PREFACE.

IN the last volume of this work the most important subject treated was a remarkable war between the United States and Spain. In the present volume the subject probably of greatest interest is also, unfortunately, a conflict of arms. The reader will find it an interesting study to compare and contrast these two wars—the one being a contest between the greatest republic in the world and a comparatively weak monarchy, the other between the greatest empire in the world and two very small republics. Of both, the causes, the processes, and the result so far as reached, will be found clearly set forth in these two volumes.

On the other hand, the reader will be interested to learn what was attempted in the cause of universal peace by the conference at the Hague. A full account, with the text of the convention as adopted, is contained in the article "Netherlands."

In line with this is the benevolent work that goes on every day, in which our country leads the world. If the reader is inclined to take a pessimistic view of our present-day civilization, let him spend a little time on the twenty pages of this volume that are devoted to "Charities of the United States," wherein the subject is taken up by States alphabetically, and every paragraph is crowded with specific facts and figures. Then let him scan the ten pages filled with "Gifts and Bequests," and learn how in the past year \$66,000,000 were given for education, charity, and religion, not counting the gifts that were of less value than \$5,000. If he is still interested to know what is done for benevolence, let him look at the article "Industrial Missionary Association of Alabama," and at the articles on the religious denominations.

World's fairs are still the fashion, and the one we record in this volume is the "National Export Exposition," held in Philadelphia.

For some knowledge of the progress of the sciences in 1899, the articles "Astronomy," "Chemistry," "Metallurgy," "Meteorology," "Physics," "Physiology," and "Associations for the Advancement of Science" may be consulted.

For the financial situation, see the articles "Financial Review" and "United States, Finances of," wherein both the facts and the philosophy are set forth. And another element in our national problems may be studied in the article "Immigration Bureau." The "Geographical Progress" of the year is set forth under that title, and "Literature" and the "Fine Arts" have their usual careful record here.

The proceedings of the "Farmers' Congress," which is now an established institution, are written for this volume by Mr. Stahl, secretary of the congress.

The necrological records are longer than usual this year. Among the eminent dead in our own country are the actors John S. Clarke, Charles F. Coghlan, William Davidge, George Edgar, Sara Jewett, and Charles R. Pope, and the famous dramatist and manager Augustin Daly; the artists Mary N. Moran, Louis T. Rebisso, Giovanni Turini, and Edmund A. Willis; the authors Isaac McLellan and Emma D. E. N.

Southworth; the capitalists John I. Blair, Roswell P. Flower, Henry Hilton, Henry B. Plant, and Cornelius Vanderbilt; the clergymen Charles D. W. Bridgman, Alexander H. Clapp, Moses D. Hodge, Samuel H. Kellogg, Dwight L. Moody, John P. Newman, Charles S. Robinson, Thomas J. Sawyer, and John Williams; the educators Edmund Chadwick, Hezekiah R. Geiger, Ezra O. Kendall, Henry H. Lockwood, James O. Murray, Andrew J. Rickoff, and Eli Thayer; the inventors Ottmar Mergenthaler, Marvin C. Stone, and John P. Thompson; the jurists Nathaniel H. Clement, Charles P. Daly, George F. Danforth, Stephen J. Field, David L. Follett, and James Harlan; the lawyers Robert G. Ingersoll, William Porcher Miles, and Gideon J. Tucker; the naval officers Peirce Crosby, Philip V. Lansdale, Theodorus B. M. Mason, George H. Perkins, and Henry F. Pickens; the philanthropists James W. Ellwell, Moses G. Leonard, Lewis Miller, Martha B. Stevens, and Elizabeth Thompson; the publishers William H. Appleton, Robert Bonner, Moses W. Dodd, Robert Clarke, Daniel S. Ford, and Effingham Maynard; the scientists Daniel G. Brinton, Hamilton Y. Castner, Elliott Coues, Othniel C. Marsh, and Edward Orton; the statesmen Robert P. Bland, Nelson Dingley, Augustus H. Garland, Garret A. Hobart, and Francis H. Pierpont; and the soldiers Edward Ferrero, George S. Greene, Alexander L. Hawkins, Guy V. Henry, Henry Heth, Guy Howard, Henry W. Lawton, Joseph I. Reynolds, John M. Stotsenberg, William Winthrop, and Horatio G. Wright. We also lost George R. Davis, the director of the great Columbian Exposition, and George Gemünder, the famous violin maker. Sketches of all these and many more are included under the title "Obituaries, American." The foreign necrology also exhibits many serious losses. These include, besides several eminent dramatists and actors of the second grade, the actresses Mary Anne Keeley (almost as old as the century), Sarah Lane, Rose Leclercq, Mademoiselle Rhea, Charlotte Saunders, Sarah Thorne, and Emma Waller. The artists lose Harry Bates, Rosa Bonheur, Sir Arthur Blomfield, Francis Dollman, and Birket Foster; the authors, Grant Allen, Prof. William G. Blaikie, A. K. H. Boyd (the "Country Parson"), Moritz Busch, Victor Cherbuliez, Émil Erckmann, Archibald Lampman, Emma Marshall, Florence Marryat (Mrs. Lean), Monier Williams, Elise Polko, and Johann Strauss, the famous composer; the naval officers, Sir Alexander Armstrong and Howard Colomb; the scientists, Robert Bunsen, John William Dawson, Sir William Flower, Sir Edward Frankland, and Henry Nicholson; the statesmen, Antonio Guzman (ex-President of Venezuela), Félix Faure (President of France), Count Caprivi, Emilio Castelar, Ulises Heureaux (President of Santo Domingo), John Mackenzie, Peter Mitchell, Nubar Pasha, Jovan Ristić, and Emil Welti. Among the eminent dead that are not included in any of these classes are Father Chiniquy (well known to a past generation as a popular agitator); Joseph Chitty, jurist; Oskar Bauman, explorer; and William E. Metford, inventor of a famous rifle. Great Britain lost many good soldiers in South Africa, but only one general, Andrew Wauchope. The careers of all these, and scores of others, are recorded under "Obituaries, Foreign."

Our three full-page portraits this year are of Gen. Henry W. Lawton, the gallant American soldier who was killed in the Philippines; President Kruger, of the South African Republic; and Émile Loubet, the new President of France.

The colored illustrations are a map of China (of interest because of the impending division of that empire), a map of South Africa, and a map showing the growth of the United States by accretions of territory from 1783 to the present day.

The book closes with an index that covers the four volumes of the series.

NEW YORK, May 15, 1900.

CONTRIBUTORS.

Among the Contributors to this Volume of the Annual Cyclopædia are the following :

Oscar Fay Adams,

Author of A Dictionary of American Authors, etc.

ALGER, HORATIO,
DALY, CHARLES PATRICK,
FOSTER, MYLES BIRKET,
McLELLAN, ISAAC,
SAWYER, THOMAS JEFFERSON,
SOUTHWORTH, EMMA D. E. N.,
and other articles.

Marcus Benjamin, Ph. D.,

Editor of United States National Museum.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE.

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa. The ruler, whose title is Negus Negusti, or King of Kings, is Menelek II, who when King of Shoa, contesting with rival claimants the succession to the throne, rendered vacant by the death of Johannes II in battle with the dervishes, signed at Ucciali a treaty with the Italians in return for arms and other aid. This treaty was signed on May 2, 1889, and confirmed in October of that year, after his position on the throne was secure. Under it Italy claimed a protectorate over Abyssinia, which

Oct. 26, 1896, by which Italy renounced the protectorate over Abyssinia, and Menelek recognized as Italian territory all the country north of the Mareb, Balesa, and Muna rivers.

The Government of Abyssinia, or Ethiopia, is of a feudal character. The Kingdom of Tigre, in the northeast, the central Kingdom of Amhara, Gojam, next to it, and the powerful Kingdom of Shoa make up Abyssinia proper, the dependencies of which extend into Somaliland as far as Harrar, and embrace a large part of the country of the Gallas.

THE GIMP, OR CITADEL, AT GONDAR.

was recognized by other European governments, but was steadily denied by Menelek. In 1895 the Italians occupied Tigre, the northernmost kingdom of the empire, and advanced into Amhara as far as the city of Adowa, near which their army was surprised and surrounded by an overwhelming force on March 1, 1896, and utterly routed. Through the mediation of Russia a treaty of peace was concluded at Adis Abeba on

Besides the country to the north of Tigre, that was formerly a part of Abyssinia, with the port of Massowah, Italy reserved in the treaty of Adis Abeba a strip 180 miles wide, extending along the coast of Somaliland, having taken over the coast stations formerly belonging to Zanzibar. All the rest of Somaliland, except the part belonging to Great Britain and the French territory around Jibutil, is claimed by Abyssinia.

sinia. In 1898 Great Britain conceded to Menelek a tract of 8,000 square miles formerly attached to British Somaliland.

The area of the empire is estimated at 150,000 square miles and the population at 3,500,000. The Negus has an army of about 150,000 men, composed of contingents drawn from the several provinces, besides which he has irregular forces and a territorial army at his command.

The Abyssinians are Christians, belonging to the Alexandrian Church. Their *abuna*, as the ecclesiastical chief is called, is always a Copt selected for the office by the Alexandrian patriarch. The *echegheh*, presiding over the monastic establishments, exercises more real authority. Jewish ceremonies are mingled with Christian rites, survivals of an earlier conversion to Judaism. The ruling caste shows evidence of the intermixture of Hebrew and Arab blood.

The people raise large herds of cattle, but till little land, although cotton and sugar cane thrive, as well as the vine and the date palm, and the coffee plant is a native of the country. Coffee, civet, wax, hides, gold, and ivory are exported. The chief imports are cotton goods of English, American, and Indian manufacture, woolen goods and raw wool, and cutlery. A railroad is planned by the French to be built from Jibutil to Harrar, 186 miles. Adis Abeba, Menelek's capital, is connected with Harrar by a telegraph. The Negus has an army of about 50,000 men, besides 15,000 between Harrar and the capital, 20,000 under Ras Makonen, and garrisons scattered over the country under other generals, all armed with modern rifles and possessing numerous Maxims and mitrailleuses. The King's chief adviser is a Swiss engineer named Ilg. His State Council is composed of the principal generals.

During the Anglo-Egyptian campaign against the Khalifa an Abyssinian force occupied the country south of Nasser, but did not attempt to co-operate with the dervishes. At the beginning of 1899 the Italians of Erythrea, fearing an attack from the Abyssinians, provisioned the fortresses of Adi Ugri, Saganeiti, Asmara, and Keren to stand a siege, and made ready an expedition for the re-enforcement, if necessary, of the local garrisons, consisting of 3,600 native regulars under Italian officers, 500 Italian regulars, 300 native artillery with 24 guns, and a native reserve militia over 3,000 strong. Mangascia, the Governor of Tigre, rebelled against the Negus in 1898, and Makonen, who was appointed Governor in his stead and was supported by the troops of Menelek, conducted a campaign against him in January, 1899, but was unable for lack of supplies to reduce him to submission. He offered to recognize the Mareb-Belesa-Muna frontier desired by the Italians, asking in return permission to buy food in their country. On Jan. 11 his forces attacked Mangascia's position, but were repelled with considerable loss. A second assault was not more successful. He then tried to turn Mangascia's flank and penetrate Agameh province, close to the Italian frontier. The Italians, however, were not alarmed, as the permission that they gave to both sides to purchase supplies and the shelter that they afforded to fugitives of the King's party, as well as to his opponents, had convinced Menelek of their neutrality. Peace was concluded between Mangascia and Makonen without a decisive engagement, the former agreeing to pay homage to Menelek and give hostages to insure his fealty, to contribute to the royal treasury, and to receive back the banished

Tigrin chieftains. Ras Mangascia and his ally, Ras Sebat, made formal submission to the Negus on Feb. 18 at Burumeida. The minor chiefs and the people of Tigre, who up to the time of the Negus Johannes were the dominant race in Ethiopia, were still unwilling to accept the rule of Menelek and the ascendancy of the Shoans, and armed bands remained in the mountains, ready to assemble once more and battle for the restoration of Mangascia. In March Menelek agreed to the Mareb-Belesa-Muna line as the permanent Italian frontier.

The advance of the British into the Soudan and their military explorations in the region of Lake Rudolf made Menelek anxious about his western frontiers. Ras Margosh, commanding one of his four principal armies, accordingly descended from the table-land of Amhara and occupied a position in Galabat. Menelek was disposed to maintain his sovereignty over this province, and also to contest the English claim to Gedaref. The French, as well as the English, have a permanent representative at the court of King Menelek, and they are building a railroad from Jibutil to Harrar and Adis Abeba, the total distance being 470 miles. Capt. Harrington, the English representative, arranged with King Menelek for a delimitation of the Egyptian frontier along the Nile valley.

AFGHANISTAN, a monarchy in central Asia, lying between Russian Turkestan and British India. The ruler is the Ameer Abdurrahman Khan, placed on the throne in July, 1880, by the British, who then occupied Cabul, the capital, having expelled Yakub Khan, son of the preceding Ameer, Shere Ali. The Indian Government has since paid an annual subsidy, at first 1,200,000 rupees, and since 1893 1,800,000 rupees, to enable Abdurrahman to consolidate his power and preserve a strong, united, and independent Afghanistan as a buffer state between the Russian dominions and India. The military forces of the Ameer consist of the feudal militia and a regular army, said to number 20,000. The artillery has 76 modern guns, and in the arsenal at Cabul are manufactured gunpowder, cartridges, rifles, and cannon by means of machinery under the superintendence of an Englishman. There are breech-loading rifles enough to arm the entire army of about 50,000 men. The Ameer's revenue is levied on the crops, his share varying from a tenth to a third, according to the amount of irrigation employed. Two crops are grown in most places, one of wheat, barley, or pulse, sown in the autumn and reaped in the spring, and one of rice, millet, or maize, sown in the spring and reaped in the autumn. Asafoetida, castor oil, and madder are common products. Afghanistan is famous for its fruits, including apples, pears, almonds, peaches, apricots, plums, cherries, pomegranates, grapes, and figs, some of which are preserved and exported to India. Other exports are horses and spices. Cotton goods from India and Europe constitute 60 per cent. of the imports. Tea is imported from China. The manufactures of the country are silks, felts, carpets, sheepskin garments, and rosaries.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,623 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; and 1,513,017 in 1890. Capital, Montgomery.

Government.—The following were the State officers during the year: Governor, Joseph F.

Johnston; Secretary of State, R. P. McDavid; Treasurer, George W. Ellis; Auditor and Comptroller, Walter S. White; Attorney-General, C. G. Brown; Superintendent of Education, J. W. Abercrombie; Commissioner of Agriculture, Isaac F. Culver; Adjutant General, W. W. Brandon; Railroad Commissioners, Ross Smith, Harvey E. Jones, succeeded March 1 by A. E. Caffee and O. Kyle; State Geologist, Eugene A. Smith; Pension Examiners, Joseph N. Thompson, E. J. Eden, Joseph R. Horn; Chief Justice of the Supreme Court, Thomas N. McClellan; Associate Justices, Jonathan Haralson, John K. Tyson, Henry A. Sharpe, and James K. Dowdell; Clerk, Robert F. Ligon, Jr. All the State officers and judges are Democrats.

Finances.—The State Treasurer's report, covering transactions from Oct. 1, 1898, to Oct. 1, 1899, shows that there was at the former date \$75,243.25 in the treasury; the receipts during the year were \$2,172,755.98. The disbursements on warrants for the current year were \$2,069,603.99, and on warrants of previous years \$7,365.17, leaving a balance of \$171,030.07. Against this balance are chargeable warrants and other claims amounting to \$425,730.03, making a net deficiency of \$254,699.96. The balance in the convict fund, deducting the amount of warrants issued and not yet paid, was \$42,580.18. The principal sources of income were: State taxes of 1898, \$1,580,759.76; licenses, \$182,045.06; insurance department, \$46,514.54; on account of convict department, \$144,855.55; United States Treasury for College of Agricultural and Mechanical Arts, \$25,000; agricultural department, \$49,341.68; solicitors' fees, \$18,625.58; school indemnity lands, \$18,055.75; railroad licenses, \$12,379.06; corporations, \$11,114.18; express, telegraph, and sleeping-car companies, \$10,784.82.

The cost of the regular and special sessions of the Legislature was \$67,404.05; State salaries amounted to \$143,975.35; the railroad commission cost \$12,539.66; the agricultural department, \$39,695.66; the convict department, \$120,059.42; pensions, \$120,961.24; the interest on the bonded debt amounted to \$448,680.

Education.—The school population is given as 634,061, of whom 351,328 are white and 282,733 colored. The apportionment of State money gives \$1.05 per capita. A new law requiring teachers to take examinations from a State board of examiners is bearing rather hard upon many of the present teaching force. At an examination in September, 67 out of 100 failed to pass at the required standard.

The Alabama Polytechnic School, at Auburn, had in October 344 students. The fund belonging to the institute is made up of the interest on the bonds received from the sale of lands given by the United States Government, which is \$20,200 per annum. It also receives a sixth of the net proceeds of the funds arising from the sale of fertilizer tags, which is between \$6,500 and \$8,000 per annum. The Morrill fund is divided between the colored industrial school at Huntsville and the institute at Auburn, according to the ratio of school population. This amounts to about \$13,000 for Auburn.

Charities.—The State paid the following amounts during the year ending Sept. 30 for its charitable institutions: Bryce Insane Hospital, \$136,318; Institute for the Deaf, \$29,416.86; Academy for the Blind, \$19,320; School for Negro Deaf Mute and Blind, \$11,270.

Railroads and Telegraphs.—The total assessed value of railroad property in the State is \$47,109,052, an increase, caused by building of

new roads, of \$1,487,105 within a year. The gross earnings for the year ending June 30, 1898, were \$15,441,484.57. The operating expenses, which do not include taxes, interest on bonded indebtedness, and current liabilities, accrued and not otherwise provided for, amounted to \$11,108,000.61, being an increase of \$1,341,220.08 over the preceding year, which is 71 per cent. of gross earnings, and shows an increase of eight tenths of 1 per cent. in the proportion of operating expenses to gross earnings over the previous year.

The assessed value of telegraph property in 1899 was \$376,771, divided among seven companies.

National Banks.—The report of the Comptroller of the Currency, published in July, shows that the national banks of the State had in loans and discounts \$6,619,477.11; United States bonds to secure circulation, \$1,221,000; due from national banks, \$1,552,434.95; due from State banks and bankers, \$369,721.10; due from reserve agents, \$1,400,767.73; lawful money reserved in bank gold coin, \$385,991.50; gold certificates, \$40,960. Under liabilities capital stock paid in, \$3,105,000; due to other national banks, \$323,011.70; due to State bankers, \$192,861.74; individual deposits, \$9,255,253.60; average reserve held, 28.47 per cent.

Industries and Products.—The mineral production in 1898, in short tons, is given approximately as follows by the State Geologist: Coal, 6,509,223; coke, 1,390,254; iron ore, 2,202,158; pig iron, 1,026,459; stone for flux, 499,859; bauxite, 13,848; barrels of lime, 127,588.

The corn crop was 39,681,000 bushels, a gain of more than 9,000,000 over that of the preceding year.

The internal-revenue receipts for 1898 amounted to more than \$1,000,000.

Many new coal mines were opened in 1899, giving a prospect of an output far exceeding that of any previous year.

Huntsville is to have a new cotton mill of 200,000 spindles, built by a Massachusetts company.

Birmingham enjoyed increased prosperity in 1898. The Avondale Cotton Mills were completed at a cost of \$600,000. The street railway companies expended \$324,000 in improvements in the way of new tracks and equipments. The Southern Bell Telephone and Telegraph Company put in a new telephone exchange with underground wires at a cost of \$100,000. The bank clearings of Birmingham were \$23,777,899, an increase of \$2,870,302 over the preceding year.

Improvements.—A convention to promote the improvement of Coosa river was held at Gadsden, Sept. 26-27. It is desired to obtain an appropriation sufficient to open the river from Gadsden to Mobile. Committees were appointed on mines, forestry, agriculture, and manufactures to tabulate statistics of the products of Coosa valley and present them to the congressional Committee on Rivers and Harbors.

It is announced that the power of Tallapoosa river is to be used to furnish an electric current to Montgomery, which will light the city and supply power for all the mills and factories within its limits.

Surveys have been made for a canal from Birmingham district to Warrior river. It is proposed to use the Valley river as part of the canal, about 40 miles; about 34 locks would be required. The project includes the opening of Warrior river for navigation.

Public Lands.—The sale of certain lands given to an educational institution caused great

agitation this year in the State. Congress granted 25,000 acres of unoccupied Government lands to be sold or leased for the benefit of the Industrial School for Girls, at Montevallo; the proceeds of sale were to remain forever as a fund for the use of the school. A like amount of land was granted to the Normal Institute for Colored Youths, at Tuskegee. The Montevallo lands, according to the reports, were located, or were intended to be located, in the coal districts near Warrior river, and were summarily bargained away, or an option was given, to a syndicate already holding lands in the region, at \$5 an acre, a price alleged to be much below their value, and, as it appears, no opportunity was given for other bids, but the sale as alleged was a private transaction between the representative of the syndicate and the Governor, to whom the board of managers of the school had given authority to dispose of the lands.

The lands given to the Tuskegee school have not been sold.

About 3,400 acres of lands belonging to the State University were sold in the autumn at \$12.50 an acre. They are coal lands in Walker County, and are alleged to be worth much more.

Lawlessness.—An attempt to capture a negro alleged to be guilty of assault in Jefferson County resulted in a riot between white and black miners on June 27, in which two negroes were killed and two others mortally wounded. The blacks were said to belong to a secret organization known as the "Knights of Africa," or the "Mysterious Ten." Several cases of lynching occurred during the year: a negro suspected of burning a barn was hanged by lynchers at Josie Beat in January; another, identified as the accomplice of a murderer, was shot by a mob near Eoline in June; near Forrest, in August, a mob hanged a negro who had attempted an assault upon a young white girl; two negroes who with others attacked a white man with whom they had quarreled about a debt they owed him were killed by a mob of masked men, Aug. 19, near Eclectic; and a negro was hanged for attempted assault on a white woman, in November, near Moulton, after being taken from jail by a mob of about 100 men.

Legislative Session.—The General Assembly convened Nov. 15, 1898, and adjourned Feb. 23, 1899. R. M. Cunningham was President of the Senate and C. E. Waller Speaker of the House.

A bill calling for an election on the question of a constitutional convention was the occasion of hot debate. The new Constitution desired by those in favor of the bill is like those recently adopted by other Southern States, designed to establish "white supremacy," as appears from the debate, from which the following passage is taken: "I believe," said Mr. Waller, Speaker of the House, "that this day is destined to be the most glorious in the history of Alabama. It means salvation and rescue from a system that has undermined and corrupted the integrity and honesty of the State. I would rather that my little prattling boys lay in their graves than that I should hand down to them the taint of the Constitution under which we are living. Let these gentlemen who oppose this bill come to me and measure in dollars the cost of purity. I disagree with these gentlemen as to their estimates of the cost of a convention. I feel that it would not cost more than \$25,000 or \$30,000. But if it were to cost five times the amount they estimate the necessary money could be raised from voluntary subscriptions. The taxes I pay now are a burden to me, but cheerfully would I

increase them tenfold if by doing so I could materially aid in getting for our State a new and honest Constitution. I defy any of these gentlemen to come to me and measure in dollars the purity of their sons. It has been intimated that a new constitution would jeopardize the suffrages of white men. I say this: If any crowd of men engage in a conspiracy to disfranchise a single poor white man I stand ready to join a body of men to lynch the culprits. It has never been purposed by the friends of a constitutional convention in Alabama to disfranchise a solitary white man."

"How will you keep from doing it?" Mr. Spears asked, interrupting.

"We will put it on the broad ground of patriotism," Mr. Waller answered. "I am sorry that such a question should be asked at this time. I am sorry that faithful Democrats should so embarrass our plans at this juncture as to make and evoke speeches that may be used against us by our enemies. But we will provide for the suffrage of those who have fought for their country or their relatives within the fifth degree of kin."

Mr. Arrington followed. He favored white supremacy. In Mississippi less than one fifteenth of the illiterate white men were disfranchised by the new Constitution. "There is no telling what future awaits us if we continue in the present manner," he said. "The throes from which North Carolina has just subsided should teach us a lesson. I say to you that we may expect as bad or worse if we do not act without delay. Why, just before I left home to come here a negro named Armstrong came to me and said he had been offered the postmastership at his town. He asked for advice. I told him that as surely as the sun shone he would be shot to death within twenty-four hours after he made his bond as postmaster. He took my advice and decided not to get the postmastership."

The bill was passed by 52 to 41 in the House and 17 to 12 in the Senate. It fixed the time for the election the first Monday in July, 1899, and delegates were to be chosen at the same time. The bill was signed by the Governor.

An act abolishing the Court of County Commissioners of Jefferson County and creating a revenue board to take its place, was brought before the Supreme Court for a test as to its constitutionality. It was passed through the Senate when a bare quorum was present; and, as one of the Senators voting was lieutenant colonel of the Fifth Regiment of immunes, it was claimed that he could not legally hold a seat in the Legislature.

A new revenue law imposes taxes on many kinds of business not heretofore taxed, and amends the provisions in regard to others. Among the new subjects coming under the law are billposters, brokers, bicycles, book agents, cigar stands, cold storage, dog or pony shows, cotton buyers, coal and coke, feather renovators, dealers in securities, ferries and toll bridges, fruit stands, horse dealers, ice factories, laundries, slot machines, news companies, sellers of patent rights, photographers, plumbers, dealers in stocks and bonds, telephone companies, and warehouse and elevator companies.

The House passed a bill increasing the appropriation for public schools from \$350,000 to \$600,000; but the State Auditor published figures to show that this would involve the State in a debt of about \$150,000, and the amount was reduced to \$450,000. Other increases in appropriations were: For salary of a supernumerary judge,

\$2,500; for tax commissioners, \$2,400; the Auditor's salary was raised from \$1,800 to \$2,400; the Adjutant General's was fixed at \$1,500.

An important act was one exempting from taxation cotton in the hands of the producer or purchased for shipment and pig iron for one year; after that the rate will be \$2 for 100 tons.

Another act authorized the examination of the titles by which sixteenth-section lands are held, and the bringing of suits to recover in certain cases where they have not been properly paid for. These are the lands that were sold for the benefit of the school fund, having been given to the State upon its admission by Congress for that purpose. Authority to sell the land was granted to the State in 1827, and the greater part was sold within a few years from that date.

The special tax for relief of disabled Confederate soldiers and the widows of deceased soldiers was raised from half a mill to one mill.

The law on the consolidation and adjustment of the bonded debt was amended by changes in important particulars. The Governor has power to refund the debt in long-term gold bonds, the principal condition being that he shall secure a lower rate of interest.

A bill in the interest of temperance provided for dispensaries in about 17 counties, to be under the control of local authorities.

Other bills were:

To authorize courts of equity jurisdiction to direct the sale of property and franchises of quasi-public corporations.

To punish the making or certifying false and fraudulent abstracts of title.

To provide for regulation of corporations transacting life insurance business.

To appropriate \$7,500 to the Alabama Industrial School for Girls, at Montevallo, and to provide for additional buildings there.

To establish a charter for Birmingham.

Providing that the convict fund shall be transferred by the Treasurer into the general fund.

For the preservation of game in Montgomery County.

A. H. Alston was elected supernumerary judge by the Legislature in joint session.

A bill requiring persons convicted of larceny and some other like offenses to work out the value of the property taken was vetoed as being opposed to the spirit of the constitutional provision forbidding imprisonment for debt.

Conventions were held for the nomination of delegates to the Constitutional Convention, but in April the Governor issued a circular letter to members of the Legislature asking their advice as to the advisability of calling an extra session of the Legislature to repeal the act. The State Convention of the Democratic party had given its approval to the measure, and recommended the party to support it at the polls. The reasons for the special session were given in the circular letter as follow:

"A number of Democrats have urged me to call a special session of the General Assembly for the sole purpose of considering whether the act authorizing a vote on the question of calling a constitutional convention should be repealed, and whether any amendments to the Constitution should be submitted for ratification. The argument used in this appeal to me is, that there is serious division in our party on this question; that many loyal Democrats are opposed to a convention; that the Democrats in the Legislature and the late State convention were almost evenly divided; that many Democrats will not vote for the convention; that if it should fail it would

seriously damage our party and tend to build up a formidable opposition."

It also urged that since the declaration that the Constitution framed must be submitted back for ratification a plain amendment framed by the General Assembly would accomplish the same result and avoid the cost of a convention.

The answers to the letter were summarized as follow: In the Senate, 16 in favor of repeal, 5 opposed, 5 doubtful, and 15 not heard from; in the House, 51 in favor, 26 opposed, 10 in doubt, and 9 not heard from. The Governor therefore issued a proclamation convening the General Assembly in extra session May 2, naming the following subjects for consideration: 1. The repeal of the law submitting the question of calling a constitutional convention to the people. 2. An amendment regulating the suffrage in the State to be submitted to the people. 3. A primary-election law.

The proclamation was accompanied by a statement given to the press by the Governor, offering among others the following explanations of his reasons for asking the repeal of the act after having signed it:

"The General Assembly, by narrow majorities—5 in the Senate and 10 in the House—decided to submit to the electors the question as to whether or not they desired a constitutional convention. While this was not in accord with my views, I did not feel at liberty to withhold my assent from a measure that permitted every voter in the State to decide for himself whether he desired a convention to be held or not. Since then a Democratic State convention has been held, and, without the question ever having been submitted to the Democratic voters or having been considered by them, an attempt was made to take away from them the right given by the Legislature to decide for themselves whether they desired a convention or not, and to bind them to vote for a convention, whether approved by their judgment and conscience or not. This has been followed up by the threat that nominees of county conventions shall disobey the wishes of the conventions which nominated them and declare for the Constitutional Convention or be driven to resign. Instead of the nonpartisan convention designed by the General Assembly, the plan now seems to be to give us a constitution framed by partisans seeking only political advantage for those engineering and directing the cause. Some of the friends of the convention claim that the pledges given in the platform practically confine the convention to a consideration of the suffrage amendment. If this be true, and the pledges are faithfully observed, I am sure that the 133 members of the General Assembly are quite as competent to frame amendments and are quite as patriotic and representative of the people of Alabama as the delegates elected to the Constitutional Convention, and can do the work at one tenth the cost of a constitutional convention.

"The pledge to submit the proposed Constitution to the ratification of the people is ominously silent as to who shall be qualified electors to vote on it. The convention seems to have the power to deny to those disfranchised by it the right to vote on ratification. Even if we can trust every member of the convention to keep in good faith every pledge made, and the previous record of some of them does not inspire confidence, then the pledges did not go far enough.

"Our present Constitution guards with jealous care many rights dear to the people. Among others:

"1. It provides a homestead exemption to shelter every family in Alabama.

"2. It prohibits the State and counties and municipalities from indorsing bonds of railroads or lending their aid or credit to any corporation.

"3. It secures to the people the right to elect their own judges and other officials.

"4. It prohibits imprisonment for debt.

"5. It secures the right of trial by jury.

"No pledge is given that a single one of these provisions shall be preserved inviolate."

The State committee of the Republican party met early in April, and declared the holding of a constitutional convention to be "unwise and unnecessary, and that its declared purpose of disfranchising any of the present voters of the State is unjust and in violation of the spirit of the Federal Constitution."

The Democratic State Committee held a meeting, April 21, and made strong protest against the repeal of the convention act.

In his message at the opening of the special session, which lasted from May 2 to May 17, the Governor said: "It is claimed by the advocates of the convention that the main question to be considered is an amendment that will secure white supremacy, that no time should be lost, but the greatest haste be taken to accomplish this. I suppose there are few thoughtful citizens, white or black, who do not believe that some change should be made in this direction. The necessity for hot haste—haste that will not permit any reflection—is not apparent. White supremacy is as complete and all-pervading to-day throughout the jurisdiction and domain of our State as it is possible to be. There is not a negro in all the Commonwealth holding an office under the present Constitution, not a justice of the peace, not a constable nor a single member of the General Assembly, nor has there been one for nearly a generation. It seems to me that the franchise can be settled with less friction and more certainty and security by a plain amendment that the people can understand and vote upon intelligently than by the framing of a new constitution. If any material changes be made in the Constitution in any other respect (and immaterial ones should not be considered), then every elector opposed to any one of the changes made would vote against the whole instrument; whereas a simple and plain suffrage amendment would command not only the intelligent and uncoerced vote of every Democrat, but of practically all the white and many intelligent colored voters in the State."

The only bills passed were two—one repealing the act of the regular session providing for a constitutional convention, and one appropriating money to pay the expenses of the special session. No primary election law was passed, and no constitutional amendments were submitted.

ANGLICAN CHURCHES. Among the items of Church growth and activity brought to notice in the Official Yearbook of the Church of England for 1899 is the increase in the number of confirmations. While in single years this varies considerably, the tables for a period of ten years show a noticeable advance in the actual number of confirmations and in the centers. The Sunday-school work appears to be growing not very rapidly, the attendance, including only children under fourteen years of age, being 2,410,201 in 1898 against 2,393,372 in 1897. The number of appropriated sittings in churches increased from 1,421,906 in 1896 to 1,878,386 in 1898, while the free sittings advanced from 4,660,206 to 4,793,008. Forty-three hundred and twenty-nine

churches were open for daily prayer in 1898 against 4,117 in 1897. A decided increase in voluntary offerings is shown, from £7,051,778 in 1897 to £7,506,354 in 1898. The figures, however, include legacies of exceptionally large amounts and specific gifts for church building, an instance being mentioned of a new church costing £100,000 which was built by the munificence of a single donor. The number of deacons ordained in 1898 (638) was smaller than at any previous period during the past twenty years.

Church Missionary Society.—The one hundredth annual meeting of the Church Missionary Society was held in London, May 2. Sir John Kennaway, M.P., presided. The expenditure during the year had been £325,223, and the receipts, apart from those for the Centenary fund, £315,126, leaving a deficiency of a little more than £10,000, which, when added to the adverse balance brought forward from the previous year, made a total deficiency of £30,110. The addition of the year's receipts for the Centenary fund (£53,260) would, however, more than cover this. Including special funds, the total amount to be acknowledged for the year was £379,827. The two thousand and third missionary of the society, not counting wives of missionaries, had been sent out in March. The committee were preparing to send missionaries to the Soudan as soon as the restrictions should be removed. The adult converts from paganism and Mohammedanism admitted to the Church by baptism during the year numbered 6,829. The numerical statistics represented 496 stations, with 403 ordained and 128 lay European missionaries, 314 wives of missionaries and 273 other women, making a total of 1,118 European workers; 303 native clergy, 5,708 native lay teachers, 245,769 native Christian adherents (including catechumens), 65,387 native communicants, 86,798 pupils, and 16,047 baptisms during the year. At the time of the meeting £70,000 had been paid and promised to the Centenary fund. The society celebrated its centenary in London during the week beginning April 9. A brief historical statement prepared by the officers with reference to the celebration showed that the society was founded at a meeting held in the Castle and Falcon Hotel, Aldersgate Street, London, April 12, 1799, when 25 persons were present. It had "always held to evangelical church principles, though it had uniformly declined to enter into home controversies." In early days it was looked upon coldly by the bishops, and it was not till 1841 that they joined it in any numbers. The first candidate to offer his services was the famous Henry Martyn, senior wrangler in 1801, and he eventually went to India as a chaplain. In all, 2,003 missionaries had labored in connection with the society. Work was now carried on in West and East Africa, Uganda, Egypt, Palestine, Persia, India, Mauritius, Ceylon, China, Japan, North-west Canada, British Columbia, and New Zealand, and more than 60 languages were used. Native churches, self-supporting and almost independent, had been formed in Sierra Leone, Lagos, and on the Niger. The society's list of living converts numbered 240,000. The service of the society comprised 1,096 European missionaries, including wives, and 55 medical missionaries. It had at home about 3,700 local missionary associations, and received contributions from about 5,000 parishes. Its magazines had an aggregate circulation of about 198,000 copies a month. A series of inscriptions hung upon the hall in which one of the meetings was held gave the dates in which the several mis-

sions were established as follow: Bengal, 1815; Northwest Provinces, 1813; Punjab and Sindh, 1852; Bombay and West India, 1820; Madras and South India, 1814; Travancore and Cochin, 1816; Ceylon, 1818; Telugu, 1841; South China, 1850; Mid China, 1844; West China, 1891; Japan, 1869; Egypt, 1882; Palestine, 1851; Persia, 1875; Turkish Arabia, 1882; Equatorial Africa, 1844; Uganda, 1876; Northwest Canada, 1822; British Columbia, 1856; Sierra Leone, 1804; Yoruba, 1844; Niger, 1857; New Zealand, 1814. A preliminary sermon to the celebration was preached in St. Paul's Cathedral by the Bishop of Derry, April 9. The first day's meeting was held April 10 in St. Bride's Church, Fleet Street, when addresses appropriate to the occasion was delivered. In the evening the Archbishop of Canterbury preached in St. Paul's Cathedral upon *The Beginning of the Catholicity of the Church*, in the setting apart of Barnabas and Saul, from which he passed to a review of the growth of the society. The second day's meetings were held in Exeter Hall, and were devoted to a review of the history of the society. Among the special topics and departments of missionary activity that came under notice in the addresses were Mohammedanism as an obstacle, the mission to Uganda, missionary and evangelical methods, educational work as an aggressive force and a defensive agency, women's work, medical work, literary work, and *The Story of the Society at Home during the Hundred Years*. In connection with this subject it was represented that since 1887, when the executive committee had resolved never to reject on financial grounds any candidate who was spiritually and mentally and physically fit for the work, the revenue had increased from £221,000 to £322,000, and the number of missionaries from 309 to 777. On the third day, April 13, the actual anniversary day, resolutions were adopted expressing thanks to God for the successful career of the society; acknowledging much on the part of the society that might cause sorrow and humiliation, confessing with shame the grievous disproportion between what the Church had done during the past century and what it ought to have done, lamenting indifference shown by many to the conversion of the world, and deploring the vast areas still unevangelized; and, looking to the future, expressing the belief that "in the scriptural doctrine and primitive order of the Church of England, in the history and character of the English people, and in their commercial and political power there are peculiar privileges which constitute a divine call to the Christians of the empire to missionary enterprise in a far larger and bolder spirit than has ever yet been manifested." The fourth day of the celebration was devoted to a review of Church and Protestant missions other than those of the Church Missionary Society, in which the Universities' Mission in Central Africa, the Society of the Protestant Episcopal Church in the United States, and the South Sea and Australian Missions were represented. Two sessions were given to Scottish, foreign Protestant, and nonconformist missions, when representatives of the Established and Free Churches of Scotland, the Paris Missionary Society, the Basel Mission, the British and Foreign Bible Society, the Wesleyan Missionary Society, and the London Missionary Society spoke of the operations of those bodies. On the fifth day subjects relating to the extension of the work of the society and fields for new missions were discussed. The last day's meeting, April 15, was for boys and girls, when medals were distributed.

Propagation Society.—The public meeting in connection with the one hundred and ninety-eighth anniversary of the Society for the Propagation of the Gospel in Foreign Parts was held May 4, the Archbishop of Canterbury presiding. The year's income of the society had been £132,355, of which £17,994 were from legacies. The missionary force comprised 787 ordained ministers, 12 of whom were bishops, and 2,900 lay teachers, with 3,200 students in the society's colleges and 38,000 children in the Asiatic and African schools. More than the usual number of offers of service abroad had been received, and a large increase was shown in the number of clergy placed on the society's list and in the native ministry, as well as an increase of £2,000 in the voluntary gifts. The society had a church car in Mashonaland running over 500 miles of railway to Bulawayo. In Guiana the Chinese had built a handsome and substantial church for themselves. A bicentenary celebration of the society is appointed to begin on June 16, 1900, the one hundred and ninety-ninth anniversary of the granting of its charter, and to close on the same day of 1901.

The Universities' Mission.—The report of the Universities' Mission to Central Africa, presented at the annual meeting, June 6, showed that mission work of the ordinary kind was scattered over about 250,000 square miles. The nurseries, schools, homes, and workshops included more than 300 children, while 780 were entirely supported by the mission. Thirty-three men were required to raise their staff to a *minimum* pitch of efficiency. Occasion having arisen by the departure for England in 1898 of the European ladies, the bishop had felt able to give the entire management of the girls' school at Likoma to a native woman teacher, with the result that the average attendance had risen from 50 to 75, and had been steadily maintained throughout the year. The suppression of the slave trade by the German Government had acted in a way that was not altogether for the advantage of the mission. The people, instead of gathering in large numbers, were now separating into small communities, and the missionary, instead of having one center, where he could work with comparative ease, found himself in charge of a number of small hamlets. A steamer had been built for Lake Nyassa, and £3,000 were needed in order to send it there.

The Bishop of London's Fund.—The Bishop of London's fund for church building in the metropolis made grants during the year for 187 permanent churches, of which 171 were parochial churches and the others "chapels of ease." It was represented at the annual meeting of the subscribers, May 1, that, while the provision of sufficient churches for themselves seemed hopeless to the growing populations of the outskirts of London, where the bishop's fund furnished the nucleus, the people of the neighborhood took heart and joined in the work. A resolution was adopted affirming the need of increased efforts to meet adequately the spiritual needs by means of the supply of mission clergy, mission rooms and churches, and additional curates and lay agents.

The Church Army.—The seventeenth annual report of the Church Army, presented at the anniversary, May 2 and 3, describes a large variety of operations which were conducted by about 150 evangelists, colporteurs, nurses, rescue workers, pioneer and tent missionaries, social officers, and other agents. Sixty-five mission vans were at work in 33 dioceses. The work done in the

72 labor homes and other institutions had realized £25,000 in the past year, and nearly £14,000 had been paid in wages to the inmates. Grants had been received from a number of boards of home guardians, and practical sympathy from the home office, the prison commissioners, judges, magistrates, and other authorities. In the lodging houses 80,000 beds had been let, 3,480 men had passed through the Thames Embankment Rescue Home, and more than 600 women and girls through the London homes provided for them. The general and evangelical accounts showed an income of £40,208, and an expenditure of £39,027; the accounts of the social departments an income of £46,246, and an expenditure of £46,405. The balance sheet showed an excess of £28,442 in assets over liabilities.

The Church Union.—At the annual meeting of the English Church Union, June 15, it was represented by the presiding officer that 7,850 persons had joined the union since June 1, 1898, of whom 5,450 had joined during 1899. The present whole number of members, 37,900, included 4,370 clergy. Never in the forty years of its existence had the union been more united or more determined to protect the doctrines and privileges of the Church. An address by Lord Halifax, president of the union, was read in his absence on account of illness, criticising recent proceedings. The resolutions unanimously agreed to by the union in 1877 were unanimously reaffirmed. They deny that the secular power has authority in matters purely spiritual.

The Liberation Society.—The Council of the Society for the Liberation of Religion from the Patronage and Control of the State at its annual meeting determined to seek to have disestablishment made a plank in the Liberal platform at the next general election, and the society at the public meeting held the same day adopted a resolution approving of the step.

Woman's Help Society.—The Church of England Woman's Help Society has for its objects the cultivation of personal purity and of religion, and works among the roughest girls. The report made at its anniversary, May 3, showed that it had made considerable progress, and was doing much good in a quiet and unobtrusive way.

Ecclesiastical Procedure.—At a meeting of all the bishops, held at Lambeth Palace, Jan. 17, it was resolved that a bill for the reform of the ecclesiastical courts, drawn on the lines laid down by the Royal Commission in 1883, should be submitted to the convocations at their meetings in February. The Royal Commission referred to was appointed in May, 1881, at the instance of Archbishop Tait, of Canterbury, to inquire into the constitution and working of the ecclesiastical courts. It presented its report, after two years of consideration, in August, 1883. It was understood that the proposed measure would recommend that complaints against a clergyman be heard and pronounced upon first by the bishop. If the respondent failed to submit, the case should be brought before a diocesan court consisting of the bishop with a legal and a theological adviser. From this court an appeal should be to the provincial court of the archbishop, and from this court a final appeal to the Crown, represented by a permanent body of lay judges.

Convocation of Canterbury.—At the meeting of the Convocation of Canterbury, Feb. 8, the Bishop of London said in the upper house that he had received a petition, signed John Kensit, for presentation to the house. His grace the president had, however, expressed the opinion that it was not desirable that the house

should receive it, as it contained reflections on the conduct of the bishops. The archbishop said that the petition ended with a very improper sentence, implying a sort of threat against the bishops, which it would be very unseemly indeed for that house to allow to appear on its records. He had, therefore, requested the Bishop of London to be good enough not to present it, and he could, if he thought fit, tell Mr. John Kensit the reason why.

The text of this petition as it appeared in the newspapers was as follows:

"To the Most Reverend the President and the Right Reverend the Bishops of the Upper House of the Convocation of Canterbury: The honorable petition of John Kensit, of 18 Paternoster Row, in the city and diocese of London, sheweth that since your petitioner has approached your right reverend house there has been throughout the country a widespread feeling of alarm and indignation at the prevalence in very many churches in every diocese throughout the country of practices distinctly Roman in their origin and use, and that to the ordinary layman there seem to have been few, if any, changes in ritual acknowledged to be legal; that, nevertheless, your lordships and divers organs of the press allege that the evil is of very restricted character; that your petitioner, with multitudes of others, believes this statement to be utterly unfounded; and he therefore humbly prays that your grace and your right reverend brethren, without delay, will furnish to the Church at large a statement of the number and names of churches in which, by your godly admonitions in private, excesses have been abandoned and unsound doctrines are no longer taught from the pulpit, and Romanizing manuals have ceased to be circulated. That your petitioner, at the request of his diocesan, the Lord Bishop of London, has scrupulously refrained from any attempt to interfere with or protest against the services in the churches to which this petition alludes; and that he would deeply regret if, through episcopal supineness, he has to resume on principle a form of protest distasteful to himself, but which seems the only course which really arrests public attention. And your petitioner will ever pray.

"JOHN KENSIT, 18 Paternoster Row.

"Feb. 8, 1899."

After the remarks on Mr. Kensit's petition the archbishop made a statement in regard to the bill for the reform of the ecclesiastical courts, to the proposed court of the archbishops for the interpretation of the rubrics, and to a joint meeting of the two convocations which was contemplated to be held in the ensuing April.

The lower house adopted a resolution of thanks to the archbishop and their lords of the upper house for proposing to rehabilitate the ecclesiastical courts of the country, "which as at present constituted do not command the confidence of the clergy as a body, and will do their utmost to consider fully the measure sent down for consideration. At the same time they desire to express their loyalty to the bishops and the directions of the Prayer Book, and their determination to do all that lies in their power to secure obedience to both the written and living voice of the Church of England, thereby assuaging the prevailing anxiety." An article was adopted requesting the bishops to institute measures looking to the relief of the clergy from burdens imposed upon their consciences by certain provisions of the marriage act of 1897. The house by resolution expressed its dutiful desire to uphold the

authority of their lordships of the upper house, and its readiness, on their direction, to give its careful consideration to subjects that concern the ritual and doctrine of the Church. "At the same time, having reasons to fear lest individual clergymen may be led to make changes on their own responsibility, this house feels constrained to exhort its brethren in the ministry to entertain with caution modes of thought and action which may weaken not only the rightful authority of the synod, but the very independence of the Church itself."

In the House of Laymen a resolution was adopted declaring that the house, "while welcoming the noble effort now making to elevate and instruct the people of the Soudan and Upper Egypt through the means of the Gordon College, at Khartoum, is nevertheless of the opinion that no effort to perpetuate the memory of Gen. Gordon can be considered adequate which does not include the direct proclamation of the gospel of Jesus Christ to all the races inhabiting the upper basin of the Nile, which has recently been brought under the control of England. They would express their earnest hope that at the earliest moment consistent with public safety the Government of the Soudan will remove the restrictions at present existing upon the entrance of missionaries into Khartoum."

At a joint meeting of the upper and lower houses and the House of Laymen, held on the first day of the sessions, the archbishop made a full statement in regard to matters affecting the existing crisis in the Church. He spoke first of the offer of the archbishops to hear cases of disputed ritual. Next he explained the nature of the bill which they proposed to introduce into Parliament. A bill had been drawn up about ten years previously by Archbishop Benson and introduced into the House of Lords, but not proceeded with. It was now reprinted, in order to make it a basis of consideration for any such reforms as would be desirable for them to introduce into Parliament and endeavor to induce Parliament to accept. If that was to be of any use, it must be considered with very great care. They ought not, however, to be in any great hurry, but should thoroughly look at the bill from all points of view previous to putting it before either house of Parliament. The archbishop felt very confident that they would be able to get things straight if only they could get the clergy and the laity to second their endeavors to proceed quietly and gently, and to seek, above all, not each his own particular fancy or predilections, but the good of the Church as a whole.

At the meeting of Convocation, April 25, the Bishop of London in the upper house presented a petition, signed by 768 medical practitioners from all counties in England and Wales, upon the subject of the communion of the sick. The petition represented that there were many exceptional cases in which the office for that service provided in the Prayer Book was too long, and its use detrimental and even occasionally dangerous to the sick person. Such exceptional cases were acute disease; long-standing wasting diseases, such as the latest stages of consumption and cancer; infectious diseases, when the priest and others are unnecessarily exposed to infection and liable to spread it; cases of sudden emergency, in which there is no time to consecrate the elements; and where there is no convenient place in which the sacrament can be reverently celebrated. As professional men the signers thought that "the sacrament should be

administered in the way which is easiest to the sick and dying, and that in the cases mentioned the custom of taking the sacrament to the sick ought to be specially permitted, as in former times, to the end that these very real difficulties and dangers may as far as possible be avoided." The experiment having been recently begun by the proprietors of two of the daily newspapers of London of publishing their journals on Sunday, as well as on the week days, the house took occasion to express its regret at the action, and its trust that the innovation, which would put a great pressure upon other journals to take a like course, and which, "if allowed to spread, will lead to a great extension of Sunday labor and an obliteration of the distinction between the Lord's Day and other days of the week, may be emphatically and effectually discouraged by public opinion, and that Churchmen will take an active part in the protest."

A resolution was passed in the lower house with reference to a license from the Crown or a declaratory act authorizing the draft of a canon for the more adequate representation of the clergy and laity in convocation. In another resolution the house expressed its opinion that "the present difficulties in the Church will be most permanently met by finding a fuller expression, consistently with the union between Church and state, for the principle of corporate Church action in the conduct of Church affairs, and its trust that a larger measure of freedom in the management of her internal affairs may be accorded to the Church, acting in and through her duly constituted assemblies, regard being had to the respective responsibilities of clergy and faithful laity," and requested the archbishop and bishops constituting the upper house to take such steps with a view to securing these objects as in their wisdom they might think fit.

Resolutions were passed in the House of Laymen asking the archbishop to take into consideration the desirability of a service being provided by authority to be used in cases of cremation; expressing the hope that the Government would speedily see its way to carry out a policy for conferring greater autonomy on the Church; and declaring that, while deploring the practice of any observances which could not fairly be held to be within the comprehensive limits of the Church of England, the house strongly protested against the Church discipline bill as inconsistent with the episcopal government of the Church.

At its meeting in July the Convocation, in all its three houses, discussed the ecclesiastical procedure bill.

Convocation of York.—The Convocation of York opened, Feb. 9, with a joint meeting of the two houses, when the archbishop spoke concerning the crisis in the Church, and particularly concerning the arrangement with the Archbishop of Canterbury for the archiepiscopal hearing of cases of disputed ritual and of the contemplated ecclesiastical courts bill. The upper house having resolved that the increasing practice among the clergy of encouraging habitual, systematic, or compulsory private confession demanded the serious attention of the bishops, a committee of the whole house was appointed to consider the subject. A resolution was adopted approving the assembling at an early date of the synods of the two provinces in one place. A resolution similar to one adopted in the lower house of the Convocation of Canterbury thanked the archbishop and bishops for proposing to rehabilitate the ecclesiastical courts of the country, and expressed

loyalty to the bishops and the directions of the existing Prayer Book.

At the session of the Convocation, May 3, a petition was presented from members of the medical profession urging that there were many exceptional cases in which the office for the communion provided in the Prayer Book is too long, and its use detrimental and occasionally even dangerous to the sick person. The discussion of the petition related to the difficulty of providing such a service as was called for in it, and was terminated by an observation by the archbishop that he thought it would be very much better if, after prolonged consultation, they were to endeavor to devise some means of meeting the difficulty, instead of leaving it, as they did at present, to the bishops and clergy very much to adopt their own means. A report was unanimously adopted on the fasting reception of the holy communion, which the bishop said he hoped would be a valuable help not only toward relieving consciences that were spiritually perplexed when such demands were made upon them as were made in the insistence upon fasting communion, but also in emphasizing the spiritual character of the preparation which was required for the holy sacrament. Resolutions were adopted in both houses condemning the issuing of newspapers on seven days in the week.

Joint Meeting of the Convocations.—The upper and the lower houses of the Convocations of Canterbury and of York having severally resolved themselves into committee, the four houses met in the Church House, London, in joint session, July 6. The archbishops presided jointly, but the Archbishop of Canterbury took the lead in the proceedings. The meeting was held with closed doors. Resolutions were submitted as "propositions for consideration as regards the appeal to the Crown and to the perpetual court": 1. That an appeal to the Crown for lack of justice shall be allowed in all cases. 2. That the subject of the appeal shall be limited to the question whether the defendant has done or taught what the Church of England has directly or by necessary implication forbidden, or omitted to do what the Church of England has expressly enjoined. 3. That the right of appeal shall be allowed to both parties, but only when there has been a difference in the judgments of the diocesan and provincial courts, unless the Crown shall give leave to appeal. These resolutions were approved. A fourth proposition—"that the Crown shall refer the appeal to a permanent committee of the Privy Council learned in the law, being also members of the Church of England"—raised discussion, in which important differences of opinion were made evident. After the conclusion of the joint session on the second day the Archbishop of Canterbury gave out as its ultimate finding a resolution, unanimously carried, that "the meeting of the committee of the whole houses of the Northern and Southern Convocations, after considering the various propositions which have been discussed during its sessions, is of opinion that further consideration of these propositions is necessary before practical steps are taken in the direction of legislation, and that the archbishops be requested, in accordance with the law and custom of Convocation, to bring the matter before their respective convocations at their next sessions." A resolution was also passed declaring that "in the interests of the Church it is desirable that a joint meeting of the two convocations should be held in each year." The resolutions adopted by the four houses were con-

sidered by the houses of laymen of the two convocations in joint convention, which, while thanking the archbishops for submitting the propositions, expressed the opinion that "it is undesirable to press forward new legislation for courts to deal with questions of doctrine and ritual when opinion is so much divided upon the form which it should assume, and when the archbishops are taking steps to place church discipline upon a better footing by the establishment of better relations between the episcopal bench and the parochial clergy." The laymen also resolved that, "in the interest of the Church, it is desirable that a joint meeting of the two convocations be periodically held, and that power should be given them for that purpose, and letters of business be issued for their action as the representative body of the Church of England"; that "it is desirable that the houses of laymen should have a more recognized position as consultative bodies of the Church, and should meet jointly when the two convocations do so"; and that "it is desirable in the interests of the Church that a joint meeting of the two houses of laymen should be held from time to time at Westminster."

The Ritualistic Crisis.—The controversy over ritualism was the predominant topic in all circles of the Church during the whole year. Mr. Francis Peek, in the *Contemporary Review* for January, charged certain of the bishops with ordaining candidates whom they knew, from the character of the colleges whence they came and of the churches to which they were to be appointed, would violate their obligations to use in service the forms prescribed in the Prayer Book and no other. Regarding the distribution of patronage by the present bishops, he claimed to show that they had appointed 28 supporters of ritualism as archdeacons, 25 to residentiary canonries, and 318 to honorary canonries; and 70 members of the Confraternity of the Blessed Sacrament to livings, with a pecuniary benefit to the ritualists of £47,000 a year. The writer further called on all friends of the Reformation to withhold contributions from those religious societies on whose boards members of the English Church Union are represented, and from the building of all churches "which are not protected from ecclesiastical patronage." A Churchmen's Council was formed in Liverpool, comprising about 100 clergymen of the dioceses and about 200 laymen, many of whom held the office of church warden; and a laymen's league, under the direction of which meetings were held in various parts of the city, and which had a bill drafted for the suppression of illegalities in the Church. A similar bill, drafted by the laymen's league, and approved by a committee of the National Club in London appointed to consider legislation in the Protestant interest, and also by the Church Association, dealt specifically, under the head of offenses, with the word mass, the issue of mass books, everything like compulsion in regard to confession, and all unauthorized rites, ceremonies, and services, and made them cognizable under two comprehensive clauses; contemplated the abolition of the episcopal veto, while granting the bishop not less than a month during which he could bring his own disciplinary powers to bear upon the offender; after the lapse of which period, upon the repetition of the offense, proceedings might follow before a lay judge, with an assessor appointed by the bishop. The bill provided that the trial be held at the nearest place to the one where the offense was committed. Any two members of the Church of England resident in the diocese might be the

complainants, they giving security for costs. The bill further provided that if judgment be obtained inhibition should follow immediately, except the offender give a written undertaking to discontinue the offense or offenses complained of. Failing such undertaking within three months, inhibition should result upon three judgments obtained against the same person within five years. An appeal to her Majesty in Council was given, and all power of imprisonment was abolished by the bill.

At a meeting held at the Church House, Jan. 11, under the auspices of the National Protestant Church Union, a memorial which had already been signed by many peers, members of Parliament, and clergymen, was adopted for presentation to the Queen. It affirmed that certain of the clergy had been engaged in the avowed purpose of undoing the work of the Reformation, and that mediæval doctrines and practices which have no place in the formularies of the Church had been introduced, and appealed to her Majesty to take steps to correct the evils complained of and prevent the reimposition of the sacerdotal yoke. (This memorial, signed by 3,900 Churchmen, of whom 31 were peers, 50 members of the House of Commons, 2,000 justices of the peace, and 1,300 clergy, was presented to the Queen on March 9.) A resolution adopted by the meeting declared that the persistent efforts widely made "to bring back into the Church of England doctrines and practices which had been deliberately rejected at the Reformation, and were identified with the Church of Rome, constitute grave danger, both to the country and to the Protestant reformed religion established by law." Another resolution suggested that should the bishops prove unable, by an exercise of the powers already intrusted to them, to remedy these evils, recourse should be had to further legislation. At a meeting of about 10,000 persons held in Albert Hall, London, under the auspices of the Church Association and about 50 other general and local Protestant societies, a demand was made for the application of the present laws to the suppression of lawless ritualism, and for new legislation to compel obedience to the law by removing the veto of the bishops and giving the laity free access to the courts of the realm. Notice was also taken of a book entitled *The Secret History of the Oxford Movement* as an offensive one, describing practices to which the attention of the Queen and Parliament should be given. At this meeting Lord Overtoun suggested that in the act of union England had pledged itself to Scotland to maintain forever the Protestant religion, and that Scotland would insist upon England fulfilling its part of the contract.

A conference of Churchmen was held April 28, the Bishop of Hereford presiding, for the purpose of forming a common basis of action between moderate High Churchmen, Broad Churchmen, and Evangelicals. Co-operation was pledged in maintaining by all lawful means the Protestant and comprehensive character of the Church, and in guarding "the great heritage of religious freedom and progress secured to the English people at the Reformation." The real presence believed in was declared to be purely spiritual, and no other to be recognized in the formularies of the Church. The doctrine of the ritualists was denounced as unscriptural and materialistic, and their ritual as hardly, if at all, distinguishable from the Roman mass. Opposition was pledged to the introduction of habitual confession to a priest and to the doctrine of the confes-

sion, and the bishops were appealed to to prevent clergymen from taking advantage of their positions to teach it, as well as to prohibit the reservation of the sacrament. The meeting expressed the opinion that the final determination of ecclesiastical cases should continue to rest with her Majesty in Privy Council, and declared opposition to the pretension put forth by some of the clergy that the law of the Church in spiritual matters is to be authoritatively interpreted by the clerical order alone. A representative committee was appointed to carry out the objects of this movement.

A resolution was adopted at the *conversazione* of the Church Association in May expressing astonishment and alarm at the failure of the archbishops and bishops to take action and at their inadequate treatment of the whole question.

A Ladies' League for the Defense of the Reformed Faith of the Church was formed in May. It saw the chief danger of the Church in the teachings rather than practices of ritualism, and, disclaiming all partisan or political views, purposed to approach the great questions at issue from the religious side and by educational means.

Letters of Sir William Harcourt.—An important feature in the controversy was the publication in the Times of London of a series of letters by Sir William Harcourt, dealing with the various aspects of the discussion, and giving prominence to legal points involved in it. In the first of these letters the writer criticised the proposal made by the archbishops to have disputed cases argued before them personally or by counsel as insufficient, because such a course would deal only with questions of rubric and not of doctrine; because the decisions of the archbishops would have no binding power; and because the cases, having to be carried there by the bishops, would probably never get before the archbishops. In a second letter he marked out a line of action to be taken in dealing with lawless clergy. His plan was first to ascertain the facts and to establish the real nature and extent of the operations of the "Catholic revival" by obtaining specific statements from each parish of what practices were in use which had been declared illegal by the courts or condemned by the bishops; by the establishment in each diocese of a regular organization for obtaining trustworthy reports on these, and then pressing these reports on the attention of the bishop, and demanding his action, or, in the alternative, liberty to proceed. The plan also contemplated that the diocesan organization should secure reports not only on the services in churches, but also on the publications circulated among congregations, and especially among children of the Church schools.

Claims of the Ritualists.—At a meeting connected with the anniversary festival of the English Church Union, Feb. 23, the Rev. T. O. Marshall, organizing secretary, spoke of the situation as being the case of the Church being governed by the man in the street—by public opinion—"but they could not submit to that." The Rev. G. Bayfield Roberts, vicar of Gloucester, said "they wanted it to be remembered that they were the Catholic Church of England, and if the assertion of that principle was dependent on bringing the bishops out of the House of Lords and bringing about disestablishment and disendowment, then in God's name let the bishops go out of the House of Lords; let disestablishment and what they called disendowment . . . come; but let them still hold true to the Church of Christ."

At a meeting attended by at least 220 incumbents, held at the Holborn Town Hall in January, with the object of which a large number of others expressed sympathy, the reservation of the sacrament for the *bona fide* purpose of communicating the sick and the dying and the ceremonial use of incense were declared to be laudable practices of the whole Catholic Church of Christ, both included in the directions contained in the ornaments rubric, the right to which could not and must not be abandoned.

The Manifesto of the Church Union.—A meeting of the English Church Union was held in London, Feb. 28, and was largely attended by men prominent in every sphere of life, all active Churchmen. Lord Halifax, president, addressing the meeting, spoke of the agitation as one which necessitated the united action of their union. What would be indifferent to them if it only touched themselves, he said, ceased to be indifferent when it touched the Church of England, and for the sake of the Church and for the sake of the truth it behooved them to make some such reply as their countrymen should understand. He denied that they were lawless in regard to the authority of the Church, and of the bishops administering Church law on Church principles, but admitted that they pleaded guilty of lawlessness in regard to the authority of the Privy Council and of courts subject to its jurisdiction when they interfered in spiritual matters. The following memorial was unanimously adopted:

"We, the clergy and laity of the English Church Union, have been publicly accused of lawlessness and disloyalty.

"We might have disregarded such accusations if they had been directed only against ourselves; we can not disregard them when we see them used to damage the Church of England, to the service of which we are pledged.

"It was open to the rulers of England in the sixteenth century to have thrown in their lot with the foreign Reformers, and to have established a new religious body in the place of the ancient English Church. They did not do so. With one voice they rejected all idea of separating themselves from the Catholic Church. They disclaimed all intention of dissociating themselves from 'the churches of Italy, France, Spain, and Germany,' except in such particular as these churches had themselves departed from primitive antiquity.

"They declared that nothing was to be taught except what could be collected from the Catholic fathers and ancient bishops. They justified their position by an appeal to Holy Scripture and primitive custom. In the sphere of government they claimed for the Crown only such power in respect to the Church as had always been claimed by the sovereigns of England—namely, to see legal justice administered in regard to all persons and causes, free from any foreign interference. In the sphere of doctrine and religious observance they rejected all changes which 'struck at any laudable custom of the whole Catholic Church of Christ.' The ordinal provided for the continuance and succession of the priesthood as it had hitherto been understood and received. Provision was made that 'the chancels should continue as in times past,' and the ancient vestments used by the clergy 'in all times of their ministrations' were enjoined.

"What have we said or done that is not in strictest harmony with these requirements?

"We have asserted, and we assert again, that the Church of England can not consistently with her principles release herself from the obligations

imposed upon her by her relation to the rest of the Catholic Church.

"We have maintained, and we shall continue to maintain, that the doctrine, discipline, and ceremonial of the Church of England, as they have at any time during the course of her history been prescribed by her, remain in force and operation except in such specific instances as they have been changed by her own authority.

"We have denied, and we deny again, that a new religious establishment was set up in England in the sixteenth century.

"We have denied, and we deny again, the right of the Crown or of Parliament to determine the doctrine, the discipline, and the ceremonial of the Church of England.

"We are content, if need be, to suffer for these things, and to suffer gladly. What we are not content to do is to sacrifice the rights and liberties of the Church of England to popular clamor and ignorant prejudice.

"If the nation, at a moment when the Church is doing more for souls, both at home and abroad, than at any previous time, is no longer prepared to recognize the Church of England on the lines which have always been hers, so it must be. We shall protest against the spoliation of the Church, but we are not prepared to barter the principles of the Church for the sake either of establishment or endowment.

"It is hateful to us even to seem to be in opposition to our bishops.

"We claim no right to introduce new ceremonies or novel doctrines at our own good pleasure, but we do claim that the rights of the Church of England shall be respected, and that matters which, in view of all the circumstances of the case, may rightly be subjects for regulation shall not be condemned on a principle of interpretation to which it is impossible we can assent.

"We can not admit, in view of the history of the Church of England, that any interpretation of the rubrics of the Book of Common Prayer can be legitimate which relies on the principle that omission to prescribe is equivalent to prohibition to use. Neither can we admit that arguments founded on nonuser, however long and continuous, can be legitimately adduced as evidence of what the Church of England forbids or enjoins.

"A church which, prescribing a service for Ascension Day as full and as particular as that ordered for Christmas and Easter, has yet for long periods of time acquiesced in a general neglect of Ascension Day has no continuous tradition or practice which can be appealed to as evidence of what it enjoins or forbids.

"We insist that it is for those who assert that certain usages formerly prevailing in the Church are not covered by the ornaments rubric to prove that they are forbidden, not for those who uphold those usages to show that they are explicitly ordered.

"We submit that when the use of the English Prayer Book was first enjoined it was used by a clergy accustomed to the traditional way of performing the services of which the Prayer Book was for the most part a translation and adaptation. Such clergy would inevitably be guided in the use of the new service book by their practice under the old. What was legitimate then can not be illegitimate now.

"These are the principles which the members of the union have maintained in the past; they are the principles they will continue to maintain in the future. Relying upon them, we earnestly beseech the rulers of the Church not to use their

spiritual power to curtail the glory and the splendor of the services of God's house on earth by imposing on the Church a narrow and disputed interpretation of the rubrics.

"We no less earnestly entreat the rulers of the state not to incur the risk of certain disaster by encouraging any legislation which should aim at enforcing upon the Church in England the decisions of secular courts in spiritual matters."

Action of the House of Commons.—This manifesto of the Church Union was the subject of debate in the House of Commons, April 11, when Mr. Balfour spoke in condemnation of the position assumed by the ritualists. A resolution was passed by a vote on division of 200 to 14 deploring the spirit of lawlessness shown by certain members of the Church of England, and advising that clergymen, before obtaining preferment from the Crown, be required to promise obedience to the bishops and the Prayer Book, and also to "the law as declared by the courts which have jurisdiction in matters ecclesiastical."

Reply of the Church Association.—In a reply to the manifesto of the English Church Union, issued in March, the National Protestant Church Association set forth that the points in dispute were not for the most part matters concerning which there had been mere "omission to prescribe," but matters "which were carefully and deliberately rejected, after mature consideration, by the Church at the revision of the Prayer Book, and are further condemned in the articles and other formularies." And it concluded: "It is vain to imagine establishment without at the same time being subject to a certain degree of state control. Nor can the state, having conceded to the Church very great privileges, on the condition that certain doctrines were to be taught and a particular form of Church government maintained, permit the clergy to contravene those doctrines and repudiate the contract with the state, by which alone they are secured in their offices and emoluments. This is really the question at issue."

Positions of the Queen and the Prime Minister.—A statement was made in the Leeds Mercury in January, in connection with a visit made by the Bishop of Winchester to Sir William Harcourt, that her Majesty was much concerned about the dissensions in the Church, and strongly desired that before any legislation was attempted an understanding should be arrived at between the Government and the bishops, so that such changes as were considered necessary might be carried through with the least possible delay and friction. While she had always taken a deep interest in Church government and discipline, her Majesty was quite unaware until the present agitation of the extent to which the new doctrines and practices had been introduced into the national Church. She was distressed at the chaos revealed, and was prepared to do all in her power to restore peace to the Establishment.

While the controversy was at its height, April 29, Lord Salisbury wrote, in a letter expressing sympathy with the anxiety expressed by his correspondent, that "great dangers and evils are before us unless it shall be found possible to restore the discipline which has been so seriously impaired. The archbishops and bishops, with whom in this matter the primary responsibility lies, are doing their utmost to bring the Church back to a sound condition in this respect. Their efforts to effect this object and to restore a respect for the laws of the Church, which in some quarters has been forgotten, deserve the hearty support of all Churchmen."

Hearing before the Archbishops.—The archbishops announced, Jan. 20, in order, as they declared, to give more confidence to the clergy and laity that their views and opinions would be fully considered; that where doubt existed as to the interpretation of the law of the Church either archbishop would be prepared to hear cases arising within his own province argued by the party interested or by counsel. In order to guard against contradictory decisions in the two provinces, neither archbishop would pronounce his decision without consulting the other.

In accordance with this proposition the Archbishop of Canterbury, with the Archbishop of York as adessor, sat at Lambeth Palace, May 8 and the followings days, to hear cases that were submitted to him by the Bishops of Norwich and of London. The proceeding was of the nature of an informal reference, having no sanction of law, and it was not expected that the opinions, advice, or command of the primate would have the effect of a judicial decision. It was regarded rather as an informal effort to determine questions of ritual and to restrain irregularities without resorting to the secular courts, and the result was expected to have great influence as a disciplinary in distinction from a judicial pronouncement, coming from the highest ecclesiastical authority. Two cases were presented, involving questions of the use of incense and of processional lights. In the one case the Bishop of Norwich had prohibited the Rev. Edward Ram, of St. John's, Timber Hill, Norwich, and in the other the Bishop of London had prohibited the Rev. Henry Westall, of St. Cuthbert's, Philbeach Gardens. A printed brief of 173 pages had been prepared, common to the cases of both clergymen, full of historical and antiquarian matter. The cases were considered from the ecclesiastical point of view. The case of the Rev. Edward Ram was heard first.

A hearing in the second case, that of the Rev. H. Westall, of St. Cuthbert's, Philbeach Gardens, was held June 7 and the following days. The case involved the question of the legality or illegality of the use of lights—not of lighted candles upon the altar, but of lighted candles in candlesticks—or of tapers in processions or on the credence table, or elsewhere than on the altar.

The judgment of the archbishops in both cases was pronounced July 31. It began by setting forth that with reference to the two questions before them—the lawfulness of the liturgical use of incense and the lawfulness of carrying lights in procession—there was no direction in the Prayer Book either enjoining or authorizing either of these two practices. Nothing, however, could be clearer than the words used in the act of 1559 prohibiting the use of any ceremony not ordered in the Prayer Book. Specifically, as to incense, there was nothing to prevent its use for fumigating or sweetening purposes in the Church. But this had no bearing on the liturgical use. The conclusion on this point was, then, that "the use of incense in the public worship and as a part of worship is not at present enjoined nor permitted by the law of the Church of England, and it is our duty to request the clergy who so use it to discontinue that use." As to lights in processions, there was no authority for such processions, and they were therefore neither enjoined nor permitted. They might light up a Church to add to its beauty, but the ceremony of carrying lights about was of a different character. "And in this case, as in that of incense, we are obliged to request the clergy to

discontinue what the law of the Church of England does not permit. . . . In conclusion, we think it our duty to press not only on the clergy who have appeared before us, but also on all the clergy alike, to submit to episcopal authority in all such matters as these. All alike have consented to the Book of Common Prayer, and the Book of Common Prayer requires all persons, not only if they doubt, but if they find that others disagree with them concerning the meaning of the directions contained in the book, to resort to the bishop of the diocese, who may, if he thinks fit, send the question to the archbishop for his decision. In order to give the fullest opportunity to any who diversely take any question of this kind to give reasons for their opinion, we have suspended our decision until we had heard the matter fully and learnedly argued before us, and we have now given our opinion as the Prayer Book requires us to do. We entreat the clergy, for the sake of the peace of the Church, which we all so much desire, to accept our decision thus conscientiously given in the name of our common Master, the Supreme Head of the Church, the Lord whose commission we bear."

The bishops generally communicated the substance of the opinion of the archbishops to the clergy of their several dioceses, and advised those who used the practices aimed at in it to discontinue them. Among the bishops supposed to be in sympathy with the ritualists, the Bishop of Rochester, while he did not conceal his sympathy, pointed out in his epistle that "the only right and loyal course for the clergy and the congregations concerned is to obey, and to be forward to obey, the grave and deliberate ruling by the highest authorities in our Church, and the admonition or wish by which that ruling is accompanied. A considerable number of the ritualistic clergy made modifications in their services, indicating a respect for the letter of the advice given them by their bishops. A few refused to obey.

According to a statement made in the Record newspaper, there were at the time the opinion of the archbishops was pronounced 289 churches in English and Welsh dioceses where incense was used, and therefore vitally affected by the decision.

An expression made by Lord Halifax, president of the English Church Union, after the decision was made, deprecating it as "the greatest misfortune that has fallen on the Church since the rise of the Oxford movement," provoked much comment. Advice given by him to laymen to obey their immediate clergy whatever their decision may be was interpreted as meaning that clergymen who refused to obey their bishops should be supported in doing so. This led to the withdrawal of several members from the Church Union, among them Dean S. Reynolds Hale, of Rochester, a very popular and influential clergyman.

The Church Congress.—The thirty-ninth annual meeting of the Church Congress was held in London—this being the first time in its history that the body has assembled in the metropolis—beginning Oct. 10. The civic welcome was given in St. Paul's Cathedral, with a sermon by the Archbishop of Canterbury on The Failure to achieve the Unity of the Church. Other sermons were preached at Westminster Abbey by the Dean of Christ Church on The Kingdom of Christ, and in St. Mary Abbots, Kensington, by the Bishop of Peterborough, on The Presence of Christ with his People. The presidential address was delivered at Albert Hall by the Bishop of London, and had for its subject the question,

How can the Church best do its Work for the World? The first topic for stated discussion was The Church in London in this Century: Its Progress and its Needs, as bearing upon which the Archdeacon of London gave a review of the history and characteristics of The Diocese of London: The West and the City, and the Bishop of Stepney spoke of the Church in East London. The subject of The Church and the Laity: The Place and Work of the Laity in (a) Church Services and Parochial Organization, (b) the General Government of the Church, was spoken on by Mr. G. W. E. Russell and Mr. T. Cheney Garfitt on the first head, and the Dean of Norwich and Canon Gore on the second. The subject of The Church and her Services was discussed under the heads of The Principles of Ritual, The Question of maintaining a Type of Anglican Service, and the Limits of Possible Variations. In this discussion, after a paper on The Principles of Ritual, by the Rev. Principal Robertson, of King's College, London, Lord Halifax, President of the English Church Union, and one of the foremost representatives of the ritualistic party, made a presentation of their case as that of conscientious worshippers, asking for a generous and hearty indulgence in efforts to enrich the service of God with an appropriate ritual derived from the early Middle Ages (approximately the thirteenth century), when the art of ritual culminated and before it degenerated into overelaboration. He was followed, after a paper by the Venerable B. Cheetham, Archbishop of Gloucester, by an address on the opposite side by Prebendary Webb-Peploe, Secretary of the National Protestant Church Association, an equally prominent representative of the antiritualists, who took the position that whatever was foreign or repugnant to the national instincts should, so far as possible, be avoided, and that whatsoever accorded with or developed those instincts might be encouraged by those in authority, provided always that limits of charity, decorum, and general utility be observed; and applied this principle to the various aspects of the ritualistic question. On the subject of The Church and the Divisions of English Christianity—(a) the History of Non-conformity in this Century and its Influence on the Life and Work of the Church, and (b) the Possibilities of a Better Understanding in the Future, papers were read or addresses made by Prebendary Wace, Canon Overton, the Rev. W. H. Hutton, the Dean of Canterbury, the Archdeacon of London, the Dean of Ripon, the Rev. C. L. Engstrom, and the president.

Other subjects discussed were: The Evangelization of the World, Within the Empire and Beyond the Empire, The Church and Modern Society (including Speculation and Gambling, Certain Needful and Needless Sunday Employments, and Sunday Amusements), The Working Women in the Church, Purity and Temperance, Impoverishment of the Clergy and its Remedies, The Church and Education, The Church in Wales, Experimental Religion: Its Doctrinal Character and Foundation (a) as set forth in Holy Scripture and (b) as expressed in the Book of Common Prayer; and The Church and Social Questions—(a) Relations of Economic Knowledge to Christian Charity, (b) Conciliation to Labor Disputes, (c) Old-age Pensions, and (d) Housing of the Poor. An evening mass meeting of men was addressed by the Archbishop of Canterbury. The closing service of the conference was held in St. Paul's Cathedral, Oct. 13, when a sermon was preached by the Bishop of London. After the formal closing of the congress proper, affiliated

meetings were held, Oct. 14, for young people and for choirs and choral societies.

ANTI-WOMAN-SUFFRAGE MOVEMENT, THE. Theories advanced in the writings of Jean Jacques Rousseau gave the first inspiration to the idea of woman as a voter. He held that only the savage is free, and if there needs must be society the individual, not the family, is its unit. During the French Revolution Condorcet and Sieyès proposed that the ballot be given to woman, and their theories influenced Mary Wollstonecraft. Her *Vindication of the Rights of Woman* was at once admired and condemned. Sympathy with the Revolution took her to Paris, where she was deserted by her American lover. Freedom from the marriage tie was considered a necessary part of the scheme for equal rights, as it was thus proclaimed; but society opposed it and compelled Godwin to wed Mary Wollstonecraft and Shelley to wed her daughter. About 1820 Frances Wright, who is called "the pioneer woman in the cause of woman suffrage," came to the United States from Scotland. She lectured throughout the country, and established in New York city, in connection with Robert Dale Owen, a newspaper called *The Free Inquirer*. It was devoted to the promulgation of communism, materialism, and state socialism. She attacked state and church as the enemies of woman, and state and church took instant alarm. A party arose, calling itself "The Christian Party in Politics," to oppose her doctrines. In 1836 Ernestine L. Rose, an exiled Pole, came to this country to lecture. She was an extreme communist, and had presided in Europe over a body called "An Association of All Classes of All Nations, without Distinction of Sect, Sex, Party, Condition, or Color." She also was a pioneer advocate of woman suffrage, and opposition to her teachings was strongly felt and openly manifested.

In 1840 the Antislavery Association was broken up by the determined effort of a few radical women to be heard publicly in its councils. In that wing of the abolition party which established "communities," which held that all human government is sinful because it is founded on force, the woman-suffrage theory found lodgment and open advocacy. It attacked the home and the state, as well as the church, in the supposed cause of woman. The state and the home looked upon these radicals as sincere but misguided enemies, and the community life was frowned out of existence.

In 1848 a convention was called to meet in Seneca Falls, N. Y., to discuss "the social, civil, and religious condition and rights of woman," and the teachings of fifty years had culminated in the inauguration of a movement in which possession of the ballot by women was the main thing to be struggled for. Strong disapproval was expressed by women of the land who were foremost in education and philanthropy—by Catherine Sedgwick, Hannah F. Gould, Catherine Beecher, Sara Josepha Hale, Dorothea Dix, Harriet Beecher Stowe, Emma Willard, Lydia H. Sigourney, and Mary Lyon—but the first formulated protest against woman suffrage was sent to the Massachusetts Legislature, in 1860, by 200 women of Lancaster. They prayed the Legislature to refrain from forcing the vote upon women, because "it would diminish the purity, the dignity, and the moral influence of woman, and bring into the family circle a dangerous element of discord."

In 1868 and following years frequent protests were sent from women to the Illinois Legislature.

In 1870 a protest was sent to the Ohio Legisla-

ture from Oberlin College. Mrs. Henry O. Houghton, of Cambridge, Mass., for years conducted an organization that confined itself to issuing protests to the Legislature and to an occasional printed appeal. In 1871 a movement, largely inspired by Emma Willard, was inaugurated by Mrs. Dahlgren, widow of Admiral John A. Dahlgren. Associated with her as officers were Mrs. William T. Sherman and Mrs. Almira Lincoln Phelps. These ladies presented a protest to Congress, signed by 15,000 women, many of them notable, representing every walk in American life. The protest gave the following reasons:

"Because Holy Scripture inculcates a different, and for us higher, sphere apart from public life.

"Because as women we find a full measure of duties, cares, and responsibilities devolving upon us, and we are therefore unwilling to bear other and heavier burdens, and those unsuited to our physical organization.

"Because we hold that an extension of the suffrage would be adverse to the interests of the working women of the country, with whom we heartily sympathize.

"Because these changes must introduce a fruitful element of discord in the existing marriage relation, which would tend to the infinite detriment of children, and increase the already alarming prevalence of divorce throughout the land.

"Because no general law, affecting the condition of all women, should be framed to meet exceptional discontent."

These ladies conducted a journal of protest for several years. Individual States had thus made quiet resistance, but it was not until 1894 that organized effort to combat the suffrage movement was begun.

By that time the situation had become confused. Many of the claims of suffrage advocates had apparently blended themselves with the progress of a century that has been notable for women's advancement. First Mormonism, and then the rise of the Populist party, had carried constitutional suffrage for woman into three States of the Union. In May, 1894, the Constitutional Convention of New York met in Albany. The suffragists asked that an amendment, striking the word "male" from Article II, section 1, of the State Constitution, be submitted to the people at the next election. A woman in Brooklyn, in the midst of the cares of a young family, began to call the attention of her friends to what seemed to her a grave danger, and she stirred sentiment so deeply that a meeting was called and action was decided upon. New York women were also interested, and a committee of six were placed in charge of a petition of protest. In less than three weeks this was forwarded to the convention with 7,000 names appended, nearly 3,000 of which were wage-earners. The protest said:

"The signatures attached are those of women who have given serious and intelligent thought to the subject, and who have become convinced that the movement for unlimited suffrage, if successful, would undo much of the good which earnest effort and untiring philanthropy have achieved for their sex in the past twenty years. We have held no public meetings, have made no speeches, conducted no campaign, have made no effort to impress the convention by mere number of names. We have accepted the signatures of no men, of no women under twenty-one years of age, of no aliens or nonresidents of the State. The signatures are confined to no class, and represent only those women who are so seriously concerned at the mere possibility of what they consider a most alarming proposition that they have come for-

ward voluntarily to record their dissent. We respectfully submit that, notwithstanding the vigorous agitation of the question and the attempt by suffragists to arouse public opinion through the press and otherwise, there is among the women of this State a profound indifference on the subject, and that until a practically unanimous expression of opinion in its favor is given the convention will not be justified in considering the radical change demanded by a small number of women who regard themselves as the special advocates of the rights of their sex."

This statement was signed by Mrs. Francis M. Scott, Mrs. Clarence E. Beebe, Mrs. David H. Greer, Miss Eleanor G. Hewitt, Mrs. Arthur M. Dodge, Mrs. George White Field, Mrs. Richard Watson Gilder, and Miss Florence Lockwood. The convention decided not to submit the amendment.

In April, 1895, the Association Opposed to the Extension of the Suffrage to Women came into being in New York city. The reason therefor is set forth in its first annual report, which says:

"It is just two years since the energetic labors of the woman suffragists to induce the Constitutional Convention to pass favorably upon a suffrage amendment first roused the women of this State into active protest. When the deliberations of that body resulted in a decision to abide by the existing suffrage regulations the storm and stress of violent discussion which had wearied the minds and ears of the community was followed by a sudden quiet. The fact that a constitutional convention is held only every twenty years led to the mistaken statement, made in newspapers and elsewhere, that this vexed question of woman suffrage would not again be presented for legislative action for that period of time.

"In spite of the decision of the Constitutional Convention, the work of the woman suffragists upon the Legislature was begun early last year. Very little attention was paid to their quiet prosecution of their work, either by the general public or by those women who only a few months before had emphatically put themselves on record as against the false idea of progress indicated by the course of these same woman suffragists. It was not until the fact that the suffrage amendment, or concurrent resolution, as it is called, had passed the Assembly and reached the Judiciary Committee of the Senate, with every prospect of passing there, was brought to the attention of the original Executive Committee who had charge of the protest sent to the Constitutional Convention, that it was realized that our work was not finished, but only just begun. A meeting of the disbanded Executive Committee was hastily called, and it was determined to oppose the contemplated action of the Legislature. After advising with a member of the Senate Judiciary Committee, it was considered best to send one of our number to appear before them. This was in response to the statement that no woman had ever been heard in opposition to the proposed amendment in all the years it had been before the Legislature, leaving us to infer that the Legislators could not be blamed if they believed those who did appear when they asserted that they spoke for all intelligent and educated women.

"At the meeting of the original Executive Committee referred to the necessity of organization was appreciated, and the determination reached to form a permanent association to take charge of the work which again pressed upon us, and thereby to create a channel into which should

flow naturally that gathering flood of strong feeling, opinion, and judgment which demands that woman should be left free to develop along the lines indicated by Nature and its logic; free to exercise the qualities specially hers; free to supplement or lead the work of her brothers in all the ways from which Nature and its logic have shut them out.

"Twenty out of the 45 States have already written, asking information, expressing sympathy and encouragement. The interest aroused in our own State was so immediate and so great that it was found that some system of organization was necessary in order that our association should grow symmetrically. The simplest, and so the best, that was suggested was to take the already defined eight judicial districts of the State as a first form of division. Each one of these judicial districts is formed of a number of counties, excepting the First, which comprises only the city and county of New York. This plan was adopted. In each one of these districts a prominent city has been selected, and there the association formed is called an auxiliary, and is numbered according to its district. The other associations formed in cities and towns are called branches.

"We have subdivided this First Judicial District into a number of branches, eight of which have been successfully formed, and more are preparing to take up the work in the near future. The result of this general organization, which was begun in January, has been a great increase of interest and membership. On Jan. 1 we had 532 city members; we now number 1,406.

"This encouraging result makes it plain that when the women are reached quietly and systematically they are glad to record themselves on our side, and have heretofore only lacked the opportunity. In the nature of the case the women who feel with us are not an aggressive sisterhood. They are not clamoring for anything; their every instinct is against loud and public demands. But once approached, and the need of concerted action made plain, there has been generally found a willing, and sometimes an eager desire to give us the weight of their names and the encouragement of their sympathy. The interest, as expressed both by letters and interviews, is very great, and in an emergency there are large numbers of women who, while now preferring simply to register themselves as members of the general association, are ready to take up the active work necessary to defeat legislation should an emergency occur. This association has as a reason for its existence the determination to make such emergencies impossible. It is our desire never again to let it happen that a small proportion—a bare 10 per cent. by the largest claim the woman suffragists ever made—of the women of this State shall assume to speak for all, or even a majority. We believe, and might almost say we know, that this association is the voice of the majority of the intelligent and thinking women of this State, and as such is prepared to stand between the unwise, socialistic, and illogical demands of the woman suffragists and the unwise, hasty, and inexpedient action of the Legislature.

"During the year we have received 500 letters from 200 different people; we have sold 360 sets of pamphlets and given away 41 more, each set containing 9 different pamphlets; of single pamphlets, 5,412 have passed from the hands of our secretary into those of eager readers. Since our appearance before the Senate Judiciary Committee last spring this matter has finally begun to be recognized as not a joke or a bit of harmless

courtesy, but a grave social and political question (foreboding much and threatening more). Massachusetts has joined hands with us in offering encouragement and assistance to those other States where the desire is felt to arrest this retrogressive movement, and from all over the land come words of thanks, of help, of indorsement."

The following document, which was addressed to the Senators and Representatives of the Massachusetts Legislature of 1898, will show that the antisuffrage sentiment of that Commonwealth was organized about the same time with that of New York, and will explain their methods and indicate their progress:

"We the undersigned, members of the Executive Committee of the Massachusetts Association Opposed to the Further Extension of Suffrage to Women, beg leave to bring to your attention a brief statement of the work of this association, which has 18 branch committees, representing 146 cities and towns. The association was organized in May, 1895, after the passage of the Wellman bill. It took the ground that 'municipal suffrage would involve a danger to the State for which no compensating advantages were shown; that the present division of labor between the sexes was founded on the laws of Nature and reason, and it affirmed that a higher standard of public duty for both men and women must be brought about by advance in education and civilization, and would be impeded by the complications arising from municipal suffrage for women.'

"Acting on this belief, a standing committee of more than 100 representative women from Boston and other parts of the State was organized. This committee forms the basis of the association, and chooses annually an Executive Committee. From the Executive Committee as a center radiate the branch committees. Each branch committee forms a center for neighboring towns, and keeps in frequent correspondence with the Executive Committee. Our growth has been rapid, although our methods are quiet.

"We aim to give an opportunity to women who agree with us to express their convictions; to arouse an interest in the subject among those who have not considered it, or who, perplexed by statements and appeals from suffragists, which do not convince them, are in an undecided condition of mind. All are included in our membership—professional women, wage-earners, home-keeping wives, and mothers. We all have the same needs for good government, for higher standards of public life, and for a deeper recognition of the fact that 'the family remains the most sacred, durable, and potent of human institutions, and through it must be sought the replenishment and improvement of society.' By lectures and informal meetings, by the circulation of literature expressing our convictions, and by giving a constant and cordial support to whatever encourages the true progress and welfare of women, we try to do our part in the great educational movement of the day.

"We believe that it should not be thought solely women's work to study this question of suffrage, but that its serious consideration is a duty which men owe to their families and to the State.

"We gratefully acknowledge the support given by previous Legislatures to the claims represented by this association, and we earnestly request a continuance of careful consideration of the views of the opponents of the further extension of suffrage to women." [Signed by the Committee.]

The progress of the opposition movement can be best traced by quoting from the next annual

report of the Central Association, in New York, April 1, 1897:

"The appeals for help from the women of other States, who are just awakening to the fact that in order to defeat they must oppose woman suffrage in their own States, have been constant and earnest during the year. The most earnest demand for assistance has been from Illinois, and your Executive Committee has decided that an association in Chicago should be started immediately. If the suffrage question is gaining strength anywhere, it is in the West.

"The first important matter undertaken by this association during the summer was accomplished by the presence of Mrs. Crannell, of Albany, at the national conventions at St. Louis and Chicago, in opposition to the suffragists who were petitioning for suffrage planks in the platforms of the Republican and Democratic parties. Mrs. Crannell represented not only New York State, but Massachusetts and 14 other States.

"During the summer our secretary was busy with correspondence with people in various States, who, learning that New York had a large organization opposed to suffrage, desired information, pamphlets, and advice. The most important part of this correspondence came from California, the only State which during the year has sent the question of suffrage to the people. It was defeated at the November elections by a large majority—83,000 to 57,000—after a regular campaign organized and carried on by some of the best known suffragists, who stumped the State in every county, and brought every private and political influence to bear that they could command. The Legislature has since defeated, by a vote of 25 to 2, a bill to resubmit the question. The other States that have defeated woman suffrage during the year are Montana, by the Legislature, 41 to 27; Nevada, by the Senate, 9 to 5; Nebraska, by the Legislature, 56 to 36; Arizona, by the Assembly, 13 to 9; Oklahoma Territory, by the House, 13 to 11; Massachusetts, by the House, 86 to 53; Delaware, by the Legislature, 17 to 7; Maine, by the Judiciary Committee, unanimous against; Iowa and Missouri both defeated the question; Connecticut in both houses; Indiana, the question of the right of women to vote under the present Constitution taken to the Supreme Court and defeated; in Kansas, where women vote in municipal elections, the lower house killed the bill giving them the right to vote for presidential electors. Outside of our own country, in Nova Scotia, the House voted 23 to 5 against it; in England, the House of Commons 228 to 157; and in South Australia, where women are allowed to vote on most questions, the Federal Convention rejected, by a vote of 23 to 12, an amendment to allow women to vote for members of the House of Representatives. The suffragists have gained their point in Idaho by a vote of the State, 12,126 to 6,282. The question went to the Supreme Court on the ground that only one half the people voted, but the vote was upheld.

"Within our own State our work has progressed more slowly than we could have wished, owing to changes in the Executive Committee, the work done for other States, and the feeling that there was no need for anxiety this winter, owing to the avowed intention of the suffragists to do nothing here until next year. In May Auxiliary No. 4, Schenectady, was organized, and in February the sixth branch of the central organization.

"The Committee on Publications has had the more important pamphlets and leaflets bound in

volumes, and sent to 50 of the most prominent public libraries in the State, and has received a large number of letters expressing appreciation of the convenience of these volumes for reaching the general public. Our literature has received some valuable additions through the Albany auxiliary, the Massachusetts Association, and the Remonstrants of Illinois. A very large number of leaflets has been sold or distributed by the secretary, especially in other States.

"In January a petition was sent to the Legislature praying it not to strike the word 'male' out of Article II, section 1, of the Constitution, and a set of our pamphlets was sent to every member of the Senate and Assembly. On March 24 Mrs. Francis M. Scott, with several other members of the Executive Committee, appeared before the Judiciary Committee of the Senate to protest against the same change in the Constitution. Mrs. Scott's arguments were listened to with interest, and in spite of the large number of prominent suffragists who appeared in favor of their petition the bill to report the question to the Senate was 'killed in committee.' On April 14, when a number of us appeared, ready to speak for our side in a hearing appointed before the Judiciary Committee of the Assembly, we were informed that there was no need our being heard, as the bill had met the same fate in the Assembly committee that it had in that of the Senate. This, we think, is really a gain, for when we remember that two years ago both committees reported favorably, and that Senate and Assembly both voted in favor of the question going to the people, we have reason to think that our appearance, with a strong, earnest association behind us to oppose the submission of the question to the people, had influence with the committees."

In the annual report for 1898 work among wage-earners was reported which proved that, save in socialistic-labor circles, the working woman in New York does not desire the ballot. "Opposition to woman suffrage was organized in Iowa. Manhattan reported an enrollment of 2,000, Brooklyn of 900, while in the entire State the membership reached into the tens of thousands. No paper for signatures was circulated at meetings among working people or other assemblies gathered to hear our arguments." This report mentions that for 1899 Manhattan had distributed 13,544 pamphlets, Brooklyn 3,720, and Albany auxiliary 20,000. On Feb. 22 of that year a joint hearing was given the association before the Judiciary Committees of the Senate and Assembly. Before December, 1899, there were anti-suffrage associations (besides those mentioned) in South Dakota, Washington, California, and Oregon. Oregon has organized to protest against the passing of a suffrage amendment that is to be submitted to the people in June next. In their address to the voters the women say:

"We believe that only a small percentage of the women of our State ask for or desire the ballot. Our school elections prove, as do those of every State in the Union which permits women to vote at such elections, that the great majority of Oregon women do not use the ballot even in school matters, in which they may be presumed to take special interest on account of their children. We believe that the majority should rule in this as in other political matters, and that a small though eager minority of our sex should not force the ballot (and its attendant privileges of sitting on juries and running for offices) upon the far larger number of women who do not desire to vote. We have no quarrel with our suffragist sisters, but we protest against their being

regarded as representatives of the true opinion of Oregon women upon this vital subject. We also believe that the adoption of this suffrage amendment would necessarily lead to serious complications in both the political and social conditions of the State, and that such complications would be harmful to the State in every way."

In their address to the women they say: "The entrance of our sex into politics would not raise or purify politics; it would only lower women instead. Woman's influence and woman's sphere are larger now than she can fully use or fill. Our true career lies in developing and enjoying what we already possess, not in grasping restlessly for a vain shadow of power. 'The hand that rocks the cradle rules the world.'"

The main points of the antisuffrage argument are the following:

Recognition of a fundamental difference between men and women, which reveals the fact that their Maker has appointed them to different tasks of equal dignity and value. Recognition of the fact that the suffrage theory, carried to its natural, inevitable conclusion, would array woman against man, and that such a catastrophe could only end in destruction of every principle of human hope or progress. Recognition of the fact that woman suffrage is based on principles that are at war with a republican form of government, and would, if attempt were made to put the ballot into woman's hand to any serious extent, endanger the freedom whose first object is now the protection of woman. Recognition of the fact that woman's progress has been steady and most in accord with Christian civilization where she has not had the ballot and has least desired it. All these positions the women who are carrying on a steady, unassuming work of opposition say they are prepared to maintain by argument and illustration.

The secretary of the Central Association is Mrs. George Phillips, No. 445 West Twenty-first Street, New York.

The first published book opposed to woman suffrage was Horace Bushnell's *Woman Suffrage: The Reform Against Nature* (New York, 1869). A later and much more comprehensive treatise on the subject is Helen Kendrick Johnson's *Woman and the Republic* (New York, 1897). Pamphlets opposing the extension of suffrage to women have been written by Goldwin Smith, Francis Parkman, Abram S. Hewitt, Mrs. Schuyler Van Rensselaer, Francis M. Scott, Rossiter Johnson, Helena De Kay Gilder, Edward Drinker Cope, and others, and have been printed and circulated by the association.

ARCHÆOLOGY. *American.*—The American Archaeological Institute has been very efficient in encouraging exploration of antiquities in Italy and Greece, and has co-operated with the American schools at Rome and Athens, under whose direction much information has been systematically collected and verified respecting many of the ancient cities and their life and art. For the sake of drawing these three institutions into closer union meetings of their councils or executive committees have been arranged to be held at the same time, or together. Such meetings were held, May 11 to 13, at Columbia University. The Archaeological Institute adopted measures intended to revive interest in American archaeological exploration, which had been conducted with less vigor within a few years past than before.

Indian Remains on the North Pacific Coast.—Researches carried on by Harlan I. Smith in connection with the Jesup expedition

to the north Pacific coast of America were directed to the archæology of southern British Columbia and to the investigation of the shell heaps of the coast of Vancouver island and of the adjacent mainland. The Salishan Indians now living in the interior of British Columbia, particularly in the valleys of the Thompson and Fraser rivers, exhibit many traits that ally their culture with that of the tribes of the east and differentiate it from that of the coast people. None of the native peoples in British Columbia make pottery, and no pottery has been found in archæological work. The archæological remains occur in the light sand of the valleys and hill-sides, where the wind is continually shifting the dry sand from place to place. Hence no definite age can be assigned to the specimens secured. Judging from the complete absence of European objects in many of the localities explored, it is inferred that the remains found there antedate contact with the whites. Numerous circular depressions are found, indicating the sites of ancient underground houses. Bits of skin garments are preserved. Portions of the clothing and bags that were made of the bark of the sage brush remain in the driest places. Beaver-teeth dice like those used by the present Indians, digging-stick handles made of antlers similar to those in use to-day, charred berries, fish bones, and skin scrapers made of stone were unearthed. The graves were found in groups and also singly. The bodies were buried upon the side, with the knees drawn up to the chest, were wrapped in a fabric made of sage-brush bark, and were covered with mats of woven rushes. Over the forehead and around the neck were strings of beads, of copper, or of *Dentalium* shell. At the side, in a pouch also made of sage-brush bark, were usually found such objects as pieces of glassy basalt, points chipped out of the same material for arrows and knives, a pair of grooved stones, which were used for smoothing and straightening arrow shafts, a set of beaver-teeth dice, bone awls and needles, quantities of red ocher, copper-stained clay, and red earth, used for paint. A number of war clubs and several small animal figures carved in bone were found. The handles of the clubs were sculptured to represent human heads with plumed headdresses. Several specimens, such as the stone mortar and the tubular pipe, recall the types found in Oregon and California. Ethnological investigations have shown the affiliation of the recent culture of this region to that of the Rocky mountain region. These archæological evidences suggest to Mr. Smith that this similarity was even greater in the past.

The most extensive remains of the early inhabitants of the coast are shell heaps. Their general distribution may be judged by the fact that more than 150 were noted in the region, less than 100 miles square, on the shore of the north end of Vancouver island and the mainland opposite. In general they are located at the mouths of fresh-water streams, and are several hundred yards in length by 5 or 6 feet in depth, while a few are miles in length and some are as much as 9 feet deep. Stumps more than 5 feet in diameter standing on them indicate a considerable antiquity for the lower layers, but few of the layers being more than an inch or two in thickness. The archæological specimens found in them include points and barbs rubbed out of bone, bone choppers for preparing cedar bark, pebbles with battered ends, such as are used in a game resembling quoits, and a copper ornaments. The scarcity of archæological specimens is accounted for by the fact that the people de-

pended very largely upon cedar products, which soon decay. The shell heaps of the delta of the Fraser river, while in general resembling those of the coast, present several marked differences. Much more black soil, charcoal, and ashes occur among the layers. The shells are considerably more decayed and mixed with the black soil; numerous skeletons of two distinct types of men are found among the layers. The proportion of specimens to the extent of the shell heaps is vastly greater than in the other localities. A stump of Douglas fir more than 6 feet in diameter stood on one of the heaps where the layers, there reaching a depth of more than 8 feet, contained human remains. This tree indicates an age for the top layers of more than five hundred years, and the bottom layers must be very much older. There is no apparent difference in the character of the specimens found in the recent and in the older layers. The general style of the objects is similar to that of those made by the present tribes on the coast. The two types of skeletons belonged apparently to coexistent people, as they were excavated from the same layers. The fact that bodies were found in shell heaps indicates that the customs of this people must have differed from those of the people who formed the shell heaps on northern Vancouver island, or that the former people was subject to other influence. The bodies were usually lying on the side, with the knees close to the chest. Except in rare instances, but few, if any, objects accompanied them.

Cairns were observed, consisting of irregular piles of boulders, from 10 to 20 feet in diameter, thrown over the body. In most cases the body was surrounded by a rectangular vault, formed by placing the straight sides of four or five boulders toward the body, and covering the cyst thus made with one or two slab-shaped rocks. Over this the rough pile of the cairn was reared. A few copper ornaments were found buried in cairns. The skeletons were usually much decayed.

Relics of the Cliff Dwellers.—The discovery of extensive ruins of the cliff dwellers and prehistoric peoples scattered over considerable tracts in southern Colorado is reported by Mr. Cecil A. Doane, a deputy United States surveyor. They are situated in districts which have been little visited by scientific archæologists. In one place, west of the La Plata river, an area of about 6,000 or 7,000 acres were dotted with the ruins of the stone houses, most of them small (family houses), of a people who apparently lived by agriculture. Yet no evidences of irrigation were observed. Traces of similar former habitation were found in localities where the surface is now covered with a dense growth of sage brush and piñon or cedar trees, through which it is often difficult to make way. The ruined walls of what must have been a very large structure—massive and measuring 45 by 90 feet—were discovered in surveying a forest. Large piñon trees were growing within the walls. In another locality were found houses of cliff dwellers, built high up the rocks, and accessible now only by ropes, reaching down from the tops of the cliffs.

A number of well-preserved mummies found by a prospector in a sealed cliff dwelling in the upper Verde cañon had well-developed skulls, covered with fine, silky hair, and were bandaged with cotton and woolen cloths of various degrees of fineness, some of it embroidered in open work. The whole was wrapped in a matting of bear grass. Kernels of corn and bone implements were found with them. Small copper bells were dis-

covered in a cliff house on upper Salt river. Accounts of this whole region agree in representing the cliff dwellings and mounds representing the ruins of former buildings as occurring in very large numbers.

An Ancient Crown.—A part of a golden crown in the collection of Mr. E. J. Molera, of San Francisco, was taken from an ancient tomb near the Indian village of Tula. It was rescued from Indians, who were opening the tombs for the sake of the treasures they contained, after it had been broken into pieces and some of the pieces had been melted. When whole the crown was a plain circle of gold, beaten to a thickness of one eighth of an inch, two and a half inches broad, with a straight edge below, but rising in front with a domelike curve to a height of nearly five inches. The front and a part of one side are all of it that has been preserved, and this bears the stamp of Leopoldo Batres, inspector of monuments for the republic of Mexico. In the same grave from which this crown was taken a necklace and a lip stone were found. The lip stone is a crystal of remarkable brilliance and workmanship, and the necklace, composed of similar crystals, is also highly finished.

A City on a Hilltop.—In exploring a hill called Xochicalco, which rises between 300 and 400 feet above the surrounding plateau, about two days' horseback journey from Cuernabaca, Mexico, Prof. W. H. Holmes observed that the surface had been remodeled on all sides so as to present a succession of terraces faced with stone. The work was so constructed as to furnish approaches by series of staircases of stone. All the level places were marked by traces of ancient houses, with surrounding courts or plazas, within which large buildings had been erected. One of these buildings or temples was in a good state of preservation, and was situated within a plaza between 300 and 400 feet square. It rested upon a stone base between 60 and 70 feet square at the bottom and rising to about 20 feet in height, was capped by a heavy cornice standing out like a brim, and was adorned with elaborate sculptures. The hill was further marked with many subterranean chambers or caverns, some extending 150 feet back, of which those explored by the author were walled and plastered.

England. New Discoveries at Silchester.—The excavations at the Romano-British site of Silchester had been carried on systematically, at the time the report for 1898 was made, for nine years, and had resulted in the exploration of considerably more than half of the 100 acres within the walls. Operations in 1898, as described by Mr. W. H. St. John Hope before the Society of Antiquaries, had been confined to the southwest corner of the city, where an area of 8 acres had been dealt with. This area had been found to contain two *insulæ*, which had been numbered XIX and XX, and a large triangular space south of them, which appeared to belong in part to Insula XVIII, excavated in 1897. Insula XIX presented the unique feature of being completely inclosed by walls. It contained a small house and two other minor buildings, as well as a well-planned house of the largest size, built round a courtyard, and having attached to it what seemed to be the remains of a tannery. The winter rooms of the house were warmed by a series of hypocausts. Beneath the courtyard were laid bare the traces of a still older house. Insula XX contained two small houses and a number of other buildings. The interest in the remains of the older house lying in the courtyard of the large house in Insula XX con-

sisted in the fact that they showed a building of half-timber construction. Such construction was not entirely unknown at Silchester, as indications of modern partitions in masonry-built houses had been detected, but entire buildings of this kind had not as yet been found on the site. The design of a finely enriched mosaic pavement in one of the chambers differed from the general run of Romano-British mosaics, in which variously disposed lines of braidwork form the most conspicuous portions. In this composition the noticeable features are delicate arabesques, resembling friezes found among the wall paintings of Pompeii, and a huge scroll of black leafage on a white ground, strongly resembling the leaf borders to be seen on Greek painted vases dated about 300 B. C.

This mosaic was shown at an exhibition of Silchester relics held at the rooms of the Society of Antiquaries, Burlington House, in May. Among the miscellaneous articles exhibited in connection with it were a mutilated amphora, without top or feet, found in the same house; a pot ornamented by the potter making indentations with his thumbs in the wet clay; pieces of plaster painted to imitate various kinds of marble; a quern, both the upper and lower stones of which were found *in situ*, and an upper quern stone still retaining its wooden handle; a pair of manacles or handcuffs, with a large lock; a well-preserved set of hooks, such as might be used for slinging barrels; a little scone to screw into the wall and hold a candle; a "hipposandal," the purpose of which is in doubt; ornaments; coins; and a brick or tile, upon which before it was baked some workman had scrawled with the tip of his finger the word "satis."

France. Caves of Brassemponty.—Among the finds of 1897 in the caves at Brassemponty, France, recorded by MM. Ed. Piette and J. de Laporterie were a horse's head engraved on a vertebra, a seal in *champlevé*, a young bovine animal raising its foot against an aurochs, two other equine figures, the head of a doe engraved in *champlevé* on a two-pointed instrument of reindeer horn, a number of bones with lines cut in them after the manner of runes, and bone arrowheads with simple linear characters. The authors remark that man had hardly been installed at Brassemponty under a relatively element climate when he invented sculpture. The first deposits met with, at the base, in the alley, and in the largest part of the great gallery, contained human statuettes, and not a single animal figure. In this respect the discoveries differ materially from those at Mas d'Azil, which are attributed to the same period.

Rome. Relics of the Republic and Kingdom.—It was usual in the earlier excavations of the Forum to stop when the first remains of a pavement were met, without seeking further to find what more ancient remains might be beneath it. Discoveries of any great value regarding the early history of Rome could hardly have been expected under this method, because all the structures of the Forum and the Comitium, with the surrounding edifices, were seriously injured or completely destroyed by the fire of Carinus, A. D. 283, and were repaired and reconstructed under Diocletian and Maxentius. Excavations could, however, have been carried on deeper without destroying what might exist at the level by digging in the gaps and free spaces between the surface ruins. This plan has been adopted in the most recent explorations under the superintendence of Signor Boni, in which the object has been kept in view of reaching the early im-

perial, republican, kingly, or even prehistoric strata whenever it was possible to do so without injuring the later or higher structures; and some interesting discoveries have been made of ancient remains under and in front of the *pronaos* of the temple standing on the site of the very ancient statue of Saturn (which was erected after the great fire of Carinus) where the ruins of the three former structures have been found. A difference of level of 1.8 millimetre exists between the Comitium of the kings and that of the late empire. At the lower or older level were discovered a platform of tufa from the *lautumia* 3.64 millimetres wide, 2.66 millimetres deep, on which stood two oblong pedestals, which proved to be those of the lions mentioned by Varro and Dionysius; a conical pedestal, also of tufa, 0.77 millimetre in diameter, standing on a slightly curved plinth, on the west side of the platform; an inscribed *stela*, slightly pyramidal in shape, measuring 0.47 millimetre by 0.57 millimetre at the base, and irregularly broken about the middle of its original height; and a tufa platform, which may possibly represent the original rostra. These four relics are all differently ornamented, and have all been purposely injured and broken by the violence of man. The deed of destruction was afterward expiated by a sacrifice, the remains and traces of which form a layer of votive offerings about half a metre in thickness.

In digging through the rude pavement and the embankment of rubbish beneath it on the line separating the Comitium from the Forum, Cavaliere Boni came upon an inclosure about 12 feet long and 9 feet wide, screened by a marble parapet on three sides, and paved with slabs of black Tenarian marble. This inclosure with its pavement is believed to be one of the structures restored by Diocletian and Maxentius, and therefore to have been considered by them important to preserve. An association is suggested of it with a passage in Festus, reading, "Niger lapis in Comitio locum funestum significat." The same author says that the spot had been selected for the burial of Romulus, the founder of the city, but, as the hero had been bodily carried up to heaven by his father, Mars, the funeral plot had been given up to Faustulus "nutricius suus." Dionysius asserts (I, 87) that near the rostra, but within the area of the Comitium, a stone lion of archaic workmanship was supposed to mark the site of the grave of Faustulus. Varro speaks of two stone lions guarding, as it were, the grave of Romulus in the same corner of the Comitium. The remains of the pedestals of both of these lions have been found. These discoveries are regarded by M. Rudolfo Lanciani as "showing how wrong we have been in disbelieving every particular of Roman traditional history previous to the Punic wars, and the inscriptions on the monuments associated with them, comprising the oldest written documents of Roman history, as the most important ever found in Rome." The inscription on the *stela* has been studied by Signor G. F. Gamurrini, who finds that it was cut in the very early style, called *βουστροφηδόν*, in which the lines run alternately backward and forward, from right to left and from left to right, or, as the etymology of the word indicates, like the turning of the oxen in plowing. This style of writing was given up by the Greeks before the end of the sixth century B.C. The lines in the present inscription, however, are perpendicular instead of being horizontal. They cover the four principal faces of the stone, with an extra line on one of the flattened corners. Unfortunately,

the top of the stone is broken, so as to make every line incomplete alternately at the beginning and the end. The characters in which the inscription is cut are those of the earliest italic derivation from the Chalcidian alphabet. Another evidence of its great antiquity is given by the three vertical dots by which the words are separated. This peculiar style of interpunctuation is to be found only in inscriptions (Attica, Laconia, Elis, Argos, Etruria) dating from the end of the seventh and the beginning of the sixth centuries B.C. The *stela*, Prof. Lanciani says, shows how exact the early Roman annalists and historians were when they speak of "leges Regiæ" and public treaties engraved on stone in a language that could not be understood. All these documents were supposed to have been lost in the Gaulish fire, and this is the only one known that partially escaped destruction then. Prof. Luigi Ceci, of the University of Rome, reads the inscription and supplies the missing words as follows:

1. QUOI HO[r]das ueigead, ueigetod s]AKROS [s]ESED.
2. SOR[das, sakros sed].
3. [eid]IASIAS REGEI LO[iba adferad ad rem d]EVAM.
4. QUOS R[ex per mentore]M KALATOREM HAP[ead endo ada]GIOD, IOUX MENTA CAPIAD, DOTA V[oread].
5. [Ini]M ITE RI K[oised nounasias i]M.
6. QUOI HAVELOD NEQU[am sied dolid mal]OD, DIOVE ESTOD. [qu]OI VOVIOD [sacer Diove estod].

His Latin translation is:

1. Qui fordas consecret, consecrato sacellum versus [or, ad sacellum].
2. Sordas [viz., qui sordas consecret, consecrato] seorsum a sacello.
3. Idibus regi liba adferat ad rem divinam [viz., ad sacrificium].
4. Quos Rex per augurem Kalatorem induhapat [viz., consecratum admittat] adagio [viz., carmine] precibus auspicia capiat, dona votiva voveat.
5. Itemque rei [divinæ] curet Nonis ibi.
6. Qui auspicio nequam sit dolo malo, Iovi esto. Qui voto [viz., nequam sit dolo malo] sacer Iovi esto.

Prof. Lanciani remarks as the most salient linguistic specialty of this document "the great number of words—great in comparison to the total—that do not appear in the Latin language." Its date is assigned by him to about the middle of the sixth century B.C. It is therefore one century older than the Prænestine fibula of Manios (Corpus Inscriptionum XIV, 4123), and two centuries older than the vase of Duenos. Prof. Ceci observes, in communicating his version of the inscription to the Italian Minister of Public Instruction, that while he will not say that the discovery of the *stela* marks the downfall of the modern hypercritical school, especially German, "one thing is certain, it will shake the faith of the many who believed blindly in the word of Niebuhr and Ihne, and will revive the hopes of the few who trusted to the authority of Livy, and had faith in the historical foundation of early Roman traditions."

Explorations were also made in the Basilicas Æmilia and Regia, and along the Sacra Via.

Greece. New Law concerning Antiquities.—It having been found that the recognition of the landowner's right of property in archæological finds implied in the old law opened the way for abuse, and that extensive thieving was

practiced under it, the Government of Greece has enacted a new law, which differs from the old one chiefly in that all objects of antiquity are declared to be exclusively the property of the state. Compensation is, however, provided for the owner of the land on which the object is found equivalent to one half of its value as determined by a committee of three persons, in which both parties are represented. Notice of all finds must be given to the ephor general within five days, under penalty of forfeiture of the compensation and a liability to fine and imprisonment. The new law further provides for a process of condemnation of property on which excavations are authorized by the state, and, in a second statute, for the organization of a graded archaeological service under the direction of the Minister of Education.

The Agora of Corinth.—Excavations at Corinth were begun in 1896, under the auspices of the American school at Athens, by Mr. Rufus B. Richardson, and resulted in the discovery of the theater. They were then suspended, on account of the war between Greece and Turkey, but were resumed in 1898, when the famous fountain of Pirene was found, with the architecture of its two-story façade almost intact, except for the loss of its marble front. Other results of the excavations of 1898 were the recovery of the synagogue in which St. Paul preached, and of a broad marble staircase leading from a broad pavement at the foot up the valley lengthwise, 30 steps of which were laid bare. The work was resumed in 1899, when at the top of this staircase were found the foundations of the propylæa mentioned by Pausanias, through which the street to the harbor of Lechæon led from the agora, occupying a position of the magnificence of which the mention by Pausanias gives no idea. Other results of the explorations of 1899 were the identification of the Temple of Apollo and the discovery of the fountain of Glauke. By the aid of these discoveries and of the descriptions given by Pausanias the identification of other points in the city will become comparatively easy.

Antiquities of Melos and Crete.—The annual report of the (British) Hellenic Society, June 29, mentioned important excavations in the island of Melos, with some research at Naucratis, as having constituted the principal work of the society for the year. Prof. Jebb, chairman of the meeting, spoke of the explorations that had been made, now for the third season, on the site of a prehistoric city near the village of Phylákopi, in the northwest of Melos, representing the earliest capital of the island, and said that the prehistoric deposit found there belonged to the interval between the earliest culture traceable on Greek soil and the later Mycænæan age. The earliest pottery found there was primitive unpainted ware, hand made and hand polished, such as was found in the earliest cyst tombs of the Cyclades. Next in age to this came a series of vase fragments with painted geometric designs; and to this again succeeded in chronological order a series of fragments known as "Therean"—that is, belonging to the class found in the island of Thera (Santorin). The work of these three periods was, of course, all pre-Mycænæan. A circumstance of peculiar interest in connection with these excavations was the discovery that the ancient town at Phylákopi must have been a prehistoric center for the manufacture and export of implements made of obsidian—a mineral which occurred in this island, and seemingly nowhere else in the Levant, in a peculiar highly vitreous state. An appeal was made for

the support of excavations in Crete, where, by an understanding with the High Commissioner of the powers, certain sites of historical importance and representative character had been reserved for British exploration. One of these was Chnossos, the city of Minos and Dedalus, the center of the ancient sea power and the earliest home of Cretan art, where a promising mound was awaiting examination. Another site was Præsos, a seat of Cretan life at a very remote period, where an archaic inscription had been discovered in a dialect the key to which had yet to be found. A third site was Lyttos, where fragments of ancient laws had been unearthed in the acropolis; and another was the cave of Psychro, on Mount Dikte, the legendary birthplace of Zeus. The great interest of prehistoric Crete consisted in its character as the first Ægean station of the earliest civilization which passed westward from Egypt. Among the results of recent research to which Crete bore witness was the existence of a system of sign writing older than the use of the Phœnician alphabet, and pointing to an intercourse with Egypt which might date from 3,000 or possibly 4,000 years B. C.

Archæological Interest in Crete.—As soon as tranquillity was restored to Crete and a European government was organized for the island the people began to show interest in its archæology by founding local museums, and an active society was formed at Heracleum for the conservation of Cretan treasures of antiquity. The Government published a decree June 21 (July 3, new style), signed by Prince George, for the protection of all remains of the past from the earliest times to the Venetian conquest, as well as of later works of historical or artistic value. The law provides compensation over and above the archæological value of the discovery to private owners, but not to communities, monasteries, and scientific bodies. It requires that the discovery of immovable antiquities be at once reported to the authorities, and that the finder leave his discovery untouched for two months after the day of giving notice, while the authorities may decide upon its disposition. Every disturbance, damage, or alteration of ancient monuments without special permission is forbidden, as also is the carrying of stones or other material from ancient ruins. Every find of movable antiquities upon his own property must be reported by the discoverer within five days, and he is given one third of its value in each case, while the finder of such articles on another man's ground shares the remuneration with the owner thereof. The right of eminent domain may be exercised when necessary, and the Government will pay indemnities for damages to property. The results of excavations belong to the Government, and will be placed in public museums, of which two have been established. The trade in antiquities is permitted only within the island, and is confined to objects that are unsuitable for the museums, those discovered before the publication of the law, and those that have been brought from abroad, after they have been duly reported and catalogued.

Temple of Æsculapius at Paros.—The excavators of the German archæological school at Athens working in the island of Paros have uncovered the celebrated Temple of Æsculapius which is described by several Greek authors. It had been pillaged, and no objects of art were found in it. Not far from the temple a fountain was discovered, which dates from the fifth or sixth century B. C., and near this the vestiges of very ancient walls.

Winners of Olympic Games.—Among the papyri recovered from Behneseh, Egypt, and deciphered by Messrs. Grenfell and Hunt, is one giving a list of the winners in all the 13 events which formed the Olympian games for a series of about seven years. It is the first record that has been found of all the events of even a single Olympiad. It covers a part of the time when Pindar and Bacchylides were composing odes, yet extant, in honor of the Olympian victors, and affords upon independent testimony, accurate dates for these famous compositions. It further throws light upon the history of Greek plastic art of the period by fixing the year of a victory, and consequently of the sculptor whose work commemorated it. Thus Polycleitus is shown to have been living in the middle of the fifth century B. C., and to have flourished only a little later than Phidias, while the sculptor Pythagoras can be shown to have continued his work down to about the same period in that century.

Palestine. Presumed Site of Gath.—At Tell-es-Saffi, the supposed site of ancient Gath, the boundary wall of the former city has been discovered in the excavations of Dr. Bliss and Mr. Macalister by tracing a massive rampart that inclosed it. The walls were 12 feet thick, and rose in some places to the height of 33 feet. Shafts have been sunk within the area, and have revealed four strata of *débris*—two pre-Israelite strata, a stratum coinciding with Jewish times, and a stratum of the age of the crusades. The testimony of the pottery would make it appear that the place has had a continuous history from the eighteenth century B. C. to the fourth century B. C., that it was founded long before the conquest of the land by Joshua, and was inhabited continuously till a late Jewish period, when it was deserted till the time of the crusaders. The tablets or *stelæ* have not, however, yet been found which would definitely identify Tell-es-Saffi with Gath. "Our excavations," says Dr. Bliss, "have proved the existence of a city quite as ancient as Gath on a site where Gath may reasonably be looked for, fortified at about a period when Gath was made a city of defense." The explorers have also been working at the neighboring site of Tell Zakariya, which has been identified with the Azekah of Scripture, where the remains of a large fortress have been found.

A Canaanitish "High Place."—The report of the excavation at Tel-es-San by Dr. Bliss, published in the quarterly journal of the Palestine Exploration Fund, relates the discovery of a structure which is supposed to be the remains of a Canaanitish temple, or one of the "high places" mentioned in the Bible. Three upright monoliths are supposed to represent the pillars spoken of in the Scripture.

Persia. Ruins of Apadana.—Prof. J. De Morgan, digging beneath the excavations made by M. Dieulafoy in 1885 on the site of the Apadana of Darius and Artaxerxes at Susa, has found inscriptions and monuments of the Anzanite period which seem to throw light on Assurbanipal's account of having taken Susa and destroyed it. Many of the monuments bore traces of fire, which the explorer referred to Assurbanipal's conflagration. A large *stela*, 6½ feet high and 40 inches wide at the base, bore three representations of the sun at the top. Below these stands the king, wearing his helmet and having a bow in his left hand and an arrow in his right, dressed in Assyrian costume, treading enemies under his feet, and having a wounded enemy (a suppliant) and dead around him. Soldiers

led by three standard bearers are pursuing the enemy, some of whom have turned toward them, beneath three trees, with a supplicating air. The scene is in the mountains. An abrupt cliff which the king and his pursuing force have reached bears a long inscription. The whole has suffered much from fire. The composition and its details are well spoken of as works of art. A bronze table or altar discovered in the same trench—an irregular slab about 5½ feet long, 2 feet wide, and 10 inches thick—was borne by four human figures at one end, while the other end was mortised into the wall, was pierced by four holes at the sides, and had a border of two enormous serpents. Only the upper parts of the bodies of the human figures remain, the heads and lower parts being gone; the arms were slightly extended from the body, and crossed over the abdomen. All projecting parts of the monument had been broken off, and the marks of hammers were visible. A granite obelisk was found, covered on all four of its sides with an inscription deeply cut into the stone, consisting of 25 horizontal lines, divided into more than 1,500 small columns, and containing almost 10,000 characters. It is the longest inscription ever discovered in Mesopotamia, and is almost complete. A white stone, roughly hewn, had four faces bearing pictures and inscriptions; at the top a coiled serpent, with two panels beneath it running round the block, and containing, the upper one two suns, the moon, two houses with conical roofs, and a scorpion; the lower one, some fantastic animals and squares interlapping. The lower part of this stone had once contained 23 lines of inscriptions, a part of which had been rubbed out by the use of the stone for sharpening tools. Another similar stone, but black, has a coiled serpent at the top, with pictures and inscriptions on the four faces below it: a star, moon, and sun, below which is a seated figure, supposed to be the king, with hands raised in adoration of a scorpion in front of him; a lion lies at his feet, under which are five lines of inscriptions. The second face of this stone is divided into five panels, containing a square building with conical roof, four standards or religious emblems, and a hawk perched next to a bull. The other two sides are filled with inscriptions. The inscriptions are being studied by Père Schell.

Egypt. Fall of Columns in the Temple of Karnak.—On Oct. 9 a number of columns (making 11 columns in all) in the fourth and fifth rows north of the axis of the Temple of Karnak fell, in consequence, it is supposed, of a slight shock of earthquake. They all fell in a straight line, from east to west. The columns can be set up again, but the architraves above them are utterly broken and destroyed. The work of repairing and strengthening the ruins of the temple has been going on for three years, under the direction of M. Segrain. None of the columns that had been repaired were injured.

Tomb of Dhuti.—In the excavations prosecuted in January, 1899, by Dr. W. Spiegelberg, of Strasburg, in the necropolis of Drah-Abu-l-Neggah, many tombs were found, but, they having all been plundered in early times, only the less valuable things remained. Yet many objects were found of importance for archæology. Dr. Spiegelberg believes that the tombs belong to the obscure period—of which we have very few monuments—between the thirteenth and seventeenth dynasties. With this fact in view, Prof. W. Max Müller says, in the Independent of New York: "Even the discovery of numerous crude '*ushebti*'—figures of wood with the well-known

chapter of the Book of the Dead written on them with ink—is of importance. Many of these figures were inclosed in a small sarcophagus of earthenware. Once such a sarcophagus had a small imitation of a tomb over itself, made from a few bricks. Four conic vessels stood at the corners of the sarcophagus. The theory that these figures did not represent slaves of the dead (as, indeed, did different statuettes of the earlier periods), but were proxies of the deceased which were expected to take his place when Osiris called him to the daily work in the heavenly fields, finds by the new observations a brilliant confirmation. This becomes the plainer if we consider that many of these proxies were wrapped in linen bandages, exactly like mummies." The time when these pits were plundered seems to be near the end of the Thebaic kingdom, when, Dr. Spiegelberg thinks, a general clearing up of the old tombs for reuse was going on. Some of the old pits were used as collective burial places for ibises and other sacred birds. One of the tombs, which had suffered this fate, belonged to a certain Here, the inspector of granaries of Queen Aahhotep, of the beginning of the eighteenth dynasty. Near this was a tomb belonging to the chief of the silver and gold house, Dhuti. Of two *stela* standing in the court at the entrance to the tomb, one contained a hymn addressed to Amon Re, while the other contained in 42 lines an account of the official acts of the deceased—among other facts, that he was appointed to superintend the manufacture of works in precious metals under the reigns of Queen Hatasu and King Thothmes III. Apposite to this is the collection of magnificent gold and silver plates of curious style preserved in the Louvre, and bearing the same name of Dhuti. Dhuti, too, is described in a tale in a papyrus in London as the hero who took by surprise the hostile city of Yapu, or Jaffa, in Palestine. He also claims to have registered the spoils brought back by the expedition which Queen Hatasu sent to the incense country of Punt, on the Red Sea. Seeking more light on this passage, Dr. Spiegelberg, Mr. Percy Newberry, and Mr. Howard Carter together examined anew the pictures relating to the expedition in the temple of Hatasu at Deir-el-Bahari, and found in the section representing the piling up of the products traces of a figure, before unperceived, of a man making entries, over which was the name of Dhuti, half obliterated, an effort having evidently been made to scratch out this part of the scene. Hence it is inferred that Dhuti eventually fell into disfavor.

Predynastic Relics.—In a paper read to the Society of Antiquaries, June 15, Mr. F. G. Hilton Price, director, described a number of very ancient antiquities in his collection which had come from Negada, Abydos, Gebelen, and other archaic sites. Many of these objects had been known to Egyptologists for several years, but it was not until systematic excavations had been carried on by Prof. Flinders Petrie at Negada and Ballas, in 1894-'95, that their period could be ascertained. It has been found that they belong to a predynastic people, who lived in the Nile valley previous to or about the time of the first dynasty. Among these objects were a remarkably fine and perfect amulet, made out of the end of the tusk of an elephant, having a human head of Asiatic type, with pointed beard, carved out on the point; an amulet made of a thin, flat piece of gold, apparently representing the former done in the flat instead of the round; a wand or baton in ivory, shaped like a boomerang, and engraved with fantastic figures; cone-shaped stone disks,

hitherto supposed to be mace heads, but which might be whorls or guards for the hand fire drill; and palettes of slate, which the author agreed with Prof. Petrie in considering had been largely used for grinding malachite or hematite for face paint, in some of which traces of the colors remained. These palettes might possibly have been employed primarily as amulets. Other objects described were bangles in shell, articles in bone, called "manikins," spoons, beads, a small stone lion, pots or vases of diorite, and other ornamental stones; pottery, of which specimens are mentioned of the red ware with black tops and of the decorative class; and a series of finely chipped implements in cherty flint.

Relics of the Earlier Dynasties.—An exhibition made by Prof. W. M. Flinders Petrie at University College, London, in July, included some of the results obtained by Prof. Petrie and his company during the previous season for the Egypt Exploration Fund and a prehistoric collection lent by Mr. Randolph Berens. The work of the Exploration Fund had been on cemeteries of various early periods, and in part at Deir-el-Bahari. The principal discovery of the year was that of the Libyan settlements in Egypt at the close of the middle kingdom, about 2400 B.C. The graves of these people are shallow, circular pits, about 2 feet deep and 4 feet across, which the excavators called from their form pan graves, and into which the bodies were placed in a contracted position, as in the prehistoric graves, but not all in the same direction. The pottery was like that of the twelfth dynasty and later, and all the Egyptian pottery, kohl pots, and beads found with these burials are of corresponding age. From this circumstance it becomes possible to fix approximately the period of the Libyan invasion. A peculiar feature illustrated in the exhibition is the burial of skulls of domestic animals. The backs of these skulls are cut away, so that they can be hung up, like the Greek *bucrania*. The facial bones are decorated with spots and lines of red paint, put on with the finger—a custom which belongs also to the prehistoric Egyptians, who are supposed to have been mainly Libyans. From the prehistoric period—still unrelated—were shown flint knives, forked lance heads, ivory knobs, clay toys and models, pottery, stone vases, beads, and other objects. The collection also included—of later periods—stone vases and kohl pots of alabaster, basalt, serpentine, and blue marble; statuettes of a lady Tasegt, a man Ranscut, and a youth whose name is lost; and several bronze weapons. A dagger is shown in photograph—the original having been detained in Cairo—with ivory handle and silver rosettes, inscribed with the name of King Snazenra, of the fourteenth dynasty. Articles of pottery of the thirteenth to the seventeenth dynasties furnish a set of forms intermediate between those of the middle kingdom and of the empire, which completes, Mr. Petrie says, "our view of Egyptian pottery, which we now know from prehistoric times down to the nineteenth dynasty." The loan collection contains some of the finest specimens known of the stone vases made in the best period of the prehistoric age, among them three large vases of shelly breccia; another of diorite, of later prehistoric time; an alabaster cup with seven spouts, assigned to the third or fourth dynasty; and a number of prehistoric flints from both the high desert plateau and the lower level near the Nile, from which the inference is drawn that Palæolithic man continued in Egypt until the Nile was as low as its present level.

Summary of Results.—Of the latest results of the explorations of the ancient tombs Mr. Petrie said, in his report to the Egypt Exploration Fund at its annual meeting, Nov. 10, after describing a system he had adopted of classifying and dating the relics found: "Thus we have a system just as convenient as a scale of years, and every kind of object can be relatively dated in it. From the order of the graves as found by the pottery, I have obtained the history of the development of stone vases, ivories, and the working of flint and metal, for even the earliest of these tombs contain copper. And having done that, a new piece of history becomes apparent in the great change that passed over every kind of work at one point of the scale about a quarter through the prehistoric age that we are studying. A new tribe seems to have come in with very different notions. One of the most curious differences is that the older people largely used signs, which are the forerunners of the Mediterranean alphabets, while the later people ignored such signs. The earlier people used no amulets; the later used amulets, several of which came down to the historic times. The use of a forehead pendant and face veil seems also to belong only to the later people. The characteristic pottery of the earlier people is closely like the Kabyle pottery of the present; the later people had some pottery almost identical with that of south Palestine in historic times. All these indications point to the earlier being a Libyan population, overlaid later on by an eastern migration. These results we have only reached in the last few weeks. I hope now it is clear what a great step we have made historically in the mode of reducing the prehistoric chaos into orderly sequence, and in tracing changes in the civilization of such ages. . . . In other lines we have also reaped a good harvest. The cemeteries of the sixth to the twelfth dynasties have given us the history of alabaster vases and of heads. The cemeteries of the thirteenth to the seventeenth dynasties have shown the development of pottery, as yet unknown, and splendid dated examples of fourteenth dynasty copper work, which fix the forms of daggers and axes. An entirely fresh invasion of Egypt by Libyans at the close of the twelfth dynasty has been traced; several kinds of subjects known before, but without dates, have taken their historical position, and we have a sample of the civilization of the Libyan tribes at about 2000 B. C. And coming down to Roman times, we have found the continuance of a longer and fuller alphabet of Asia Minor in an inscription scratched by a Roman legionary at the camp of Diospolis."

Africa. Prehistoric Tombs of Carthage.—

The excavations of M. Gauckler at Carthage have been carried on in a tract near the cisterns of Bordj Djedid, between the great trench where Vernay first discovered Carthaginian tombs in 1885 and the Punic necropolis of Douimès, which was successfully explored by Père Delatre. This district is one of the most important in Carthage, containing as it does traces of former civilizations in successive strata to the depth of 7 or 8 metres. In the superficial explorations relics brought to the surface by the plow were observed, consisting of tiles, lamps, coins, articles of pottery, etc. At the depth of a metre and a half Byzantine tombs were found with rude mosaics. Beneath these were various constructions of the corresponding epoch, among others a Roman house apparently of the period of Constantine, together with remains of a more ancient epoch, notably a colossal head of Marcus Aurelius in

white marble. This house of Constantine's time is very interesting. In the center was a fountain; farther on were two rooms paved with mosaics, one representing a seashore scene, comprising a pavilion with towers, persons fishing or boating, and mythological scenes in the lower part. Another mosaic is less important, representing a hunt of wild animals, and apparently, from the style and design, not older than the fourth century A. D. Still another mosaic is marked by pagan traits, and is therefore probably more ancient. A narrow passage was discovered, with steps, descending which a chamber was found, the floor of which was covered with fragments of painted and molded plaster. The apartment had been divided by a wall, on the other side of which the *débris* was of a different character, and consisted of lamps in the Christian designs of the fish, the palm, and the cross, and fragments of pillars and plaster painted in bright colors, of a style quite Pompeiian. One of these fragments represents a young woman or priestess dressed in white, with a lotus flower over her forehead, holding a staff terminating in a cross. Other figures in marble were of pagan divinities, bearing ancient fractures and signs of deterioration, indicating that they had suffered at the hands of iconoclasts. Among them were a pudic Venus on a dolphin, a Jupiter seated with his eagle, a Bacchus giving a drink to a panther, a young man seated dressed in the chlamys, a mask of Silenus, a lion's-head waterspout, two statues of Mithra in terra cotta (one of which was trampling on the head of a bull), articles of pottery, the lower part of a statuette with the bust of the Carthaginian horse, a mask of a goddess wearing a diadem, and a portrait of a woman. In a far corner of the chamber,

BULL, DEDICATED TO SATURN, FOUND IN THE SANCTUARY OF JUPITER AMMON, GRAYISH-WHITE MARBLE, 0.35 MILLIMETRES IN HEIGHT.

against the wall, was a white marble slab, bearing a dedication to Jupiter Ammon, who was identified with the god Sylvain, adored by the Berbers, "Jovi, Hammoni, Barbaro, Sylvano." On the other side, and considerably farther back,

THE SECRET CRYPT OF THE TEMPLE OF JUPITER AMMON. VIEW OF THE WALLED-UP CAVERN IN WHICH THE STATUES AND INSCRIPTIONS WERE FOUND.

was a second dedication. At the foot of this double dedication was a white marble head of a votive bull, bearing between its horns a crescent with an inscription dedicated to Saturn; then 20 *betyles* in granite and balls of stone, often crossed by a bronze wire, and disks or ovoid balls of terra cotta. This find of balls derives importance from the fact that, while large numbers of such objects had been found at Carthage, their purposes were not known. The present finding and the objects with which the balls are associated indicate that they were votive offerings. In the extreme back of this dark corner of the chamber was a sort of secret place, where were found four almost intact statues of white marble. The three larger ones formed a triad similar to that constituted by the colossal statues found in the Sebka de Kheredine, now preserved in the Museum of Bardo. The latter statues represent the Carthaginian Isis, but those now found are of the Greek Demeter, the Roman *Ceres africana*, who superseded the Phœnician Tanit, accompanied by the slender *Canephora Oneistophora*, and a young woman clothed in transparent drapery. These statues are very graceful, chiseled in a marble of golden tone and very fine grain. A few light touches with the pencil serve to bring out the characteristic features of the sculpture and give the illusion of life. The figures had been concealed in the bottom of the crypt, which had afterward been carefully covered up and walled, and then covered with a mosaic, which effectually concealed it. They were probably thus hidden away to prevent injury by Christian enemies. The necropolis beneath the level of these chambers contains tombs down to the Roman epoch, and also very ancient Punic tombs, which carry us back to the sixth century B.C. The burial places were respected so long as Carthage remained independent, and were gradually extended out to greater distances from the city. The tombs farthest away date from about the third century B.C., while the more ancient tombs were nearer to the old town. They were excavated out of the rock of the plateau of tufa that extends beyond Bordj Djedid. The first tombs

opened by M. Gauckler were simple graves dug in the virgin sand, and are generally poor, containing nothing more than the scarabeus of carnelian or paste, which might answer as a kind of card of identity for the deceased, a bronze disk, an ostrich egg, a painted figure to serve as a protecting amulet, some pearl beads, and pottery, but never coins. Other graves are covered with a simple slab. In one of these last was found a large Punic terra-cotta mask, intact, the hideously distorted expression of which was expected to frighten sacrilegious violators of the tomb. Another grave contained an Assyrian cylinder of jade, bearing a figure of the god Marduck throttling a winged monster. As the explorers advanced toward the hill the tombs were closer together and richer. Some were arranged like troughs paved with slabs. Silver jewels, necklaces, numerous pearls of vitreous paste, and hard stones, amethyst, agate, carnelian, rock crystal, ear pendants, and a few gold rings were collected from them. In February, 1899, M. Gauckler discovered two large tombs built like the tomb of Iadamelek, which was found in 1894, at the same depth of 7 metres. The mortuary chamber was closed by a monolith door. The flat roof was protected against the earth above by a series of monoliths, disposed saddle-back fashion, while the interior of the roof was ceiled with cedar, which is now decayed, and the remains of which crumble into dust under pressure of the finger. The walls are covered with a clear white stucco. In the back of the chamber was a little broken pitcher. The niche was empty in the first tomb; in the second it was occupied by two pieces of pottery. The deceased was extended directly on the floor, without a coffin, clothed in his jewels. Numerous large jars were in a corner. The first tomb contained two skeletons—a husband and wife. The man had a silver ring with a carnelian scarabeus and seal on his finger. The woman had an ear pendant, a necklace pendant, a ring with a bezel representing a winged uræus and two doves, all in massive gold. The second tomb contained only a man's body, with a place left by its side, but not many

objects. Both tombs were less rich than might have been anticipated judging from the care exercised in their construction. A third tomb built between these two, of much less elaborate finish, was extremely rich in funerary furniture, and contained the skeleton of a woman holding a bronze mirror in her left hand, and in her right heavy cymbals of the same metal. The left wrist was hidden under a bracelet of pearls, scarabei, and little images. On the right arm were several silver and ivory rings. The figures were loaded with silver rings and a gold ring with four cynocephali engraved on the bezel. The left ear bore a golden pendant, with a *tau* cross. On the neck was a large necklace of massive gold, made of forty differently shaped parts, symmetrically disposed on either side of a central piece representing a turquoise crescent, resting upon a disk of jacinth. Besides these were another silver necklace, an aryballus, a figured Corinthian alabaster, a large enameled flask covered with gold leaf, a

walls, an ancient cyclopean wall, partly fallen to pieces, running "in a mighty circle" round the slope of the hill to the right and left, and forming with the hill what is designated as a courtyard; and a ground wall worked into the natural rock that formed a sort of flat floor, and which had formed part of a building. The stones of this ground wall were heart shaped and worked with a pick. The whole of the ruin was built after the general ancient Semitic pattern. The ruin is ascribed to the old conquerors, who chose here in the Fura massive a very commanding position for their fort. A second ruin was found a few days later by Dr. Peters's companion, Mr. Leonard Puzey, west northwest of the first, on another head of the same ridge looking over the plain in the same direction.

Bronzes from Benin.—In the course of the punitive expedition by the British Government to the city of Benin to avenge the massacre of British subjects a number of remarkable bronze panels were discovered. Having been sent home to England by Sir Ralph Moore, the majority of them have been presented by Lord Salisbury to the British Museum. The designs upon the plaques are apparently of native origin, but testify to contact with Europeans. A number of figures of Europeans are represented, and in such situations as imply friendly relations with the negroes, whether in sport or on occasions of ceremony. The native traditions as to the origin of these works as collected by Sir Ralph Moore and Mr. Roupell are to the effect that when the white men came a man came with them who made brass work and plaques for the king, stayed a very long time, had many wives but no children, and was given plenty of boys to teach. The panels are supposed to have been made about the middle of the sixteenth century. Other metal objects in the round are included in the collection. Among them are two human heads, over each eyebrow of which are four vertical cicatrices, and two bands between, which, with the pupils of the eyes, have been inlaid with iron. A number of carved tusks and other objects of ivory exhibit superior workmanship, but are associated with Portuguese emblems.

Japan. Dolmens in Japan.—A careful examination of the rude stone monuments of Japan and of the sepulchral chambers termed dolmens has led Mr. W. Gowland to conclude (Transactions and Proceedings of the Japan Society, Vol. IV, Part III, 1899) that they were built by the ancestors of the present Japanese. The aboriginal inhabitants were apparently the Ainos, who occupied the whole country until they were driven back to the north by a more powerful race. Whence came the invaders from whom the present Japanese have descended is not known, and the dolmens afford little information on this question. No dolmens have been found in China, and those which occur in Korea differ entirely from those in Japan. In fact, Mr. Gowland points out, it is not until, in passing westward through Asia, the shores of the Caspian Sea are reached that dolmens similar to the Japanese kind are found, and for more closely allied forms the search must be extended to western Europe. The approximate date of the end of the dolmen period is regarded as lying between 600 and 700 A.D., and of its beginning about the second century B.C. Mr. Gowland shows that "the period during which the dolmens were built in Japan was characterized, from its beginning to its close, by a well-developed civilization and a culture which had advanced far beyond the limits of barbarism, and was, in fact, the birthtime of

HEAD OF THE STATUE OF CERES.

statue of polychrome *faïence* in the Egyptian style, disks of painted ostrich eggs, shells filled with purple paint, vases, and a lamp.

Cyclopean Ruins on the Muira River.—Dr. Karl Peters reports the discovery of cyclopean ruins near the great Kraal Inja-ka-Fura, on the Muira river, a southern tributary of the Zambesi. They are situated on a hill running parallel with the western of the two mountains through which the Muira cuts its way, and which the author calls after his own name, Mount Peters. The ruins consisted of ancient ground

the ornamental arts; that the builders of the dolmens were the ancestors of the present Japanese; that during this period the clans of the race had driven out the aborigines from the richest portion of the country, had become a settled and united people, and had made great progress in both the arts and industries."

ARGENTINE REPUBLIC. a federal republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province and the federal district, and a House of Representatives, numbering 86, 1 to every 20,000 inhabitants. The President and Vice-President are elected for six years by popular vote. One third of the Senators and one half of the Representatives are elected every two years. Gen. Julio A. Roca was inaugurated as President on Oct. 12, 1898, and Norberto Quirno Costa as Vice-President. The Cabinet of ministers appointed by the President was as follows: Minister of the Interior, Dr. Felipe Yofre; Minister of Foreign Affairs and Worship, Dr. Amancio Alcorta; Minister of Finance, Dr. José M. Rosa; Minister of Justice, Dr. Oswaldo Magnasco; Minister of War, Gen. Luis Maria Campos; Minister of Marine, Commodore Martin Rivadavia; Minister of Agriculture, Dr. Emilio Frers; Minister of Public Works, Dr. Emilio Civit.

Area and Population.—The area of the republic is 1,778,195 square miles. The population increased from 1,736,922 at the census of 1869 to 3,954,911 at the census of May 10, 1895. The population at the latter date consisted of 2,088,919 males and 1,865,992 females. These figures do not include 30,000 uncivilized Indians, 60,000 unenumerated, and 50,000 Argentinians residing or traveling abroad. Buenos Ayres, the capital, has 753,000 inhabitants; Rosario, the next largest town, 94,025. The number of immigrants in 1897 was 72,978; of emigrants, 31,192. Of the immigrants, 21,431 were females. The total included 38,745 Italians, 13,059 Spaniards, 7,813 French, and 1,876 Germans. The total number of foreign-born residents in 1895 was 886,895, of whom 492,636 were Italians, 198,685 Spanish, 94,098 French, 21,788 English, 17,143 Germans, 14,789 Swiss, 12,803 Austro-Hungarians, 2,269 Portuguese, and 32,184 of other nationalities.

Finances.—The revenue in 1897 was \$30,466,322 in gold and \$61,035,853 in paper; expenditure, \$29,214,763 in gold and \$93,427,502 in paper. For 1898 the revenue was estimated at \$34,759,146 in gold and \$52,918,000 in paper, and the expenditure at \$22,100,182 in gold and \$97,881,111 in paper. The budget estimate of revenue for 1899 was \$32,423,500 in gold and \$67,540,600 in paper. Of the gold revenue, \$28,099,800 come from customs. The estimated receipts in paper are \$18,000,000 from alcohol, \$8,849,400 from tobacco, \$13,868,400 from other taxes, \$5,900,000 from sanitary works, \$2,000,000 from land taxes, \$7,314,600 from stamps and licenses, \$4,543,900 from posts and telegraphs, \$4,120,000 from sales and leases of land, \$2,000,000 from bank profits, and \$944,000 from other sources. The total expenditure for 1899 was estimated at \$29,070,173 in gold and \$75,782,687 in paper. The items are \$17,299,711 in paper for the interior and Congress, \$237,441 in gold and \$249,792 in paper for foreign affairs, \$6,872,114 in gold for finance, \$22,746,732 in gold and \$11,249,408 in paper for the debt, \$10,331,466 in paper for justice and public instruction, \$14,027,582 for war, \$11,256,614 for marine, \$6,086,000 in gold and \$4,400,000 in paper for public works, and \$96,000 in paper for new ministries. For 1900 revenue

was estimated at \$45,981,000 in gold and \$67,122,000 in currency; expenditure at \$32,947,000 in gold and \$95,447,000 in currency. The external debt in July, 1898, amounted to £61,900,352 sterling, not counting £9,994,098 new bonds to be issued. Of these, £6,746,030 were for conversion of the Buenos Ayres provincial debt, £1,378,968 for conversion of the debt of Buenos Ayres city, and £1,819,100 for commutation of railroad guarantees. The internal debt amounted to \$189,162,500 payable in gold and \$45,838,067 in paper in 1896, since when a popular loan of \$39,000,000 has been raised to increase the army and navy and \$6,000,000 of bonds have been issued to discharge a debt for education. The floating debt is about \$39,000,000.

The actual revenue in 1898 reached \$35,000,000 in gold and \$49,000,000 in currency. The receipts for 1899 showed in the beginning of the year an increase of nearly 25 per cent., owing to a new tax on alcoholic liquors, and the revised estimate made the total \$47,000,000 in gold and \$62,000,000 in paper. Congress in 1898 authorized a sterling loan of £6,000,000, for which, however, satisfactory proposals could not be obtained. In regard to the provincial debts, the National Government has offered to pay the interest on all national bonds acquired by the provinces when the loans were first made. Of the heavily indebted provinces, Entre Rios and San Luis concluded an agreement with their European creditors in January, 1899. The National Government sought to induce Santa Fé and Cordoba to do the same, and before the end of the fiscal year the debts of all the provinces were arranged. At the opening of Congress, on May 1, President Roca urged in his message the necessity of placing the currency on a sound basis by making notes convertible for gold, so as to avoid the fluctuations that have injured the general commerce in the past; and to accomplish this he proposes to accumulate a strong gold cash reserve, by this means gradually improving the value of the currency until it reaches par. The amount of inconvertible paper currency in circulation on June 30, 1899, was \$292,000,000.

The debts of the various provinces were converted and assumed by the Federal Government on similar terms to those made originally in respect to the debt of Buenos Ayres. The Federal Government, for example, handed over to the creditors of Entre Rios \$14,000,000 of 4-per-cent. gold bonds for the purpose of canceling the outstanding provincial obligations, and to the creditors of Cordoba \$11,000,000 of 4-per-cent. bonds to extinguish \$27,000,000 of provincial 4½-per-cent. bonds, recovering from each province the sums required for the annual service of the debt in a similar manner to that provided for in the case of Buenos Ayres. The assumption of the provincial debts, in addition to the extraordinary obligations incurred in anticipation of war, has increased the liabilities of the Government in ten years from \$120,000,000 in gold to \$469,000,000. The amount of the external and internal debt of the National Government on June 30, 1899, not including \$25,000,000 of floating debt, but including the settlement of the claims of the Transandine Railroad Company and the bonds for the Cordoba and other provincial debts not yet delivered, was \$443,991,768 in gold, requiring for the annual payment of interest and sinking fund \$27,760,211 in gold, equal to \$7 per capita, and requiring over 38 per cent. of the total federal revenue. Notwithstanding the improved financial outlook, the best terms that the Government could arrange for the new loan of £6,000,-

000, which was finally concluded in May, were an issue price of 90, less $1\frac{1}{2}$ per cent. commission, with interest at 6 per cent. in gold and a sinking fund of 1 per cent., the loan being secured on the alcohol tax. The external obligations of the provinces, which have now been assumed by the National Government, were originally contracted under the free banking law of Nov. 3, 1887. The proceeds of the various loans were deposited in gold in the care of the National Government, which issued $4\frac{1}{2}$ -per-cent. gold bonds for the amount; and these were delivered to the conversion bureau, where they were retained as security for the note issue of the various provincial banks. The gold was sold by President Juarez Celman, and thus the security for the $4\frac{1}{2}$ -per-cent. bonds disappeared. The National Government for a long time repudiated responsibility for the bonds, placing its argument on the ground that it had acknowledged liability for the note issues.

The Army and Navy.—The authorized strength of the regular army is 29,513 officers and men. The actual strength in 1898 was 945 officers and 12,073 men. The National Guard embraces all able-bodied citizens, and numbers about 480,000. Young men are called into camp every year from the age of twenty for the period of two months, and receive a careful military training.

The navy contains the old armored cruiser *Almirante Brown*; the small coast-defense vessels *Libertad* and *Independencia*; 5 new belted cruisers of 6,880 tons, the *Garibaldi*, *San Martin*, *Pueyrredon*, *Gen. Belgrano*, and *Rivadaria*, built in Italy for the Italian and Spanish governments, each armed with 2 10-inch guns mounted for an elevation of 40° , besides 10 6-inch and 6 4.7-inch quick-firing guns; the protected cruiser *Nueve de Julio*, of 3,575 tons displacement, capable of making 22 knots with natural draught; the second-class cruiser *Buenos Aires*, of 4,500 tons, which has made more than 23 knots without forced draught; 5 converted cruisers, obtained from the Italian and Spanish commercial marine; and the destroyers *Corrientes*, *Misiones*, and *Entre Rios*, built in England, with a contract speed of 26 knots. Their sister, the *Santa Fe*, has been lost.

Navigation.—The number of vessels entered from abroad during 1897 was 10,363, of 6,064,064 tons, of which 6,827 were steamers, of 5,522,973 tons, and 3,536 were sailing vessels, of 541,091 tons.

The merchant marine in 1898 numbered 86 steamers, of 31,976 tons, and 157 sailing vessels, of 39,695 tons.

Commerce and Production.—The cultivable area is estimated at 240,000,000 acres, of which only 15,000,000 are now tilled. There are 5,500,000 acres devoted to wheat, the crop of which in 1897 was 1,500,000 tons. Sugar cane occupies about 82,000 acres. Vineyards in 1895 covered 71,135 acres, producing 42,267,000 gallons of wine, 10,582 tons of raisins, and 478,800 gallons of alcohol. The number of cattle in 1895 was 21,702,000; of horses, 4,447,000; of sheep, 74,380,000; of goats and other animals, 3,885,000.

The gold value of imports in 1897 was \$98,289,000, and of exports \$101,169,000. The imports of animal products were \$2,425,759; of vegetable products, \$12,896,503; of beverages, \$7,728,705; of textile goods and apparel, \$30,449,912; of oils and minerals, \$3,215,057; of chemicals, \$2,985,231; of colors and dyes, \$626,000; of timber and wood manufactures, \$4,985,698; of paper, \$2,642,984; of hides and leather, \$904,638; of iron and iron

manufactures, \$16,986,023; of other metals, \$2,508,530; of glass and crockery, \$8,011,029; of various articles, \$1,922,879. The exports of animals and animal products were \$74,044,525; of agricultural products, \$23,336,369; of forest products, \$1,918,241; of mineral products, \$164,989; of products of the chase, \$587,863; of various articles, \$1,117,312. The export of beef and mutton was 91,374 tons; of wool, 205,571 tons; of sheepskins, 37,077 tons; of wheat, 101,845 tons; of corn, 374,942 tons. The imports of gold and silver in 1897 were \$663,378, and the exports \$4,936,088. The business of exporting live stock and meat to the European markets, especially England, has grown so rapidly in the course of the last six years that sheep and cattle have latterly been bred for their flesh rather than for wool and hides, as was formerly the practice. The Argentine exports of live animals now compete successfully with those of the United States and Canada, and the trade in frozen mutton compares favorably with that of Australia and New Zealand. The rich pastures of the river Plate are succulent during the whole winter, and are never dried up in summer like the grazing lands of Australia. The importation of fine bulls and rams from England and France has greatly improved the breed of cattle and sheep. The first shipments of live animals were made in 1889. The shipments for the first six months of 1899 were 116,000 steers and 341,000 sheep, besides 805,000 frozen carcasses. This includes the trade with Brazil, but not the large herds driven over the Andes for sale in Chili. The average weight of bullocks exported to Europe is 1,500 pounds. This market and the Liebig factory of extract of beef on the river Uruguay absorb the native breed of cattle to the extent of about 300,000 animals yearly, which are worth only a third of the price of the better bred cattle. The old long-horned breed is only raised in the remote districts, and even there a slight intermixture of Durham or Hereford blood is found. In the principal grazing districts breeders have not only graded up their cattle till they are all three quarters or seven eighths Hereford or Durham, but have greatly increased the capacity of the land for fattening stock by sowing alfalfa. The land adapted for this forage crop is practically unlimited, and with the extension of its cultivation at the present rate the country in the course of five years will be able to support 50,000,000 head of cattle, and double this number in five years more. The herds are allowed to graze in the alfalfa fields, and some *rancheros* prepare them for export by feeding corn. Animals unsuitable for export are converted into dried beef for the Brazilian and Cuban markets in the *saladeros*, in which 1,360,000 were slaughtered in the first six months of 1899. Butter and cheese are not yet manufactured on a large scale, but considerable shipments of butter have been made to Brazil and more recently to Europe. The number of sheep in the country is at least 85,000,000, consisting of the merinos and merino grades that formerly preponderated everywhere, and Lincolns, Oxfords, Leicesters, and other mutton sheep now bred for export in the live state and as frozen mutton. The bulk of the wool is shipped to the Continent of Europe, but the coarse long grades are worked up in the carpet factories of the United States. Horses and mules have not been bred extensively, but in the last three years the British Government has purchased the remounts for its cavalry in South Africa in Buenos Ayres. New regulations for the shipment of live stock, published on May 25, 1899, provide

for the careful inspection of animals and less crowding in transit.

The value of the trade with the principal countries in 1897 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	\$36,392,057	\$12,984,690
France.....	11,019,576	22,999,019
Germany.....	11,114,102	14,047,135
United States.....	10,101,714	8,321,611
Belgium.....	8,046,254	8,934,829
Italy.....	10,943,038	3,964,616
Brazil.....	4,761,505	8,685,187

Communications.—There were 9,270 miles of railroad in operation in 1897. The capital was \$510,643,296 in gold, of which \$56,331,063 represented national, \$83,859,062 provincial, \$113,311,995 guaranteed, and \$257,141,178 private lines. There were 16,044,389 passengers and 9,001,559 tons of freight transported in 1897.

The length of telegraph lines is 25,345 miles, with 59,060 miles of wire. Of the total, 11,023 miles, with 23,572 miles of wire, belong to the Federal Government; 7,070 miles, with 18,717 miles of wire, to railroads; 4,428 miles, with 7,462 miles of wire, to telegraph companies; and 2,824 miles, with 9,309 miles of wire, to other concerns. The number of messages in 1896 was 4,953,887.

The post office in 1896 forwarded 177,641,000 pieces of mail matter, of which 24,947,340 were international. Postal and telegraph receipts were \$30,069,799; expenses, \$27,169,020.

Political Affairs.—The long-standing dispute between the Argentine Republic and Chili over the boundary line in Patagonia was by mutual agreement submitted on Sept. 22, 1898, to the arbitration of the British Government. Another question of boundaries arose in respect to territory in the north, the district of Puña de Atacama, formerly a part of Bolivia, which Chili claimed by right of conquest during the war against Peru and Bolivia and the Argentine Republic by virtue of cession by Bolivia subsequent to that war. This dispute was referred to an international commission, with William I. Buchanan, the United States minister at Buenos Ayres, as arbitrator, which met on March 20, 1899, and in three days concluded the delimitation, recognizing part of the Argentine and part of the Chilean boundary lines, and dividing the disputed territory between the two states. A colony of Welsh settlers, who have built irrigation works, has done more for the agricultural and pastoral development of the Argentine part of Patagonia than the Argentine people have themselves. The success of this foreign colony has impelled the Argentine Government to undertake the construction of railroads giving access to the interior of Patagonia. The federal authorities also recognize the necessity of establishing colonization laws which will prevent the alienation of large blocks of land in this territory, and will encourage immigration and settlement by facilitating the acquisition of small farms. When the war cloud that has hung over the country for many years was lifted by the definite agreement with Chili for the settlement of the boundary dispute the military agent in Europe, who was contracting for Krupp cannon, was instructed to change the order, and take railroad material instead. Having averted the danger of war and stopped the large expenditures for war material that for several years have been the cause of heavy additional taxation and the piling up of debt at home and in Europe, President Roca has an opportunity of studying the reduction of

taxes, the improvement of the police, and the question of the administration of justice, which he described in his message as having fallen into such discredit that the material progress of the country demands better guarantees for life, property, and general rights. Another problem is that of an immigration policy that will attract people from Europe to the vast fertile areas that are adapted in every way for settlement. The Federal Government is hampered in its efforts to bring about reforms in the police and the judiciary by the limitations to its powers over these institutions set by the national Constitution, which gives absolute autonomy in local affairs to the fourteen states of the republic, which are extremely jealous of their rights, and resent any interference of the national authorities in matters belonging to the local administration. The intervention of the Federal Government is legal only for the prevention of a disturbance of public order or for the purpose of remedying any infraction by one state government of the constitutional rights of another. After the provincial elections of March 26 in Buenos Ayres the President saw fit to intervene in a local quarrel to put an end to a deadlock. Dr. Irigoyen, the Governor, refused to recognize the candidates who were declared elected to the provincial Legislature, declaring that their election was obtained by fraudulent practices. The local Chambers, however, asserted that the Governor had no authority to decide the matter, and, after scrutinizing the returns, declared the various candidates legally entitled to their seats. Dr. Irigoyen then placed the legislative hall in the care of the police, with orders that no person be allowed to enter. As all sittings of the Chamber were thereby forcibly suspended, the federal authorities decided to take possession of the capital for the purpose of inquiring into the merits of the quarrel and restoring a republican form of government. The federal commissioner charged with the investigation decided that the elections were void on account of fraud, and on May 26 issued a decree ordering a fresh ballot. One of the first measures brought before Congress was a bill to facilitate judicial procedure. Owing to the antiquated constitution of the judiciary, the federal and the provincial courts were clogged with tens of thousands of cases awaiting trial or judgment. The increase in the revenue resulting from new taxation and the expansion of the import and export trade, with the cessation of warlike expenditures, prompted the mercantile community, which is largely composed of foreigners, to begin an agitation for the reduction of taxation. The total revenue—national, provincial, and municipal—amounts to about \$250,000,000 a year, or \$62 per capita. The surtax of 10 per cent. on the customs tariff, imposed to provide ways and means to prepare for the eventualities of a war with Chili, was continued in force, and new taxes had recently been placed on alcohol and other articles of consumption. The merchants of Buenos Ayres in a monster petition prayed for the reduction of duties, the revision of tariff valuations, the fixing of taxes for a term of three years, and the reform of the commercial code, especially in regard to the laws of insolvency. A commercial treaty with the United States was negotiated and signed in July, according to the provisions of which Argentine wool, hides, and sugar are admitted at minimum tariff rates into the United States in return for reciprocal advantages extended by the Argentine Republic to American canned goods, cereal food preparations, and lumber.

ARIZONA, a Territory of the United States, organized Feb. 14, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; and 59,620 in 1890. Capital, Phoenix.

Government.—The following were the Territorial officers during the year: Governor, N. O. Murphy; Secretary, Charles H. Akers; Treasurer, F. W. Pemberton; Auditor, G. W. Vickers; Adjutant General, H. F. Robinson; Attorney-General, C. A. Ainsworth; Superintendent of Education, R. L. Long; Geologist, W. P. Blake; Chief Justice of the Supreme Court, Webster Street; Associate Justices, Richard E. Sloan, Fletcher M. Doan, George R. Davis; Clerk, Lloyd Johnston—all Republicans.

Finances and Valuations.—The following items are taken from the Governor's message to the Legislature of 1899: The assessed valuation of the taxable property is \$31,473,540. The rate of taxation differs in the counties, but the average rate throughout the Territory is \$3.50 on the \$100, 80 cents of which is for Territorial purposes solely. The bonded and floating debt, Dec. 31, 1898, was \$2,680,000. Deducting from this county and city funded indebtedness, leaves a bonded Territorial debt of \$1,045,972.43; adding the floating debt, \$255,112.73, makes a total Territorial debt of \$1,301,085.16; less cash in hands of Treasurer, \$161,950, leaves a net Territorial indebtedness of \$1,139,135.16.

The total city and county funded indebtedness amounts to \$1,634,027.57. The Territory still has bonds outstanding bearing a higher rate of interest than 5 per cent., amounting to \$281,000. These can be funded into fifty-year 5-per-cent. refunding bonds. Unless Congress renews the refunding act, no more bonds can be sold to take up unpaid warrants since Jan. 1, 1897.

Education.—In February the enrollment at the Territorial University was 130, not including some who are pursuing special studies. The classrooms and dormitories are not large enough for the present attendance.

The Normal School at the same date had 180 pupils, and it graduated 32 in June. A new normal school is located at Flagstaff, in the northern part of the Territory.

The Indian School near Phoenix has about 600 pupils. The Government appropriates to it \$140,000. Three new buildings have been added recently. The superintendent's report gives the scholastic population of the tribes immediately adjacent to the school as 8,170. In addition to pupils from these tribes, advanced students are drawn from other Indian schools in Arizona, California, and Nevada.

The New Capitol.—Ground was broken in February for the foundation of the new Capitol. It is to be 84 by 184 feet, and three stories in height. The legislative halls and chambers for the Supreme and Federal Courts will occupy the upper floor.

Fort Whipple.—The Secretary of War issued an order in November for the immediate restoration of Fort Whipple, so that troops may be stationed there as soon as possible. The troubles in the Navajo country had made the people of the Territory anxious to have this important station well manned. It is the only post in the Territory that has railroad communication with the outside world.

Railroads.—The Arizona and Utah road was completed Aug. 16 amid great rejoicing at the camp of Chloride, which the new line brings into closer touch with its markets.

The Territorial Board of Equalization fixed the

valuation of the nine railroads this year at a total of \$5,246,018.17.

Public Lands.—The report of the Surveyor General shows that the area of public lands, together with the reserve land appropriated to the Territory, at the close of the year was: Surveyed, 10,887,865 acres; unsurveyed, 41,337,590 acres; total, 52,225,461 acres. There was 99,445 acres granted for Indian reservation patents. The number of mineral and mill-site patents during the year was 36. The report says:

"The special deposits made by individuals for office work and stationery in connection with the survey of mineral claims for the year ending June 30, 1899, amounted to \$3,945; mineral surveys ordered, 89; locations embraced in said order, 166; mill sites, 4; mineral orders amended, 20; mineral surveys approved, 50; mineral surveys pending, 60; mineral plats prepared, 209; transcripts of mineral surveys, notes, reports, etc., 50.

"The number of miles surveyed during the year embraced an area containing 162,850.74 acres.

"There is a large immigration to Arizona on account of her valuable and almost undeveloped mineral resources. This has created a large home market for agricultural products, and made it possible for a profitable increase in the number of people engaged in agricultural pursuits.

"The lands when irrigated are wonderfully productive, but on account of the cost of transportation of farm products it does not pay to ship them a great distance."

It was announced in June that the decision of the United States Supreme Court in the Algodones land grant case would have the effect of opening for entry a great portion of a very rich valley in Yuma County, which has been held back from prosperity for many years by the uncertainty as to this final decision, which is now rendered in favor of the Government.

The following dispatch was published in April: "Special-Agent Holsinger, of the Interior Department, is about to bring suit for the recovery from a number of mining companies for the value of immense quantities of mesquite wood. He estimates that 20,000 cords of mesquite have been cut from the Gila valley in the vicinity of Solomonville and Safford during the last few years, and all of it illegally. It is also charged that the Papago Indians and Mexicans supplying Tucson with wood are daily violating the law. A man may cut mesquite legally for firewood for his personal use, but for anything more extensive he must apply to the Land Office at Washington."

Water Storage.—The greatest storage basin in the world is to be built in the mountains, 60 miles from Phoenix. The United States Government has granted to the Hudson Reservoir and Canal Company this basin, known as the "Tonto Basin," to be used as a storage reservoir. The company proposes to build a dam at the head of the cañon, where the river emerges from the basin, thus creating a lake, which will cover 18 square miles to a depth of 100 or 200 feet. It will be necessary to build a dam 200 feet high and some 600 feet in length at the top, although the cañon is only 200 feet wide from the first 100 feet from the bottom. The Territory of Arizona has granted the company the use of the channel of Salt river in which to convey the waters thus stored to the valley, and the stored waters will therefore be turned back into the channel as needed, and conveyed through the cañon for 30 miles to the head of the valley, where the first diverting dam is found. To construct

this great storage reservoir will cost, it is estimated, about \$2,500,000.

Mining.—It is stated that Arizona led in the increase in copper production in 1898. A St. Louis dispatch in June said that a company just incorporated has a claim in Pima County on which is a hill 225 feet high, that by actual measurement shows 3,500,000 cubic yards of copper, gold, and silver ores, or about 8,000,000 tons.

Great activity has been shown in the copper districts this year, and one estimate placed the probable product as high as \$13,000,000, with half that amount in gold and silver. Among the important copper districts are Clifton, Jerome, Bisbee, and Globe, and new properties are developing in the vicinity of Tucson.

In November it was reported that a rich bed of porphyry and porphyritic schist carrying gold and silver had been discovered in Placerita gulch in the northern part of the Territory, and that several samples of a 46-foot cut across the cleavage of the schist showed an average of \$4 to \$8 per ton, while in other places averages of shafts and pits showed values of more than \$12 a ton.

About the same time much excitement was caused by the discovery of great beds of platinum in the Cataract creek country. Gold and aluminum are also found there. The principal claims are about 40 miles from Williams, and that town was said to be almost depopulated, while the road between was swarming with conveyances of every kind.

The Territorial Geologist says: "Arizona shows the occurrence of several of the rarer minerals, such as vanadinite, wolframite, and hübnerite, in quantities sufficient for commercial exploitation. An important development of the turquoise industry has been commenced at Turquoise mountain, in Mohave County. Ancient Aztec workings have been cleaned out, and hundreds of prehistoric implements have been found. The Territory contributes to the list of beautiful gems in addition to turquoise. The peridotites are highly valued and in greater demand; so also the ruby-like garnets of the Navajo country. The onyx of Yavapai County has not lost its beauty or its measure of appreciation."

Legislative Session.—The Legislature met Jan. 16, and adjourned March 16. Morris Goldwater was President of the Council, and Henry F. Ashurst Speaker of the House. There were 4 Republican and 8 Democratic members of the Council, and the House was composed of 11 Republicans and 13 Democrats. Including the general appropriation bill, 69 acts were passed.

A new county, Santa Cruz, was created from the eastern part of Pima County, making the whole number of counties 13.

An act abolishing the Loan Commission was vetoed, but passed over the veto. The Immigration Commission also was abolished, and the boards of supervisors of first-class counties may appoint commissioners of immigration. Another act abolished the Board of Equalization.

A residence of six months in the Territory was made a condition for a voter, and poll taxes must be paid before registration.

The Governor was authorized and directed to appoint, within twenty days after the passage of the act, a commission consisting of three competent lawyers, not more than two of whom should be of the same political party, to revise the laws of the Territory, eliminating all "crude, useless, imperfect, and contradictory matter."

To encourage the building of railroads a measure was passed exempting them from taxation for ten years. Canals and reservoirs constructed

for irrigation and manufacturing were also exempted.

Other important bills were for taxation of insurance companies and for regulation of the acknowledgment of deeds and the release of mortgages. The militia law was repealed.

Memorials to Congress were adopted, asking for an appropriation of \$20,000 for building a dam on Gila river, for increase of legislators' pay from \$4 to \$8, and for statehood.

Other acts were:

For compulsory school attendance.

Regulating homestead exemptions.

Amending the prize-fight law.

To lower the interest on Territorial warrants.

Providing for free libraries and reading rooms in municipalities.

Making privileged certain communications to physicians and surgeons.

Fixing the age of consent at sixteen.

For the protection of the American flag.

To encourage prospecting, and fixing assayers' rates.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; and 1,128,179 in 1890. By estimates based on the school census of 1897 it was 1,302,185 in that year. Capital, Little Rock.

Government.—The following were the State officers during the year: Governor, Daniel W. Jones; Secretary of State, Alexander C. Hull; Treasurer, Thomas E. Little; Auditor, Clay Sloan; Attorney-General, Jefferson Davis; Superintendent of Education, J. J. Doyne; Commissioner of Mines, Manufactures, and Agriculture, Frank Hill; Railroad Commissioners, appointed in March, Robert Neill, J. G. Wallace, Henry W. Wells; Mine Inspector, Robert Boyd; Land Commissioner, J. W. Colquitt; Inspector of Wines, Carl A. Starck; Board of Charities, S. H. Davidson, T. H. Matthews, J. J. Thomas, J. W. Meeks, G. M. Heard, succeeded in March by G. L. Basham, and J. G. B. Simms, succeeded by W. A. Jeffers; Chief Justice of the Supreme Court, Henry G. Bunn; Associate Justices, Simon P. Hughes, C. D. Wood, Burrill B. Battle, and James E. Riddick; Clerk, P. D. English—all Democrats.

Valuations and Finances.—The amount of taxable property in the State, exclusive of Crittenden County, is \$176,423,418. Crittenden County's total in 1898 was \$2,089,025. This indicates an increase of about \$1,000,000. The value of real property is \$118,718,357; of personal, \$57,705,061.

The rate of taxation, as fixed by the Legislature for this year and the next, for State purposes, is 5½ mills, an increase of three quarters of a mill. Of this, 2½ mills are for general purposes, 2 mills for schools, and a quarter mill for pensions. The necessity for the other mill is explained by the Auditor as follows: "First, our agreement and solemn pledge made to the United States Government to pay her \$160,000 within the next year, as the balance on our debt found due to the Government and duly acknowledged by act of Legislature of 1897; and, second, since the Legislature had passed the funding act, calling in all old bonds which bear 6 per cent. for exchange for new bonds bearing 3 per cent., it was certainly nothing more than common ordinary honesty to provide a fund out of which the interest on the new issue could be promptly and fully paid when due, which will be done out of balance of one-mill sinking-fund tax after paying

our obligations to the United States. Not only will these obligations be promptly met, but from this rate of taxes, within the next two years, Arkansas will call in and cancel \$375,000 of old scrip outstanding against her, and for many years overdue, and bring down the balance owed on bonded indebtedness, three fourths of which will be in her school fund, cleared of all doubt and confusion, and with funds ready to meet her obligations as they mature."

Canceled school bonds and coupons to the amount of \$1,085,200 were burned in August, having been replaced by new 3-per-cent. bonds. The finances are now in better condition than ever, according to the report. The total outstanding debt of the State is \$2,045,867; but of this the common-school fund owns \$468,885, the sixteenth-section fund \$656,450, and the State University \$86,970, leaving due to private parties \$833,562.

Pensions.—At the close of 1898 there were 1,178 pensioners on the ex-Confederate State pension roll, drawing amounts from \$25 to \$100 per annum. The total amount of pension fund on hand for 1898 was in round numbers \$44,000, which when prorated to the pensioners on the roll gave them 94 per cent. of their full allowance. The law says there shall be paid out of the treasury of the State to every soldier who has been for twelve months preceding the date of his application a resident of the State, and who is indigent and incapacitated for manual labor by reason of a wound received while in discharge of his duties as a soldier in the service of the State of Arkansas or of the Confederate States of America, certain amounts annually, according to the degree of disability.

Charities and Corrections.—At the Asylum for the Insane 787 patients were under treatment in 1898; 604 remained at the end of the year. The percentage of recoveries was 44 of those admitted, and the death rate 6.89 per cent. of all treated. The average cost of a patient is \$91.08 a year. Of the sum of \$120,000, appropriated for the two years ending April 1, 1899, \$62,004.36 had been expended by Sept. 30, 1898.

The buildings of the Deaf-mute Institute were destroyed by fire Sept. 30. The loss was about \$200,000, and there was no insurance. The use of Fort Logan H. Roots was granted for the school until permanent quarters could be built. Only about 38 persons were in the buildings at the time of the fire, which was before the opening of the term. The whole number, including pupils and teachers, is about 300. Steps have been taken to rebuild immediately.

The report of the superintendent of the Penitentiary gives the following details: "We had in this institution on Dec. 31, 1898: White males, 275; colored males, 639; colored females, 10; Indian males, 4; total, 928. The average population for 1897-'98 was 963; the average population for 1895-'96 was 931; an increase in population during last two years of 32. The greatest number ever confined in the Penitentiary of this State was reached April 6, 1898, being 1,005. Our total revenue for the years 1897-'98 from sale of farm products, sale of wood in the city, and the hire of convicts is \$226,969.61. Our balance on Dec. 31, 1898, was: Cash in State treasury, \$48,310.66; cotton and cotton seed unsold, estimated, \$37,500; personal assets, appraised valuation, \$62,251.78; total assets, not including real estate, \$148,062.44." The cost of maintenance is \$69.21 a year. A camp has been established 18 miles from the city, where the women and the white boys under twenty-one are kept.

The State has contracted the labor of 300 con-

victs to be used in railroad construction. Heretofore most of the convicts have been worked at raising cotton on the share system.

Education.—There are 465,830 children of school age in the State, and the apportionment of State money gives them 86 cents per capita. Actually enrolled in the public schools are 296,785, of whom 220,736 are white and 76,049 colored. Enrolled in private and denominational schools are 5,835.

During the summer 34 institutes were held for white teachers with a total enrollment of 1,547, and 15 for colored teachers with a total enrollment of 761. The State received \$2,000 from the Peabody fund; no appropriation was made by the Legislature.

By act of the General Assembly the State University, at Fayetteville, is to be known as the University of Arkansas.

Railroads.—During the first eight months of the year 234 miles of track were added to the railway mileage in the State.

The last rail on the Choctaw and Memphis road was laid Oct. 12. This line includes the Little Rock and Memphis and the Choctaw, Oklahoma and Gulf, with new connecting track, making a line of 563 miles from Memphis to Weatherford, Indian Territory.

The Arkansas Northern, to run 211 miles northwest to Springfield, Mo., has been incorporated. Other shorter roads are in process of construction. The Searcy and Des Arc is a consolidation of the Searcy and West Point and the Des Arc and Northern, and is to be made a continuous line between the towns. The Deckerville, Osceola and Northern is running from Deckerville to Osceola, and opening up a vast territory.

The Jonesboro, Lake City and Eastern is running trains over a large portion of its tracks, and is building more lines, intending to have a through line from Jonesboro to the river. The Hoxie and Southern is also running trains, and will have through connection with the fast trains of the Kansas City Company. The Arkansas Central from Fort Smith to Paris, 46 miles, is practically completed.

The New Capitol.—The Attorney-General instituted proceedings to test the constitutionality of the act providing for a new Capitol. The grounds of action were that the part of the act appropriating \$50,000 to enable the commissioners to begin the work was not passed by a two-third vote in the House, as required by the Constitution for an appropriation bill; also that the act provided that the new building should occupy the present Penitentiary site, and invested the Penitentiary commissioners with authority to buy land and build a new Penitentiary, which provision was not mentioned in the title of the act. Without waiting for the decision, the Capitol commissioners—Gov. Jones, G. W. Murphy, G. W. Donaghey, C. G. Newman, J. M. Levesque, A. H. Carrigan, and R. M. Hancock—went on with the work, and ground was broken July 4. G. R. Mann is the architect employed. The decision of the Supreme Court was given Oct. 7, affirming the constitutionality of the act, the court holding that the Legislature has the power to determine what expenses come under the head of "necessary expenses of the government" which do not require a two-third vote, and that the provision for the new Penitentiary comes under the general purpose of the bill, and need not be specially mentioned in the title. The cost of the Capitol is limited to \$1,000,000.

Labor.—There was a long strike this year of miners in the western part of the State, the cen-

ter of trouble being Huntington, Sebastian County. The importation of negroes from Kentucky to take the place of strikers threatened to bring on a race war, and the Governor issued an order to the sheriff to prevent the imported laborers from debarking; but he afterward modified the order so as to allow "orderly, respectable white laborers" to come in, and promised them protection. More negroes and others were brought in, and a State court issued an injunction restraining companies from importing miners and railroad companies from bringing them in from other States; but the injunction was dissolved by the Federal court for the western district of Arkansas. There was a riot at Huntington, May 15, in which one man was killed and another wounded in an attack on a mine and some miners' boarding houses. A number of miners were sentenced in July to imprisonment for five to ten months for violating the injunction of the court restraining strikers from interfering with the operation of the coal mines and from intimidating the men at work. It was estimated that the strike had caused a loss of at least \$1,250,000.

The report of the Mine Inspector for 1898 says the question of child labor still continues a problem, parents being found willing to swear to anything in order to keep their children at work.

Lawlessness.—At Hot Springs, March 16, a political feud ended in a street riot, in which five men lost their lives.

A so-called race war took place in March in Little River County, in the extreme southwestern part of the State. It was believed that 23 negroes were in a plot to begin a race war, and mobs of white men turned out to hunt them down. The dispatch said: "The exact number of negroes who have been summarily dealt with, or those who may yet fall into the hands of the mob before order is restored, may never be known. Seven bodies have been found, and other victims are being hunted, and will meet the same fate when run to earth. The work of dispatching the first two or three was easy, but the news soon spread among the negroes, who, instead of making the resistance and offering the battle that they had threatened, became panic-stricken, and began getting out of the community as quickly as possible. Two whose names were on the list of conspirators got a good start of the men who were detailed to look after them, and succeeded in reaching the Texas State line before being captured. However, they did not escape. They were overtaken, out of breath and exhausted, and were swung up without ceremony."

A so-called vigilance committee in August notified the colored residents of Paragould, Greene County, that they must leave the town. Many of them applied to the mayor, who declined to promise them protection. They left in large numbers, and the houses of those remaining were stoned. The citizens held a mass meeting, and deplored the action of the mob. They called upon the authorities to afford protection to all residents without regard to color.

De Queen.—The town of De Queen, on the Kansas City, Pittsburg and Gulf Railroad, 50 miles north of Texarkana, was almost totally burned up in the night of Oct. 1. Fifty-four business houses, including banks and hotels, were destroyed. The town was incorporated July 5, 1897, and has grown very rapidly since the completion of the railroad. About 10,000 bales of cotton are handled there each year.

Legislative Session.—The General Assembly convened Jan. 10 and adjourned April 19, after the longest session in the history of the State.

M. J. Manning was President of the Senate, and A. F. Vandeventer was Speaker of the House.

The most important act of the session was the antitrust law. It provides that any person or corporation which shall be a party to any pool or agreement to fix prices or premiums shall be deemed guilty of conspiracy to defraud, and be liable to a fine of \$200 to \$5,000 for each violation of the law, and that every day such corporation or person shall continue to do so shall be regarded as a separate offense. As interpreted by the Attorney-General, it excluded from transacting business in the State not only corporations and companies combining to fix rates in Arkansas, but all such as were members of any such associations in combination to fix or limit prices anywhere. As soon as the bill was signed all foreign fire insurance companies authorized to do business in the State, of which there were 63, withdrew, and policies were obtainable only in the two or three mutual companies organized and incorporated under the State laws.

The business men of Little Rock held a meeting, and appealed to the Legislature to modify one of the provisions of the law, that they might be able to insure their property in legitimate insurance companies. One of the houses laid the appeal on the table; the other indefinitely postponed it. A member of the Legislature, Hon. J. E. Wood, told the business men, in an address, that "they were to blame for the passage of the bill, for not taking more interest in politics and electing men to the Legislature who were more closely in touch with the business interests of the State." For this declaration he was censured by the House, but afterward a resolution was adopted expunging the censure from the record. Cases to test the validity of the law were brought in the circuit court, and decision was given that the law could not apply to companies in combinations in other States if they had not entered into any agreement to control rates in Arkansas. This decision was affirmed by the Supreme Court.

Four other acts affecting insurance companies were passed. One requires every corporation for whatever business organized to file with the Secretary of State a copy of its charter and a certificate of appointment of an agent for service; another is an amendment of the valued-policy law, applying to real property only, and making the amount upon which premium is collected a liquidated demand in case of loss; another provides that in suit upon policy issued on personal property proof of substantial compliance with the terms of the policy by the insured is sufficient to recover; the last applies to fraternal orders, and requires such associations to file a copy of their constitution and by-laws and a statement of their condition with the Auditor of State on March 1 of each year, and pay a fee of \$10.

An act was passed establishing a railroad commission. Its title is: "An Act to provide for the regulation of railroad freight and passenger tariffs in this State, to prevent unjust discriminations and extortions in the rates charged for the transportation of passengers and freight, and to prohibit railroad companies, corporations, and lessees in this State from charging other than just and reasonable rates and to punish the same, and prescribe a mode of procedure and rules of evidence in relation thereto; and to appoint commissioners and to prescribe rules for their government and define their powers and duties in relation to the same."

The Governor was authorized to appoint the three commissioners, to serve until the next general election, by and with the advice and consent

of the General Assembly in joint session. The salary of each commissioner was fixed at \$2,500, to be paid by the State.

By an act "to suppress the illegal sale of liquors, and to destroy the same when found in prohibited districts," "any chancellor, circuit judge, justice of the peace, mayor, or police judge, upon his own information or that of others given to him that spirituous liquors have been shipped to any prohibition district to be sold contrary to law, may issue a warrant directed to a constable, marshal, sheriff, or chief of police, commissioning him to search for and, upon finding any such liquors, to publicly destroy the same." In November this law was declared invalid in a circuit court, on the ground that it allowed the confiscation of one's personal property without due process of law.

The Governor sent a special message, calling the attention of the Legislature to the prevalence of smallpox in parts of the State; and an appropriation of \$5,200 was made to the Board of Health for the purpose of preventing the spread of the disease.

The appointment of a board of Capitol commissioners was provided for. They are to have in charge the building of a new Statehouse on the present site of the Penitentiary. Each commissioner receives \$5 a day while actually engaged, and 5 cents a mile in traveling to and from the capital.

The office of State Wine Inspector was created. It is to be the duty of the inspector to procure samples of any wine sold in the State which he has reason to believe impure, to have it analyzed, and to institute prosecutions in cases where the wine falls below the standard.

Railroad companies are to be responsible for rough handling of baggage in sums of not less than \$25 nor more than \$200.

The widow of a deceased Confederate soldier or sailor who has remained unmarried may apply for a pension after the death of her husband.

A county court may contract for the work of county prisoners with a person in another county, or may order the prisoners worked on the public roads.

All coal mined and paid for by weight must be weighed before it is screened.

In counties where there is no poorhouse county judges may let out the paupers to the lowest responsible bidder.

County-farm convicts are to be credited with 75 cents for each day they are on the farm, whether they work or not.

Marriages heretofore solemnized by mayors are declared legal and binding, and children born of parents so married are declared legitimate.

Other acts of the session were:

Appropriating \$5,000 to pay costs incurred in enforcing the antitrust law.

Making it unlawful to kill deer for pleasure or pastime in Mississippi, Crittenden, and Cross Counties.

Amending the mechanics' lien law; suit to be instituted within fifteen months.

Allowing ex-Confederate and Union soldiers to peddle without license.

Appropriating \$55,000 for disabled ex-Confederate soldiers.

To give the mortgagor right of redemption twelve months after date, when real property is sold under foreclosure.

For better protection of labor in the milling and manufacturing industries of Arkansas; wages to be paid in currency.

To better inform claimants of delinquent lands

that same have been forfeited for nonpayment of taxes.

Requiring physiology and hygiene to be taught in public schools, with special reference to the effects of alcoholic drinks.

To extend the land grant to the Mississippi River, Hamburg and Western Railroad.

Authorizing mechanics and artisans to sell personal property on which they hold liens.

Relieving husbands of responsibility for antenatal debts of their wives.

Making it a misdemeanor to sell or give to minors under twenty-one cigarettes or material for making them, under penalty of a fine of \$100 to \$300; or to sell or give to minors under fifteen cigars or tobacco in any form, under penalty of \$10 to \$50.

Making it unlawful to catch, kill, or injure any wild Chinese pheasant for five years from April 10, 1899.

A joint resolution was passed to submit a proposed amendment to the Constitution, permitting State and county officers to give bonds in guarantee companies.

A resolution proposing an amendment exempting new cotton and woolen manufacturing industries from taxation for five years was defeated in the Senate.

The appropriations amounted to \$1,136,385.30.

A bill to separate the school money raised by special levy, so that the part paid by white taxpayers should go to the support of white schools, and that paid by colored to colored schools, was introduced in the House, but failed.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE. American.—The forty-eighth meeting of the American Association was held in Columbus, Ohio, during Aug. 19-26, 1899. The officers of the meeting were: President, Edward Orton, of Columbus, Ohio. Vice-presidents

EDWARD ORTON.

of the sections: A, Alexander Macfarlane, South Bethlehem, Pa.; B, Elihu Thomson, Lynn, Mass.; C, Frank P. Venable, Chapel Hill, N. C.; D, Storm Bull, Madison, Wis.; E, Joseph F. Whitteaves, Ottawa, Canada; F, Simon H. Gage, Ithaca, N. Y.; G, Charles R. Barnes, Chicago,

Ill.; H, Thomas Wilson, Washington city; and I, Marcus Benjamin, Washington city. Permanent secretary, Leland O. Howard, Washington city. General secretary, Frederick Bedell, Ithaca, N. Y. Secretary of the council, Charles Baskerville, Chapel Hill, N. C. Secretaries of the sections: A, John F. Hayford, Washington city; B, William Hallock, New York city; C, Henry A. Weber, Columbus, Ohio; D, James M. Porter, Easton, Pa.; E, Arthur Hollick, New York city; F, Charles L. Marlatt, Washington city, in place of Frederick W. True; G, William A. Kellerman, Columbus, Ohio; H, Edward W. Scripture, New Haven, Conn.; I, Calvin M. Woodward, St. Louis, Mo. Treasurer, Robert S. Woodward, New York city.

Opening Proceedings.—The usual regular preliminary meeting of the council with which the association begins its sessions was held in the Chittenden Hotel on Aug. 20, at noon. At this session the final details pertaining to the arrangements of the meeting were settled, and the reports of the local committees acted on. The names of 55 applicants for membership were favorably considered, which number, together with 26 names acted on at meetings of the council held in New York city on Dec. 27, 1898, and in Washington city on April 23, 1899, brought the total membership up to 1810. The general session with which the public meeting began was held in the chapel of the Ohio State University at 10 A. M., on Aug. 21. The meeting was called to order by the retiring president, Frederic W. Putnam, of Cambridge, Mass., who said that "Columbus, as the capital of the great State of Ohio, was a fitting place for the American Association for the Advancement of Science to begin the second half of the century of its existence," and introduced Dr. Edward Orton as the presiding officer for the meeting. An address of welcome was made by Attorney-General Axline, representing Gov. Bushnell; also one on behalf of Mayor Swartz was presented by Judge Earnhart. President Thompson welcomed the association on behalf of the university. He said: "The Ohio State University is exceedingly happy in the privilege of extending a welcome to you, not only in her own name, but in the name of all these institutions which are to do so much in the future for industrial and scientific education in the great West. We recognize in this association a body of men devoted to the study of science and scientific education. We trust that your stay with us will assure you that the Ohio State University proposes to prove her right to existence by ministering to the needs of the people, and by presenting to them an open opportunity to the best that modern education can supply."

In behalf of the association President Orton returned cordial thanks for the welcome given. In the course of his remarks he described the great geographical range of the association, saying: "It transcends not only all State limits, but national boundaries as well. An organization that represents the United States takes in a respectable part of the land areas of the planet, but this is not merely a United States organization. It especially includes that potent and ambitious neighbor of ours to the northward, that owns more than 3,000,000 square miles, or a full half of the North American continent. Our name is broad enough to include also our neighbors to the southward, Mexico and the Central American republics." In referring to the work of the association, he said: "Its very title indicates that the work is incomplete, that it is still in progress. Its founders fifty years ago

clearly saw that they were in the early morning of a growing day. The most unexpected and marvelous progress has been made since that date, but as yet there is no occasion and no prospect of occasion to modify the title. We are still laboring for the advancement of science, for the discovery of new truth. The field, which is the world, was never so white to the harvest as now, but it is still early morning on the dial of science. Our contributions to the advancement of science are often fragmentary and devoid of special interest to the outside world. But every one of them has a place in the great temple of knowledge, and the wise master builders, some of whom appear in every generation, will find them all and use them all at last, and then only will their true value come to light."

The usual announcements were then made, after which the session was adjourned.

Address of the Retiring President.—The association met again in the auditorium of the Board of Trade on Monday evening to listen to the retiring address of President Putnam, who since 1886 has held the chair of American Archaeology and Ethnology in Harvard University, and has also been the curator of the department of anthropology at the American Museum of Natural History in New York city since 1894. The subject of his address was *A Problem in American Anthropology*. In opening he referred to the recent death of Daniel G. Brinton, a past president, saying, "By his death American anthropology has suffered a serious loss, and a great scholar and earnest worker has been taken from our association." Then, taking up his subject proper, he said: "We are still disputing the evidence furnished by craniology, by social institutions, and by language in relation to the unity or diversity of the existing American tribes and their predecessors on this continent." He discussed at length the paper read before the association in 1857 by James D. Dana on *Thoughts on Species*, and then one by Sir Daniel Wilson, and finally one by Lewis H. Morgan, in each of which the assumed unity of the American race was held. He also showed that Edward J. Payne, in his recent *History of the New World called America*, likewise expressed his belief in the antiquity and unity of the American tribes. Then, taking up the subject of craniology, he described the methods of studying skulls, and claimed that "the many differing characteristics exhibited in a large collection of crania, brought together from various portions of America, north and south, are reducible to several great groups. These may be generally classed as the Eskimo type, the northern and central or so-called Indian type, the northwestern brachycephalic type, the southwestern dolichocephalic type, the Toltec brachycephalic type, and the Antillean type, with probably the ancient Brazilian, the Fuegian, and the pre-Inca types of South America. Each of these types is found in its purity in a certain limited region, while in other regions it is more or less modified by admixture. Thus the Toltec or ancient Mexican type (which, united with the Peruvian, was separated as the Toltec family even by Morgan) occurs, more or less modified by admixture, in the ancient and modern pueblos and in the ancient earthworks of our central and southern valleys. In Peru, more in modern than in ancient times, there is an admixture of two principal types. At the north of the continent we again find certain traits that possibly indicate a mixture of the Eskimo with the early coast peoples both on the Pacific and on the Atlantic sides of the continent. The

north-central Indian type seems to have extended across the continent and to have branched in all directions, while a similar, but not so extensive branching, northeast and south, seems to have been the course of the Toltecan type." This led up to an expression of his belief that "the American continent has been peopled at different times and from various sources; that in the great lapse of time since the different immigrants reached the continent there has been in many places an admixture of the several stocks and a modification of the arts and customs of all, while natural environment has had a great influence upon the ethnic development of each group." The reasons for this belief were then given in detail, and included a discussion of the "mound builders." Concerning these he showed the universality of such mounds, and said that "the earth mounds, like the shell mounds, were made by many peoples and at various times." He then said: "That man was on the American continent in Quaternary times, and possibly still earlier, seems to me as certain as that he was in the Old World during the same period. The Calaveras skull, that bone of contention, is not the only evidence of his early occupation of the Pacific coast. On the Atlantic side the recent extensive explorations of the glacial and immediately following deposits at Trenton are confirmatory of the occupation of the Delaware valley during the closing centuries of the glacial period, and possibly also of the interglacial time. The discoveries in Ohio, in Florida, and in various parts of Central and South America all go to prove man's antiquity in America. Admitting the great antiquity of one or more of the early groups of man on the continent, and that he spread widely over it while in the palæolithic and early neolithic stages of culture, I can not see any reason for doubting that there were also later accessions during neolithic times and even when social institutions were well advanced. While these culture epochs mark certain phases in the development of a people, they can not be considered as marking special periods of time. In America we certainly do not find that correlation with the Old-World periods which we are so wont to take for granted." He then paid a deserved tribute to the museums and expeditions through which material was being collected for study. In closing he said: "Anthropology is now a well-established science, and with all this wealth of materials and opportunities there can be no doubt that in time the anthropologists will be able to solve that problem which for the past half century has been discussed in this association—the problem of the unity or diversity of prehistoric man in America."

Proceedings of the Sections.—The association is divided into nine sections, each of which is presided over by an officer having the rank of vice-president of the association. Subsequent to the opening proceedings each section meets by itself and effects its organization by electing a fellow to represent it in the council, a sectional committee of three fellows, a fellow or member to the nominating committee, and a committee of three members or fellows to nominate officers of the section for the next meeting. As soon as this organization is effected the secretary of the section reports to the general secretary, who then provides him with a list of papers that, having been considered suitable by the council, may be read and discussed before the section. A press secretary, whose duties are to prepare abstracts of the papers read and to give them to reporters of newspapers, is also commonly chosen.

A. Mathematics and Astronomy.—The presiding officer of this section was Prof. Alexander Macfarlane, of Lehigh University, Bethlehem, Pa., who presented an address on *The Fundamental Principles of Algebra*.

In this paper he confined his discussion to the advances made in the present century, and began a description of the results that followed the recognition of the analogy between $\frac{d}{dx}$, the symbol of differentiation, and the ordinary symbol of algebra. The work of Peacock, who flourished in Cambridge from 1812 on, as well as the advances made by D. F. Gregory, a younger member of the Cambridge school of mathematics, were carefully considered. In chronological order followed references to Augustus de Morgan and to George Boole, both of whom were logicians as well as mathematicians. Much attention was devoted to the famous Sir William R. Hamilton, who did considerable in advancing mathematical science, and to whom we owe the method of quaternions. Grassmann and Hankel followed Hamilton, and their contributions received due consideration. Clifford, of whom so much was hoped, and who died too soon, was the next whose work was analyzed, and then the newer publications of Chrystal were discussed. The work of Whitehead, the most recent of writers on algebra, was then taken up. Dr. Macfarlane's conclusions were: "If the elements of a sum or of a product are independent of order, then the written order of the terms is different, and the product of two such sums is the sum of the partial products; but when the elements of a sum or of a product have a real order, then the written order of the elements must be preserved, though the manner of their association may be indifferent, and a power of a binomial is then different from a product. This applies whether the sum or product occurs simply or as the index of a base. Descartes wedded algebra to geometry; formalism tends to divorce them. The progress of mathematics within the century has been from formalism toward realism; and in the coming century, it may be predicted, symbolism will more and more give place to notation, conventions to principles, and loose extensions to rigorous generalizations."

The following-named papers were read and discussed before the section: Report on Progress in Non-Euclidean Geometry, by George B. Halsted; Report on Progress in the Theory of Linear Groups, by Leonard E. Dickson; The Aberration Constant from Observations of Polaris, by Asaph Hall, Jr.; Ancient Eclipses and Chronology, by Robert W. McFarland; Some Points in the Design of a Spectroscope, by H. C. Lord; Note on Grassmann's Proof that there can be but Two Kinds of Lineal Multiplication of Two Factors, by Joseph V. Collins; The Theory of Mathematical Inference, by G. J. Stokes; Recent Progress in Positional Astronomy, by John R. Eastman; Practical Astronomy during the First Half of the Present Century, by Truman H. Safford; Internal Forces that generate Stellar Atmospheres, by J. Woodbridge Davis; On the Commutators of a Group, by George A. Miller; and Linear Vector Functions, by S. Kimura.

On Aug. 24 this section met in joint session with Section B to listen to the following papers: Recent Progress in Theoretical Meteorology, by Cleveland Abbe; The Determination of the Nature of Electricity and Magnetism, including a Determination of the Density of the Ether, by Reginald A. Fessenden.

B. Physics.—This section was presided over by

Elihu Thomson, who is well known for his electrical inventions, most of which are controlled by the Thomson-Houston and General Electric Companies. His address was on The Field of Experimental Research. He said in part: "Physical research by experimental methods is both a broadening and a narrowing field. There are many gaps yet to be filled, data to be accumulated, measurements to be made with great precision, but the limits within which we must work are becoming at the same time more and more defined. It is but a few months since Prof. Dewar, by the evaporation of liquid hydrogen in a vacuum, closely approached, if he has not reached, our lower limit of possible temperature. We can imagine no limit to possible increase of temperature. While we may actually employ in electric furnaces temperatures which, according to Moissan, have a lower limit of 3,500° C., we can realize the possibility of temperatures existing in the stars measured by tens of thousands or hundreds of thousands of degrees of our temperature scale. It has been aptly said that many, and perhaps most, of the important discoveries have been made with comparatively simple and crude apparatus, yet it is probably true also that future advance work is likely to require more and more refined means and greater nicety of construction and adjustment of apparatus. In most fields of research, however, progress in the future will depend in an increasing degree upon the possession by the investigator of an appreciation of small details and magnitudes, together with a refined skill in manipulation or construction of apparatus." After reviewing the work on electric waves by Hertz, and the still more recent advances made by Marconi, he said: "Before leaving the consideration of this most fruitful field of experimental research opened by Hertz, it may be stated that the one gap in the work yet to be filled is the actual production of electric waves of a wave length corresponding to those of the spectrum. Despite the diligent studies which had been made in the invisible rays of the spectrum, both the ultrared and ultraviolet—a work far from completion as yet—the peculiar invisible radiation of the Crookes tube remained unknown until the work of Lenard and Röntgen brought it to the knowledge of the world. It is needless to recount the steps in the discovery of Röntgen rays. The diffusion which takes place when Röntgen rays pass through various media is another phenomenon which needs more attention from investigators. Again, our knowledge of the aurora is not as yet much more definite or precise than it is in regard to the obscure forms of lightning. Whether these phenomena will ever be brought within the field of research by experimental methods is an open question. We define our instruments; we render more trustworthy our means of observation; we extend our range of experimental inquiry, and thus lay the foundation for the future work, with the full knowledge that, although our researches can not extend beyond certain limits, the field itself is, even within those limits, inexhaustible."

The following-named papers were read and discussed before the section: Apparatus for the Demonstration of the Varying Currents in the Different Conductors of a Rotary Converter, by Frank C. Caldwell; A New Graphical Method of Constructing the Entropy-temperature Diagram from the Indicator Card of a Gas or Oil Engine, by Henry T. Eddy; Compound Harmonic Vibration of a String, by William Hallock; A New Form of Electrical Condenser having a Ca-

capacity capable of Continuous Adjustment, by Lyman J. Briggs; Time of Perception as a Measure of the Intensity of Light and Relations of Time and Space in Vision, by James McK. Cattell; The Musical Scales of the Arabs and Mediæval Organ Pipes and their Bearing on the History of the Scale, by Charles K. Wead; An Absolute Determination of the E. M. F. of a Clark Cell, by Henry S. Carhart and Karl E. Guthe; Quantitative Investigation of the Coherer, by Augustus Trowbridge; Polarization and Polarization Capacity, by Karl E. Guthe and Martin D. Atkins; Current and Voltage Curves in the magnetically Blown Arc and in the Aluminum Electrolytic Cell, Some New Apparatus—Tachometer, Chronograph, Data Collector, Induction Coil, Balance for Standardizing Amperemeters, Standard of Induction, Location of Smokeless Discharge by Means of Colored Screens, Note on the Age of the Earth, and Measurement of Magnetism in Iron and the Relation between Permeability and Hysteresis, by Reginald A. Fessenden; Polarization and Internal Resistance of the Copper Voltmeter, by Burton E. Moore; Concerning the Fall of Potential at the Anode in a Geissler Tube, by Clarence A. Skinner; The Equipment and Facilities of the Office of United States Standard Weights and Measures for the Verification of Electrical Standard and Measuring Apparatus and An Experimental Test of the Accuracy of Ohm's Law, by Frank A. Wolff, Jr.; March Weather in the United States, etc., by Oliver L. Fassig; A New Spectrophotometer and a Method of Optically Calibrating the Slit and On Achromatic Polarization in Crystalline Combinations, by D. B. Brace; A Method for the Study of Phosphorescent Sulphides, by Fred E. Kester; Accidental Double Refraction in Colloids and Crystalloids, by Bruce V. Hill; A Bolometric Study of the Radiation of a Black Body between 600° and 1,100° C., by Charles E. Mendenhall; A Bolometric Study of the Radiation of an Absolute Black Body, by Frederick A. Saunders; On Thermodynamic Surfaces of P. V. T. for Solid, Liquid, and Gaseous State, by Francis E. Nipher; Optical Calibration of the Slit of a Spectrometer, by E. V. Capps; On Differential Dispersion in Double Refracting Media, by E. J. Rendtorff; Relations of Magnetization to the Modulus of Elasticity, by James S. Stevens; On the Escape of Gases from the Planets according to the Kinetic Theory and On Flutings in Kundt's Tube, by S. R. Cook; The Dielectric Strength of Oils and Some Unexpected Errors in Wattmeter Measurements, by Thomas Gray; Note on the Preparation of Reticles, by David P. Todd; Electrical Anæsthesia and The Nature of Spoken Vowels, with Reference to the Theories of Helmholtz and Hermann, by Edward W. Scripture; Pressure and Wave Length, by John F. Mohler; and The Attenuation of Sound and the Constant of Radiation of Air, by A. Wilmer Duff.

On Aug. 24 a joint session of Sections A and B was held, at which the papers mentioned under Section A were read.

C. Chemistry.—Prof. Frank P. Venable, who fills the chair of Chemistry in the University of North Carolina, Chapel Hill, N. C., presided over this section, and delivered an address on The Definition of the Element. He began by saying that "the conception of an element among the Greek philosophers and the earlier alchemists was very different from the modern idea." Then he followed with a historical outline of the development of the idea of the element. Closing that portion of his address with: "Thus the elements were recognized as simple bodies because there

were no simpler. They were not complex or compound. The distinction was clearly drawn between bodies simple and bodies compound, and the name simple body has been frequently used as a synonym for element through a large part of this century." Then, discussing the significance of the idea of atom, he made the following statement: "It is not possible for me, in the limits of this address, to array before you all of the various evidence which leads to the belief that our so-called elementary atoms are after all but compounds of an intimate, peculiar nature whose dissociation we have as yet been unable to accomplish. When properly marshalled, it gives a very staggering blow to the old faith. What would be attained if any one should succeed in decomposing an element by one of the usual methods? Successful decomposition should mean the discovery of a method which will decompose not one, but many or, indeed, all of the elements, and the decomposition of these must not yield a larger number of supposedly simple bodies, but a small group of one or two or three which are common constituents of all." His argument led to this conclusion: "Either these imagined simple bodies are after all compounds, built up of two or more common constituents, or they are but varying forms of one and the same kind of matter subjected to different influences and conditions." The closing portion of his address leaned toward the hypothesis that the elements are built up of two or more common constituents, which, he said, "has a larger number of supporters and would seem more plausible."

The following-named papers were presented before the section, the meetings of which were also attended by the members of the American Chemical Society: The Relation of Physical Chemistry to Technical Chemistry, by Wilder D. Bancroft; On the Constitution of Oxy azo-compounds, by William McPherson; The Nature of the Change from Violet to Green in Solutions of Chromium Salts, by Willis R. Whitney; Microstructure of Antimony-tin Alloys, by J. J. Kessler, Jr.; The Electrolytic Deposition of Metals from Non-aqueous Solutions, by Louis Kahlenberg; Some Experimental Illustrations of the Electrolytic Dissociation Theory, by Arthur A. Noyes; Methods of Analysis of Sulphite Solutions as used in Paper Making, by Rudolf De Roode; Improvement in the Chemical Composition of the Corn Kernel, by Cyril G. Hopkins; Some New Products of Maize Stalks, by Harvey W. Wiley and William H. Krug; Soil Humus, by E. F. Ladd; The Relation of Fertilizers to Soil Moistures, by Julius T. Willard; Secondary Heptylamine, by Thomas Clarke; Propane Trisulphonic Acid, by William B. Shober; On the Derivatives of Isocotic of Formhydroxamic Acid, and their Relation to Fulminic Acid, by H. C. Biddle; The Reichert Figure of Butter, by James H. Stebbins, Jr.; The Determination of Nickel in Nickel Steel, by George W. Sargent; Camphoric Acid, Alpha-hydroxy-dihydroicis-campholytic Acid, and the Synthesis of Dimethyl-cyan-carbon-ethyl-cyclopentanone, by William A. Noyes and J. W. Shepherd; Diazo-Caffeine and The Preparation of the Tri-phenyl-chlor-methane and Tri-phenyl-carbinol, by M. Gomberg; The Action of Sodium Methylate upon the Dibromides of Propenyl Compounds and Unsaturated Ketones, by F. J. Pond; Some Secondary Cyclic Amines, by Curtis C. Howard; On Naphthalene-azo-alpha-naphthol and its Derivatives, by William McPherson and Robert Fischer; Esterification Experiments with Hexahydro- and Tetra-hydroxylic Acids, by William A.

Noyes; On the Condensation of Chloral with Ortho-, Meta-, and Para-nitranilines, Note on the Occurrence of Chromium, Titanium, and Vanadium in Peats, and On the Universal Distribution of Titanium, by Charles Baskerville; The Atomic Weight of Calcium, by Theodore W. Richards; Preliminary Report on a New Method for the Determination of Carbon Dioxide, by M. E. Hiltner; Analysis of Oils, by Augustus H. Gill; Examination of Lemon-flavoring Extracts, by A. S. Mitchell; The Composition of American and Foreign Dairy Salt, by Fritz W. Woll; Notes on Testing Soils for Application of Commercial Fertilizers, by Henry A. Weber; The Persulphates of Rubidium, Cesium, and Thallium, by Arnett R. Foster and Edgar F. Smith; The Chemical Composition of Butter Fat and The Chemistry of Rancidity in Butter Fat, by C. A. Browne, Jr.; Halides and Perhalides of the Picolines, by Paul Murrill; A Determination of the Transformation Point of Sodium Sulphate, by Arthur P. Saunders; Notes on the Estimation of Total Carbon in Iron and Steel, by Francis P. Dunnington; Electrolysis of Metallic Phosphate Solutions, by Harry M. Fernberger and Edgar F. Smith; The Action of Sodium Methylate upon the Dibromides of Propenyl Compounds and Unsaturated Ketones, by F. J. Pond, O. P. Maxwell, and G. M. Norman; On the Determination of Volatile Combustible Matter in Coke and Anthracite Coal, by Richard K. Meade and James C. Atkins; Observations upon Tungsten, by Edgar F. Smith; The Atomic Mass of Tungsten, by Willett L. Hardin; Notes on the Determination of Sulphur in Pig Iron, by M. J. Moore; An Electrolytic Study of Benzoic and Benzil, by Joseph H. James; The Quantitative Estimation of Boric Acid in Tourmaline, by George W. Sargent; Some Boiling-point Curves, by John K. Haywood; Electrolytic Determinations and Separations, by Lily G. Kollack; The Precipitation of Copper by Zinc, by John G. Shengle and Edgar F. Smith; Derivatives and Atomic Mass of Palladium, by Willett L. Hardin; Action of Hydrochloric-acid Gas upon Sulphates, Selenates, Tellurates, and Phosphates, by Raymond W. Tunnell and Edgar F. Smith; and The Electrolytic Oxidation of Succinic Acid, by Charles H. Clarke and Edgar F. Smith.

D. Mechanical Science and Engineering.—The presiding officer of this section was Prof. Storm Bull, who fills the chair of Steam Engineering in the University of Wisconsin, Madison, Wis. He addressed the section on Engineering Education as a Preliminary Training for Scientific-research Work. He said in part: "The object of scientific-research work is, as I understand it, to ascertain the facts of Nature, to correlate these facts, and, finally, to deduce the laws of Nature as illustrated by the facts discovered. It will be noticed that I divide scientific-research work into three parts, and I am sure that everybody will agree when I say that most of the scientific work done to-day is along the first line." These qualifications were discussed somewhat at length. He then said: "It is my contention that a man who has received a thorough engineering education, and perhaps has added a few years of professional work to scholastic training, is as well prepared to take up scientific-research work as any one coming from our universities and colleges." The education of an engineer was discussed by him, and he contended that "the ideal engineering education is first an academic course, followed by two or three years' work in the engineering college. A man educated as just indicated would certainly be better fitted for sci-

entific-research work than any other college graduate who had an equal amount of time for preparation, but had taken no engineering work." In conclusion he said: "I desire to repeat that we engineers, or semi-engineers, need to feel that our work is very often scientific-research work of the highest character, and that, although we are very often told that because of its practical nature it does not belong to pure science, yet we should insist that, whether it be pure science or not, it is scientific work."

The following-named papers were then presented before the section: Crystallization in Bronze Test Pieces, Support of Beams in Tests of Transverse Strength, and The Fracture of Spheres, by William T. Magruder; A New Exact Geographical Method for Designing Cone Pulleys, by Walter K. Palmer; Some Experiments on Combustion in Locomotive Boilers, by J. W. Shepherd; Some Engineering Experiences with Spanish Wrecks and Electric Mining of Bituminous Coal, by William S. Aldrich; The Illustration of Critical Speeds of Shafts, The Friction of Balls in Thrust Bearings, and The Fuel Value of Cereals, by Thomas Gray; and A Novel Method of Testing a Locomotive Boiler, by Frank C. Wagner.

On Aug. 23 a joint session was held with Section I, when a paper on Some Thermal Determinations in Heating and Ventilating Buildings, by Gilbert B. Morrison, was read and discussed.

E. Geology and Geography.—This section was presided over by Mr. Joseph F. Whiteaves, of the Geological Survey of Canada, who presented an address on The Devonian System in Canada. He showed at the outset that the existence of the Devonian as a distinct geological system was first indicated by Lonsdale, in 1837, on purely palæontological evidence, and subsequently confirmed by Sedgwick and Murchison, in 1839, on stratigraphical considerations. Having thus established the origin of the word Devonian, he passed to Canada, and said that "rocks of Devonian age have been discovered at various times in almost every province and district of the Dominion, and it is thought that a brief summary of the history of these discoveries and of the present state of our knowledge of the Devonian rocks of Canada, from a palæontologist's point of view, may be of interest on this occasion. In accordance with long usage in Canada, the line of demarcation between the Silurian and Devonian systems in this address will be drawn at the base of the Oriskany sandstone. It will also be convenient to consider the information that has so far been gained about the Devonian rocks of Canada in geographical order, from east to west, under the three following heads—namely, (1) the Maritime Provinces and Quebec, (2) Ontario and Keewatin, and (3) Manitoba and the Northwest Territories." Each of these geographical divisions was then taken up, and under subdivisions of the smaller provinces a summary of the descriptions of the formation in a chronological order was given, as well as a summary of the palæontological features of the formation.

The following-named papers were read and discussed before the section: The Geology of Columbus and Vicinity, by Edward Orton; Glacial Phenomena of Central Ohio, by Frank Leverett; Glacial and Modified Drift in Minneapolis, Minn., by Warren Upham; Lateral Erosion at the Mouth of Niagara Gorge, by G. Frederick Wright; The Geology of Oahu, Hawaiian Islands, by Charles H. Hitchcock; Random: A Pre-Cambrian Upper-Algonkian Terrane, by Charles D. Walcott; The Petrographic Province of Fox

River Valley, Wisconsin, by William H. Hobbs and C. K. Leith, with analyses by William W. Daniels; Age and Development of the Cincinnati Anticline, by August F. Foerste; The Lower Devonian Aspect of the Lower Helderberg and Oriskany Formations, by Charles Schuchert; The Silurian-Devonian Boundary in North America, by Henry S. Williams; The Section at Schoharie, N. Y., by John J. Stevenson; The Ozarkian and its Significance in Theoretic Geology, by Joseph Le Conte; The Geological Results of the Indiana Coal Survey, by George H. Ashley; The Cape Fear Section in the Coastal Plain, by Joseph A. Holmes; The Occurrences of Corundum, by J. H. Pratt; Triassic Coal and Coke of Sonora, Mexico, by Edward T. Dumble; Some Geological Conditions favoring Water-power Developments in the South Atlantic Region, by Joseph A. Holmes; *Paropsonema*: A Peculiar Echinoderm from the Intumescens Fauna, New York, Remarkable Occurrences of Orthoceros in the Oneonta Sandstones of New York, and The Squaw Island "Water Biscuit," Canandaigua Lake, New York, by John M. Clarke; The Pre-Lafayette (Tennessean) Base Level, by W. J. McGee; The Relative Ages of the Maumee Glacial Lake and the Niagara Gorge, by Charles E. Slocum; The Galt Moraine and Associated Drainage, by Frank B. Taylor; Discovery of New Invertebrates in the Dinosaur Beds of Wyoming, by Erwin H. Barbour and Wilbur C. Knight; The Rapid Decline of Geyser Activity, by Erwin H. Barbour; The Pot Holes of Foster's Flats (now called Niagara Glen) on the Niagara River, by Miss Mary A. Fleming; and A Consideration of the Interpretation of Unusual Events in Geological Records, illustrated by Recent Examples, by Frederick W. Simonds.

On Aug. 22 the section met in joint session with the Geological Society of America. On Aug. 24 the entire section visited the gas fields near Lancaster, Ohio, where a display of natural gas was made under the direction of the Central Ohio Natural Gas and Fuel Company.

F. Zoölogy.—Prof. Simon H. Gage, of the biological department of Cornell University, Ithaca, N. Y., was the presiding officer of this section, and he chose as the subject of his address The Importance and the Promise in the Study of the Domestic Animals. After citing a number of pertinent illustrations, he said: "I have tried to show a few ways in which the study of domestic animals has thrown light on the problems confronting mankind in his social ideals, in preventive medicines, in physiology and hygiene, in embryology and comparative anatomy, and in the doctrine of the evolution of organic forms. The attempt has been made to show that, with the higher forms at least—that is, the forms most closely related to man, and with whose destiny his own economic, hygienic, and social relations are most closely interwoven—the domestic animals have in the past and promise in the future to serve the best purpose because of the abundance of the material in quite widely separated groups of animals which long have been and still are under greatly differing conditions and surroundings; and, finally, because this material is plentiful and under control, and thus may be studied throughout the entire life cycle." He also called attention to the fact that "there has been and still is too great a tendency in biology to study forms remote and inaccessible." As a final word he said: "However necessary and desirable it may have been in the past that the main energy of zoölogists should be employed in the description of new species and in the mak-

ing of fragmentary observations upon the habits, structure, and embryology of a multitude of forms, I firmly believe that necessity or even desirability has long since passed away, and that for the advancement of zoological science the work of surpassing importance confronting us is the thorough investigation of a few forms from the ovum to youth, maturity, and old age. And I also firmly believe that, whenever available, the greatest good to science, and thus to mankind, will result from a selection of domesticated forms for these thorough investigations."

The following-named papers were read and discussed before the section: On the Utility of Phosphorescence in Deep-sea Animals, by Charles C. Nutting; The Course of the Fibers in the Optic Chiasma of the Common American Toad (*Bufo lentiginosus*), by B. B. Myers; On *Reighardia*, a New Genus of Linguatulida, by Henry B. Ward; The Histogenesis of Muscle in the Metamorphosis of the Toad (*Bufo lentiginosus americanus*), by Benjamin F. Kingsbury; The Progenitors of Batrachians, by Theodore Gill; Observations on the Variation, Life History, and Habits of a Minute Locust (*Edipoda maritima* Uhl. (?), by Herbert Osborn; A Chart for illustrating the Origin and Evolution of Animal and Vegetable Life, by A. D. Hopkins; Geographical Variations as illustrated by the Horned Larks of North America, by Harry C. Oberholser; On Some Pirate Bugs, which may be Responsible for So-called "Spider-bite" Cases, by Leland O. Howard; Cave Animals: Their Character, Origin, and their Evidence for or against the Transmission of Acquired Characters, by Carl H. Eigenmann; Have we more than a Single Species of *Blissus* in North America? by Francis M. Webster; Aestivation of *Epiphragmophora traskii* (Newcomb) in Southern California, by M. Burton Williamson; Natural Taxonomy of the Class Aves, by Robert W. Shufeldt; Notes on the Morphology of the Chick's Brain, by Susanna P. Gage; Further Notes on the Brook Lamprey (*Lampetra wilderi*), Respiration in Tadpoles of the Toad (*Bufo lentiginosus*), and Photographing Natural-history Specimens under Water or other Liquids with a Vertical Camera, by Simon H. Gage; A Discussion of *Aspidiotus cydoniae* and its Allies, by Charles L. Marlatt; and Effects of Hydrocyanic-acid Gas upon Animal Life and its Common Use, by Willis G. Johnson.

G. Botany.—The presiding officer of this section was Prof. Charles R. Barnes, who fills the chair of Plant Physiology in the University of Chicago, Chicago, Ill. The subject of his address was The Progress and Problems of Plant Physiology. He said in part: "It is only in comparatively recent years that plant physiology has become established upon a firm experimental basis, and thus fitted to take its proper place among the sciences offered in university curricula. Its real and vigorous growth has been measured by scarcely four decades." Prof. Barnes then discussed the chief features of plant physiology in which notable progress had been made during the last decade, under the headings of physical chemistry, physiological morphology, irritability, ecology, and cytology. This treatment he summarized in closing as follows: "The great advances in plant chemies and physics, the progress in the investigation of causes of plant form, the widening ideas of the property of irritability, the investigation of the social relations of plants, and the minute study of cell action in spite of their diversity have one great end in view. This is nothing less than the solution of the great problem—the fundamental problem—of plant

physiology, as of animal physiology. The secret which we must discover, the dark recesses toward which we must focus all the light that can be obtained from every source, is the *constitution of living matter*. Intrenched within the apparently impenetrable fortress of molecular structure this secret lies hid. The attacks upon it from the direction of physical chemistry and physiological morphology, of irritability, of ecology, and of cytology, are the concentrating attacks of various divisions of an army upon a citadel, some of whose outer defenses have already been captured. The innumerable observations are devised along parallel lines of approach, and each division of the army is creeping closer and closer to the inner defenses, which yet resist all attacks and hide the long-sought truth. We see yet no breach in the citadel. Here and there we seem to approach more closely, and at certain points are getting glimpses, through this loophole or that, of inner truths hidden before. It is not possible to prove to-day that life and death are only a difference in the chemical and physical behavior of certain compounds. It is safe to say that the future is likely to justify such an assertion. In the meanwhile we press forward along the whole line. Botany is more than ever full of meaning, because with its sister sciences it is no longer seeking things, but the reasons for things."

The following-named papers were read and discussed before the section: The Geotropism of the Hypocotyl of Cucurbits, by Edwin B. Copeland; The Destruction of Chlorophyll by Oxidizing Enzymes, by Albert F. Woods; The Effect of Hydrocyanic-acid Gas upon the Germination of Seeds, by Charles O. Townsend; Some Physiological Effects of Hydrocyanic-acid Gas upon Plants, by Willis G. Johnson; Etiolative Reactions of *Sarracenia* and *Oxalis*, by William B. Stewart; The Mycorrhiza of *Tipularia*, by Julia B. Clifford; The Cultures of *Uredineae* in 1899, by Joseph C. Arthur; The Embryology of *Vaillantia hispida*, by Francis E. Lloyd; Division of the Megaspore of *Erythronium*, by John H. Schaffner; The Tamarack Swamp in Ohio and The Flora of Franklin County, Ohio, by Augustin D. Selby; The Fungous Infestations of Agricultural Soils in the United States, by Erwin F. Smith; The Occurrence of Calcium Oxalate and Lignin during the Differentiation of the Buds of *Prunus americana*, by Henry L. Bolley and L. R. Waldron; Two Diseases of *Juniperus*, by Hermann von Schrenk; The Crystals in *Datura stramonium* L., by Henry Kraener; The Fertilization of *Albugo bliti*, by Frank L. Stevens; The Embryo Sac of *Leucoerinum montanum*, by Francis Ramaley; Notes on Subterranean Organs, by A. S. Hitchcock; Some Monstrosities in Spikelets of *Eragrostis* and *Setaria*, with their Meaning, by William J. Beal; Are the Trees advancing or retreating upon the Nebraska Plains? One Thousand Miles for a Fern, and Studies of Vegetation of the High Nebraska Plains, by Charles E. Bessey; Useful Trees and Shrubs for the Northwest Plains of Canada and The Breeding of Apples for the Northwest Plains, by William Saunders; Field Experiments with "Nitragin" and other Germ Fertilizers, by Byron D. Halsted; The Duration of Bacterial Existence under Trial Environments, by Henry L. Bolley; Suggestions for a more Satisfactory Classification of the Pleurocarpous Mosses, by Abel J. Grout; Notes concerning the Study of Lichen Distribution in the Mississippi Valley, by Bruce Fink; Botanical Teaching in the Secondary Schools, by William C. Stevens; Botanical Teaching in the Secondary Schools, by Ida Clendenin; On the Occurrence of

the Black Rot of Cabbage in Europe, by H. A. Harding; A Summary of our Knowledge of the Fig, with Illustrations, by Walter T. Swingle; and The Classification of Botanical Publications, by William Trelease.

Columbus was the home of William S. Sullivant and Leo Lesquereux, the first and most famous bryologists, and on Aug. 23 the students of mosses and hepatics gathered to honor their name and fame. Their portraits were exhibited and their works were shown. Twelve North American mosses have been named for Sullivant, and specimens from these were loaned from the Sullivant collection belonging to the Gray Herbarium through the courtesy of Dr. Benjamin L. Robinson. Plates from Sullivant's *Icones* were exhibited with each species. The special exercises were as follow: William A. Kellerman read Dr. Asa Gray's tribute to Sullivant from the Supplement to the *Icones*; Mrs. Nathaniel L. Britton gave a brief account of the species named for Sullivant; Charles R. Barnes read a tribute to Leo Lesquereux from the Botanical Gazette; Lucien M. Underwood gave a brief outline of the progress in the study of the hepatics, illustrated by books and pamphlets; the plates illustrating twelve new species of hepatics from California, described by M. A. Howe, were exhibited, and the specimens shown by F. E. Lloyd; Prof. Earle read Some Notes on the Moss Flora of Alabama, by Dr. Charles Mohr; Mrs. Britton gave a brief historical record of the study of mosses, illustrated by books and pamphlets; Abel J. Grout presented some suggestions for a more satisfactory classification of the pleurocarpous mosses, and exhibited a set of his revisions of Pleurocarpous genera, also a set of The Bryologist; George N. Best exhibited a set of his publications and a summary of his work; William A. Kellerman exhibited a set of drawings and mosses formerly the property of Mr. Schrader, who made the drawings for Sullivant's *Icones*; Mrs. Britton and Prof. Underwood exhibited a set of 45 photographs of American students and collectors whose names are perpetuated in those of American mosses; Mrs. Britton showed a set of maps with starred regions where collections had been made, and lists of the names of collectors; reports were received from the Sullivant moss chapter, with a list of members from the secretary, Mrs. Annie M. Smith, and also a list of the species of mosses named by Sullivant; reports were received from Mr. McElwee, of the Philadelphia moss chapter, with lists of collections and books on mosses which may be found in the Academy of Natural Sciences of Philadelphia; and Arthur Hollick gave information as to the publication of the later work of Lesquereux.

H. Anthropology.—This section was presided over by Dr. Thomas Wilson, curator of prehistoric archaeology in the United States National Museum, Washington city. Dr. Wilson presented to the section an address on Beginnings of the Science of Prehistoric Anthropology. He said in part: "Up to the beginning of this century the science of prehistoric anthropology had been an unknown one. Prior to that time the origin of man and his first occupation of the earth had belonged either to history or else it was detailed in tradition. In 1806, in Denmark, the beginning of this science took place. The King organized a commission to investigate the surface of the earth in his kingdom. He appointed a zoölogist, a geologist, and an archaeologist, and the three started over the work." After discussing the work in Denmark, he passed to a description of the Swiss lake dwellings, the

discovery of which at once stimulated a search for similar remains in other parts of Europe. From the discoveries of the dolmens by the commission in Denmark and from the works of the lake dwellers described by Kellar investigators soon came to the conclusion that there had been a prehistoric human existence, and thus the science of prehistoric anthropology was established on a firm basis. Dr. Wilson also described the development of a belief in the prehistoric origin of palæoliths, and mentioned the impetus given to the new science in 1859 by Darwin's publication of the origin of the species by evolution. Continuing his historical summary of the development of prehistoric anthropology, he referred to the international congresses that have been held since 1872, and alluded, as he reached his close, to the discovery in Java in 1894, by Dr. Dubois, of what he claimed was "a being midway between man and ape, and the missing link so often and long talked of."

The following-named papers were then read and discussed before the section: In Memoriam: Remarks on the late Daniel G. Brinton; The Beginnings of Mathematics, by W J McGee; Report of the Committee on the White Race in America, The Scientific Societies and Institutions of the United States, and New Anthropometric Methods, by J. McKeen Cattell; Researches in Experimental Phonetics, with Demonstration of Results, Inadequacy of the Present Tests for Color Blindness, with Demonstrations of a New Test, Observations on After-images and Cerebral Light, and Observations on the Economy of Sleep, by Edward W. Scripture; Regarding the Evidences of Ancient Prehistoric Man in the Maumee River Basin, by Charles E. Slocum; The Latest Discoveries of Traces of Glacial Man at Trenton, N. J., and the Light thrown upon them by a Comparative Study of the Gravels of the Delaware and Susquehanna Valleys, by G. Frederick Wright; Recollections of M. Boucher de Perthes, by Thomas Wilson; The Aboriginal Quarries and Shops at Mill Creek, Miami Co., Illinois, by William A. Phillips; The National Diatonic Scale: A Chapter of Musical History, by Charles K. Wead; A Comparative Study of the Physical Structure of the Labrador Eskimos and the New England Indians, by Frank Russell; The Cherokee River Cult, by James Mooney; Extent of Instruction in Anthropology in Europe and America, by George G. McCurdy; Allan Stevenson's Trance and Prehistoric Settlement, Big Kiokee Creek, Columbia Co., Georgia, by Robert Steiner; and Evolution, by Eliza T. Houk.

I. Social and Economic Science.—The presiding officer of this section was Dr. Marcus Benjamin, editor in the United States National Museum, Washington city. In accordance with a request made to Dr. Benjamin at the council meeting held in April, he delivered an historical address on The Early Presidents of the Association. This address began with a brief history of the formation of the association, in which it was shown that the organization was a development of the Association of American Geologists and Naturalists, which was founded in 1840, and which in turn had its beginning in the Geological Society founded in New Haven in 1819. The influence of the National Institute in Washington was also pointed out. Subsequently Dr. Benjamin gave brief but pointed biographies of the first 25 presidents. These included William C Redfield, whose theory of storms marked the beginning of the science of meteorology; Joseph Henry, the first secretary of the Smithsonian Institution, whose discoveries in physics made possible the

magnetic telegraph; Alexander D. Bache, superintendent of the United States Coast Survey; Louis Agassiz, famous as a teacher and as a naturalist; Benjamin Peirce, teacher of mathematics in Harvard University, who demonstrated the fluid constitution of the rings of Saturn; James D. Dana, noted for his text-books on mineralogy and geology; James Hall, palæontologist and State geologist of New York; Alexis Caswell, meteorologist and physicist, President of Brown University; Jacob W. Bailey, an early worker on infusoria with the microscope, teacher of science at West Point; Jeffries Wyman, the comparative anatomist of Harvard, a distinguished worker in American anthropology; Stephen Alexander, Professor of Astronomy in Princeton; Isaac Lea, the conchologist and student of unios; Frederick A. P. Barnard, physicist, educator, author, President of Columbia University; John S. Newberry, naturalist, State geologist of Ohio; Benjamin A. Gould, astronomer; John W. Foster, geologist, President of the Chicago Academy of Sciences; William Chauvenet, mathematician, President of Washington University, St. Louis; T. Sterry Hunt, of the Canadian Geological Survey; Asa Gray, botanist, author of botanical text-books; J. Lawrence Smith, chemist and mineralogist; Joseph Lovering, physicist, long a teacher in Harvard; John L. Le Conte, entomologist; Julius E. Hilgard, physicist, superintendent of the Coast Survey; and William B. Rogers, founder of the Massachusetts Institute of Technology. Dr. Benjamin's address was illustrated with portraits of all the presidents of the American Association.

The following-named papers were read and discussed: Natural Distribution as modified by Modern Agriculture, by John Hyde; Federal Guarantees for maintaining Republican Government in the States, by Cora A. Benneson; Calculations of Population in June, 1900, by Henry Farquhar; Power of the Consumer economically Considered, by Florence Kelley; The Basis of War and Peace, by Michael A. Clancy; The Increase in the Median Age of the Population of the United States since 1850, by Mansfield Merriam; Trusts: A Study in Industrial Evolution and The Spoils System in Theory and Practice, by Harry T. Newcomb; Moral Tendencies of Existing Social Conditions, by Washington Gladden; Hysteresis in Social, Economic, and Vital Phenomena, by Reginald A. Fessenden; Defective Vision of School Children, by A. G. Field; Science and Art in Social Development, by John S. Clark; The Personal Equation as a Psychological Factor, by Laura O. Talbott; Positive Science and Methods in Education, by Mrs. Daniel Folkmar; Some New Aspects of Educational Thought, by Thomas M. Balliet; and The Manual Element in Education, by Calvin M. Woodward.

On Aug. 23 this section met in joint session with Section D to listen to the paper by Gilbert B. Morrison mentioned under Section D.

Affiliated Organizations.—Other scientific bodies, taking advantage of the gathering of so many members at the meeting of the American Association, have adopted the practice of holding meetings at the same place and contemporaneous with the American Association, but at such hours as not to interfere with the regular sessions of the larger body. The American Microscopical Society held its twenty-first annual meeting on Aug. 17, 18, and 19, with William C. Krauss, of Buffalo, N. Y., as president, and Henry B. Ward, of Lincoln, Neb., as secretary. Sixteen or more papers were read, and at the close of the meeting Albert M. Bleile, of Colum-

bus, Ohio, was chosen president. The Society for the Promotion of Engineering Education held its sixth annual meeting on Aug. 17, 18, and 19, with John B. Johnson, of St. Louis, Mo., as president, and Albert Kingsbury, of Durham, N. H., as secretary. A number of papers were read, and the election resulted in the selection of Ira O. Baker, of Mason, Ill., as president. The Botanical Society of America held its fifth annual meeting on Aug. 18 and 19, with Lucien M. Underwood, of New York city, as president, and George F. Atkinson, of Ithaca, N. Y., as secretary. Five papers were read in full and several by title. The president of last year, Dr. Nathaniel L. Britton, delivered his retiring address on Report of Progress of Development of the New York Botanical Garden. Prof. Benjamin L. Robinson, of Harvard University, was chosen president for the ensuing year, and Secretary Atkinson continued in office. The eleventh annual meeting of the Association of Economic Entomologists was held on Aug. 18 and 19, with Charles L. Marlatt, of Washington city, as president, and Archie H. Kirkland, of Malden, Mass., as secretary. A number of papers were read, and for the ensuing year Laurence Bruner, of Lincoln, Neb., was chosen president, while the secretary remained unchanged. Simultaneously the Society for the Promotion of Agricultural Science held its meetings, and its final sessions were held jointly with those of the entomologists. Byron D. Halsted, of New Brunswick, N. J., was its president, and Charles S. Plumb, of Lafayette, Ind., its secretary. For the ensuing year William T. Beal, of Lansing, Mich., was chosen president, and Thomas F. Hunt, of Columbus, Ohio, as secretary. The American Chemical Society held its nineteenth general meeting in conjunction with Section C of the American Association. Its president is Edward W. Morley, of Columbus, Ohio, and its secretary, Albert C. Hale, of Brooklyn, N. Y. Nearly one hundred members were registered as present. The Geological Society of America, of which Benjamin K. Emerson, of Amherst, Mass., is president, and Herman L. Fairchild, of Rochester, N. Y., is secretary, met in joint session with Section E. The papers read by the members, both of the chemical and geological societies, are incorporated with the list given under Sections C and E. The second summer meeting of the American Forestry Association was held on Aug. 22 and 23, with James Wilson, of Washington city, as president, and George P. Whittlesey, of Washington city, as secretary. The American Mathematical Society, of which Albert S. Woodward is president, and F. N. Cole, secretary, both of New York city, met on Aug. 25 and 26. The Botanical Club of the association, of which Byron D. Halsted, of New Brunswick, N. J., is president, and Augustus D. Selby, of Wooster, Ohio, secretary, met at intervals during the meeting, and twenty-seven papers were read and discussed before its members.

Final Session.—This was held on Aug. 25, when it was announced that a grant of \$50 was made to the Committee on the White Race in America for the establishment of an anthropometric laboratory. A second grant of \$50 was made for the quantitative study of biological variation under Dr. Charles B. Davenport, and to report and extend this work a committee was appointed, consisting of Drs. Boas, Cattell, Minot, Eigenmann, and Davenport. The only other grant made for research was one of \$100 for the purpose of stocking pools with different species of blind vertebrates where they may be reared and studied in the light, the work being carried out

by Prof. Carl H. Eigenmann. Reports were made by the committees on the library, on standards of measurement, and on the United States Naval Observatory. Several committees that had accomplished the work for which they had been appointed were discharged. President Orton announced the gift of \$1,000 from Emerson McMillin, who is well known for his generous benefactions to science, and Mr. McMillin was elected a patron of the association. New amendments to the constitution were proposed by W J McGee, making the term of office of the treasurer five years, and by J. McKeen Cattell, adding a section of physiology and experimental medicine. Section A was given permission to arrange for a joint meeting with the American Mathematical Society. Also Section H was authorized to hold a winter session at such place as the sectional committee should decide, and an appropriation not exceeding \$25 from the current funds was allowed such section to cover the expenses of printing.

The usual resolutions of thanks were proposed by a committee and presented by Past-President Thomas C. Mendenhall.

The attendance was 352 members and associates, which gives the Columbus meeting the rank of 15 among the 48 meetings thus far held. There were 273 papers presented before the association, distributed as follow: Section A, 14; B, 40; C, 55; D, 15; E, 33; F, 19; G, 33 (Botanical Club, 27); H, 20; and I, 17.

The treasurer's report showed a gratifying increase in the funds of the association. In addition to the income derived from investment, the permanent secretary was able to turn over to the treasurer \$1,000 derived from membership fees to be added to the permanent fund.

The Next Meeting.—Invitations were received from Ithaca, N. Y., Philadelphia, Pa., Saratoga Springs, N. Y., New York city, Niagara Falls, N. Y., Jacksonville, Fla., and Denver, Col. It was decided to meet in New York city during the week of June 25–30, at Columbia University. It was urged that, as a large number of the members would be going to the Paris Exposition or for travel in other parts of Europe, it would be of the greatest convenience for them to meet in the metropolis. The following officers were chosen: President, Robert S. Woodward, Columbia University, New York city. Vice-presidents of sections: A, Asaph Hall, Jr., University of Michigan, Ann Arbor, Mich.; B, Ernest Merritt, Cornell University, Ithaca, N. Y.; C, James Lewis Howe, Washington and Lee University, Lexington, Va.; D, John A. Brashear, Pittsburg, Pa.; E, James F. Kemp, Columbia University, New York city; F, Charles B. Davenport, Harvard University, Cambridge, Mass.; G, William Trelease, Shaw's Botanical Garden, St. Louis, Mo.; H, Amos W. Butler, Indianapolis University, Indianapolis, Ind.; I, Calvin M. Woodward, Washington University, St. Louis, Mo. Permanent secretary, Leland O. Howard, Cosmos Club, Washington city. General secretary, Charles Baskerville, University of North Carolina, Chapel Hill, N. C. Secretary of the council, William Hallock, Columbia University, New York city. Secretaries of the sections: A, Wendell M. Strong, Yale University, New Haven, Conn.; B, Reginald A. Fessenden, Western University of Pennsylvania, Alleghany, Pa.; C, Arthur A. Noyes, Massachusetts Institute of Technology, Boston, Mass.; D, William T. Magruder, Ohio State University, Columbus, Ohio; E, Joseph A. Holmes, University of North Carolina, Chapel Hill, N. C.; F, Carl H. Eigenmann, Indiana University, Bloom-

ington, Ind.; G, Daniel T. MacDougal, Columbia University, New York city; H, Frank Russell, Harvard University, Cambridge, Mass.; I, Harry T. Newcomb, Census Bureau, Washington city. Treasurer, Robert S. Woodward, Columbia University, New York city.

British.—The sixty-ninth annual meeting of the British Association for the Advancement of Science was held in Dover, Sept. 13–20. The officers were: President, Sir Michael Foster.

SIR MICHAEL FOSTER.

Section presidents: A, Mathematics and Physics, John H. Poynting; B, Chemistry, Horace T. Brown; C, Geology, Sir Archibald Geikie; D, Zoology, Adam Sedgwick; E, Geography, John Murray; F, Economic Science and Statistics, Henry Higgs; G, Mechanical Science, Sir William H. White; H, Anthropology, Charles H. Read; I, Physiology, John N. Langley; K, Botany, Sir George King. General treasurer, Carey Foster. General secretaries, Edward A. Schäfer and William C. Roberts-Austen. Assistant general secretary, G. Griffith, College Road, Harrow.

General Meeting.—The association began its proceedings with a meeting of the general committee on Sept. 13, presided over by Sir Archibald Geikie, when the report of the council for the year 1898–99 was presented. In this it was suggested that the meeting this year would be memorable from the fact that for the first time in the history of the association the time and place of meeting had been fixed in conjunction with and in response to an invitation of the French Association for the Advancement of Science, with the object of affording an opportunity for the members of the sister associations to exchange visits and to participate in scientific discussions. The death of Past-President Sir Douglas Galton was mentioned, and it was reported that Sir William Crookes had been nominated as a delegate to represent the association at the jubilee of Sir George Gabriel Stokes, and that he presented an address on that occasion. The various resolutions referred to the general committee by the council were acted upon, notably one authorizing the council to make a grant of £1,000 out of the accumulated fund of the association to the national antarctic expedition. It was reported that satisfactory arrangements

had been made with the British Museum for the establishment of a bureau for ethnology. The treasurer reported that the total receipts for the year were £5,083, and the total expenditure £1,430. The annual subscriptions amounted to £800, and the sale of the associates' tickets realized £1,028, and of ladies' tickets £639. The usual vote of thanks was adopted for the retiring president, Sir William Crookes, concerning whom it was said that, while the presidential addresses were often valuable contributions to the literature of science, it was seldom that one of them held the public interest and attention so closely and so long as the address delivered by Sir William Crookes last year had done. In the evening the association met in the town hall of Dover for the purpose of listening to the inaugural address of the president. The retiring president, Sir William Crookes, introduced his successor with the following words: "To abdicate is not usually considered the height of human felicity; but when I consider how admirably fitted my successor is to sit in the president's chair, I can assure you abdication becomes a positive pleasure. Sir Michael Foster can have no good wishes more eager and sincere than mine, but I must wish him something special for the sake of his peace of mind, his time, and his credit. May he escape the dilemma that has befallen me! I trust his year of office may not be checkered by the necessity of writing a book to defend the sanity of his address."

Sir Michael Foster has held the chair of Physiology at Cambridge since 1893, and his scientific attainments have recently been recognized by the Queen, who knighted him. Also, he is secretary of the Royal Society.

Inaugural Address of the President.—In beginning his address Sir Michael Foster paid a well-deserved tribute to Sir Douglas Galton, who presided at the Ipswich meeting in 1895, and who died during the year, referring especially to the earnest efforts made by the deceased scientist toward securing the foundation of a national establishment for the prosecution of prolonged and costly physical researches. He said: "The National Physical Laboratory has been founded," and expressed his regret that Sir Douglas "was not spared to see the formal completion of the scheme whose birth he did so much to help, and which, to his last days, he aided in more ways than one." Then, contrasting the scientific conditions in 1799 with those of to-day, he said: "In the year 1799 the knowledge of oxygen, of the nature of water and of air, and, indeed, the true conception of chemical composition and chemical change, was hardly more than beginning to be, and the century had to pass wholly away before the next great chemical idea, which we know by the name of the atomic theory of John Dalton, was made known." Concerning electricity, which he called the "bright child of the nineteenth century," he told of the crude knowledge of its properties that existed a century ago, and how we were to-day proud, and justly proud, both of the material triumphs and of the intellectual gains which it has brought us, and we are full of even larger hopes of it in the future. "In 1799," he said, "the science of geology, as we now know it, was struggling into birth." Since then "its practical lessons have brought wealth to many, its fairy tales have brought delight to more, and round it hovers the charm of danger, for the conclusions to which it leads touch on the nature of man's beginning." After describing the knowledge of biology in 1799, he said: "To-day the merest beginner in

biologic study is aware that every living being, even man himself, begins its independent existence as a tiny ball, of which we can, even acknowledging to the full the limits of the optical analysis at our command, assert with confidence that in structure, using that word in its ordinary sense, it is in all cases absolutely simple. It is equally well known that the features of form which supply the characters of a grown-up living being, all the many and varied features of even the most complex organism, are reached as the goal of a road, at times a long road, of successive changes; that the life of every being, from the ovum to its full estate, is a series of shifting scenes, which come and go, sometimes changing abruptly, sometimes melting the one into the other, like dissolving views, all so ordained that often the final shape with which the creature seems to begin, or is said to begin, its life in the world is the outcome of many shapes, clothed with which it in turn has lived many lives before its seeming birth. If we wish to measure how far off in biologic thought the end of the last century stands, not only from the end but even from the middle of this one, we may imagine Darwin striving to write the *Origin of Species* in 1799. We may fancy him being told by philosophers how one group of living beings differed from another group because all its members and all their ancestors came into existence at one stroke when the first-born progenitor of the race, within which all the rest were folded up, stood forth as the result of the creative act. We may fancy him listening to a debate between the philosopher who maintained that all the fossils strewn in the earth were the remains of animals or plants churned up in the turmoil of a violent universal flood, and dropped in their places as the waters went away, and him who argued that such were not really the 'spoils of living creatures,' but the product of some playful plastic power which out of the superabundance of its energy fashioned here and there the lifeless earth into forms which imitated, but only imitated, those of living things. Could he amid such surroundings by any flight of genius have beat his way to the conception for which his name will ever be known?" This portion of his address concluded with: "I am content to have pointed out that the two great sciences of chemistry and geology took their birth, or at least began to stand alone, at the close of the last century, and have grown to be what we know them now within about a hundred years, and that the study of living beings within the same time has been so transformed as to be to-day wholly different from what it was in 1799. Not only have the few driven far back round the full circle of natural knowledge the dark clouds of the unknown which wrap us all about, but also the many walk in the zone of light thus increasingly gained. The span between the science of that time and the science of to-day is beyond all question a great stride onward." Of the man of science he said: "He is not creative like the poet or artist, but he is created. His work, however great it be, is not wholly his own; it is in part the outcome of the work of men who have gone before. Again and again a conception which has made a name great has come not so much by the man's own effort as out of the fullness of time. From the mouth of the man of old the idea dropped barren, fruitless; the world was not ready for it, and heeded it not; the concomitant and abutting truths which could give it power to work were wanting. Coming back again in later days, the same idea found the world awaiting it; things

were in travail preparing for it; and some one, seizing the right moment to put it forth again, leaped into fame. It is not so much the men of science who make science as some spirit which, born of the truths already won, drives the man of science onward, and uses him to win new truths in turn." Concerning results, he continued: "The material good which mankind has gained and is gaining through the advance of science is so imposing as to be obvious to every one, and the praises of this aspect of science are to be found in the mouths of all. Beyond all doubt science has greatly lessened and has markedly narrowed hardship and suffering; beyond all doubt science has largely increased and has widely diffused ease and comfort. The features of the fruitful scientific mind are in the main three: In the first place, the seeker after truth must himself be truthful, truthful with the truthfulness of Nature. In the second place, he must be alert of mind. In the third place, scientific inquiry, though it be pre-eminently an intellectual effort, has need of the moral quality of courage. In no branch of science during these later years has there been greater activity and more rapid progress than in that which furnishes the means by which man brings death, suffering, and disaster on his fellow-men." The brotherhood of science was referred to, and he told how the "great need of mutual knowledge and of common action felt by men of science of different lands is being manifested in a special way. In almost every science inquirers from many lands now gather together at stated intervals in international congresses to discuss matters which they have in common at heart, and go away each one feeling strengthened by having met his brother." In closing he said: "Looking back, then, in this last year of the eighteen hundreds, on the century which is drawing to its close, while we may see in the history of scientific inquiry much which, telling the man of science of his shortcomings and his weakness, bids him be humble, we also see much, perhaps more, which gives him hope. The past points not to itself, but to the future; the golden age is in front of us, not behind us; that which we do know is a lamp whose brightest beams are shed into the unknown before us, showing us how much there is in front and lighting up the way to reach it. We are confident in the advance because, as each one of us feels that any step forward which he may make is not ordered by himself alone, and is not the result of his own sole efforts in the present, but is, and that in large measure, the outcome of the labors of others in the past, so each one of us has the sure and certain hope that as the past has helped him, so his efforts, be they great or be they small, will be a help to those to come."

Proceedings of the Sections. *A. Mathematics and Physics.*—This section was presided over by John H. Poynting, Professor of Physics in Mason College, Birmingham. His address began with a reference to the establishment of the National Physical Laboratory, of which he said "it was absolutely necessary for the due progress of physical research in this country." He then discussed the methods of investigation as practiced by the physicist, saying: "His method consists in finding out all likenesses, in classing together all similar events, and so giving an account as concise as possible of the motions and changes observed. His success in the search for likenesses and his striving after conciseness of description lead him to imagine such a constitution of things that likenesses exist

even where they elude his observation, and he is thus enabled to simplify his classification on the assumption that the constitution thus imagined is a reality. He is enabled to predict, on the assumption that the likenesses of the future will be the likenesses of the past. A portion of his address was devoted to a description of the various "hypotheses as to the constitution of matter and the connecting ether." Finally, he referred to the limitations of the physical method, saying: "The discussion of the physical method, with its descriptive laws and explanations and its hypothetical extension of description, leads us on to the consideration of the limitation of its range. The method was developed in the study of matter which we describe as nonliving, and with nonliving matter the method has sufficed for the particular purposes of the physicist." His closing sentences were: "If we have full confidence in the descriptive method, as applied to living and nonliving matter, it appears to me that up to the present it teaches us that, while in nonliving matter we can always find similarities, while each event is like other events, actual or imagined, in a living being there are always dissimilarities. Taking the psychical view—the only view which we really do at present take—in the living being there is always some individuality, something different from any other living being, and full prediction in the physical sense and by physical methods is impossible. If this be true, the loom of Nature is weaving a pattern with no mere geometrical design. The threads of life, coming in we know not where, now twining together, now dividing, are weaving patterns of their own, ever increasing in intricacy, ever gaining in beauty."

Subsequently the following-named papers were read and discussed before the section: *Spectroscopic Examination of Contrast Phenomena*, by G. J. Burch; *Variation of the Specific Heat of Water*, by Hugh L. Callendar and H. T. Barnes; *Results of Experiments on the Expansion of Porcelain with Rise of Temperature*, by T. G. Bedford; *On the Energy in a Turbulent Liquid transmitting Lamina Waves*, by George F. Fitzgerald; *Permanence of Certain Gases in the Atmospheres of Planets*, by G. H. Bryan; *The Thermo-electric Properties of Some Iron Alloys*, by W. F. Barrett; *On the Production in Rarefied Gases of Luminous Rings in Rotation about Lines of Magnetic Force*, by C. E. S. Phillips; *A Note on Deep-sea Waves*, by Vaughan Cornish; *Existence of Masses Smaller than Atoms*, by Joseph J. Thomson; *A Short Account of the Controversy regarding the Seat of Volta's Contact Force*, by Oliver J. Lodge; *Sun Spots and Temperature*, by Dr. Van Rijkevorsel; *Seismology in Mauritius*, by J. F. Claxton; *An Account of the Work done at the Blue Hill Meteorological Observatory*, by A. Lawrence Rotch, of Boston, Mass., U. S. A.; *A Description of the Hydro-aërograph*, by F. Napier Denison; *Rainfall of the Southeastern Countries of England*, by John Hopkinson; *Description of a Gravity Balance*, by Henry S. Threlfall; *Platinum Thermometry*, by Hugh L. Callendar; *An Account of the Recent Magnetic Work in the United States and Canada*, by Louis A. Bauer, of Washington city, U. S. A.; *Special Sensitiveness of Mercury Vapor in an Atmosphere of Hydrogen, and its Influence on the Spectrum of the Latter*, by E. Percival Louis; *The Theory of Electrolytic Solution Pressure*, by Robert A. Lehfeldt; and *Temperature and Dispersion in Quartz and Iceland Spar*, by J. William Gifford.

Also the following reports: Report on the Methods of determining Magnetic Force at Sea, Report of the Committee on Electrolysis and Electro-chemistry, Report of the Committee on the Heat of Combination of Metals in the Formation of Alloys, Report of the Committee on Radiation from a Source of Light in a Magnetic Field, Report of the Committee on Solar Radiation, Report of the Committee on Seismological Investigations, Report of the Committee on Ben Nevis Observatory, Report of the Committee on Meteorological Photography, and Report of the Committee on Electric Standards, were presented and discussed.

B. Chemistry.—The presiding officer of this section was Dr. Horace T. Brown, F.R.S., of South Kensington, England. He said: "The subject which I have chosen for my address is the fixation of carbon by plants, one which is the common meeting ground of chemistry, physics, and biology. We have become so accustomed to the idea that the higher plants derive the whole of their carbon from atmospheric sources that we are apt to forget how very indirect is the nature of much of the experimental evidence on which this belief is founded. There can be no doubt that the primary source of the organic carbon of the soil, and of the plants growing on it, is the atmosphere; but of late years there has been such an accumulation of evidence tending to show that the higher plants are capable of being nourished by the direct application of a great variety of ready-formed organic compounds that we are justified in demanding further proof that the stores of organic substances in the soil must necessarily be oxidized down to the lowest possible point before their carbon is once more in a fit state to be assimilated." Then he "indulged in a little historical retrospect," and described the work of Priestley, Ingen-Housz, De Saussure, Bokorny, Acton, and the recent work of J. Laurent and Mazé. "These facts," he said, "justify what I have already said, that we ought to demand more direct evidence than is at present available before we accept the view that the majority of chlorophyllous plants take in the whole of their carbon from the atmosphere." The greater portion of his address was devoted to a description of the experimental work done by himself in the Jodrell Laboratory, at Kew. Conclusive results have not yet been obtained, and he concluded with: "When we have succeeded in finding some simple chemical means of fixing the initial products of the reduction of carbon dioxide, then, and then only, may we hopefully look forward to reproducing in the laboratory the first stages of the great synthetic process of Nature, on which the continuance of all life depends."

Subsequently the following-named papers were read and discussed: The Solidification of Hydrogen, by James Dewar; Oxidation in Presence of Iron, by H. J. H. Fenton; The Condensation of Glycollic Aldehyde, by H. J. H. Fenton and Henry Jackson; Some New Silicon Compounds obtained from Silicon Tetraphenylamine by Heating with Mustard Oil, by J. Emerson Reynolds; Water and Sewage Examination Results, by Samuel Rideal; The Place of Nitrates in the Biology of Sewage, by W. Scott Moncrieff; Excretory Products of Plants, by Prof. Hanriot; On the Nature of Symbiosis, by Marshall Ward; Note sur les Fermentations Symbiotiques Industrielles, by A. Calmette; Symbiotic Fermentation: Its Chemical Aspects, by Henry E. Armstrong; Proposed International Committee on Atomic Weight, by Frank W. Clarke, Washington city,

U. S. A.; The Development of Chemistry in the Last Fifteen Years, by A. Ladenburg; The Influence of Solvents upon the Optical Activity of Organic Compounds and A Method for resolving Racemic Oximes into their optically Active Components, by W. J. Pope; The Chemical Effect on Agricultural Soils of the Salt-water Flood of Nov. 29, 1897, on the East Coast, by Thomas S. Dymond; Phenomena connected with the Drying of Colloids: Mineral and Organic, by John H. Gladstone and Walter Hibbert; Action of Light upon Metallic Silver, by John Spiller; Influence of Acids and of Some Salts on the Saccharification of Starch by Malt Diastase, by A. Fernbach; A Note on the Combined Action of Diastase and Yeast on Starch Granules, by G. Harris Morris; Action of Hydrogen Peroxide on Carbohydrates in the Presence of Iron Salts, by J. M. Crofts and R. S. Morrell; Influence of Substitution on Optical Activity in the Bornylamine Series and New Derivations from Camphor Oxime, by M. O. Foster; Investigations in the Formation of an Intermediate Compound in the Action of Caustic Soda in Benzaldehyde, by Charles A. Kohn and W. Tranton; On Some Experiments to obtain Definite Alloys of Cadmium, Zinc, and Magnesium with Platinum and Palladium, by W. R. Hodgkinson, Capt. Waring, and Capt. Desborough.

Also the following reports: Report of the Committee on the Relation between the Absorption Spectra and the Chemical Constitution of Organic Substances, Report of the Committee on Isomeric Naphthalene Derivations, Report on the Intermittent Bacterial Treatment of Raw Sewage in Coke Beds, and Report of the Committee on the Teaching of Natural Science in Elementary Schools, were presented before the section.

C. Geology.—The presiding officer of this section was Sir Archibald Geikie, director-general of the Geological Survey of the United Kingdom, a past president of the association. He said: "Among the many questions of great theoretical importance which have engaged the attention of geologists none has in late years awakened more interest or aroused livelier controversy than that which deals with time as an element in geological history. In offering a brief history of the discussion there is, I think, a practical outcome which may be made to issue from the controversy in a combination of sympathy and co-operation among geologists all over the world. A lasting service will be rendered to our science if by well-concerted effort we can place geological dynamics and geological chronology on a broader and firmer basis of actual experiment and measurement than has yet been laid." Then, beginning with James Hutton, the founder of modern geology, he discussed his theory on the age of the earth, together with those of Playfair and Lyell. Sir Archibald then took up Lord Kelvin's famous paper of 1862, in which he declared his belief that the age of our planet must be more than twenty million, but less than four hundred million years. Continuing, he discussed the more recent statements by Kelvin, as well as those by Huxley, Tait, and George Darwin. His own conclusions were: "So far as I have been able to form an opinion, one hundred millions of years would suffice for that portion of the history which is registered in the stratified rocks of the crust. But if the palæontologists find such a period too narrow for their requirements, I can see no reason on the geological side why they should not be at liberty to enlarge it as far as they may find to be needful for the evolution of organized existence on the globe." His final re-

marks were descriptive of suggested points in geology concerning which greater research might aid in elucidation of the subject.

The following-named papers were read and discussed: On the Relations between the Dover and Franco-Belgian Coal Basins, by R. Etheridge; The Southeastern Coal Field, by W. Boyd Dawkins; Note relating to a Boring through the Chalk and Gault near Dieppe, by A. J. Jukes-Browne; On Some Recent Work among the Upper Carboniferous of North Staffordshire and its Bearings on Conceded Coal Fields, by Walcot Gibson; Photographs of Sandstone Pipes in the Carboniferous Limestone at Doolbau, Anglesey, by Edward Greenley; Barium Sulphate as a Cementing Material in the Bunter Sandstone of North Staffordshire, by C. B. Webb; Recent Developments in the System of Photo-micrography of Opaque Objects as applied to the Delineation of the Minute Structure of Fossils, by A. W. Rowe; Water Zones and their Influence on the Situation and Growth of Concretions, by George Abbott; The Extra-moraine Drainage in Yorkshire, by Percy F. Kendall; The Origin of Lateral Moraines and Rock Trains, by J. Lomas; On the Origin of Flint and Homotaxy and Contemporaneity, by W. J. Sollas; Some Observations on the Surface of the Mount Sorrel Granite, by W. W. Watts; On the Origin of Chondritic Meteorites, by A. Renard; On Coast Erosion from Deal to Dover, Folkestone, and Sandgate, by Capt. McDakin; On Coast Erosion from Walmer to Whitstable, by G. Dowker; A Preliminary Report upon the Erosion of the Seacoast of the United Kingdom, by G. W. Whitaker; Photographs of Wave Phenomena, by Vaughan Cornish; On the Eruption of Mount Vesuvius in September, 1898, by Tempest Anderson; The Mode of Erosion of Some Yorkshire Valleys, by Percy F. Kendall; The Geological Condition of a Tunnel under the Straits of Dover, by W. Boyd Dawkins; A Proposed New Classification of the Older and Newer Pliocene Deposits of the East of England and Meteorological Conditions of Northwestern Europe during the Pliocene and Glacial Periods, by F. W. Harmer; Some Observations on the Palæolithic Implements of North Kent, by J. M. Mello; Sigmoidal Curves in the Crust of the Earth, by Maria M. Gordon; and A Few Observations on the Subdivisions of the Carboniferous System in Certain Portions of Nova Scotia, by H. M. Ami.

Also the following reports: Report of the Committee on Seismological Investigations, Report of the Committee on the Structure of Crystals, Report of the Committee on Life Zones in the British Carboniferous Rocks, The Report of the Committee appointed to investigate the Ty Newydd Leaves at Tremairechion, North Wales, Report of the Committee on the Fossil Phyllopod of the Palæozoic Rocks, Report of the Committee on Photographs of Geological Interest in the United Kingdom, Report of the Committee to examine the Conditions under which Remains of the Irish Elk are found in the Isle of Man, Report of the Committee to investigate the Canadian Pleistocene Flora and Fauna, Report of the Committee appointed to investigate the Ossiferous Caves at Uphill, Report of the Committee on Erratic Blocks of the British Isles, and Report of the Committee on Registration of Type Specimens, were presented before the section.

D. Zoölogy.—The presiding officer of this section was Prof. Adam Sedgwick, F. R. S., of Trinity College, Cambridge, who delivered an address on Variation and Some Phenomena connected with Reproduction and Sex. In beginning his address he said: "That part of the science of

zoölogy which deals with the functions of organs, particularly of the organs of the higher animals, is frequently spoken of as physiology, and is separated from the rest of zoölogy under that heading. Some of the most important problems of the physiological side of zoölogy still remain within the purview of this section." On the variation of organisms he said: "The members of a species, though resembling one another more closely than they resemble the members of other species, are not absolutely alike. They present differences, differences which make themselves apparent even in members of the same family—that is, in the offspring of the same parents. It is these differences to which we apply the term variation. Without variation there could have been no progress, no evolution in the structure of organisms." After discussing genetic variation, he asked: "Has the variability of organisms ever been different from what it is now? Has or has not evolution had its influence upon this property of organisms, as it is supposed to have had upon their other properties? There is only one possible answer to this question. Undoubtedly the variability of organisms must have altered with the progress of evolution." This he then discussed at length, closing with: "If variation was markedly greater in the early periods of the existence of living matter, it is clear that it would have been possible for evolutionary change to be effected much more rapidly than at present, especially when we remember that the world was then comparatively unoccupied by organisms, and that, with the change of conditions consequent on the cooling and differentiation of the earth's surface, new places suitable for organic life were continually being formed."

The following-named papers were read and discussed: A New Form of Sponge (*Astroscelera willeyana*) from Lifu, Loyalty Islands, by J. J. Lister; The Morphology of the Cartilages of the Monotreme Larynx, by Johnson Symington; The Palpebral and Oculomotor Apparatus of Fishes, by Bishop Harman; The Development of *Lepidosiren paradoxa*, by J. Graham Kerr; Animals in which Nutrition has no Influence in determining Sex, by James F. Gemmill; Some newly Discovered Neo-myelodon Remains from Patagonia, by A. Smith Woodward; Observations on the Habits and Characteristics of the Fur Seals of the Bering Sea, by G. E. H. Barrett-Hamilton; The Results of Some Experiments made at Plymouth on the Artificial Rearing of Sea Fish, by Walter Garstang; An Account of Dr. C. G. Joh. Peterson's Investigations in Plaice Culture in the Limfjord, by Sir John Murray; The Occurrence of the Gray Goumard and its Spawning in the Offshore and Inshore Waters, by W. C. McIntosh; The Physico-Biological Aspect of the Thames Estuary as Bearing on its Fisheries, by J. Murie.

Also the following reports: Report of the Committee appointed to promote the Systematic Collection of Photographic and other Records of Pedigree Stock, Report of the Committee on the Periodic Investigation of the Plankton and Physical Conditions of the English Channel during 1899, Report of the Committee on the Occupation of a Table at the Zoölogical Station at Naples, Report on the Zoölogy of the Sandwich Islands, Report on the Zoölogical and Botanical Publication, Report on the Zoölogy and Botany of the West India Islands, and Report of the Committee for constructing a Circulatory Apparatus for Experimental Observations on Marine Organisms.

E. Geography.—This section was presided over by Sir John Murray, F. R. S., who since 1882 has been the editor of the scientific results of the

Challenger expedition. The subject of his address was the Ocean's Floor. He said: "It was the desire to establish telegraphic communication between Europe and America that gave the first direct impulse to the scientific exploration of the great ocean basins, and at the present day the survey of new cable routes still yields each year a large amount of accurate knowledge regarding the floor of the ocean." Taking up special topics, he showed from statistics that considerably more than half of the sea floor lies at a depth exceeding 2,000 fathoms, or more than 2 geographical miles. The greatest depth recorded is 5,155 fathoms, or 530 feet more than 5 geographical miles, being about 2,000 feet more below the level of the sea than the summit of Mount Everest is above it. Concerning the ocean floor, he said: "The deep sea is a region of darkness as well as of low temperature, for the first direct rays of the sun are wholly absorbed in passing through the superficial layers of water. Plant life, in consequence, is quite absent over 93 per cent. of the bottom of the ocean, or 66 per cent. of the whole surface of the lithosphere." He referred to the changes in progress on the floor of the ocean, and discussed the causes of the changes in the surface of land areas. In closing he made an appeal for aid to carry to a successful issue the proposed antarctic exploring expedition.

The following-named papers were read and discussed before the section: Description of an Arctic Voyage in the Russian Ice-breaker *Yermak*, by Admiral Makuroff; Physical Observations in the Barents Sea, by William S. Bruce; The Voyage of the Southern Cross from Hobart to Cape Adare, by Hugh R. Mill; The Problem of Antarctic Exploration, by M. H. Arctowski; The Physical and Chemical Work of an Antarctic Expedition, by John Y. Buchanan; On the Flora of the Seas, by George Murray; Travels in East Bokhara, by Mrs. W. R. Rickmers; An Account of a Journey in Western Oaxaca, Mexico, by O. H. Howarth; An Account of the Oceanological and Meteorological Results of the German Deep-sea Expedition in the Steamship *Valdivia*, by G. Schott; The Mean Temperature of the Surface Waters of the Sea round the British Coast, and its Relation to that of the Air, and Temperature and Salinity of the Surface Waters of the North Atlantic during 1896 and 1897, by H. N. Dickson; The Nomenclature of the Forms of Suboceanic Relief, by Hugh R. Mill; Bathymetrical Survey of the Scottish Fresh-water Locks, by Sir John Murray and F. P. Pullar; Twelve Years' Work of the Ordnance Survey, by Sir John Farquharson; Sand Dunes in Lower Egypt, by Vaughan Cornish; A Visit to the Kartchkhall Mountains in Transcaucasia, by W. R. Rickmers; On the Anthropogeography of New Guinea and Sarawak, by Alfred C. Haddon; Travels through Abyssinia, by Capt. Wellby; An Account of a Journey to Wilczek Land and a Winter in the Arctic Regions, by Walter Wellman, of Washington city, U. S. A.; and On Oceanic Islands, by Charles W. Andrews.

F. Economic Science and Statistics.—The presiding officer of this section was Henry Higgs, who is secretary of the British Economic Association and is connected with the English civil service. The subject of his address was The Condition of the People. He said: "The prime concern of the economist and of the statistician is the condition of the people. The statistician measures the changing phenomena of the production, distribution, and consumption of wealth, which to a large extent reflect and determine the

material condition of the people. The economist analyzes the motives of these phenomena, and endeavors to trace the connection between cause and effect." Mr. Higgs then contended that "we want, above all, the careful, minute, systematic observation of life as effected by environment, heredity, and habit." Concerning wages, he said: "It is now necessary for us to distinguish between real wages and utilities; not to stop at the fact that so many shillings a week might procure such and such necessities, comforts, or luxuries, but to ascertain how they are expended." The defects of household management received due attention, and he contended that great possibilities in the economic progress would result from attention being paid to the humblest details of domestic life. The waste in the consumption of food was discussed, and he told how, owing to the great cheapness of bananas during a recent severe strike, the strikers had sustained themselves and their families on this fruit at a trifling cost. Other forms of waste, such as coal, were mentioned, and he quoted Edward Atkinson to the effect that the waste of food from bad cooking in the United States amounted to \$1,000,000,000 a year. He contrasted the economies of the French people with those at home, and referred to the desirability of municipal management of funerals. He quoted largely from Le Play's monograph, *Family Budgets*, saying: "They yield excellent material, upon which science in its various branches has yet to do work which will benefit mankind in general, and promises especially to benefit the people of this country."

The following-named papers were read and discussed before the section: Aspects of American Municipal Finance, by John H. Hollander, of Baltimore, Md., U. S. A.; Municipal Trading and Profits, by Robert Donald; The Single Tax, by William Smart; The State as an Investor, by E. Cannon; The Mercantile System, by G. J. Stokes; On the Mercantile System of *Laissez Faire*, by Miss Ethel R. Faraday; Geometrical Illustrations of the Theory of Rent, by J. D. Everett; On the Modes of representing Statistics, by F. Y. Edgeworth; Agricultural Wages from 1770 to 1895, by A. L. Bowley; On the Census of 1901, by Miss Clara E. Collet; On the Cause of Average Wages between 1790 and 1860, by George H. Wood; The Regulation of Wages by Lists in the Spinning Industry, by S. J. Chapman; The Teaching University of London and its Faculty of Economics, by Sir Philip Magnus; The Increase in Local Rates in England and Wales, 1891-'92 to 1896-'97, by Miss Hewart; Bank Reserves, by George H. Pownall; Indian Currency after the Report of the Commissioner, by Hermann Schmidt; The Silver Question in Relation to British Trade, by J. M. Macdonald; Results of Recent Poor-law Reform, by Harold E. Moore; and Old-age Pensions in Denmark, by A. W. Flux.

G. Mechanical Science.—Sir William H. White, F. R. S., who is assistant controller and director of naval construction in the English Admiralty, was the presiding officer of this section. His address treated of Steam Navigation at High Speeds. He said that progress in steam navigation had been marked by the following characteristics: 1. Growth in dimensions and weight of ships, and large increase in engine power as speeds have been raised. 2. Improvements in marine engineering, accompanying increase of steam pressure; economy of fuel and reduction in the weight of propelling apparatus in proportion to the power developed. 3. Improvements in the materials used in ship-building; better structural arrangements; relatively lighter hulls and larger

carrying power. 4. Improvements in form, leading to diminished resistance and economy of power expended in propulsion. These characteristics were illustrated by a concise survey of the progress achieved (1) by transatlantic passenger steamers, (2) by swift passenger steamers for long voyages, (3) by cargo and passenger steamers, and (4) by cross-channel steamers. He told how speed had been increased from $8\frac{1}{2}$ to $22\frac{1}{2}$ knots, and the time on the voyage reduced to about 38 per cent. of what it was in 1840. "Ships have been more than trebled in length, about doubled in breadth, and increased tenfold in displacement. The number of passengers carried by a steamship has been increased from about 100 to nearly 2,000. The engine power has been made 40 times as great." The size and speed of war ships was discussed, and he showed how the speed of a war ship in 1860 was from 12 to 13 knots, while at present from 20 to 23 knots are obtained. Modern battle ships are of 13,000 to 15,000 tons, and modern cruisers of 10,000 to 14,000 tons, not merely because they are faster than their predecessors, but because they have greater powers of offense and defense and possess greater coal endurance. He showed the advantages of increased dimensions, and then passed to an interesting description of swift torpedo vessels. Concerning these he said: "The results obtained in torpedo vessels show such a wide departure from those usual in seagoing ships as to suggest the possibility of some intermediate type of propelling apparatus applicable to large seagoing ships, and securing sufficient durability and economy of fuel in association with further savings of weight." He described at length the steam turbo-motor recently introduced by Charles Parsons, and in conclusion discussed the future possibilities of speed, asserting that in the immediate future "further reductions may be anticipated in the weight of propelling apparatus and fuel in proportion to the power developed; further savings in the weight of the hulls, arising from the use of stronger materials and improved structural arrangements; improvements in form and enlargements in dimensions"; also, "if greater draughts of water can be made possible, so much the better for carrying power and speed."

The following-named papers were read and discussed before the section: On the Dover Harbor Works, by William Matthews and J. C. Coode; On Noninflammable Wood and its Use in War Ships, by E. Marshall Fox; A Short History of the Engineering Works of the Suez Canal to the Present Time, by Sir Charles Hartley; A Description of Suggestions made for Fast Cross-channel Steamers to be fitted with the Parsons Steam Turbine, by Charles Parsons; Niclausse Steam Boilers, by Mark Robinson; The Method of Under-water Torpedo Discharge adopted by Sir W. G. Armstrong, Whitworth & Company, by Capt. Lloyd; Electrical Machinery on Board Ship, by Alexander Siemens; A Contribution to the Knowledge of the Electric Conductivity and Magnetic Properties of an Extensive Series of Iron Alloys, by W. F. Barrett and William Brown; A Method of Electric Railway Signaling without Contact, by Wilfred S. Boulton; Some Recent Applications of Electro-metallurgy to Mechanical Engineering, by Sherard C. Coles; On the Lighthouses of the English Channel, by James Kenward; Recent Experiences with Steam on Common Roads, by J. I. Thornycroft; Dymchurch Wall and the Reclamation of Romney Marsh, by E. Case; An Apparatus by which the Circularity of Boiler Furnaces could be tested,

by T. Messenger; and Some Experiments on the Thrust and Power of Air Propellers, by William G. Walker.

H. *Anthropology*.—This section was presided over by Charles H. Read, who is the keeper of British and mediæval antiquities in the British Museum. In his address he called attention to the fact that in Great Britain there is a greater variety of prehistoric and later remains than is seen in most European countries, and yet in the absence of any organized means for their preservation many ancient remains have been plowed down almost to the level of the surrounding country, thus scattering bones and other relics unnoticed over the field. Such accidental and casual destruction can only be remedied by enlightening public opinion through local scientific societies. "The plan I would propose," he said, "is this: Each society should record on the large scale ordnance map any tumulus or earthwork within the country, and at the same time keep a register of the sites, with numbers referring to the map, and in this register should be noted the names of the owner and tenant of the property, as well as any details that would be of use in exploring the tumuli." Mr. Read described the steps taken toward the formation of a bureau of ethnology, and said: "Within a short time we shall have an organization that will systematically gather the records of the many races which are either disappearing before the advancing white man, or, what is equally fatal from the anthropological point of view, are rapidly adopting the white man's habits and forgetting their own." Attention was called to the fact that the museums of anthropology in Berlin surpass those in London; thus "the British province of Assam is represented in Berlin by a whole room, and in London by a single case." This led to a plea for more ample accommodation and for more extensive teaching. He said: "I should like to say that courses of lectures in anthropology delivered in the same building would form a fitting crown to such a scheme for a really imperial museum such as I have endeavored to sketch. There is but one chair of anthropology in this country, and there is ample room and ample material to justify the creation of a second." Failing to secure more accommodations in the British Museum, the natural home of such a collection, he recommended the conversion of the Imperial Institute into "such a museum of anthropology as I have indicated, but, of course, as a Government institution. I am by no means an advocate of the creation of new institutions if the old ones can adequately do their work. But the removal of the ethnographical and anthropological collections from the British Museum to the galleries of the Imperial Institute would possess so many manifest advantages that the disadvantages need scarcely be considered."

The following-named papers were read and discussed before the section: The Personal Equation in the Anthropometry of Criminals, by J. G. Garson; The Finger Prints of Young Children, by Francis Galton; On the Finger Print as a Means of Identifying Criminals, by E. R. Henry; The Cambridge Expedition to Torres Straits and New Guinea and Some of the Totem Customs of the Yaraï Kanna Tribe of Cape York, North Queensland, by Alfred C. Haddon; The Linguistic Results of the Cambridge Expedition to Torres Straits and New Guinea, by Sidney H. Ray; Some Observations on Savage Music and Observations on Hearing, Smell, Taste, Reaction, and Time, by C. S. Myers; On the Clubs, Houses, and Dubus of British New Guinea, by C. G. Selig-

mann; Observations and Experiments on Vision, Color, and Estimation of Time and Two New Departures in Anthropological Method, by W. H. R. Rivers; Observations on the Sense of Touch and of Pain on the Estimation of Weight and Variations of Blood Pressure, by W. McDougall; Stonehenge: Some New Observations and a Suggestion, by Alfred Eddowes; The Discovery of Stone Implements in Pitcairn Island, by J. Allen Brown; On the Occurrence of Celtic Types of Fibula of the Hallstatt and La Tène Period in Tunisia and Eastern Algeria, by Arthur J. Evans; On Irish Copper Celts and On Stone Molds for New Types of Implements from Ireland, by George Coffey; On Recent Ethnographical Work in Scotland, by J. Gray; Recent Anthropometrical Work in Egypt and Some Remarks on the "Cero" of St. Ubaldino: the Relic of a Pagan Spring Festival at Gabbio, in Umbria, by D. MacIver; A Study of One Thousand Egyptian Skulls, with Fifty Thousand Measurements, by Donald Macalister; Notes on Color Selection in Man, by John Beddoe; Sequences of Prehistoric Remains and Early Mediterranean Signanias or Alphabets, by W. M. Flinders-Petrie; Primitive Rites of Disposal of the Dead as illustrated by Survivals in Modern India, by W. Crooke; Preanimistic Religion, by R. R. Marett; Thirty-seven Nats (or Spirits) of the Burmese, by R. C. Temple; Exhibition of Ethnographical Specimens from Somali, Galla, and Shangalla, by R. Koettlitz; The Ethnography of the Lake Region of Uganda, by J. R. L. Macdonald; and The Ethnology of West African Tribes North of the Middle Benue, by H. Pope Hennessy.

Also the following reports were presented before the section: Report on the New Edition of Anthropological Notes and Queries, Report on the Collection, Preservation, and Systematic Registration of Photographs of Anthropological Interest, Report of the Committee for the Ethnographical Survey of the United Kingdom, Report of the Committee appointed to investigate the Mental and Physical Deviation from the Normal among Children in Public Elementary and Other Schools, Report on the Lake Village at Glastonbury, Report on the Analysis of the Metals found in the Lake Village, Report of the Committee appointed to Co-operate with the Silchester Excavation Fund Committee in their Excavations in the Roman City of Silchester, and Report of the Committee appointed for the Ethnographic Survey of Canada.

I. Physiology.—The presiding officer of this section was Dr. John N. Langley, F.R.S., lecturer on histology in the University of Cambridge. He said: "I propose to consider some relations of the nerves which pass from the brain and spinal cord and convey impulses to the other tissues of the body—the motor or efferent nerves—and in especial the relations of those efferent nerves which run to the tissues over which we have little or no voluntary control." Concerning limitations in the control of the nervous system over the tissues of the body, he contended that "this control is in considerable part indirect only, the several tissues are in varying degree under direct control, and different parts of one tissue may be influenced by the nervous system to different extents." As to limitations in the control of the nervous system over the different activities, he said that "even when nervous impulses can strikingly affect the vital activity of a tissue their action is limited." After discussing the somatic or voluntary nervous system, he passed to the autonomic or involuntary tissues, which, he said, "although not under the prompt and immediate con-

trol of the will, are under the control of the higher centers of the brain." The arrangement of the involuntary nervous system was described, as well as the cranial and sacral systems. He discussed inhibition, and said that the heart, stomach, and intestines work when no longer connected with the central nervous systems, and that they are especially liable to inhibition. Under the caption of the view of the equal endowment of the tissues, he denied the probability that all unstriated muscle and glands, and even the voluntary muscles, have inhibition nerve fibers. Experimental evidence, he asserted, was fairly decisive in favor of the simple view that the nerve impulse passes indirectly through one "relay station" only from the central nervous system to the involuntary tissues. His final topic was a discussion on the regeneration of certain nerves. He said: "The factors which determine whether a particular tissue or part of a tissue is eventually supplied with nerve endings, and the degree of development of these, are the factors which determine evolution in general. In the individual it is exercise of function which leads to the development of particular parts; in the race it is the utility of this development which leads to their preservation. And so it is conceivable that in some lower vertebrate at some time the autonomic nervous system may have developed especially in connection with those tissues which appear in ourselves to be wholly unprovided with motor nerve fibers."

The following-named papers were read and discussed before the section: Auto-intoxication as a Cause of Pancreatic Diabetes, by J. H. Tuckett; The Effects of Pituitary Extract, by Edward A. Schäfer and Swale Vincent; The Theory of Hearing, by A. A. Gray; A New Instrument for measuring the Duration of Persistence of Vision on the Human Retina and A New Instrument for measuring the Persistence of Duration of Vision, by E. S. Bruce; (1) On the Resonance of Nerve and Muscle; (2) The Propagation of Impulses in the Rabbit's Heart; (3) Fibrillation and Pulsation of the Dog's Heart, by H. Kronecker and F. C. Busch; The Effects of Successive Stimulation of the Viscera and Vasomotor Nerves of the Intestine, by M. Bunch; On the Innervation of the Thoracic Part of the Oesophagus, by H. Kronecker and W. Muklberg; Experiments on a Dog with a Vella Fistula, by H. Kronecker and T. E. Essdemont; On Variations in the Tonus of the Sphincter of the Bladder and The Dependence of the Tonus of the Muscles of the Bladder in Rabbits on the Spinal Cord, by H. Kronecker and Dr. Arnold; On Respiration on Mountains, by H. Kronecker and Dr. Burgi; Protamines and their Cleavage Products: Their Physiological Effects, by W. H. Thompson; The Vascular Mechanism of the Testes, by W. E. Dixon; Observations on Visual Acuity from Torres Strait, by W. H. R. Rivers; On Protamines: The Simplest Proteids, by Prof. Kossel; and Observations on Visual Acuity from New Guinea, by C. G. Seligmann.

K. Botany.—Sir George King presided over this section, and gave as his address a sketch of the history of Indian botany. He pointed out that the first contribution to the knowledge of the botany of what is now British India was made by the Dutch. The active study of botany on the binomial system of nomenclature invented by Linnaeus was initiated in India by Koenig; and the subsequent history of botanic science in India might be divided into two periods, the first extending from Koenig's arrival, in 1767, to Sir Joseph Hooker's arrival, in 1849, and the second extending from the latter date to the present day. He

spoke of the formation of the Botanic Garden in Calcutta in 1787, and of the successive superintendents—William Roxborough, Nathaniel Wallich, and William Griffith. After mentioning other early workers in the field of Indian botany, he passed to a discussion of the splendid work done by Sir Joseph Hooker. Since that event, he said, the most important botanical work done in India has been that of C. B. Clarke. The preservation in good condition of a type specimen is, from the point of view of a systematic botanist, as important as the preservation to the British merchant of the standard pound weight and the standard yard measure, on which the operations of British commerce depend, and yet the only place available for that purpose was an old dwelling office on Kew Green, to which a cheap additional wing had been built. "In behalf of the flora of India," he said, "I venture to express the hope that the provision of a proper home for its types may receive early and favorable consideration of the holders of the national purse strings." In conclusion he described the forest department, which he styled "one of the great economic enterprises connected with botany in India." After showing that the ordinary forest officer educated in England now arrives in India without sufficient knowledge to enable him to recognize from their botanical characters the best-marked Indian trees, he explained this condition by saying: "The general decadence of the teaching of systematic botany in England during the past twenty years is, perhaps, to some extent the cause of the low estimation in which the science is held by the authorities of the Indian forest department."

The following-named papers were then read and discussed before the section: Some Methods for Use in the Culture of Algae and on the Growth of *Oscillaria* in Hanging Drops of Silica Jelly and On Horn-destroying Fungus, by Marshall Ward; On the Influence of the Temperature of Liquid Hydrogen on the Germinative Power of Seeds, by Sir W. Thistleton Dyer; On the Phosphorous-containing Elements in Yeast and On the Sexuality of the Fungi, by Harold Wager; On *Bulgaria polymorpha* as a Wood-destroying Fungus and On India Rubber, by R. H. Biffen; On a Disease of *Tradescantia*, by A. Howard; On the Localization of the Irritability of Geotropic Organs, by Francis Darwin; The Results of Studies in Araceae, by Douglas Campbell; Studies in the Morphology and Life History of the Indo-Ceylonese Podostemaceae, by John C. Willis; On Fern Sporangia and Spores, by F. O. Bower; The Jurassic Flora of Britain and A New Genus of Palaeozoic Plants, by A. C. Seward; The Intumescences of *Hibiscus vitifolius*, by Miss E. Dale; The Maiden-hair Tree (*Ginkgo biloba*), by A. C. Seward and Miss J. Gowan; Some Isolated Observations bearing on the Function of Latex, by J. Parkin; and Stem Structure in Schizaceae, Gleicheniaceae, and Hymenophyllaceae, by L. A. Bootle.

Affiliation with the French Association.—An interesting feature of the Dover meeting was the visit of the French association to Dover and the return visit by the British association to Boulogne. On Sept. 16 nearly 300 members of the French association and of the Société Géologique de Belge arrived at Dover, and were received by the officers of the British association with appropriate words of welcome, Sir Michael Foster saying: "By the friends of science, by the friends of humanity, this day of the reunion of the two associations will always be truly regarded as a great festival." After a reception at the Town Hall, the visiting scientists gathered with

the sections of their choice and later met in common with the association at luncheon, when again addresses of felicitation were made by the higher officers of each association. Also on Sept. 20 the officers and about 100 members of the French association, together with the president and some of the chief officers of the British association, were received and entertained by the mayor and corporation of Canterbury. The return visit of the president, officials, and about 250 members of the British association to the French association gathered at Boulogne was made on Sept. 21. On their arrival they were entertained at a breakfast in the Casino, and later were officially welcomed by the mayor of Boulogne. The British members then attended the sessions of the French association, presenting papers and taking part in the discussions. A banquet, at which happy expressions of good feeling were conspicuous, brought the event to a close.

On Sept. 15 an evening lecture on *La Vibration Nerveuse* was delivered in French by Prof. Charles Richet, and on Sept. 18 an evening lecture on the Centenary of the Electric Current was delivered by Prof. J. A. Fleming. The last-named was made conspicuous by the exchanges of congratulatory telegrams between the British association and the Congress of Electricians assembled in Como, Italy, to celebrate the centenary of Volta's electric discoveries, and also by the exchange of messages by the Marconi system of wireless telegraphy with the French association.

Attendance and Grants.—According to Nature, the meeting was "a great success, especially when the size of the town and the fact that it is the most ambitious effort the town has ever made are considered." The attendance was 1,403, distributed as follows: Old life members, 296; new life members, 20; old annual members, 324; new annual members, 67; associates, 549; ladies, 120; and corresponding and foreign members, 27. In grants for research £1,115 was distributed among the sections as follows: Mathematics, £215; chemistry, £90; geology, £95; zoölogy, £355; geography, £100; economic science and statistics, £5; anthropology, £140; physiology, £75; botany, £20; and corresponding societies, £20.

Next Meeting.—The association will meet in 1900 in Bradford, beginning on Sept. 5. Invitations to hold the meeting in 1901 in Belfast and in Cork were presented, but for special reasons the meeting in that year had been predetermined for Glasgow. Sir William Turner, M.B., LL.D., D.C.L., F.R.S., and F.R.S.E., Professor of Anatomy in the University of Edinburgh, was appointed president for the Bradford meeting. The following persons were invited to serve as vice-presidents: The Earl of Scarborough, the Duke of Devonshire, the Marquis of Ripon, the Bishop of Ripon, Lord Masham, the Mayor of Bradford, the Hon. H. E. Butler, Sir Alexander Binnie, Prof. Arthur W. Rücker, and Prof. T. E. Thorpe; general secretaries, Sir W. Roberts-Austen and Edward A. Schäfer; assistant general secretary, G. Griffin; general treasurer, Carey Foster.

ASTRONOMICAL PROGRESS IN 1899. The advancement in astronomy the past year was eminently satisfactory.

The Sun.—So intense is the glare surrounding the Sun in a cloudless sky that no instrument yet devised enables astronomers to make observations of the various phenomena immediately surrounding it, except the prominences or protuberances, which can be seen and leisurely studied by means of the spectroscope. The other phenomena surrounding the Sun—the chromosphere, the corona, the streamers (curved, straight,

radial, and tangential)—though very bright, can not be seen except when the Sun is totally eclipsed and the observer near the center of the Moon's shadow. The making of long journeys, often of many thousand miles, to observe a total eclipse is not for observing the Sun itself, which would be impossible, as it is entirely covered by the Moon, but to study, with telescope, spectroscope, and photographic camera, the Sun's immediate surroundings.

On Jan. 22, 1898, a large party from several countries visited India to observe a total solar eclipse, which at every station selected was successfully observed. The result of all the observations has just been published in book form, with many elaborate illustrations, by the British Astronomical Association of London. It appears that the observations were almost exclusively photographic, and were a great success. On several of the plates the flash-light spectrum, and on others the corona spectrum, are clearly seen, and also on plates exposed during partial phase the Fraunhofer dark spectrum bordered with dark lines. On some of the plates the flash-spectrum lines in the ultra-violet are beautifully defined, and can be traced as far as wave length 3242. In this region from H more than 218 lines can be counted, and the wave lengths of all measured. A great many of the lines were due to iron, calcium, and magnesium. Three of the strongest lines have been identified by Mr. Jewell, at Johns Hopkins University, as due to the rare element titanium, which, instead of being confined to the flash layer, extended as high in the chromosphere as hydrogen, and also in the prominences, which are eruptions from the chromosphere, extending to a height of 100,000 miles, and were plainly visible to the naked eye during the totality of the eclipse of 1869. The coronium line, to produce which no substance has yet been found on the Earth, was traced to a height of 160,000 miles. This eclipse has confirmed what several previous ones have shown—that the corona, chromosphere, prominences, etc., belong to the Sun, and not to the Moon.

The grandest problem in astronomy is to measure the Sun's distance from the Earth. It was formerly thought that the problem was solved over one hundred years ago, and that the distance was 95,000,000 miles, but is now thought to be about 93,000,000. Millions of dollars were spent to observe the transits of Venus of 1874 and 1878 for this purpose, but the discussion of the observations still left a possible error of 200,000 miles. Now, thanks to the discovery of an insignificant asteroid, by the first day of the twentieth century (Jan. 1, 1901) the doubt will be reduced 75 per cent., as described under Asteroids.

The month of September, 1898, was rendered memorable to solar physicists by the sudden appearance of one of the largest Sun spots on record. As it appeared during the period of minimum Sun-spot activity, it created far greater interest than if it had occurred during the maximum period, and has created a distrust as to the existence of the eleven-year period of Sun spots. It first appeared on the east limb of the Sun on Sept. 2, and on the following day it assumed gigantic proportions, equal to 1,400,000,000 square miles. On the 10th the spot covered an area of only 24,000,000 square miles. During its passage across the central meridian of the solar disk the northern regions of the Earth were treated to one of the most magnificent auroral displays seen for many years. The simultaneousness of the two phenomena goes far to estab-

lish the truth of the theory long entertained that there is a connection between them. At the same time there was a sharp disturbance of the magnetic needle in various countries, and of the telegraph wires, lasting four hours. The movement of the needle in declination extended through an arc of more than a degree. When it is considered that Sun spots last many days, and often weeks, it seems to militate against the truth of the above-mentioned theory that the aurora should last but a day, and often much less, and magnetic intensity but four hours.

Photographic Astronomy.—Dr. E. E. Barnard, of the Yerkes Observatory, Williams Bay, Wisconsin, has published two papers, the first being a description of one of his photographs of the Milky Way, near Theta Ophiuchi, accompanied by a print of it, which reveals much of the intricate structure of that portion of the starry girdle. Certain appearances in the photograph appear to justify the belief that in this portion of the galaxy a substratum of a dual nebulousity exists, while huge dark rifts and black lines suggest the idea that the photograph actually pierced through the luminous girdle into the blackness and starless space beyond. These peculiarities, he says, strongly remind one of the appearances often seen in the umbra of Sun spots, where a dark halo lies in the dark central spot, as if the cavity was partly veiled with some sort of medium, with apertures in it. His second paper can be found in the March number of the *Astro-Physical Journal*.

Prof. E. C. Pickering, of Harvard Observatory, has lately received from its station at Arequipa, Peru, a series of the most successful photographs of the heavens yet taken. One plate especially, 14×18 inches, taken with the Bruce photographic telescope, shows with marvelous clearness and exactness as to magnitudes and position the enormous number of 400,000 stars, all depicted by a single exposure of probably several hours' duration. Miss Catharine Bruce, of New York, gave the professor \$50,000 for the construction of this celebrated photographic telescope of unique construction. The object glass corrected for actinism (thus being useless for visual work) is 24 inches in diameter, and has only a 12-foot focus. The professor is now constructing a telescope, going to the other extreme as to focal length, to be about 175 feet, to lie horizontal and immovable. The light from objects to be observed is to be reflected from a plane mirror driven by clockwork, equatorially mounted, and regulated to sidereal time; or the photographic plate itself may be moved by clockwork, to counteract the rotational velocity of the Earth, that a star may be held during exposure on the meridional wire in the eyepiece. The great Yerkes telescope, with a 40-inch object glass, is 67 feet long, while this new instrument, with an objective only 13 inches in diameter, will be more than 100 feet longer. One advantage possessed by the long telescope will be the immense size of the photographed Moon and planets; that of the former will be about 15 inches in diameter, while with ordinary telescopes 3 inches is about the limit. The great telescope building in Paris for the Exposition is to have an object glass 50 inches in diameter, and to be about 100 feet in length. Enlarging photographs, especially of the Moon, is often done, but always at the expense of distinctness; but as the Moon taken with the long telescope will be 15 inches in diameter, no further details of value would be gained by enlarging.

It has been known for many years that in

order to deal most effectively with stellar phenomena a field of much greater width was necessary than from 10 to 15 degrees, as formerly practiced. But not until the publication of Mr. Dallmeyer's stigmatic lens, in 1897, was one able to chart wide sky areas without great distortion near the margin of the field. A photograph taken by Mrs. Maunder, of England, with a stigmatic lens only $1\frac{1}{2}$ inch in diameter and 9 inches in focal length, has been published. The field shown is 37 degrees on a side and 50 degrees diagonally. A set of 40 plates of the same angular aperture as the foregoing, but of larger scale, would provide a more complete chart of the heavens than any that we now possess in a small compass and at very little expense. The work lies very easily within the powers of many small private observatories.

The Planets.—No remarkable advance in our knowledge of the planets was made during the year. Prof. Schiaparelli has published his fifth memoir on the planet Mars, without increasing our knowledge of the cause of its surface markings, which has excited the world during the past two decades. The true explanation of the changes visible on his surface at different seasons, the duplication of the so-called canals, which some astronomers, with indifferent optical appliances, profess to see easily, while others with far superior means can not see them, seems as far off as ever. The gemination of the canals is believed by the majority of astronomers to be an optical illusion, inherent in some eyes, especially if wearied by overwork, the defect being in the eye, and not in the telescope. Some observers say they see markings on Mercury and Venus, and thence deduce conclusions as to their rotation periods. Herr Leo Brenner says he has conclusive evidence that Mercury rotates on its axis once in thirty-three days and forty-five minutes. The general opinion that this period is but about twenty-four hours has long held sway. A day on Venus has been supposed to be about the same as ours, yet some observers now assert that her period of rotation is 224.7 days. In the presence of such discrepant conclusions it must be held that nothing is positively known as to the period of either planet, and the same remark applies to the periods of Uranus and Neptune, and all satellites except our own.

Satellites of Mars.—No. 7, Vol. IX, of the Transactions of the British Astronomical Association contains some new and interesting facts regarding the satellites of Mars, and, as they are totally unlike anything known elsewhere in the solar system, a few are briefly noticed:

Phobos.—This little speck of a world is only 10 or 15 miles in diameter (some estimate it at 7 miles), revolves around Mars in $7^h 39^m$, and therefore must move across the sky at the rate of 47° an hour. But, as it rises in the west and sets in the east, its apparent motion across the sky will be the difference between its own and the rotational velocity of Mars, which is $14^\circ 30'$ an hour, or $32^\circ 30'$. Owing to the satellite's rapid motion, combined with its large parallax, it is above the horizon at the equator for $4^h 15^m$, and below it for $6^h 45^m$. Owing to the combined motion of both satellite and planet, it requires $11^h 6^m$ for Phobos to return to the same meridian, during which time it goes through all the phases, from new Moon to full, and from full to new, that our Moon does in twenty-nine and a half days. As the length of a night on Mars is $12^h 18^m$, Phobos can be seen by the same observer twice full and once new, or once full and twice new. The eclipses of both the Sun and the satellite

occur with great frequency. So rapid is the phase change of Phobos that at a zenithal central eclipse, which lasts 54^m , the satellite may be seen to enter the shadow in a phase a little short of full and emerge a little past full, each phase being 0.937. When Phobos is in the zenith it appears more than twice as large as on the horizon. If Phobos and Deimos are exactly in the plane of the planet's equator, Deimos will be occulted by Phobos about every ten hours, the moons approaching each other from opposite directions. The average distance of Phobos from the surface of Mars is only 3,730 miles. Assuming that the satellite turns to Mars the same phase as does our Moon to the Earth, the planet will appear immovably fixed in the sky, with a disk one thousand times larger than is shown by our Moon. A Martian astronomer (if there is one) could with a powerful telescope bring the satellite within one mile.

Deimos.—This satellite completes a revolution round the planet in $30^h 15^m$, rising, as does our Moon, in the east and setting in the west, traveling across the sky at the slow rate of $2^\circ 45'$, equal to the difference between its own hourly velocity of $11^\circ 53'$ among the stars and the hourly rotational velocity of the planet of $14^\circ 37'$. If the satellite is supposed to rise when full, it can be seen twice full and twice new before it sets. In the zenith Deimos from the surface of Mars will appear about one third larger than when in the horizon. Its diameter is uncertain, but is considered to be from 10 to 15 miles, too small ever to eclipse the Sun totally, though it will cross the solar disk about 130 times during a Martian year. Of course, it must occasionally happen that both satellites will transit the Sun at the same time, both passing across the sky from west to east, Deimos slowly and Phobos rapidly. If it be assumed that Deimos turns the same face to Mars, which is probable, the planet would appear fixed in the sky, the stars sailing by in regular order. As Deimos is more distant from the surface of Mars than is Phobos, it will appear somewhat smaller, but would still appear vastly larger than our Moon appears to us.

Of Jupiter little is known that was not previously recorded. Mr. Denning, of England, has examined his rotation period as given by dark and bright spots in the region of the equator, which furnishes a mean period of $9^h 50^m 23^s$, against $9^h 50^m 30^s$ as previously adopted. The period of the famous red spot, which is still faintly visible, from 17,414 revolutions, is $9^h 55^m 39.4^s$, but is not uniform. The variation is not great—perhaps not greater than might be expected from the nature of the observations.

Nothing but ordinary routine observations have been made on the planets Uranus and Neptune to determine their periods of rotation, but Dr. E. E. Barnard, of the Yerkes Observatory, has made a series of elaborate observations with the mammoth telescope on Neptune's satellite, the measures of which have enabled Prof. Hall to improve the elements of its orbit. He finds the mass of Neptune to be $\frac{1}{19697}$, that of the Sun being 1.

Asteroids.—Since the last report the following asteroids have received numbers to replace the provisional letters given in the last volume:

DL	429	DP	437
DM	430	DQ	433
DN	431	DR	434
DO	432	DS	435

Since then the following have been discovered and received provisional letters. Some of these

have been numbered, and a few have been named as indicated:

DT 436, discovered by Wolf.
DU 438, discovered by Charlois, Nov. 8, 1898.
EB 439, discovered by Coddington, Oct. 14, 1898.
EC 440, discovered by Coddington, Oct. 14, 1898.
ED 441, discovered by Charlois, Dec. 9, 1898.
EE 442, discovered by Wolf, Feb. 15, 1899.
EF 443, discovered by Wolf, Feb. 17, 1899.
EL 444, discovered by Coggia, March 31, 1899.

Nearly a dozen others were found and received provisional letters, but they proved to be those discovered several years ago. The following asteroids have received names: No. 420, Bertholda; No. 421, Zähringia; No. 422, Berdina; No. 428, Monathia; No. 433, Eros; No. 439, Ohio.

An asteroid discovered six years ago, No. 366, which has had only a provisional number, has lately been named Vincentina.

Asteroid 433 (DQ), about which so much interest is taken on account of its anomalous orbit and the value it will have for astronomy, has been named Eros. A brief notice of its discovery was given in the last volume of the Annual Cyclopædia, before the great value of the discovery was fully appreciated or its orbit accurately computed. The number of asteroids now known is about 450, all between the orbits of Mars and Jupiter except the one under discussion. The labor of keeping track of so many is great, and the announcement of the discovery of another is treated with indifference bordering on disgust; but the discovery of Eros has opened a broad field for speculation, as it may be the forerunner of others moving in the same or similar orbits. It was discovered by photography; its trail, a long one, was found on the plate with two short ones, which immediately indicated that if it was not that of a comet then there must be an asteroid with an orbit unlike any of the others. A few observations showed that two thirds of its orbit lies between the orbits of the Earth and Mars, instead of between Mars and Jupiter. At certain times it can approach nearer the Earth than any heavenly body except the Moon, and be just visible to the naked eye. It makes one of these nearest approaches only once in about thirty-one years, when its parallax will amount to almost a minute; and of all the means that can be used for the ascertainment of the Sun's distance from the Earth, including the transits of Venus, this little insignificant world is worth the most. We have always considered Mars as our nearest outside and Venus the nearest inside neighbor, but now it is Eros and Venus. At its least distance from the Earth Eros is only 0.15, in terms of the Earth's distance from the Sun, as compared with 0.27 for Venus in transit, equal to 25,650,000 miles, and 0.38 for Mars in perihelion, equal to 35,300,000 miles, or only 14,000,000 for Eros.

The Earth passes the longitude of the asteroid's perihelion (nearest the Sun) on Jan. 22, and in order that the Earth and the asteroid be nearest together the asteroid must pass perihelion on or near that date, which it will not do till 1931. But, fortunately, quite a near approach will take place in December, 1900, the distance being 0.33, at which the little planet will be between the eighth and ninth magnitude. When discovered it was of the eleventh magnitude, and three and a half years previous it must have been of the sixth and a half. The diameter of the little world is about 17 miles.

If its parallax can be obtained, Kepler's third law gives at once the distance of the Earth from the Sun, which is the "yardstick" that determines the distances of all the planets from the

Sun and from each other, and their diameters and orbital velocities." Prof. Pickering found the trail of Eros on 13 plates exposed during 1893-'96, the photo-magnitudes varying from 8.2 to 12.5. During the search for Eros on the plates Mrs. Fleming found images of two variable stars, one of which fails to appear on 10 plates. All the photographs on which Eros was found were taken with doublets. Had lenses of the usual form been used, with a field only 2 degrees in diameter, all the images of Eros would have fallen outside the plates.

Dr. S. C. Chandler, editor of the Astronomical Journal, has computed the following elements of Eros, using recent observations combined with positions found on Harvard plates in 1894:

EPOCH 1898, AUG. 31.5, GREENWICH MEAN TIME.	
Mean anomaly.....	221° 35' 45.6"
Node to perihelion.....	177° 37' 56.0"
Longitude of node.....	303° 31' 57.1"
Inclination of orbit.....	10° 50' 11.8"
Angle of eccentricity.....	12° 52' 9.8"
Daily motion.....	2015.2326"
Logarithm of mean distance.....	0.1637876
Period of revolution.....	643.10 days

Saturn's Ninth Satellite.—Attempts have been made to discover new satellites to the planets by photography, but they have failed, from the low rapidity of the lenses employed. On Aug. 16, 17, 18, 1898, four plates were exposed for two hours each, with the lens presented to Harvard College Observatory by Miss Catharine Bruce, of New York, which has 24-inch aperture and only 13 feet 4 inches focal length. One hundred thousand stars appeared on each plate. The photographs were examined two at a time, one superimposed on the other, and placed film to film, so that each star was represented by two contiguous dots, the satellite showing itself by a single dot, sharing in the motion of Saturn relatively to the stars. The position of the satellite is nearly the same on the two plates taken on Aug. 16. On Aug. 17 it followed this position 35" of arc, and was south 19". On Aug. 18 it followed 72", and south 43". Its motion was direct, but slower than that of Saturn, and nearly in the same direction. It therefore can not be an asteroid, but must be either a ninth satellite to Saturn or an ultra-Neptunian planet. Prof. Pickering, who has thoroughly investigated all the circumstances of this strange and unexpected discovery, thinks the latter supposition exceedingly improbable. It was at first identified with a faint object found on the plates taken in 1897, and the period of revolution around Saturn (seventeen months) was thence derived; but this is not confirmed, and the period is now in doubt. The position angle in May, 1899, was between 280° and 290°, and the distance between 20 and 30 minutes. The uncertainties will probably be diminished when plates taken at the Harvard Observatory station at Arequipa, Peru, on Sept. 15, 16, and 17, 1898, are received at Harvard College Observatory. The apparent orbit of the supposed satellite is a very elongated ellipse. From comparisons with Hyperion, the faintest of his satellites, the magnitude of the new one is estimated at 15.5. As seen from Saturn, it would appear of the sixth magnitude, or as faint as the faintest star visible to the naked eye. If its reflecting power is the same as his largest satellite, Titan, its diameter is estimated to be only about 200 miles. Prof. William H. Pickering, its discoverer, suggests the name Phœbe, sister of Saturn. It thus appears that this unique planet is adorned with 9 moons, environed in 3 rings, and sometimes 5.

Nebulæ.—In four years of the five that Dr. Lewis Swift has been director of the Lowe Observatory, at Echo Mountain, California, he has discovered and catalogued 350 new nebulae. Some of these are very interesting, and deserve thorough investigation with the spectroscope and the largest telescopes. Special attention is drawn to a few, as follows:

One which he calls a nebulous nebula, in right ascension $23^{\text{h}} 29^{\text{m}}$, declination south $36^{\circ} 29'$, has the appearance of a central elongated nebula, with sharp outline, centrally superimposed on another very much the larger and of unimagined faintness. It is probably the only one in the heavens that bears any resemblance to it, and raises the question whether there can be any connection between the two, if two there are. Astronomers are acquainted with several nebulous stars—that is, a star in the center of a nebulous atmosphere—but a nebula in the center of a nebulous atmosphere is a novelty. One in right ascension $0^{\text{h}} 46^{\text{m}} 45^{\text{s}}$, declination south $35^{\circ} 0.5'$, presents the curious aspect of a double nebulous Uranus. Two others, which he calls hair-line nebulae, resembles, except in color, a short piece of horsehair. They are doubtless disk nebulae, their thin edges being presented exactly to our line of sight. Their places for A. D. 1900 are right ascension $3^{\text{h}} 31^{\text{m}}$, declination south $34^{\circ} 47'$, and right ascension $5^{\text{h}} 29^{\text{m}} 20^{\text{s}}$, declination south $36^{\circ} 28'$.

Prof. Herbert A. Howe, director of the Chamberlain Observatory, University Park, Colorado, has recently discovered 22 new ones while obtaining micrometrical places of some previously discovered.

Dr. De Lisle Stewart has 46 novæ on photograph plates, taken with the Bruce photographic telescope at the Harvard Observatory station, Peru, in the latter part of 1898. The group is between right ascension $3^{\text{h}} 10^{\text{m}}$ and $3^{\text{h}} 50^{\text{m}}$, and declination south $49^{\circ} 50'$ and $55^{\circ} 40'$. Only two appear in Dreyer's New General Catalogue of Nebulae—viz., 1311 and 1356. There are several nebulous regions in the celestial vault that suggest the idea that they may be offshoots from one, or at least are connected together, the connecting links being invisible from faintness and distance. Isaac Roberts has lately reproduced a photograph of No. 2239, between right ascension $6^{\text{h}} 24^{\text{m}}$ and $6^{\text{h}} 23^{\text{m}}$ and north declination $4^{\circ} 24.8'$ and $5^{\circ} 56.5'$ in the constellation Monoceros, with an exposure of $2^{\text{h}} 45^{\text{m}}$, a depiction of nebosity, extending like a cloud, but broken up into wisps, streamers, and curdling masses densely dotted with stars on its surface and the surrounding region. Several remarkable black tortuous rifts meander through the nebosity, their margins sharply delineated.

Hind's variable nebula is the only well-authenticated instance of a nebula varying in brightness, somewhat analogous to variable stars. It is in Taurus, and is No. 1555 of the catalogue of nebulae. The following observations were made with the 40-inch telescope of the Yerkes Observatory by Dr. Barnard: When discovered by Prof. Hind, of England, many years ago this nebula was conspicuous in an ordinary telescope, but in 1868 it had vanished from the largest telescopes. Mr. Burnham saw it as a very faint nebula, in 1890, in the 36-inch telescope at the Lick Observatory. In February, 1895, it was an easy object, but it had vanished the following September. On Sept. 28, 1897, it could be detected at good intervals of seeing, but with extreme difficulty, with the great Yerkes telescope.

Dr. Scheiner, with an exposure of seven and a

half hours, obtained a good photograph of the spectrum of the great nebula in Andromeda from K to H. A comparison between this and the solar spectrum disclosed a surprising agreement between them. No trace of bright lines (a sure indication of the presence of gas) was present, so that the interstellar space in the nebula is not apparently occupied by gaseous matter. The doctor calls attention to the analogy between the Andromeda nebula and the Milky Way. The streams and irregularities of the latter he regards as of special structure, instead of a ring system. The ground for this view is the fact that all ring nebulae give gaseous spectra, in contrast with the spiral nebula.

Dr. J. E. Keeler, director of the Lick Observatory, on the night of Dec. 12, 1898, observed the Orion nebula with the spectroscope attached to the 36-inch telescope. The slit was first placed on the nebulosity surrounding the star (Bond 734). The night being hazy, only a single line was visible, identified as $H\beta$. The slit was then placed on the Huyghenian region near the trapezium, which showed the usual spectrum. $H\beta$ and the second nebular line (α) = 4959 were about equally bright, but the chief line (α) = 5007 was several times brighter than either. The intensity of the spectrum was then diminished by contracting the vertical aperture of the spectroscope, the resolving power remaining unchanged. When the brightness was sufficiently reduced $H\beta$ and the second line disappeared, the chief nebular line alone being visible. In other words, with a sufficiently feeble spectrum the $H\beta$ line was alone visible in one part of the nebula, and the chief line alone in another part. The doctor pronounces the result inexplicable on physiological grounds, and thinks it can only be due to real difference in the spectrum of the nebula itself.

Recent observations of the star Mira (which varies from the second magnitude to invisibility in eleven months) by Prof. Campbell, with the Mills spectrograph attached to the 36-inch telescope at the Lick Observatory, show that the star is retrograding from us at the rate of 38.5 miles a second. This result was obtained from the dark lines only, as some of the bright lines show considerable displacement toward the violet. He was unable to perceive any trace of the green line of hydrogen, yet the two succeeding members glowed with unexpected intensity. The absence of the lower radiations constitutes an anomaly of the most pronounced kind, and is accounted for by the diverse character of the hydrogen spectrum in nebulae and bright helium stars.

Comets.—In 1898 ten comets were observed, one more than ever before recorded, while up to Oct. 20 three only were discovered in 1899, and two of these were expected.

Comet I 1898 (Brooks).—This interesting comet was discovered by William R. Brooks at Smith Observatory, Geneva, N. Y., on Oct. 20, 1898, in the constellation Draco, in right ascension $14^{\text{h}} 35^{\text{m}} 10^{\text{s}}$, declination north $60^{\circ} 26'$. For a telescopic comet it was large and bright, being visible with a 3-inch telescope, in presence of a half-moon. For a while after discovery it was supposed to be a return of Schaeberle's comet of 1881 IV, so similar were their orbital elements. Further observations, continued longer, afforded evidence that it was moving in a parabola, and therefore was a visitor to our system for the first and last time. Similarity of element, however, leads strongly to the supposition that they belong to the same family. The following are the latest, and presumably the most ac-

curate elements of its orbit: Time of perihelion passage, 1898, Nov. 23.14, Greenwich mean time; from node to perihelion, $123^{\circ} 22'$; longitude of node, $96^{\circ} 10'$; inclination, $140^{\circ} 19'$; perihelion distance, 0.7564.

Comet 1898 J (Chase).—This extremely faint comet was discovered by photography by Mr. F. L. Chase, an assistant at Yale College Observatory, who on Nov. 14 photographed the radiant of the November meteoric shower in the sickle of Leo. When the plate was developed nothing indicating a new point of light or a trail by a moving object was seen. But two weeks afterward the director, inspecting the negative, saw a minute speck slightly elongated. He requested astronomers at other observatories to inspect their plates, and the speck was found at the same place. When the region was examined with one of our great telescopes the mysterious object was identified as a comet. The shortness of the trail was accounted for by the slow motion of the comet and the short exposure, combined with its extreme faintness. From observations made on Nov. 14, 23, and 25, and Dec. 5, Prof. Möller has computed the following orbital elements: Time of perihelion passage, 1898, Sept. 19.65, Berlin mean time; node to perihelion, $4^{\circ} 23' 9.2''$; longitude of node, $95^{\circ} 47' 0.2''$; inclination of orbit, $22^{\circ} 28' 25.2''$; longitude of perihelion distance = q , 0.357918. These elements indicate that the orbit is a parabola.

Comet A 1899 (Swift) was discovered by Dr. Lewis Swift, director of the Lowe Observatory, Echo Mountain, California, on the evening of March 3. It was the brightest and most interesting comet that has appeared since the great comet of 1882. It had an interesting history while under observation, which was nearly four months. For full particulars the reader is referred to the *Astronomical Journal*, No. 464, where a double head and double nucleus are represented and fitful variations of brilliance are described. This variation in brilliance was a new feature in cometary astronomy. The discoverer from its subsequent behavior has reason to believe that a sudden outburst occurred just prior to its discovery, rendering it visible to the naked eye. At this time a phenomenon was seen which could not be seen the next evening nor at any subsequent evening, and which never has been seen appended to any comet. The bright coma visible to the naked eye was centrally superimposed on another very much the larger and of unimagined faintness, the marginal demarcation of the two being sharply defined. The following parabolic elements have been computed: Time of perihelion passage, April 13.0148; node to perihelion, $8^{\circ} 48' 52''$; longitude of node, $25^{\circ} 0' 55''$; inclination, $146^{\circ} 15' 48''$; logarithm of perihelion distance, 9.51311.

Comet B 1899 = Tuttle's of 1858 = Mcchain's Comet of 1790.—This interesting periodic comet was rediscovered by Dr. Wolf on March 5, 1899. It has a period of 13.7 years. It remained unobserved from 1790 to 1858. Its period is the longest of all the short-period comets.

Comet C 1899 (Holmes) = Comet III 1893.—This was rediscovered, June 10, by Perrine at the Lick Observatory with the 36-inch telescope, in which it appeared not brighter than a star of the sixteenth magnitude. This is its first return since its first discovery by Holmes in 1893.

Comet D 1899 (Tempel's) = Comet II 1873.—This short-period comet of six years was also rediscovered by Perrine on May 7, almost exactly at the place computed for it by Prof. Schulhof, the error being only $2'$ of arc.

The elements of Comet E 1898 (Perrine) resemble those of the Comets of 1684, 1785 I, Comet B 1898, and Pons's comet of 1812 = Comet Pons-Brooks of 1884. These facts strongly indicate that they all belong to the same family, although only the latter is periodic. The elements of the bright comet discovered by Prof. Brooks, as stated above, bear a strong resemblance to that of 1881 IV, although Dr. Stécher has computed for it a period of not less than one hundred thousand years. For comparison the elements of both are subjoined:

Comet Brooks.		Comet 1881 IV.
Node to perihelion.....	$123^{\circ} 33' 48''$	$123^{\circ} 7' 19''$
Longitude of node.....	$96^{\circ} 20' 1''$	$97^{\circ} 2' 37''$
Inclination.....	$140^{\circ} 21' 4''$	$140^{\circ} 13' 54''$
Log. of perihelion distance.	9.887852	9.80178

Comet E 1899 (Giacobini) was discovered at Nice, France, on Sept. 29, in right ascension $16^{\text{h}} 26^{\text{m}} 3.2^{\text{s}}$, declination south $5^{\circ} 10'$. The following elements have been computed from observations of Oct. 3, 6, and 9:

TIME = 1899, SEPT. 18.3115 BERLIN MEAN TIME.

Node to perihelion.....	$12^{\circ} 47' 26''$	} 1899.0.
Longitude of node.....	$273^{\circ} 2' 48''$	
Inclination.....	$76^{\circ} 33' 17''$	
Logarithm of q = 0.25273.		

Variable Stars.—For three hundred years it has been known that Beta Persei (Algol or Demon star) varied periodically through nearly two magnitudes; also that Omicron Ceti (Mira the Wonderful) varied from the third magnitude to invisibility, going through all its changes in about eleven months. Many others, as now known, are at their maxima visible to the unassisted eye, but at their minima are beyond the reach of ordinary telescopes. Many theories have been advanced to account for their variability. The number of these now known amounts to more than a thousand. As amateurs can engage profitably in the work, no telescope being required, the list is increasing rapidly. In several particulars Algol is the most interesting, as the theory to account for its behavior is recognized by all astronomers as correct—viz., that it has a dark companion revolving round it, the plane of whose orbit is coincident with our line of sight, which periodically eclipses it. If this theory be true, then the bright component must alternately approach and recede from our solar system. The spectroscope has settled that question in the affirmative, giving the following data: Diameter of Algol, 1,000,000 miles; diameter of companion, 800,000 miles; distance between them, 3,000,000 miles; velocity of companion, 55 miles a second.

The shortest known* variable is U Pegasi, changing in $5^{\text{h}} 35^{\text{m}}$. Nova Auriga, when discovered, appeared as an ordinary star of the fifth magnitude, but soon began to decline rapidly in brightness, until it reached about the seventeenth magnitude, being a difficult object in the great Lick telescope. It has a remarkable spectrum, showing many bright narrow lines and broad dark bands. Later it increased to the tenth magnitude, and is now a nebulous star. Examining the Draper memorial photographs, Mrs. Fleming, of Harvard College Observatory, discovered a new star in Sagittarius, which was first of the fifth magnitude, and therefore easily visible to the naked eye, but by March, 1899, it had declined to the tenth. The spectrum resembles those of many other variables, many of the bright lines being due to hydrogen.

No so great advance in astronomy has been made as in the discovery and classification of

variable stars. The number now known is a hundred times greater than were known fifty years ago. But the most surprising and least expected is that many stars in several clusters vary, some during short periods and in wide limits. The literature of the subject is extensive. After the fact became known a systematic search by photography was made by Mr. S. I. Bailey at the Harvard Observatory at Arequipa, Peru, which resulted in the discovery of those mentioned below. The whole number of stars examined in the several clusters was 19,050, of which 509 were variable, or 1 variable to 37. This ratio, however, varies greatly in different clusters. While in Messier there are 13, the splendid naked-eye cluster in Hercules shows but 2 variables, or only 1 in 500. Messier 3 showed 132 in 900, or 1 in 7. No cause has been assigned for these extraordinary phenomena that meets with general acceptance. Prof. E. C. Pickering has compiled a table giving the number of variables in 23 clusters, which is published in *Popular Astronomy* for November, 1898, of which the following are the most remarkable: New General Catalogue 5272 = Messier 3, 132 are variables; New General Catalogue 5839 = Omega cluster 125; New General Catalogue 5904 = Messier 5, 85; New General Catalogue 7078 = Messier 15, 51, are variables. The Omega Centauri cluster, just visible without a telescope, surpasses in number of stars in a given area all others known. Its position is right ascension $13^h 26^m 46^s$, declination south $46^\circ 47'$. Although it is much less than some others in extent, yet 8,000 stars have been counted on a photograph plate, but the number actually visible is very much greater. The periods of 106 of the 125 variables in the Centauri cluster have been determined; 98 have periods less than twenty-four hours. The longest is four hundred and seventy-five days, the shortest six hours and eleven minutes. The largest range in variation is about five magnitudes, and no star has been included whose light changes do not amount to half a magnitude. In one star whose period is fourteen hours and eight minutes, the rise from minimum to maximum, a change of two magnitudes, takes place in one hour. Eleven of the clusters investigated have 11,980 stars and 462 variables, or 1 in 26.

Double Stars.—A large number of the naked-eye stars are found, when examined by the telescope, to be double or triple. Those that revolve around each other are called binaries, of which Castor is a familiar example. From 1877 the period of this interesting binary was considered to be one thousand and one years; but this theory has been completely upset by the fact that since 1887 the two components have been steadily approaching each other. Prof. Doberck, of Hong-Kong Observatory, has recently computed a new orbit from all available observations. He makes the time of perihelion passage A. D. 1948.86, and the period only 318.23 years.

The line must be sharply drawn between telescopic and spectroscopic doubles. A star may be telescopically double and not be a binary, one star happening to be almost exactly behind the other. Not until orbital motion is detected beyond all doubt can the star be pronounced a binary. On the other hand, a spectroscopic double is assuredly a binary, for its orbital motion is what determines it to be a binary double. A spectroscopic double never can be seen double by any telescope, so close together are the components. When the components of such a pair revolve around each other, their orbital plane being coincident with our line of sight, the visible

star (the other supposed to be dark) must alternately approach the Earth and recede from it by the attraction of the dark one. It is this reversal of the motion of light that the spectro-scope takes cognizance of. Several such spectroscopic doubles have been lately discovered, the latest find being the pole star. This polar pilot has a minute star quite close to it visible in small telescopes, but there is no reason to suppose that they are physically connected. Polaris (as the pole star is called) is a spectroscopic binary, lately discovered to be such by Prof. W. W. Campbell, of Lick Observatory, and its duplicity has been fully confirmed by Edwin B. Frost, at Yerkes Observatory, whose observations and measurements tally almost exactly with those of Prof. Campbell. The latter is of the opinion that it is a ternary system instead of a binary—that is, the system is composed of one bright naked-eye star and two dark ones, which make a revolution around the bright one in a little more than three days. The spectro-scope has proved that the pole star is moving toward the Earth at the rate of 9 miles a second. Although Polaris is approaching the Earth, yet its velocity is variable. During two days it is approaching our system at the mean rate of 14 kilometres a second, and during the next two days but 8 kilometres. This variable motion is ascertained by the displacement of the lines in the bright star's spectrum. When any star is approaching the Earth its spectral lines are moved slightly toward the violet, but if it is receding the same lines are moved toward the red end of the spectrum. The amount of displacement gives the velocity. If the velocity of a star is uniform, whether to or from the Earth, this affords positive evidence that the star is not a binary with their orbital planes coincident or nearly so with our line of sight. The spectro-scope takes no cognizance of a binary star if its motion is perpendicular to our line of sight.

The photographic determination of the motion of a star in the line of sight by the spectro-scope is one of the marvels of photo-spectroscopy, which, owing to more rapid plates, can now be obtained by an hour's exposure. The plate and the companion spectrum of a terrestrial source are placed side by side, and the measure of the displacement of the two spectra is then made with the microscope and micrometer. M. Deslandres juxtaposed a terrestrial spectrum with that of Alpha Auriga, and found that the displacement of the lines toward the red corresponded to a velocity of recession of 43 kilometres a second. For the dog star (Sirius) the increase of distance was 18 kilometres a second. Gamma Pegasi was found to be approaching the Earth at the rate of 3 kilometres a second. Beta Auriga showed a doubling of the lines, first detected by Prof. Pickering (proving that the star is a spectroscopic double, which no telescope is able to divide), which indicates velocities of 100 kilometres a second, or a little more than 62 miles.

In the progress of the work of a spectro-graphic determination of stellar motion to and from our system several other instances of rapid motion were detected. From four plates of the spectrum of Eta Cephei a mean result was obtained showing a velocity of approach of nearly 87 kilometres a second, and four plates of the brighter component of Zeta Herculis give a velocity, also of approach, of 70.3 kilometres a second. Belopolski's result for the latter star is 70 kilometres. These results, however, are somewhat reduced when corrected for the motion of

the solar system in space—nearly toward Alpha Lyrae, according to Prof. Newcomb.

All stars, including our Sun, which is also a star, are in motion. To us they appear to move very slowly, which is owing to their great distance, whereas in many instances the motion is exceedingly rapid. Hitherto the most rapid known was 1830 Groombridge, called the "runaway star." A very interesting star in this respect has recently been discovered in connection with Prof. Capteyn's work on the Cape of Good Hope photographic *Durchmusterung*. It is of the eighth magnitude, in right ascension $5^h 6^m 40^s$, declination south $44^\circ 58.2'$. It has a proper motion of $9''$ of arc, exceeding that of 1830 Groombridge by about $12''$. Its rapidity of motion would indicate that it may have a large parallax, and prove it to be our nearest stellar neighbor. The circle of the sky, like all circles, contains 1,296,000", which, divided by 9, gives 144,000, the time required to complete the circle of the sky. The number of miles an hour which such a motion implies depends on the star's distance, which is unknown.

Prizes.—The fifth Watson gold medal has been awarded by the American National Academy of Sciences to Dr. David Gill, astronomer royal at the Cape of Good Hope, the value of whose labors in astronomy is everywhere appreciated. The Laland prize of the French Academy of Sciences was awarded to Dr. S. C. Chandler, editor of Gould's *Astronomical Journal*, for contributions to astronomy. The Damoiseau prize was bestowed on Prof. G. W. Hill, of Washington; the Valtz prize, on M. P. Colon, of Madagascar; the Janssen prize, on M. Belopolsky, of the Imperial Observatory of St. Petersburg. The Bruce gold medal was awarded to Dr. Auwers for various kinds of astronomical work, but especially for largely contributing to the determination of the solar parallax.

Variation of Latitude.—Dr. S. C. Chandler frequently publishes a paper in his *Astronomical Journal* on the variation of latitude and its cause. He contends that recent observations tend strongly to confirm the truth of his hypothesis that the axis of rotation of the Earth is not at the pole itself, but within it, and that, instead of being stationary, it describes a small ellipse with axes $0.30''$ and $0.08''$ in a year, its major axis lying along a meridian 45° to the east of Greenwich. Astronomers are about equally divided as to the truth of the hypothesis.

End of the Century.—The year A. D. 1900 is the last one of the nineteenth century, and not, as many suppose, the first of the twentieth, and as it closes a remarkable century, and is of itself a remarkable year also, it seems advisable to explain why it is not the beginning of the next century, and also why it is a remarkable year. It must be borne in mind that the year of Christ's birth was A. D. 1, the previous year being B. C. 1, there having been no year 0. Therefore, supposing he was born, as we reckon time, on Jan. 1, A. D. 1, and as it requires one hundred years to make a century, it is plainly evident that the first century ended at midnight of Dec. 31, A. D. 100. Immediately after, Jan. 1, A. D. 101, the second century began, and in like manner the third began Jan. 1, A. D. 201, and the twentieth will begin Jan. 1, A. D. 1901, nineteen centuries not having been completed until midnight of Dec. 31, A. D. 1900. Nineteen hundred is divisible by 4, without a remainder, and yet 1900 will not be a leap year. The rule for calculating leap years, briefly told, is as follows: All common years divisible by 4 and centennial years by 400,

without remainders, are leap years. The year 1900, being a centennial year, but not divisible by 400, is a common year, the like of which has not happened in one hundred years. If the year consisted of an exact number of days, no leap year would be necessary. Also, if its length was exactly three hundred and sixty-five days and six hours, a leap year once in four years would keep the same seasons to the same months forever as they now exist, winter never occurring in July and August. For convenience we call the year three hundred and sixty-five days and six hours, while it is only three hundred and sixty-five days five hours forty-eight minutes and forty-six seconds, an annual difference of eleven minutes and fourteen seconds, which in four years amounts to forty-four minutes and fifty-six seconds, so that at every leap year we are adding forty-four minutes and fifty-six seconds too much, which in a hundred years amounts to eighteen hours forty-three minutes and twenty seconds, or more than three fourths of a day. By calling each centennial year a common year too much would be dropped by five hours sixteen minutes and forty seconds, or nearly a quarter of a day; therefore each fourth centennial is called a leap year, the extra day being dropped from the other three, which produces an almost exact correction, the error amounting to but one day in thirty-six hundred years.

This is according to the Gregorian calendar, a correction of the Julian calendar, which provided for the leap years but not for the centennials which are not divisible by 400. Some countries were slow in adopting the Gregorian calendar, notably England, and Russia has not yet adopted it, though an effort is being made to do so at the beginning of the twentieth century. At the time this calendar was adopted in England an error of eleven days had accrued, which had to be dropped, and this accounts for the celebration of Washington's birthday on Feb. 22, although he was born on the 11th, as reckoned at that time. All our Presidents, with the single exception of Jefferson, were elected in a leap year, and the President to be elected in 1900 will also be elected in a common year; but this will not again happen until A. D. 2100, which, like 1900, will be divisible by 4 but not by 400. It therefore follows that a person born on Feb. 29 (as is the case with the writer) enjoyed his last birthday in 1896, and the next will not occur until 1904.

Eclipse Expedition.—The eclipse expedition to India was made possible by the generosity of Mr. W. M. Pierson, and was under the immediate charge of Mr. C. Burchhalter, of the Chabot Observatory, at Oakland, Cal., who, with the aid of two or three volunteers, carried out his work with perfect success. His place of observation was only two miles from Prof. Campbell's camp of the Lick Observatory party. The unusual brightness of the sky and terrestrial surroundings, which was very marked, was ascribed to the presence of much atmospheric dust. The Pierson photographic telescope had been provided with a duplicate lens and tube in case of accidents. The photographs taken by the latter were good, but those of the Pierson lens, in which the exposures were controlled by a new device, show the finest at the Sun's limb, and also the greatest extension of the corona, equal to $2\frac{1}{2}$ diameters of the Moon, all upon the same plate, a thing never before accomplished. By this method, if allowance be made for the extreme brightness of the inner corona, which has always been underrated, results of great value may be secured in future eclipses.

Prof. Burekhalter designed doing little, but doing it well. The ingenious device mentioned above, one of his own inventions, was intended to control the exposure so as to give the outer and fainter streamers a long exposure, and the bright inner ones and the chromosphere a shorter one upon the same plate, a feat never before accomplished. This was done by a revolving disk in front of the plate, with slits cut out of it wide at the circumference and narrow at the center. The disk was made to revolve by clockwork at the back of the plate, the attachment passing through a hole made in the plate itself. This hole, falling in the center of the Moon's disk, did no particular harm, its effect on the print being strikingly like some newly discovered crater on the Moon. The light intensity transmitted to the plate at the farthest limits of the corona and streamers, being the same as at the Moon's limb, prevents an overexposure at the latter region and an underexposure at the former. This arrangement, as used at the eclipse in India, gave an exposure at the outer corona of four seconds, against only 0.08 of a second at the inner. At the meeting of the Royal Astronomical Society attention was drawn to the beauty of the details in the inner corona as seen on the photograph, and especially to a formation in the northwest quadrant, which was not shown on any of the other photographs.

Astrographic Chart.—The Savilian Professor of Astronomy at Oxford University Observatory, speaking of the measurement and reduction of the plates for the Astrographic Catalogue, says that only 586 plates out of 1,180 required to include the entire sky have been measured, and 525 of them are completely reduced. The scheme is less favorably considered by astronomers than formerly.

Prof. Turner has found that sometimes 300 or 400 stars are depicted on his plates, 2 degrees by 2 degrees square, with only twenty seconds' exposure, and that with a three-minute exposure in the region of this area, whose center is in right ascension $19^h 43^m$, declination north 29° , 2,440 stars were measured. To avoid having too many stars on the plate, he found it necessary to reduce the time of exposure.

As the result of the laborious investigation carried out by Prof. E. C. Pickering, of Harvard College Observatory, it has been found that with a photographic doublet lens large fields are obtainable sensibly free from optical distortion. This being the case, astronomers begin to entertain the opinion that the scheme of further completing the astrographic chart with its hour's exposure of plates, embracing an area of only 2 degrees by 2 degrees square, is a waste of time and labor, and the taking of these long-exposure plates is being abandoned.

AUSTRALASIA, one of the grand divisions of the globe, consisting of the continent of Australia and island colonies of Great Britain, with interjacent islands. With the exception of the Dutch and German portions of New Guinea, the German protectorates of Bismarck Archipelago and the northern Solomon Islands, the French colony of New Caledonia, and the New Hebrides and smaller islands under native rule, all the islands of Australasia are British colonies and dependencies. The five colonies in Australia and the colonies of Tasmania and New Zealand are self-governing, having each its representative Legislature, with a responsible ministry, disposing of its own revenues, and making its own laws under a charter granted by the British Parliament, subject to a certain reserved veto power

of the Imperial Government and to the appellate jurisdiction of the Judicial Committee of the British House of Lords in matters of imperial concern. The Crown is represented in each colony by a governor, who as the executive head of the colonial Government acts on the advice of responsible ministers selected from the party or coalition that forms the majority in the Legislative Assembly. The Crown colony of Fiji is administered in accordance with native laws and customs, and its Governor is High Commissioner for the Western Pacific, having supervision of the other islands under native rule.

Area and Population.—The area in square miles of the British Australasian colonies, according to the latest surveys, and their estimated population on Dec. 31, 1897, are given in the following table:

COLONIES.	Area.	Population.
New South Wales.....	310,700	1,335,800
Victoria	87,884	1,169,434
Queensland	668,497	484,700
South Australia.....	903,690	358,224
Western Australia.....	975,920	161,924
Tasmania	26,385	195,500
New Zealand *.....	104,471	703,260
Fiji and Rotumah	8,045	121,798
Total	3,085,592	4,530,740

* Census of 1896.

The estimate of population for New South Wales was made on June 30, 1898. The number of males was computed at 715,835; females, 619,965. Sydney, the capital, had, with its suburbs, an estimated population in 1897 of 417,250. The number of aborigines in 1891 was 5,097; of half-castes, 3,183.

In Queensland the aborigines are estimated at 12,000. There is still some immigration of Chinese into Queensland, the number of arrivals in 1897 having been 455 and of departures 398. The arrivals of Polynesians numbered 935 and departures 924. The population of Brisbane and its environs in 1897 was estimated at 105,734. The total population of the colony on Dec. 31, 1898, was estimated to be 499,000, consisting of 280,000 males and 219,000 females.

The population of Victoria was estimated for June 30, 1898. Melbourne, the capital, contained 458,610, nearly 40 per cent. of the total population of the colony; Ballarat, 46,137; Sandhurst, 43,075. There has been for five years an annual excess of emigrants over immigrants, which was 14,547 in 1896 and 19,949 during the three years preceding, due to departures for the gold fields of Western Australia.

The population of South Australia comprised 183,920 males and 174,304 females. There were 3,848 Chinamen in the colony in 1891. The number of aborigines was then estimated at 3,134—1,661 males and 1,473 females. Adelaide, the capital, contained, with its suburbs, 146,125 inhabitants in 1897.

The population of Western Australia consisted of 110,359 males and 51,565 females. Perth, the capital, had 37,929 inhabitants. The number of aborigines in the colony can not be estimated, as they live mostly in unexplored regions. There were 5,670 civilized aborigines in 1891. At the end of 1898 the population of the colony was estimated at 168,150. The number of arrivals during the year was 32,709; departures, 28,756.

In New Zealand the population consisted of 371,415 males and 331,945 females. Of the total white population, 340,631 were found on the North island, 362,236 on the Middle island, and

493 on Stewart, Chatham, and Kermadec islands. Including 39,854 Maoris and 3,711 Chinese, the total population on April 12, 1896, was 743,214. Of the Maoris, 21,673 were males and 18,181 females. The total includes the half-castes living in the tribes, numbering 3,503, and 229 Maori wives of European husbands.

The population of Fiji consisted of 67,410 males and 54,388 females. The Europeans numbered 3,401, of whom 2,116 were males and 1,285 females; East Indians, 12,025, of whom 8,143 were males and 3,882 females; Fijians, 99,773, of whom 53,208 were males and 46,565 females; Rotumans, Polynesians, half-castes, and others, 6,599, of whom 3,943 were males and 2,656 females.

The movement of population in the several colonies for 1897 was as follows:

COLONIES.	Marriages.	Births.	Deaths.	Excess of births.	Net immigration.
New South Wales..	8,813	37,247	14,264	22,983	6,606
Victoria.....	7,568	31,310	15,136	16,184	*6,454
Queensland.....	2,894	14,313	5,423	8,890	3,631
South Australia.....	1,949	9,535	3,973	5,562	*816
Western Australia.....	1,659	4,021	2,643	1,378	22,600
Tasmania.....	1,052	4,654	1,947	2,737	4,038
New Zealand.....	4,928	18,737	6,595	12,142	2,752
Fiji.....	3,451	3,999	† 548

* Net emigration. † Fijians only. ‡ Excess of deaths.

Finances.—The revenue and expenditure of the several colonies for 1897 and the state of their debts at the end of the fiscal year ending June 30, 1898, in New South Wales, Victoria, Queensland, and South Australia; on March 31, 1897, in Western Australia and Tasmania; on March 31, 1898, in New Zealand; and on Dec. 31, 1897, in Fiji, are shown in the following table:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales.....	£9,482,135	£9,391,012	£61,074,498
Victoria.....	6,886,664	6,701,100	47,058,088
Queensland.....	3,768,152	3,747,428	33,498,414
South Australia.....	2,596,611	2,598,939	24,408,000
Western Australia.....	2,843,775	3,236,044	7,608,480
Tasmania.....	845,019	785,026	8,390,026
New Zealand.....	5,079,230	4,602,272	44,081,521
Fiji.....	74,492	73,232	213,256

The revenue of New South Wales is the gross revenue. Of this, £2,570,489 are obtained by taxation, the estimated yield of customs being £1,256,097; excise, £291,343; stamps, £348,558; land tax, £371,870; income tax, £180,103; licenses, £122,518; the land revenue is £2,023,071; receipts from services, £4,633,196; from miscellaneous sources, £255,379. Of the gross expenditures, £1,855,387 were for the railway and tramway services, £702,361 for posts and telegraphs, £2,271,833 for interest on the public debt, £722,308 for education, and £3,839,123 for other public works and services. The average rate of interest on the public debt is 3.71 per cent. The net return from railroads, tramways, telegraphs, waterworks, and sewerage, on which 81 per cent. of the debt has been expended, is 3.68 per cent. a year. The total revenue for 1899 was £9,754,185, railroad receipts having increased £200,000 and customs £73,000. Expenditure for 1899 was more than covered by income.

The revenue of Victoria derived from taxation was £2,645,187, of which £1,759,380 was received from customs, £294,746 from excise, £115,524 from the land tax, £86,906 from duties on estates of deceased persons, £19,128 from a duty on bank notes, £153,500 from stamps, £17,099 from business licenses, £19,603 from tonnage dues, etc., and £179,301 from the income

tax. The receipts from railways were £2,597,255; from posts and telegraphs, £522,741; from Crown lands, £413,551; from other sources, £451,483. Of the total expenditures, £1,892,092 were for interest and expenses of the debt, £1,476,696 for working expenses of railroads, £251,552 for expenses of other public works, £580,507 for posts and telegraphs, £135,928 for Crown lands, £568,357 for public instruction, £263,723 for charitable institutions, £156,137 for judicial and legal expenses, £299,235 for police and jails, £93,211 for customhouses and harbors, £53,316 for mines, £181,649 for defense, and £616,529 for other expenses. The revenue for 1899 was estimated at £6,907,439; expenditure, £6,873,529. The actual receipts were £7,378,842. Of the total Victorian debt, £36,700,944 were borrowed for railway construction, £7,321,850 for waterworks, £1,105,557 for public-school buildings, and £1,800,970 for other public works. The average rate of interest on the debt is 3.88 per cent.

Of the revenue of Queensland £1,207,849 came from customs, £123,396 from excise and export duties, £110,207 from stamps, £56,598 from licenses, £61,596 from the duty on dividends, £346,249 from rent of pastoral lands, £214,427 from other rents and sales, £1,158,657 from railways, and £258,940 from posts and telegraphs. The principal expenditures were £1,324,333 for interest on the public debt, £684,566 for operating railways, £313,610 for posts and telegraphs, £247,473 for public instruction, £167,385 for the Colonial Treasurer's department, £84,014 for the Department of Public Lands, £37,280 for the Department of Agriculture, and £63,010 for endowments to municipalities and divisions. The expenditure out of loans amounted for the year to £937,066, of which £626,974 were spent on railways, £36,101 on telegraphs, £11,717 on rivers and harbors, £3,875 on defense, £7,598 on water supply, £12,274 on buildings, £70,016 for loans to sugar planters, and £116,877 for loans to public bodies. The revenue for 1899 was estimated at £3,882,360; expenditures, £3,866,507. The actual receipts amounted to £4,174,000, and expenditures to £4,024,000.

South Australia obtains its revenue mainly from customs duties, inland revenue, posts and telegraphs, railroads, and public lands. The customs revenue for 1899 is estimated at £584,386 out of a total revenue of £2,649,899, the estimate of expenditures being £2,619,220. The actual receipts from all sources were £2,665,500.

The yield of customs duties in Western Australia in 1897 was £1,076,330. The rest of the revenue is derived mainly from railways, the postal service, and rent from public lands. The annual charge of the debt is £303,153. The revenue collected during the year 1898 was £2,605,000, having grown from £400,000 in 1890, the year when responsible government was introduced, population having increased from 40,000 to 168,000.

Of the Tasmanian revenue £351,848 was derived from customs. The part derived from land sales is expended for redemption of loans. The revenue for 1898 was estimated at £913,275, and the expenditure at £803,527. Of the total debt, 48.24 per cent. was raised for railroad construction, 1.59 per cent. for telegraphs, 28.82 per cent. for roads, bridges, and jetties, 9.08 per cent. for public buildings, 1.58 per cent. for defenses, 1.34 per cent. for loans to public bodies, and 2.57 per cent. for various public works and services.

Of the revenue of New Zealand £1,935,252 were obtained from customs, £780,232 from the

post office, telegraphs, and stamps, £1,370,572 from railroads, £267,286 from the land tax, and £115,210 from the income tax. Sales of land brought in £109,521. The chief expenditures were £1,741,413 for the public debt, £849,928 for railways, £466,925 for education, £362,993 for posts and telegraphs, and £195,602 for constabulary and defense. The land tax is not assessed on improvements, and the mortgagee pays the tax for the value of his mortgage. The rate for 1897 was 1*d.* in the pound, besides which a graduated tax is collected on large properties ranging from $\frac{1}{2}$ *d.* on values between £5,000 and £10,000 up to 2*d.* on values exceeding £210,000. The income tax is collected on incomes above £300, 6*d.* in the pound on the first £1,000 and 1*s.* on every additional £1,000 of income.

Of the revenue of Fiji £32,994 came from customs, £4,254 from navigation dues, £7,298 from licenses and internal revenue, £6,847 from law courts, £2,686 from postal and revenue stamps, and £19,217 from native taxes, the last being paid in native produce delivered by the natives and sold by the Government by annual contract. Of the expenditures, £37,726 were paid in salaries and £35,506 for other expenses.

Commerce.—The value of the foreign trade of the several colonies in 1897 is given in the following table:

COLONIES.	Imports.	Exports.
New South Wales.....	£21,744,350	£23,751,072
Victoria.....	15,454,482	16,739,670
Queensland.....	5,429,191	9,091,557
South Australia.....	7,126,385	6,928,415
Western Australia.....	6,418,565	3,940,098
Tasmania.....	1,367,608	1,744,461
New Zealand.....	8,055,223	10,016,993
Fiji.....	248,748	431,860

The trade of New South Wales with other Australasian colonies amounted to £9,602,277 of imports and £8,174,666 of exports. The overland trade was £3,931,292 for imports and £4,498,619 for exports. Other British possessions furnished £856,576 of imports and took £602,449 of exports. The imports from Great Britain were £7,557,069, and the exports to Great Britain £8,728,828. Imports from the United States amounted to £1,887,877, and exports to the United States were £2,462,319 in value. With all other foreign countries the import trade was £1,840,551 and the export trade £3,782,810. Of the total exports, £17,057,543 were products of the colony. The export of wool was 285,797,725 pounds, valued at £8,920,285. The export of tallow was valued at £504,227; frozen and preserved meat, £545,133; hides and skins, £772,584; leather, £304,179; coal, £952,054; gold coin, £4,346,647. The coal output for 1898 was 4,736,000 tons, valued at £1,304,000.

The imports of Victoria comprised wool for £1,964,731, woolen goods for £604,895, cotton goods for £919,661, sugar for £785,717, tea for £273,338, live stock for £528,787, timber for £251,451, iron and steel manufactures for £535,666, coal for £228,647, and other articles of the value of £9,361,589. The export of wool was 123,572,693 pounds, valued at £3,999,813, nearly half of it being the produce of other colonies. The export of gold, mostly specie, was £6,472,318; export of live stock, £329,860; wheat exported, £225,957; other breadstuffs, £51,509; re-export of tea, £155,896; export of sugar, mostly refined in the colony, £160,554; export of leather and leather manufactures, £370,495; export of clothing, £164,285; export of tallow, £162,585;

all other exports, £4,646,398. Of the total value of imports, £6,004,798 came from Great Britain, to which £9,559,249 of exports were sent; Australasian colonies produced £6,813,772 of the imports and took £4,969,120 of the exports; India furnished £282,090 of imports and received £325,261 of exports; Ceylon furnished £143,030 and received £59,812; Canada furnished £11,682, but took only £424; and other British possessions furnished £335,341 and received £162,583; making the total value imported from British countries £13,590,713 and the total exports to them £15,076,449. The imports from non-British countries were £1,863,769, of which £590,744 came from the United States, £546,589 from Germany, £157,615 from Java and the Philippine Islands, £142,924 from France, £142,915 from Belgium, £104,761 from Sweden and Norway, £48,446 from China, and £129,775 from other countries; exports to foreign countries amounted to £1,663,221, of which the value of £740,638 went to France, £480,840 to Germany, £198,525 to Belgium, £185,344 to the United States, £12,949 to Java and the Philippines, and £44,925 to other countries.

The largest imports of Queensland were textile goods and clothing for £1,030,296 and metals and metal manufactures for £680,606. The chief exports were gold for £2,568,702, wool for £2,509,342, sugar for £681,038, frozen meat for £662,994, hides and skins for £437,658, preserved and salted meat for £274,698, tallow for £272,528, pearl shell for £126,492, meat extract for £92,255, fruit for £87,450, silver for £62,801, and tin for £36,670. Of the total imports, £2,501,952 came from Great Britain, £2,323,035 from Australasian colonies, £265,766 from the United States, £157,342 from British possessions, and £181,096 from other countries. Of the exports, £3,322,703 went to Great Britain, £5,645,626 to Australasian colonies, £79,615 to various British possessions, £1,765 to the United States, and £41,848 to other countries. The yield of sugar in 1899 was 164,000 tons from 82,000 acres, compared with 98,000 tons from 65,000 acres in 1898. The total value of imports in 1898 was £5,880,000; exports, £10,079,000, showing large increases in sugar, wool, gold, and meat.

The South Australian exports of wool in 1897 were valued at £995,393; of wheat flour, £225,387; of wheat, £2,473; of copper, £238,277. The quantity of breadstuffs was 18,119 tons. Of the total imports, £2,054,267 came from Great Britain, £3,846,508 from Australasian colonies, £304,666 from the United States, £240,513 from various British possessions, and £677,431 from other countries. Of the exports, the value of £2,182,946 went to Great Britain, £2,961,212 to Australasian colonies, £909,553 to other British possessions, £1,900 to the United States, and £872,804 to other countries.

The gold exported from Western Australia in 1897 was 674,989 ounces, £2,564,977 in value. Other exports were wool of the value of £295,646; timber, £192,451; sandalwood, £49,480; pearl shell, £40,253; skins, £28,021; pearls, £20,000. Of the total value of the imports, £2,624,086 came from Great Britain, £3,277,300 from Australasian colonies, £210,100 from other British possessions, £160,055 from the United States, and £147,024 from other countries. Of the total for exports, £1,736,205 went to the United Kingdom, £1,980,218 to Australasian colonies, £158,457 to other British possessions, £120 to the United States, and £65,098 to other countries. In 1898 the gold export was 1,050,183 ounces, valued at £3,991,000.

The chief imports of Tasmania were textile goods and clothing for £410,768, mechanical and art products for £334,539, and articles of food and drink for £282,182. The wool export was valued at £264,630; gold, £230,282; silver and silver ore, £216,893; green and preserved fruit, £195,073; tin, £150,586; timber and bark, £62,085; hops, £18,373. Of the total value of imports, £612,980 came from Victoria, £197,667 from New South Wales, £125,522 from other British colonies, £397,510 from Great Britain, and £33,929 from foreign countries. Of the total exports, Victoria took £807,433; New South Wales, £583,273; other colonies, £68,331; Great Britain, £274,497; and foreign countries, £10,927.

The imports of New Zealand in 1897 included textiles and clothing for £1,982,896, iron and steel goods and machinery for £1,406,111, sugar for £373,407, books, paper, and stationery for £337,336, spirits, wines, and beer for £268,160, fruit for £183,133, tea for £178,350, tobacco and cigars for £164,889, oils for £163,793, bags and sacks for £104,401, fancy goods for £100,824, coal for £98,139, other merchandise for £2,686,762, and specie for £61,022. The exports were wool for £4,443,144, frozen meat for £1,566,286, gold for £980,204, butter and cheese for £553,122, Kauri gum for £398,010, hides, skins, and leather for £343,769, grain and pulse for £339,643, preserved meats for £78,235, grass seed for £46,947, phormium or New Zealand hemp for £30,674, bacon and hams for £13,560, animals for £11,974, other domestic produce for £530,735, British and foreign merchandise for £144,955, and specie for £275,771. The export of wool was 135,835,117 pounds; of frozen meat, 1,407,921 hundredweight; of Kauri gum, 6,641 tons; of butter, 99,002 hundredweight; of cheese, 77,683 hundredweight. Of the total value of the imports, £5,392,738 came from Great Britain, £1,001,003 from Australia, £628,044 from the United States, £303,624 from India and Ceylon, £283,593 from Pacific islands, £43,390 from China, £25,564 from Mauritius, and £377,267 from other countries. Of the exports, £8,168,123 went to Great Britain, £1,323,784 to Australia, £375,096 to the United States, £117,365 to Pacific islands, £6,773 to China, £3,258 to Mauritius, £2,810 to India and Ceylon, and £19,784 to other countries. The total value of imports for 1898 was £8,230,529; of exports, £10,523,290.

The chief imports of Fiji were textile goods for £49,254, breadstuffs for £23,085, coal for £14,274, rice for £11,205, machinery for £12,036, hardware for £12,807, meat for £9,234, and bags for £6,862. The export of sugar was 26,991 tons, of the value of £323,830. Of copra 7,757 tons were exported, valued at £70,182; of distilled spirits, 15,041 gallons, valued at £1,880; of peanuts, 185 tons, valued at £2,636; of tobacco, 9 tons, valued at £2,052; of cotton, 34 tons, valued at £1,615; of bananas, the value of £16,514.

In the early part of 1899 rains fell in many parts of Australia that have suffered from almost continual drought for three or four years past. Among the other drawbacks to the prosperity of these colonies, which, in spite of precarious seasons, are the most productive communities in the world in proportion to population, is the phylloxera, which has appeared among the vineyards of Victoria. The increase of the wine duty in England is regarded as a serious blow to viticulture in Australia, which is just reaching a practical commercial footing after half a century of struggles. The early samples exhibited at the world's fair of 1851 were so promising that the

planting of vineyards in Victoria became a huge speculation. Ignorant and careless methods destroyed the reputation of Australian wines until practical wine growers from France and Germany introduced the true system. Young Australians went to those countries to learn the European processes. The wines shown at the Indian and Colonial Exhibition of 1886 revived the interest of the British public in this colonial product. The old and discarded vineyards were restocked and fresh lands were planted. In 1891 the Victorian Government offered bonuses for the planting of vineyards, and sent round instructors in wine making. In 1895 the Government of South Australia opened bonded stores in London, where wines already approved by the officials in the colony are treated and matured under the supervision of an expert, with the result that the exports from that colony have increased fivefold. The long voyage, the heavy freights, and the cost of importing casks are serious handicaps to the trade in competition with European countries, and hence the wine growers of Australia hoped that the new duty would be remitted in their case. The imports of Australian wines into Great Britain have increased from 56,000 gallons in 1884 to 710,000 gallons in 1898.

The imposition of a stamp duty on colonial securities is also resented as an invidious action of the British Government. One of the most troublesome pests in the pastoral regions is the cattle tick, which is spreading into new districts constantly. Government agents have been sent to Europe to seek new ways of promoting the export commerce of the colonies. A fraudulent trader of Adelaide, whose practices might cause alarm concerning the integrity of Australian commercial men, was sentenced by South Australian justice to two years of penal servitude.

The gold production for the whole of Australia in 1898 was estimated at 3,154,000 ounces, an increase of 565,000 ounces over 1897, Western Australia having produced 1,049,000 ounces and Queensland 918,000 ounces, both leading Victoria, which has heretofore headed the list, whose production for this year was 845,000 ounces, and that of New South Wales 342,000 ounces.

The recent advances in the price of wool and meat have greatly benefited the colonies of New South Wales, Queensland, and New Zealand, and the improvement in the economic situation has made itself felt at once in the finances of the colonial governments, which here reflect more truly than in other countries the general situation. In Victoria the recovery in the pastoral industries has made itself manifest in a less degree. In this colony agriculture has made great strides, the value of its products having risen in five years from £5,000,000 to £7,000,000. In New South Wales the extension of cultivation has lately been still more rapid, the area having been doubled in five years. The increase in 1898 under the new land laws was remarkable, and in Queensland land legislation has contributed to produce a like movement. The best butter season in Australia lasts from October till March, and the harvesting of fruits, such as apples, raisins, currants, prunes, and figs, takes place at the opposite season of the year to that of the northern hemisphere, so that the Australian products scarcely come into competition in the markets of the world with those of Europe and America. The dairy industries are making progress in all the colonies. The sugar production on the north coast, notwithstanding the general depression, has increased 50 per cent. in a year.

The fruit of Victoria and Tasmania, both fresh and dried, finds a ready market in England.

Navigation.—There were 3,345 vessels, of 3,331,877 tons, entered during 1897 at the ports of New South Wales, 2,996, of 2,837,143 tons, being British and 349, of 494,734 tons, foreign. The number cleared was 3,120, of 3,412,554 tons, of which 2,775, of 2,913,314 tons, were British and 345, of 499,240 tons, foreign. The shipping registered in the colony comprised 475 sailing vessels, of 54,671 tons, and 496 steamers, of 66,750 tons.

The number of vessels entered at Victorian ports was 1,888, of 2,437,190 tons, of which 359, of 846,250 tons, were British and 1,371, of 1,242,918 tons, were colonial; the number cleared was 1,882, of 2,428,182 tons, of which 357, of 848,547 tons, were British and 1,370, of 1,249,306 tons, were colonial. The shipping registered as belonging to Victoria was 259 sailing vessels, of 40,637 tons, and 149 steamers, of 55,737 tons.

The number of vessels entered in Queensland ports was 642, of 569,610 tons; the number cleared was 654, of 559,290 tons. The shipping of the colony comprised 90 steamers, of 12,884 tons, and 138 sailing vessels, of 9,874 tons.

In South Australian ports 1,178 vessels, of 1,774,476 tons, were entered and 1,191, of 1,785,673 tons, were cleared. The shipping of the colony consisted of 217 steamers, of 22,229 tons, and 109 sailing vessels, of 30,641 tons.

The number of vessels entered in Western Australian ports during 1897 was 721, of 1,196,760 tons; cleared, 707, of 1,181,072. The registered shipping comprised 17 steamers, of 3,898 tons, and 135 sailing vessels, of 5,812 tons.

In Tasmania 699 vessels, of 542,049 tons, were entered, of which 38, of 116,719 tons, were English; and 717, of 542,119 tons, were cleared, of which 36, of 115,190 tons, were English. The shipping of the colony comprised 155 sailing vessels, of 8,340 tons, and 44 steamers, of 6,036 tons.

The number of vessels entered during 1897 at ports of New Zealand was 600, of 686,899 tons, of which 563, of 648,171 tons, were with cargoes; cleared, 587, of 675,333 tons, of which 548, of 647,121 tons, were with cargoes. Of the vessels entered 133, of 276,020 tons, were British; 395, of 340,793 tons, were colonial; and 72, of 70,086 tons, were foreign. The merchant shipping of the colony comprised 318 sailing vessels, of 40,733 tons, and 188 steamers, of 78,980 tons.

Railroads, Posts, and Telegraphs.—There were 2,691 miles of railway in operation in New South Wales on June 30, 1898, the capital cost of which was £37,719,402. The receipts for the year were £3,026,748 and operating expenses £1,614,605, which was 53.34 per cent. of the gross earnings. The Government owns the railroads and also the tramways, which have a length of 65 miles, built at a cost of £1,478,251, the gross receipts from which were £313,871 and working expenses £259,141.

The railroads of Victoria, all owned by the Government, had a total length of 3,130 miles, built at a cost of £38,325,517. The receipts for 1897 were £2,615,935; expenses, £1,563,805, being 60 per cent. of the receipts. The net profit was 2.75 per cent. of the capital cost, while on the borrowed capital the mean rate of interest is 3.90 per cent. There were 42,263,638 passengers and 2,383,445 tons of freight carried during the year.

The railroads of Queensland had a total length of 2,609 miles at the beginning of 1898. The cost of construction was £18,016,150. The receipts in 1897 were £1,122,637 and expenses £688,033.

The length of railroads in South Australia in December, 1897, was 1,870 miles, of which 146

miles were in the northern territory. The railroads pay a profit to the Government of about 3 per cent.

The length of railroads open to traffic in Western Australia on June 30, 1898, was 1,456 miles, of which 464 miles were private lines. There were 360 miles building.

Tasmanian railroads had a length of 495 miles in the beginning of 1898.

The railroads of New Zealand on March 31, 1898, consisted of 806 miles of Government lines in the North island and 1,249 miles in the Middle island, besides 167 miles of private lines, a total of 2,222 miles. The gross receipts on the Government railroads were £1,376,008, and the operating expenses were £857,191. The cost of construction was £16,872,045. The number of passengers transported was 4,672,264; tons of freight, 2,628,746.

The postal traffic of New South Wales for 1897 was 72,939,084 letters, 1,085,770 postal cards, 42,426,394 newspapers, 12,742,704 packets and book parcels, 539,503 parcels, and 403,779 money orders for the amount of £1,421,524, besides £377,282 paid on postal notes.

The postal revenue of Victoria, including telegraph and telephone receipts, was £529,754 in 1897, and the expenses were £494,257.

The Queensland postal traffic for 1897 amounted to 18,370,937 letters, 11,496,656 newspapers, 4,767,783 packets, and 202,248 parcels. The postal revenue was £167,998.

The post office of South Australia in 1897 carried 19,128,982 letters, 2,039,686 packets, and 9,421,986 newspapers.

In Western Australia the post office carried 12,898,552 ordinary and registered letters and postal cards, 6,744,536 newspapers, and 3,952,025 packets. The receipts from the post office and telegraphs were £261,328.

The post office in Tasmania carried 7,906,506 letters, 2,278,082 packets, 257,878 postal cards, and 5,095,792 newspapers during 1897. The receipts were £58,099, and expenses, including the telegraph service, were £65,268.

The post office in New Zealand during 1897 forwarded 32,272,923 letters, 757,172 letter cards, 1,341,821 postal cards, 14,825,386 books and parcels, 14,261,345 newspapers, and 293,240 money orders. The receipts of the postal and telegraph departments were £371,962; expenses, £364,403.

The telegraph lines of New South Wales had in the beginning of 1898 a length of 12,778 miles, with 33,073 miles of wire. The total cost was £932,412. The number of telegrams sent was 2,728,360 during 1897. The receipts were £427,440; the net revenue was £155,162.

Victoria had 6,947 miles of telegraph lines, with 14,374 miles of wire. The number of dispatches in 1897 was 1,821,634. The telephones had 10,541 miles of wire.

There were 10,090 miles of telegraph lines in Queensland, with 18,472 miles of wire, at the end of 1897. The number of messages sent was 934,326, and the number received from abroad was 121,239, besides 109,569 official dispatches. The receipts were £83,846; expenses of the telegraph and postal services, £313,944.

South Australia had 5,862 miles of telegraph and telephone lines, with 14,447 miles of wire. The overland telegraph from Adelaide to Port Darwin has a length of 2,000 miles. The Government receives a net profit after paying interest on borrowed capital.

The telegraphs of Western Australia on Jan. 1, 1898, had a length of 5,958 miles, besides 965 miles under construction; the length of wire was

8,111 miles. The number of dispatches in 1897 was 1,306,003. The net receipts were £98,696.

The Tasmanian telegraphs had 1,884 miles of line, with 3,313 miles of wire, besides 427 miles of submarine cable. The number of messages in 1897 was 229,710. The Government owns in addition 570 miles of telephone lines. The revenue from telegraphs and telephones was £19,308 in 1897.

New Zealand telegraphs had on March 31, 1898, a length of 6,484 miles, with 18,024 miles of wire. The number of dispatches for the year was 2,696,233. The revenue from telegraphs and telephones was £136,221.

Australian Federation.—The Australian Premiers met at Melbourne on Jan. 28, 1899, in a new Federal Council to recast the commonwealth bill which had been ratified by the popular referendum in 1898 in Victoria, Tasmania, and South Australia, but had failed to secure the required majority in New South Wales, and in Western Australia had not been accepted by the Legislature, while Queensland also stood aloof, waiting for the action of New South Wales. In New South Wales the movement for Australian union had found some of its earliest and strongest advocates, but the project that was adopted at the convention encountered the uncompromising opposition of a large and determined minority of the politicians and people of this, the most populous and progressive of the colonies, who, before yielding up the free-trade policy by which they had prospered and endangering their preponderant economic position among the colonies, wanted to be sure of a federal constitution in which New South Wales and Victoria, which must bear the principal part of the financial cost, would not be swamped by the votes of the three or four other members of the confederation. The Constitution as worked out by the convention of 1898 followed the democratic model of the United States, and amply protected the state rights of the minor colonies, whereas the statesmen of New South Wales endeavored to carry through a closer national union, patterned after the Constitution of the Dominion of Canada. They objected to the financial provisions of the commonwealth bill as imposing unequal burdens on the citizens of different colonies, and to the Constitution of the Federal Parliament as conducive to deadlocks. The Braddon clause of the original bill provided that the surplus revenues should be paid back to the colonies in proportion to their population. At the new conference the Premiers came to a satisfactory settlement of all disputed questions. It was agreed that an absolute majority of both houses of the Federal Parliament should decide all differences between the two branches of the Legislature, instead of a majority of three fifths; but, to safeguard the interests of the lesser states as protected by the Senate, the protracted method of procedure is retained, whereby a measure rejected by the Senate can not be reintroduced until three months have elapsed, which means shelving it to another session, and, if it is again rejected, both houses must be dissolved and a new Parliament elected, which, if the bill is again passed in one house and rejected in the other, will finally decide the question by a majority vote in joint sitting. The Braddon financial clause was adopted only provisionally for ten years, at the end of which the Federal Parliament may repeal or amend it, and in the meantime it is empowered to deal with any exceptional difficulties arising out of the financial position of any of the states. It was agreed that the capital of the federation should be a federal district located

within the boundaries of New South Wales, at least 100 miles removed from Sydney. Pending the erection of the federal buildings the Parliament will meet in Melbourne, Victoria. No alteration was made in the original proposals regarding rivers, which will be under the control of the Federal Parliament if they flow through the territory of more than one colony; money bills, which must originate in the House of Representatives, and may be rejected but not amended by the Senate; judicial appeals; or the number of Senators, which will in the beginning be six for each colony, and may be increased when the Federal Parliament deems it expedient. The number of Representatives will be twice the number of Senators, and if these are increased they will be increased proportionally. They will be elected by the popular vote of each colony in separate districts. The Senators will be elected also by direct popular vote, but by the whole colony voting as one electorate. To Queensland, however, was accorded the desired privilege of choosing its Senators separately in the three divisions of the colony.

Premier Reid pledged himself to secure the passage of the amended federation bill through the Parliament of New South Wales and of a new enabling bill for taking a referendum by which a simple majority of the electors would be sufficient to secure the adoption of the Federal Constitution. Sir John Forrest, the West Australian Premier, would not promise to support the amended bill before consulting his colleagues. The other Premiers promised to have the new bill referred to the electors of their respective colonies in accordance with the original provisions of the enabling acts of 1896. South Australia was to take the referendum in connection with the general election without waiting for New South Wales. The agreement was signed on Feb. 3. On his return to Sydney Mr. Reid was confronted with difficulties in the way of keeping the agreement on which he had not reckoned. The session of the Parliament of New South Wales opened on Feb. 21. The amended bill, to which Mr. Reid had pledged his credit as Premier, was passed by the lower house on March 2. It was sent to the upper house, where further amendments were introduced. One of these required that one fourth of the electors on the register should vote for the bill in order to secure its approval, or, in other words, that, instead of the majority required by the Melbourne agreement, at least 80,000 votes should be given in its favor. The amended bill passed the Legislative Council on March 21. The New South Wales Government was pledged to secure the passage of the bill without amendments. On Feb. 22 the lower house rejected the amended bill as sent down to them by the Council. The upper house refused to give way. A conference of the two houses was called to discuss the question, and met without result on March 28. Mr. Reid, in accordance with his previously declared intention, exercised the power which constitutionally belonged to him, prorogued Parliament for a few days in order to give himself the power of reintroducing the rejected bill, and increased the numbers of the upper house by the nomination of 12 new members. The nominees selected took their seats on April 11. The reintroduced bill was presented to the lower house and passed on April 13. It was accepted by the reconstituted Council on April 19, and on April 25 the announcement was made that the federal bill would be submitted to a referendum of the electors on June 20. The South Australian Parliament passed the en-

abling bill on March 3 without a division. The enabling acts of the various colonies stipulated that three of them could go on and form a confederation, to which other colonies might be admitted later. The Western Australian act contained the proviso that New South Wales must be one of the three.

The referendum in South Australia, taken on April 29, resulted in a vote of 65,990 votes for the commonwealth bill to 17,000 against the measure. In New South Wales the popular vote was cast on June 20. Both parties put forth their utmost strength, and the federationists won by a vote of 101,000 to less than 80,000. The parliaments of the other colonies thereupon passed the new enabling bills without opposition. The referendum in Victoria, taken toward the end of July, resulted in a vote of 140,000 in favor of federation to 9,000 negative votes. In Tasmania about the same time 10,000 voted for and 700 against the bill. The vote in Queensland was taken on Sept. 2, and resulted in about 10,000 votes being cast in favor of the bill and 5,000 against it. Western Australia was not yet willing to accept the federal bill as it was. The Government of this colony claimed the right to have amendments introduced in its favor, as had been done to meet the objections of New South Wales. The West Australians considered that the bill placed them in a worse position financially than the inhabitants of any other colony, as they would have to surrender £1,250,000 of their revenue, and would only be relieved of £370,000 of expenditure. When Sir John Forrest proposed to submit the commonwealth bill to a joint committee of the West Australian Parliament the other Premiers protested that alterations in the bill were absolutely impossible, and warned him that delay or isolation would not tend to the advantage of Western Australia.

The scheme of federation which five of the six Australian colonies have accepted, and which awaits the approval of the British Parliament, resembles the Constitution of the American Union, and differs from that of the Canadian Dominion in that all powers not expressly conferred on the Federal Government are reserved to the individual states. The Federal Parliament will consist, after the model of all parliaments in British self-governing communities, of two houses, called in this instance the Senate and the House of Representatives, both elective by popular ballot, Senators for six years, subject to dissolution, members of the lower house for three, the latter about in the proportion of 1 to 50,000 of the present population. The franchise will be identical for both houses, and for the present will be the existing parliamentary franchise of the several colonies. The right is reserved, however, to the Federal Parliament to determine its own franchise when desirable. The powers delegated by the colonies to the Federal Government are in some cases concurrent with those of the states, in others exclusive. The Federal Parliament will have the right of regulating trade with foreign countries and between the states. After a certain period it will have exclusive powers over customs, excise, and bounties. Its powers of taxation are not confined to customs and excise. Direct taxes may be levied, as well as indirect, but all taxation must be uniform throughout the commonwealth. It will have power to legislate with regard to all the services committed to its care, the most important of which are the national defense and the posts and telegraphs. The Federal Government will have the right to borrow on the public

credit, and may, if desired, assume and consolidate the debts of all the federated colonies. Though the Senate may not originate nor amend any financial measure, it may suggest amendments, and has power to reject money bills as well as all other legislation. The powers of the Crown will be exercised in the usual way by a governor general, assisted by an executive council, which will be composed of not less than seven members, responsible, individually and collectively, to Parliament. All the revenues of the commonwealth will be paid into a consolidated revenue fund, which can only be drawn upon by parliamentary appropriations. An elaborate system of bookkeeping and control has been devised to insure the collection of the customs revenue and the return of the surplus in due proportion to the contributing colonies. The administrative expenses of the commonwealth, in addition to the services taken over from the colonies, are not expected to exceed £200,000 or £300,000, against which should be set the savings to be effected by the concentration of those services under a single management. The officers employed in these branches of the civil service become federal officers, to be paid out of the federal treasury. The contemplated conversion of the public debt is estimated to promise a saving of £1,000,000 a year, and the possible consolidation of the railroads nearly £500,000 more. The commonwealth administration itself is not expected to add anything to the total expenses of government, but financial difficulties and inequalities will be felt in some of the individual colonies, which will settle themselves in time or can be adjusted as experience dictates. An important section of the Federal Constitution is devoted to the creation of a High Court of Australia, to consist of a chief justice and at least two associate judges. The Federal Parliament will also have power to create other federal courts. The High Court will be a court of appeal from the supreme courts of the states, and, although the right of appeal to the Privy Council is not abolished, appeal to the High Court will in most instances be substituted. In regard to the interpretation of the commonwealth Constitution, no appeal to the supreme imperial tribunal is allowed, a provision differing from the law of Canada, and one likely to occasion some demur in Great Britain. The amendment of the Constitution is provided for by means of a majority vote of both houses of Parliament, followed by a referendum to the people of the federated colonies, the votes of colonies having female suffrage being counted at half the total number.

The Pacific Cable Scheme.—The question of laying a submarine cable to connect Canada with the Australian colonies has been discussed in its political, strategic, and commercial aspects since the land telegraph system of Canada was extended to the Pacific coast, more than twenty years ago. In 1887 proposals were laid before the colonial conference, and in 1894 the inter-colonial conference at Ottawa approved the project, and requested the Canadian Government to take steps to promote its fulfillment. Estimates, surveys, and tenders obtained by the Canadian authorities were submitted in 1897 to a Pacific cable committee in London, which recommended the route from Vancouver by way of Fanning island and Fiji to Norfolk island, branching thence to New Zealand and Queensland. The total length to the Queensland terminus would be 7,986 nautical miles. The estimated cost from the best materials was £1,800,-

000, to which it was proposed Queensland, New South Wales, Victoria, and New Zealand should each contribute one ninth and the United Kingdom and Canada the remaining five ninths in equal shares. With a cable rate of 3s. a word, taking operating expenses at 1s. a word, and the first year's traffic at 1,800,000 words, the traffic by the eastern line having been 2,350,000 words in 1897, with a rate of 4s. 9d. a word, the new line would more than pay its way from the beginning, the utmost estimate of the fixed charges, including sinking fund and maintenance, being £160,000. The Canadian Government agreed to pay its allotted share of the cost and the Australasian governments their respective shares, but the British Government at the last moment receded from the plan of joint ownership, the Eastern Extension Telegraph Company having protested against Government competition and the reduction of cable charges. The Colonial Secretary, Joseph Chamberlain, proposed instead to subsidize the all-British line by extending imperial credit to raise part of the capital. Though deeply disappointed, the Canadian and Australasian governments entered into negotiations with the home authorities on the new basis. The Government of British Columbia offered to contribute two eightieths of the cost in addition to Canada's five eightieths. The proposal of the Imperial Government was to grant a subsidy to meet five eightieths of the net loss of any year, but not to exceed £20,000 annually, in consideration of which the cable must be made in accordance with imperial specifications, the rates subjected to the approval of the Imperial Government, and imperial messages have priority over all others and be transmitted at half rates. The subsidy would begin from the time when the cable is opened for traffic, and would not run longer than twenty years. The protests of the colonies induced the British Government in June to reconsider the offer it made in April, and to express willingness to modify its proposals on the basis of utilizing the public credit of the United Kingdom so as to raise the necessary capital on more advantageous terms than could be obtained for loans guaranteed only by the colonial governments. The Eastern Extension Company, in the hope of defeating the Pacific cable, offered to lay one from South Africa to Australia, and to reduce the charges to or from Europe to 4s. a word. This proposal was favorably received in Victoria and Tasmania, and was welcome to Western Australia, where the cable would land, but New South Wales, New Zealand, and the other colonies clung to the project of all-British cables encircling the globe and connecting the chief self-governing colonies.

New South Wales.—Every male British subject who has resided a year in the colony has the right to vote for members of Parliament. There were 324,338 electors, 24.28 per cent. of the total population, enrolled in July, 1898, and 178,717 voted. The duration of Parliament is three years. The upper house is the Legislative Council, consisting of 58 members appointed by the Crown for life. The Legislative Assembly has 125 members, elected in separate districts.

William Lygon, Earl Beauchamp, succeeded Viscount Hampden as Governor in January, 1899. The Cabinet in the beginning of 1899 consisted of the following members: Premier, Treasurer, and Minister for Railways, George Houstoun Reid; Chief Secretary, James Nixon Brunker; Attorney-General, John Henry Want; Secretary for Lands, Joseph Hector Carruthers; Secretary for Public Works, James Henry Young; Minis-

ter of Public Instruction and Industry and Labor, James Alexander Hogue; Minister of Justice, Charles Alfred Lee; Postmaster-General, Varney Parkes; Secretary for Mines and Agriculture, Joseph Cook.

The government of G. H. Reid has depended for its continuance on the vote of the Labor party, which is always cast solidly either for measures which it advocates or for indifferent measures in return for concessions on other points. The paternal methods of government now followed in this colony are illustrated by the agreement of the Premier to distribute £500,000 as advances to the farmers, who have suffered from drought for four seasons, the maximum relief in each case being limited to £200. He also promised a remission of rents on Crown leases and an extension of time for payments on conditional purchases. After a special session for the passage of the federation bill, which was marked by a conflict between the Premier, supported by the Legislative Assembly, and the upper house, Parliament was prorogued on April 21 till the summer session, for which important measures were being prepared. The deadlock was ended by the nomination of twelve new members to the Legislative Council, of whom four were working-class representatives. This infusion of the Labor element into the upper house was a significant innovation. The acceptance by the colony of federation takes away the great ground of division between the two main parties. The free traders, who have been in the ascendant, must now countenance a protective tariff for Australia against the outside world, which for fiscal reasons may not be less than 25 per cent., while sharing with the other colonies inter-colonial free trade. New combinations of parties are therefore likely to result. Among the new measures brought before Parliament were several of an advanced character, which the Labor party considered important. On the retirement of Mr. Want, on April 18, Mr. Reid assumed the duties of Attorney-General temporarily. Before the opening of the regular session a rearrangement of the Cabinet officers was effected on June 27. The Premier retained the post of Attorney-General permanently, handing over the office of Treasurer to Mr. Carruthers, who was succeeded as Minister of Lands by Mr. Young, the latter being replaced by Mr. Lee as Secretary for Public Works, and he in turn as Minister of Justice by John Hughes, the Vice-President of the Executive Council and representative of the Government in the upper house. Parliament was opened on July 18. Changes in procedure were declared necessary, and grand committees were suggested. Bills were presented for the establishment of a state bank, for old-age pensions, for the amendment and consolidation of the mining laws, and for the construction of narrow-gauge railroads through fertile districts. The state bank was to be established by consolidating two existing savings banks, and empowered to loan money to settlers at 4 per cent. The Government promised also to introduce technical education in the state schools and to establish more experimental farms. Farmers would be assisted by the Government to obtain the best American agricultural machinery. In the beginning of September Mr. Lyne, who had succeeded Mr. Barton as leader of the Opposition, moved a vote of censure, to which a Labor member, Mr. Fegan, added another on the payment of a member of Parliament for a report on old-age pensions. After a week's debate the Government was defeated by a vote of 78 to 40.

Victoria.—The members of the Legislative Council, 48 in number, are elected for six years by freeholders, leaseholders or occupiers of property worth £25 a year, and professional men or graduates. The Legislative Assembly contains 95 members, elected for three years by universal manhood suffrage. The number of electors for the Legislative Council registered in 1898 was 130,545; the number on the roll of the Legislative Assembly was 252,560.

The Governor is Lord Brassey, appointed in 1895. The Cabinet of ministers in the beginning of 1899 was composed as follows: Premier and Treasurer, Sir George Turner; Chief Secretary and Minister of Public Instruction, A. J. Peacock; Attorney-General, Isaac Isaacs; Solicitor-General, Sir Henry Cuthbert; Commissioner of Trade and Customs, President of the Board of Land and Works, and Commissioner of Crown Lands and Survey, R. W. Best; Postmaster-General, J. G. Duffy; Minister of Defense, W. McCulloch; Minister of Mines and Water Supply, H. Foster; Minister of Agriculture and Commissioner of Public Works, J. W. Taverner; Minister of Railways and Minister of Health, H. R. Williams; without office, S. Williamson.

The Minister of Lands, with one of the members of the Assembly, went to New Zealand in the spring of 1899 to study the solution of the difficulty of the unemployed said to have been found in the labor and social legislation of that colony. Their report was on the whole favorable to arbitration in labor disputes and to old-age pensions. The Government was already contemplating legislation for pensioning superannuated workmen, and also a new factory and shop act. The old-age-pension act was based on the New Zealand law, the funds to be provided by the income tax. The eagerness for Government employment and the glut in the labor market of Victoria was shown by over 15,000 applications for less than 400 vacancies in the railroad service. A rush for licenses to dredge for gold in Victorian rivers met with opposition from owners of riparian rights and agriculturists whose lands were endangered, and when this seemed to be the case the Minister of Mines postponed action for twelve months. Parliament was opened on June 27. Besides the labor bills, one was brought in for continuing and extending the income tax. The question of plural voting was the subject of another. The Government also proposed to abolish female suffrage. A commission was appointed to draw up a scheme for technical education. A leader of the Opposition, Mr. Deakin, after agitating the subject in public meetings, offered a resolution in favor of including in the state system of education unsectarian religious instruction, consisting of a short prayer and hymn and the reading of selected passages of Scripture. The Government offered to submit the question to a referendum, and a motion to that effect was carried, with the formidable condition that the heads of the religious denominations should first meet and come to an agreement among themselves as to what form the religious instruction should take.

Queensland.—The Legislative Council consists of 41 members, nominated for life. The Legislative Assembly contains 72 members elected by all adult males who have resided six months in the colony. There were 81,892 electors in 1897. The Governor is Lord Lamington, who was appointed in 1895. The Council of ministers in the beginning of 1899 was composed as follows: Premier and Chief Secretary, James Robert Dickson; Secretary for Agriculture and Minister for

Public Lands, J. V. Chetaway; Home Secretary, J. F. C. Foxton; Postmaster-General and Minister for Justice, W. H. Wilson; Treasurer and Secretary for Mines, Robert Philp; Secretary for Public Instruction, D. H. Dalrymple; Secretary for Railways and Secretary for Public Works, John Murray; without portfolio, A. H. Barlow and George Wilkie Gray.

The Legislative Assembly was dissolved on Feb. 15, and a new Parliament was summoned to meet on May 2 to consider especially the commonwealth bill subsequent to the action upon it by New South Wales. The advantage to Queensland from opening the Australasian markets to its raw products was considered sufficient to overshadow any temporary disarrangement of industrial and commercial relations, while the colony, if it remained isolated, would be shut off from outside financial assistance necessary for the development of its vast but sparsely populated territory. The policy of Queensland was declared by the Premier to be the exclusion of all alien and colored races not already sanctioned by law. In accordance with a treaty with Japan, the immigration of Japanese laborers and artisans has wholly ceased. That country has furthermore given preferential treatment to Queensland sugar. The general elections, which took place toward the end of March, resulted in the return of 43 Ministerialists, 21 Labor candidates, and 8 Opposition members. A rearrangement of the Cabinet took place on March 29 in consequence of the appointment of Mr. Rutledge as Attorney-General. Mr. Wilson, while remaining Postmaster-General, became Secretary of Public Instruction, Mr. Dalrymple became Secretary of Public Lands, and Mr. Chetaway retained the secretaryship of agriculture only. Parliament was opened for regular business on May 16, and, after passing the federation bill, was prorogued on July 4 until after the referendum.

South Australia.—The Legislative Council contains 24 members, elected for nine years by freeholders, leaseholders, and householders. The House of Assembly comprises 54 members, 2 for each district, elected for three years by the vote of all adult citizens, male and female, whose names have been on the register six months. In 1897 the number of electors enrolled was 134,886.

Lord Tennyson succeeded Sir Thomas Fowell Buxton as Governor on Feb. 2, 1899. The ministry in the beginning of 1899 consisted of the following members: Premier and Attorney-General, C. C. Kingston; Chief Secretary, J. V. O'Loughlin; Treasurer and Minister controlling Northern Territory, F. W. Holder; Commissioner of Crown Lands, L. O'Loughlin; Commissioner of Public Works, J. G. Jenkins; Minister of Education and Agriculture, Richard Butler.

Parliament was dissolved on April 6 and elections for the Assembly were held on April 29. A referendum for household suffrage was taken at the same date, as well as the referendum for federation. For household suffrage 49,200 votes were cast to 33,900 in the negative. The Roman Catholics endeavored to carry the country for a capitation grant to all schools and for religious instruction in the public schools. The Ministerial party won, but their majority was cut down. When the new Parliament met Mr. Kingston suggested that, in view of federation, the number of members in the colonial Parliament should be reduced to 16 in the upper and 36 in the lower house, and that there should be fewer ministers, and these elected by Parliament instead of being appointed.

Western Australia.—The Legislative Council consists of 24 members, elected for six years by British subjects holding freeholds or occupying property worth £25 a years. The Legislative Assembly consists of 44 members, elected in as many districts for four years by British subjects resident for at least two years in the colony or in possession of freehold or leasehold property or mining licenses.

The Governor is Sir Gerard Smith, appointed in October, 1895. The Cabinet in the beginning of 1899 was composed of the following members: Premier and Colonial Treasurer, Sir John Forrest; Commissioner for Railways and Director of Public Works, F. H. Piesse; Commissioner of Lands, George Throssell; Minister of Mines, H. B. Lefroy; Attorney-General, Richard William Pennefather; Colonial Secretary, George Randell.

Western Australia has suffered from a depression owing to the withdrawal of capital consequent upon overspeculation in gold mines. The production of the gold fields has nevertheless increased, and recently ore has been shipped as well as gold. Nine public batteries are working, and more are being erected. Coal mines have been opened at Collie and tin mines at Green Bushes. The ill treatment of natives by some of the local magistrates resulted in these losing their commissions. The mole at Fremantle has been extended so as to accommodate more shipping. Parliament was opened on June 21. New measures deal with a tax on dividends, rural and land improvement, the encouragement of local industries, boards of conciliation for labor disputes, trade unions, and free education throughout the colony. The labor bills were suggested by a fierce strike of dock laborers that interfered for many weeks with the commerce of Fremantle until it was settled early in April. The dividend duty is 5 per cent. on the dividends of joint-stock companies doing business in the colony, including banking and mining corporations, but excluding insurance companies. Resolutions in favor of woman suffrage were voted by both houses.

Tasmania.—The Legislative Council is composed of 18 members, elected under a property and educational franchise for the term of six years. The House of Assembly has 37 members, elected for three years by householders and persons in receipt of an income of at least £40. The electors for the Legislative Council numbered 9,359, those for the Assembly 31,613 in 1898.

The Governor since 1893 has been Viscount Gormanstown. The Cabinet in the beginning of 1899 was composed as follows: Premier and Treasurer, Sir E. N. C. Braddon; Chief Secretary, W. Moore; Attorney-General, D. C. Urquhart; without portfolio, Thomas Reiby; Minister of Lands and Works, A. T. Pillinger.

An attempt to upset the ministry in June fell far short of success. A motion in favor of woman suffrage was passed by the Assembly. On Aug. 18 this chamber approved a bill extending throughout the colony the Hare system of voting, which had already been tried in Hobart and Launceston.

New Zealand.—The Legislative Council consists of 48 members, who hold their seats for seven years, except those appointed before 1891, when the term was for life. The Legislative Assembly has 74 members, including 4 representatives of the Maori nation, elected for three years by the votes of all adult persons of either sex who have resided in the colony a year. In 1896 there were 339,230 registered voters, of whom 196,925 were men and 142,305 women; in the 70

European districts and in the 4 Maori districts there were 13,008 votes recorded.

The Governor is the Earl of Ranfurly, appointed Aug. 10, 1897. The ministry in the beginning of 1899 was composed as follows: Premier, Colonial Treasurer, Commissioner of Trade and Customs, Postmaster-General, Electric Telegraph Commissioner, Minister of Labor, and Minister of Native Affairs, R. J. Seldon; Minister of Lands, Minister of Agriculture, Commissioner of Forests, and Minister in Charge of Advances to Settlers' Office, J. McKenzie; Minister for Railways and Minister of Mines, A. J. Cadman; Commissioner of Stamp Duties, Acting Colonial Secretary, and Member of the Executive Council representing the Native Race, J. Carroll; Minister of Immigration, Minister of Education, and Minister in Charge of Hospitals and Charitable Aid, W. C. Walker; Minister for Public Works, Minister of Marine, and Minister in Charge of Printing Office, W. Hall-Jones; Minister of Justice, Minister of Defense, and Minister of Industries and Commerce, T. Thompson.

No community has gone so far as New Zealand in experimental social reforms since the establishment of the principle of one man one vote. The public men of this colony have given their chief attention to the prevention of social conditions detrimental to the well-being of the poorer classes, such as are flagrant in the mother country. The newly enacted old-age-pension act provides that every man and woman in New Zealand from the age of sixty-five onward is entitled as a matter of right, not of charity, in consideration of services rendered and labor performed in helping to build up the colony, to a pension of £18 a year from the state, provided they have been residents of the colony for twenty-five years, have never been in prison for a longer term than four months, and have not deserted their families. The money to provide these pensions is taken from the ordinary revenues, and three years must elapse before Parliament can repeal the enactment or revise it by either increasing or reducing the amount of the pension. Maoris and naturalized foreigners participate in the benefits of the act, but Asiatics are excluded. The railroad revenue of the colony has increased so much that the Government intends to reduce freight charges to home markets in order to encourage production and trade. Inland postage, which is still a penny, will probably also be reduced, but the Premier does not think it a good policy to reduce taxation, as it is necessary to spend money to improve the colony. The Parliament was opened on June 23. The harbor defenses are almost completed, the volunteers fully armed, and the Defense Committee are studying a complete scheme for the defense of the colony. Large areas have been purchased under the land settlements act, but the number of applicants far exceeds that of available farms. The act is to be extended so as to provide land for workmen's homes and villages. Bills were introduced dealing with workmen's compensation and accident insurance, facilitating the settlement of native lands, and providing for a direct vote of the people on questions of colonial importance and the decision of such questions by a bare majority of voters at the polls. The operation of the industrial conciliation and arbitration act had so expanded that delays resulted, and proposals were submitted to remedy this. The experiment of compulsory arbitration as far as it has gone is approved by all the workers and by many of the employers, but the majority of the employers are still distrustful, and some are bit-

terly opposed to it. On a motion of want of confidence in the House of Representatives on July 6 the Government commanded a majority of only 7 votes.

Fiji.—The Governor of Fiji is Sir G. T. M. O'Brien. The island is divided into 16 provinces, each under a *roko tui*, or native chief. European commissioners reside in three of the provinces. The sugar, coconut, banana, and other plantations belong mostly to European settlers.

British New Guinea.—The British territory of New Guinea, including the Louisiade and D'Entrecasteaux islands, has an area of about 90,540 square miles, with 350,000 native inhabitants and 250 Europeans. The cost of administration, calculated at £15,000 a year, is guaranteed by the Queensland Government, but the governments of Victoria and New South Wales contribute equal shares and have equal control with Queensland over the administration. The territory is administered by the Lieutenant Governor, George Ruthven Le Hunte. The policy of withholding all lands for the use of the natives has been followed hitherto, and regulations forbidding the alienation of land were strictly enforced. However, in March, 1898, the Lieutenant Governor and his Council approved an ordinance enabling a company called the British New Guinea Syndicate to acquire and occupy an area not to exceed 250,000 acres, paying 2s. an acre, with a view to the development of the territory by exploring and opening up Crown lands, cultivating the rubber plant and other tropical produce, and discovering and working mineral deposits. There were 397 vessels, of 20,702 tons, entered and 302, of 20,360 tons, cleared during 1898. Gold is mined in the Louisiade and Woodlark islands and on the mainland by 300 whites, who employ many natives. The value of the imports in 1898 was £46,971; exports, £49,859. The chief imports are foodstuffs, cloth, tobacco, and hardware. The exports, besides gold and pearls, are trepang, copra, pearl shells, and sandalwood.

The British Government, having in 1898 agreed to convey to a land syndicate a tract of land in New Guinea, rescinded the arrangement on account of the remonstrances of the governments of Victoria, New South Wales, and Queensland, leaving these to settle with the syndicate the question of compensation. Another syndicate offered to take 100,000 acres, but the colonial statesmen do not consider the time ripe for making grants of land. Mr. Le Hunte, the new Lieutenant Governor, has prepared a scheme for the development of New Guinea.

AUSTRIA-HUNGARY, a dual monarchy in central Europe, composed under the fundamental law of Dec. 21, 1867, of the Empire of Austria and the Kingdom of Hungary, inseparable constitutional monarchies, hereditary in the male line of the dynasty of Hapsburg-Lorraine or, in the event of the extinction of the male line, in the female line. The legislative power for affairs common to both monarchies—viz., foreign relations, military and naval affairs with the exception of the national territorial armies, common finance, commercial and railroad affairs concerning both monarchies, the customs tariff, the coinage, and the administration of the occupied Turkish provinces of Bosnia and Herzegovina—is exercised by committees of the legislative bodies of both monarchies. These committees, which are called the Delegations, meet alternately in Vienna and Buda-Pesth, the two capitals. They are composed of 20 members elected annually by each of the two upper houses and 40

from each of the lower houses. The Austrian and Hungarian Delegations meet and vote separately, and in case of a disagreement they decide the question by a joint vote. The common ministers are responsible to the Delegations, and may be impeached for any dereliction of duty.

The Emperor of Austria and King of Hungary is Franz Josef I, born Aug. 18, 1830, proclaimed Emperor of Austria on Dec. 2, 1848, when his uncle Ferdinand I abdicated in consequence of a revolutionary uprising, and crowned King of Hungary on June 8, 1867, when the ancient constitutional rights of that monarchy were re-established. The heir presumptive is the Emperor-King's nephew, Archduke Franz Ferdinand, born April 21, 1865, son of the late Archduke Karl Ludwig and Princess Annunciata, daughter of the former King of Naples.

The ministers for the whole monarchy at the beginning of 1899 were as follow: Minister of Foreign Affairs and of the Imperial House, Count Agenor Maria Adam Goluchowski; Common Minister of War, Gen. Edmund, Edler von Krieghammer; Common Minister of Finance, Benjamin de Kallay.

The Common Budget.—The cost of the administration of common affairs is borne by the two halves of the monarchy in a proportion settled by an agreement between the Austrian Reichsrath and the Hungarian Parliament. This agreement, called the *Ausgleich*, has been revised and renewed every ten years, but when the last period expired in 1897 the two legislative bodies were unable to reach an understanding. Negotiations were continued, and in the meantime the provisions of the last *Ausgleich* were continued temporarily as a *modus vivendi*. By this, after the proceeds of the common customs were deducted from the sum required, Hungary first paid 2 per cent. of the remainder, and then the balance was contributed by the two monarchies, the Austrian portion being 70 per cent. and the Hungarian 30 per cent. In 1898 the total sanctioned expenditure was 162,625,000 florins—the revenue from customs, 46,673,000 florins; Austria's contribution, 79,543,000 florins; Hungary's contribution, 36,409,000 florins. The budget estimates of revenue for 1899 were 132,000 florins from the Ministry of Foreign Affairs, 2,660,389 florins from the Ministry of War and Marine, 5,169 florins from the Ministry of Finance, and 164,378,382 florins from customs and matricular contributions—total, 167,175,940 florins. The estimated expenditures were 4,194,100 florins of ordinary and 80,100 florins of extraordinary expenditure by the Ministry of Foreign Affairs, 132,468,237 florins of ordinary and 11,217,014 florins of extraordinary expenditure for the army, 11,195,260 florins of ordinary and 5,746,000 florins of extraordinary expenditure for the navy, 2,126,404 florins of ordinary and 10,780 florins of extraordinary expenditure by the Minister of Finance, and 138,045 florins for the Board of Control.

The dual monarchy contracts no loans, but the general debt existing in 1867, of which 2,757,449,395 florins were outstanding in June, 1898, requires 126,284,691 florins annually for interest and amortization, which is divided between the two halves of the monarchy, Austria paying 95,973,852 florins and Hungary 30,310,839 florins. The common floating debt on June 30, 1898, amounted to 182,672,730 florins, of which amount 120,892,780 florins consisted of the common paper currency.

The revenue of Bosnia and Herzegovina for 1898 was estimated at 19,244,250 florins, more

than sufficient to cover the cost of administration, estimated at 19,185,820 florins.

The Army.—The period of service in the Austro-Hungarian army is three years in the line and seven years in the reserve. Those not drawn for active service are enrolled in the supplementary reserve, the Ersatztruppen, or in the Landwehr. After completing the whole term in the common army, the discharged soldiers are enrolled for two years in the Landwehr or national army, called the Honved in Hungary, and after that they can be called out for the defense of the nation as members of the Landsturm until they are forty-two years old. For those enrolled at once in the Landwehr at the age of twenty-one the period of service is twelve years. The Landwehr in time of peace is only called out periodically for instruction and exercise. The annual contingent for the common army is 59,211 in Austria and 43,899 in Hungary; total, 103,100. The annual contingent for the Landwehr is about 10,000 in Austria and 12,500 in Hungary.

The common army on the peace footing in 1898 had 3,738 officers and 3,843 men in the staff, 1,536 officers and 7,680 men in the military establishments, 9,454 officers and 177,109 men in the infantry, 1,874 officers and 45,506 men in the cavalry, 1,636 officers and 28,152 men in the field artillery, 412 officers and 7,760 men in the fortress artillery, 575 officers and 9,918 men in the pioneers, 79 officers and 2,854 men in the sanitary corps, and 393 officers and 3,253 men in the train. The Austrian Landwehr had 2,168 officers and 20,657 men in the infantry and 196 officers and 1,899 men in the cavalry; the Honved, 2,132 officers and 20,797 men in the infantry and 390 officers and 4,200 men in the cavalry. The total peace strength was 24,583 officers and 333,628 men, or 358,211 of all ranks, with 47,757 horses and 1,048 guns. The war strength is 45,238 officers and 1,826,940 men, with 281,886 horses and 1,864 field guns. The infantry is armed with the Mannlicher rifle, having a caliber of 8 millimetres and 5 cartridges in the magazine, the cavalry with the saber and a repeating carbine, and the artillery with 9- and 7-centimetre bronze guns.

The Navy.—The fleet in 1899 consisted of 1 second-class and 7 third-class battle ships, 8 vessels for port defense, 1 first-class, 3 second-class, and 8 third-class cruisers, 12 gunboats, and 32 first-class, 31 second-class, and 8 third-class torpedo boats. Of the newer constructions, the most notable are the barbette ships *Monarch*, *Wien*, and *Buda-Pesth*, displacing 5,550 tons, with 10.6-inch Harveyized armor over the vital parts, armed with 4 9.4-inch, 6 5.9-inch quick-firing, and 14 47-millimetre quick-firing guns, with 4 torpedo tubes, and having engines of 8,500 horse power, capable of speeding 17 knots. A similar battle ship of 7,800 tons displacement is under construction, and one of 8,000 tons displacement has been begun. Built on the model of the cruiser *Maria Theresa*, launched in 1893, the larger *Kaiser Karl VI.* of 6,250 tons displacement, was launched in 1898, having 10.6-inch armor, engines of 12,300 horse power, giving a speed of 20 knots, and an armament of 2 9.4-inch, 8 5.9-inch quick-firing, and 18 other machine guns. The torpedo cruiser *Zenta*, lately launched, will be followed by another. The programme of construction, which follows out the original plan of a purely defensive fleet of the highest efficiency, provides for a total force of 15 armor clads between 6,000 and 9,000 tons, 7 second-class cruisers ranging between 4,000 and 7,000 tons, 7 cruisers between 1,500 and 2,500 tons, 15 torpedo gunboats, and 90 torpedo boats of the various classes.

Commerce and Production.—The total value of the special imports into the customs territory, including both monarchies and Bosnia and Herzegovina, was 755,300,000 florins in 1897, and the total value of exports was 766,200,000 florins. The values of the chief imports in the special commerce were 50,769,000 florins for raw cotton, 40,186,000 florins for cereals, 38,503,000 florins for wool, 31,382,000 florins for coal and fuel, 26,238,000 florins for coffee, 25,971,000 florins for tobacco, 22,110,000 florins for hides and skins, 21,427,000 florins for leather, 19,662,000 florins for machinery, 19,374,000 florins for metals other than iron, 18,932,000 florins for woollen yarn, 17,978,000 florins for wine, 14,218,000 florins for silk goods, 13,359,000 florins for eggs, 11,292,000 florins for silk manufactures, 11,240,000 florins for live animals, and 10,317,000 florins for cotton yarn. The values for the principal exports were 61,382,000 florins for sugar, 43,921,000 florins for eggs, 39,975,000 florins for cereals, 37,770,000 florins for lumber, 27,289,000 florins for timber, 26,857,000 florins for lignite, 25,174,000 florins for horses, 24,453,000 florins for malt, 22,428,000 florins for glassware, 20,335,000 florins for live animals, 18,464,000 florins for woollen goods, 17,033,000 florins for hides and skins, 16,208,000 florins for leather gloves, 9,787,000 florins for staves, 9,463,000 florins for feathers, 8,334,000 florins for shoes, 7,296,000 florins for beer, and 4,436,000 florins for wine.

The value of the gold and silver coin and bullion imported during 1897 was 99,867,928 florins; exports, 51,651,584 florins.

The amount of the trade in 1897 with the principal countries* is shown in the following table, giving the values of the imports from and the exports to each country in florins:

COUNTRIES.	Imports.	Exports.
Germany	270,389,000	399,023,000
Great Britain	69,168,000	70,522,000
Italy	55,040,000	59,441,000
Russia	56,029,000	25,893,000
United States	55,755,000	16,804,000
Switzerland	22,775,000	31,943,000
British India	41,596,000	12,049,000
France	24,103,000	27,500,000
Roumania	18,680,000	26,363,000
Turkey	17,837,000	26,275,000
Servia	18,296,000	12,030,000
Brazil	20,665,000	1,822,000
Netherlands	9,598,000	11,461,000
Belgium	13,486,000	6,611,000
Egypt	6,516,000	10,029,000
Greece	9,153,000	5,414,000

The special imports of Hungary from all countries, including Austria, in 1897 were 554,814,000 florins in value; exports, 540,980,000 florins. The chief imports were cotton goods for 62,170,000 florins, woollen goods for 38,797,000 florins, clothing for 16,901,000 florins, wine in casks for 15,219,000 florins, silk goods for 12,295,000 florins, refined sugar for 10,742,000 florins, and coffee for 9,632,000 florins. The chief exports were wheat, barley, and maize for 84,379,000 florins, flour for 84,007,000 florins, cattle, pigs, and horses for 70,403,000 florins, wine in casks for 17,040,000 florins, cask staves for 10,456,000 florins, eggs for 8,125,000 florins, and wool for 7,150,000 florins. The imports from Austria were 428,756,000 florins, and exports to Austria 412,113,000 florins in value; imports from Germany were 27,565,000 florins, and exports to Germany 50,956,000 florins; imports from Great Britain were 5,025,000 florins, and exports to Great Britain 11,115,000 florins.

The export trade of Austria has been languishing for some time as the result of the active

competition of Germany and other countries. The merchants called upon the Government to adopt a vigorous commercial policy that would help them to secure fresh markets, especially in China, where other governments have actively supported the enterprise of their citizens. The Minister of Commerce responded by establishing subsidized commercial agencies abroad, working in connection with export syndicates at home. An industrial council, recently created to keep the Government in touch with the views and needs of the manufacturers, had failed to realize expectations. The Government in the naval estimates provided for the construction of new vessels in deference to the demands of the mercantile community for an increase in the navy. The chambers of commerce and industry bespeak more radical and wide-reaching reforms, such as the reduction of taxes on trade, the remission of duties on raw materials, discriminating railroad rates in favor of manufacturers and exporters, subventions and bounties, relaxed state control and supervision, the repeal of laws for the protection of labor, etc. One of the chief grievances of Austrian industrialists is the active interposition of the Hungarian Government for the purpose of building up industries at their expense. There are no such labor laws in Hungary as in Austria, no hampering legislation or heavy taxation affecting capital, and the Government, by offering special privileges and immunities, has endeavored to induce Austrian manufacturers to establish plants in Hungary. To attract the Vienna silk industry and the textile industries of Bohemia the Hungarian authorities have even offered subventions.

Navigation.—The number of vessels entered at ports of Austria during 1896 was 100,873, of 11,771,345 tons, and the number cleared was 100,856, of 11,774,758 tons. The Austrian merchant navy on Jan. 1, 1897, comprised 12,115 vessels, of 215,258 tons, of which 181, of 145,154 tons, were steam vessels and 11,934, of 70,104 tons, were sailing vessels. Of the total number 253, of 174,507 tons, were engaged in foreign commerce, 1,526, of 22,345 tons, were coasting vessels, and 10,336, of 18,406 tons, were fishing and other small craft.

The number of vessels entered at Hungarian ports during 1897 was 18,700, of 1,844,385 tons; cleared, 18,679, of 1,848,586 tons. The Hungarian commercial marine on Jan. 1, 1898, numbered 502 vessels, of 67,879 tons, and of these 70, of 45,630 tons, were steamers, while 432, of 22,249 tons, were sailing vessels. Of the total number 76, of 62,224 tons, were engaged in ocean commerce, 153, of 5,228 tons, in the coasting trade, and 273, of 427 tons, were fishing craft.

Railroads, Posts, and Telegraphs.—The state railroads in Austria had a length in 1897 of 4,594 miles; lines belonging to companies but operated by the Government, 933 miles; lines owned and operated by companies, 5,844 miles; total length, 10,438 miles. The total cost was 2,662,716,000 florins. The number of passengers transported in 1896 was 105,201,000; tons of freight, 100,000,000; receipts, 263,955,000 florins; operating expenses, 153,896,000 florins.

The state lines of railroad in Hungary on Jan. 1, 1898, had a length of 4,758 miles; companies' lines worked by the state, 3,268 miles; lines owned and worked by companies, 1,763 miles; total length, 9,784 miles. The total capital expenditure was 1,241,804,000 florins; number of passengers in 1897, 56,982,000; freight carried, 35,724,000 tons; receipts, 121,236,000 florins; expenses, 66,060,000 florins.

The Austrian post office in 1897 carried 809,770,210 letters and postal cards, 113,036,520 samples and books, and 95,533,400 newspapers. The receipts were 44,650,851 florins; expenses, 40,705,717 florins.

The Hungarian post office carried in 1897 letters and postal cards to the number of 236,825,000, 92,635,000 newspapers, 43,253,000 samples and book packets, 18,015,900 money and postal orders of the total value of 502,604,000 florins, and 18,114,000 parcels and money letters.

The telegraph lines of the Austrian Government had in 1897 a total length of 31,484 miles, with 92,052 miles of wire. The number of messages dispatched was 13,771,084.

The Hungarian telegraph lines had in 1897 a total length of 13,375 miles, with 64,515 miles of wire. The number of dispatches sent during the year was 13,396,578.

The New Ausgleich.—The commercial treaty between Austria and Hungary, which expired by limitation of time in 1897, has been continued provisionally pending the conclusion of a new treaty, or *Ausgleich*, which the Hungarians insisted should be made with the co-operation of the Austrian Reichstag, because the Hungarian Constitution makes the continuance of constitutional, parliamentary conditions in Austria a requisite for all treaty arrangements between the two halves of the dual monarchy. Aside from that, it was feared that any compromise reached with the Austrian Government acting under Article XIV of the Austrian Constitution—the emergency paragraph which empowers the Government to provide for the conduct of affairs by legislative decrees in case of a temporary interruption of parliamentary rule—might be upset afterward by the Reichstag when regular parliamentary government should be resumed. The dismissal of the Reichsrath on Feb. 1, 1899, when it was found that the deadlock could not be broken, almost put an end to hopes of making a new *Ausgleich* between the two Parliaments. Koloman Szell took the premiership in Hungary in May, with the mission of negotiating a temporary *Ausgleich* with the Austrian Government, to be confirmed by executive decree under the emergency paragraph if the consent of the Austrian Parliament could not be obtained. Naturally the Hungarian legislators demanded that under these conditions the financial and economic interests of Hungary should be protected to the utmost extent. Many of the provisions had already been arranged in previous negotiations. On the demand of Hungary it had been agreed that when the commercial treaties with Germany and other countries expire in 1903 new ones should only be concluded till 1907, when the *Ausgleich* would also expire, leaving Hungary then free to resume her commercial independence, if desirable, and make separate treaties with foreign countries in consonance with her individual interests. The sugar-bounty system was continued. The Hungarian Government now refused to continue the customs union with Austria longer than 1903, unless in the meantime the normal activity of the Austrian Reichsrath should be resumed and it should become possible to complete the arrangements between the two Legislatures, as provided for by the Constitution. The Austrian Government in accepting this hard condition argued that the charter of the Austro-Hungarian Bank should also be made to terminate in 1903. The Hungarian Government desired, on the contrary, to continue the arrangement with the common bank for ten years, and the Austrian ministry, after

carrying on prolonged negotiations, gave way on this point also.

Austria.—The legislative body is the Reichsrath, consisting of the Herrenhaus, or House of Lords, in which 19 princes of the imperial family, 9 archbishops, 8 prince bishops, 66 territorial nobles, and 153 life members have seats, and the House of Deputies, composed of 425 members, who are elected for six years, 85 by the territorial aristocracy, 118 indirectly by the towns, 21 by the chambers of trade and commerce, and 129 indirectly by the rural districts, and 72 directly by all male citizens of towns and rural communes who pay 4 florins a year in direct taxes or possess educational or other qualifications. The representation of the provinces is unequal, varying from 1 member to 29,694 inhabitants in Salzburg to 1 to 89,188 in Galicia. Lower Austria sends 46 members; Upper Austria, 20; Salzburg, 6; Styria, 27; Carinthia, 10; Carniola, 11; Trieste, 5; Gorizia and Gradisca, 5; Istria, 5; Tyrol, 21; Vorarlberg, 4; Bohemia, 110; Moravia, 43; Silesia, 12; Galicia, 78; Bukowina, 11; Dalmatia, 11.

The Austrian ministry formed on March 7, 1898, was composed as follows: President of the Council and Minister of the Interior, Graf Franz von Thun-Hohenstein; Minister of Public Instruction and Ecclesiastical Affairs, Graf Bylandt-Reydt; Minister of Finance, Dr. J. Kaizl; Minister of Agriculture, Baron von Kast; Minister of National Defense, Field-Marshal Graf Zeno von Welsersheimb; Minister of Justice, Dr. J. von Ruber; Minister of Railways, Dr. H. Ritter von Wittek; Minister of Commerce, J. di Pauli, Baron von Treuheim; without portfolio, Ritter von Jedrzejowicz.

Area and Population.—The Austrian dominions have a total area of 115,903 square miles, with a population estimated at the end of 1896 at 25,249,203, comprising 12,467,738 males and 12,781,465 females. The number of marriages in 1897 was 202,936; of births, 968,280; of deaths, 646,620; excess of births, 294,952. The number of emigrants in 1897 was 37,215. Vienna, the Austrian capital, had 1,364,548 inhabitants at the last decennial census.

The emigration from Austria-Hungary in 1896 was 67,456 persons, of whom 45,327 went to North America, 11,389 to Brazil, and 220 to the Argentine Republic. In 1897 the total number of emigrants was 37,215. According to United States immigration statistics, 34,196 Austrians and 30,898 Hungarians arrived in 1896, 18,006 Austrians and 15,025 Hungarians in 1897, and 23,118 Austrians and 16,662 Hungarians in 1898. The term of military service is still three years in Austria-Hungary, and to avoid conscription about 30,000 young men escape over the border every year according to estimates of the military authorities. Most of them go to the United States, where there are believed to be over 100,000 men who should be in the army or the reserves. They pass the frontier by means of forged passports furnished by foreigners, who make a business of aiding their escape.

Finances.—The revenue of the Austrian Government in 1896 amounted to 741,442,000 florins, and the expenditure to 737,387,000 florins. For 1898 the budget estimate of revenue was 723,221,759 florins, and of expenditure 722,872,831 florins. The sanctioned estimates for 1899 make the revenue 760,754,838 florins, of which 767,600 florins are receipts of the Reichsrath and Council of Ministers, 1,412,109 florins are taken in by the Ministry of the Interior, 398,362 florins by the Ministry of Defense, 7,136,242 florins by the

Ministry of Education and Worship, 549,664,788 florins by the Ministry of Finance, 52,721,270 florins by the Ministry of Commerce, 129,828,620 florins by the Ministry of Railroads, 15,293,050 florins by the Ministry of Agriculture, 1,135,111 florins by the Ministry of Justice, 489,602 florins from pensions, subventions, etc., 1,057,080 florins from the state debt, and 551,000 florins from various sources. The total expenditure is estimated at 760,286,793 florins, of which 4,650,000 florins are for the imperial household, 78,307 florins for the imperial Cabinet, 2,568,231 florins for the Reichsrath and Council of Ministers, 23,300 florins for the Supreme Court, 126,162,876 florins for contributions to common expenditure, 28,142,972 florins for the Ministry of the Interior, 25,196,170 florins for the Ministry of Defense, 31,473,776 florins for the Ministry of Worship and Instruction, 131,681,228 florins for the Ministry of Finance, 49,783,310 florins for the Ministry of Commerce, 107,526,190 florins for the Ministry of Railroads, 19,357,914 florins for the Ministry of Agriculture, 29,210,791 florins for the Ministry of Justice, 175,500 florins for the Board of Control, 31,693,465 florins for pensions, subventions, etc., 171,929,683 florins for the state debt, and 633,080 florins for management of the debt.

Austria's special debt amounted on July 1, 1898, to 1,470,788,879 florins, of which 1,466,528,424 florins represent consolidated debt and 4,260,555 florins floating debt. The annual charge for interest and amortization of the special debt is 74,580,058 florins.

Political Affairs.—The conflict between the Germans and the Czechs made the parliamentary session at the beginning of 1899 a constant succession of broils and tumults. The German Opposition obstructed legislative business completely from the time that the Reichsrath met on Jan. 17. Motions were made to impeach the entire Cabinet. Interpellations regarding the treatment of German students at the University of Prague were made in an interminable succession and discussed at great length. When tired of talking the obstructionists demanded a roll call on every motion that they or the Ministerialists offered. The ministry withdrew all controversial projects of legislation, including the most important bills, in the hope of accomplishing some slight part of its programme, but the Opposition prevented anything from going through, and the German constituencies gave their hearty approval to this course of action. When the court at Prague decided that the language ordinances were constitutional, the Moderate members of the German party lost all the restraining influence that they had possessed. On Jan. 27 members of the warring parties came to blows when the Czech leader Kramarz, who was vice-president of the house at the time of the suspension of a sitting by gendarmes during the Badeni administration, was interrupted in his speech with shouts of "Bring in the police!" The German factions, with the exception of the Pan-Germanic group, met to formulate their demands, and these were utterly irreconcilable with the minimum claims of the Czechs. The Government had hoped to renew the *Ausgleich* with Hungary. The Hungarian Diet till now had insisted that the new *Ausgleich* must be arranged between the two Parliaments, and the provisional extension of the old one could not be prolonged beyond the current year. The Government was compelled, however, to resort once more to the application of Article XIV of the Constitution, by which the government

can be carried on by decrees. Not only was the minority strong and aggressive, but the majority divided and wavering, so that in a snap vote the ministry found itself actually in a minority of one the day before it closed the session. The chances of a truce between the rival nationalities did not improve after the return to the mild absolutism of Article XIV, although the Social Democrats were the only ones who cried out against the reactionary and despotic character of this provisional method of government, now become chronic. The Poles and the German Clericals, who formed part of the Government majority, were growing restive under the control of the Czechs before the prorogation, and yet these, although the members of the German party who a year or so before were in favor of compromise were now united with the extremists against any concession, became more exorbitant in their demands, exciting the resentment even of the lesser nationalities, such as the Slovenes and the Italians. The Germans, as a matter of policy, were not willing to accept a compromise favorable to themselves in the language question, even if such could be obtained from the Government after prorogation, because the language ordinances were ordinary administrative decrees, but if new ones were issued while Article XIV was in force it would require an act of Parliament to repeal them. The Pan-Germanic party, headed by Herr Schönerer, began to extend its influence among the hitherto loyal Catholic peasantry, who were incensed against their Clerical leaders and the Catholic hierarchy on account of their political alliance with the Czechs. The movement took the form of wholesale conversions to the Protestant Evangelical and the Old Catholic faiths. Many of those that renounced the Roman Catholic faith for political reasons under the lead and direction of the Pan-Germanic leaders, who kept a list of persons ready at the opportune moment to announce their conversion to Protestantism, were still loyal to the dynasty, and were not ready to follow these in their ultimate plans for the separation of the German provinces from Austria and their annexation to the German Empire. The German Government gave no countenance to the Austrian separatists' designs, and prevented their finding an echo in Germany; but the conversions to Protestantism were openly aided and encouraged by the Evangelical community in Germany, although the High Consistory of the Evangelical Church in Austria adopted a hostile attitude toward the movement. There were numerous conversions in January in Linz, the chief town of Upper Austria, and more in succeeding months. In northern Bohemia a large number of German Catholics changed their religion on national grounds. The cry of "Away from Rome!" was taken up in Gratz, the capital of Styria, where not 1 per cent. of the population were Protestants. Although aristocratic ladies placed obstacles in the way of a meeting that was announced to be held in a public hall, a large assemblage gathered eventually to hear Old Catholic orators preach emancipation from Rome, until the proceedings were stopped by the police, because one of the speakers spoke of the Old Catholic movement as an expression of the spirit of German nationalism. The Peasant League of the Alpine provinces, which combined a general Agrarian programme with certain German Nationalist features, such as the adoption of German as the language of the state, a customs union with Germany, a merely personal union with Hungary, and the exclusion from Austria of Galicia, Buko-

wina, and Dalmatia, which would be erected into autonomous provinces, thus relieving the finances of the Austrian state, was suppressed by the Statthalter of Gratz on the ground that it had enrolled German subjects as members. This league was founded to resist the absorption of the small farms by the great landholders, who in upper Styria convert them into game preserves. The agitation, which was started by Baron Rokitsansky, a member of the Styrian Diet, spread through Styria, Salzburg, Upper Austria, and the German districts of other provinces wherever the peasant proprietors, whose freeholds were already heavily mortgaged, were so reduced by the general agricultural depression that thousands of farms were sold under the hammer every year. The denunciation of the league by the priests had created a prejudice against the clergy among the peasantry, and gave occasion for the adoption of the Old Catholic creed by Catholics who had no other grounds, either religious or national, for abandoning the faith to which they were as deeply attached as the priests themselves. The policy of making concessions to the Slavs at the cost of the Germans in other parts of Austria caused profound mortification even in the Tyrol, the most loyal of the Austrian provinces, where there is no Slav element. The same policy produced a similar effect among the Austro-Italian population of the coast lands. Political radicalism also gained ground in all parts of the country, and the growing distress of the peasantry made them accessible to the Social Democratic propaganda, which was not a serious danger to political institutions so long as it was confined to the industrial population. The Socialists had worked hand in hand with the anti-Clerical element in the last elections in Styria. The Government intended to issue a new decree regulating the language question under paragraph 14, but the reception of an announcement to that effect discouraged such an attempt. The Diet of Lower Austria passed a resolution approving the language ordinances as an absolute necessity in the interest of the Germans and in that of Austria, but rejecting all attempts to settle the language question through any channel but the laws of the empire. When the provincial Diet of Bohemia met on March 14 the German members remained absent. The Tyrolese Diet passed German Nationalist resolutions. In the first quarter of 1899 there were 2,600 renunciations of the Roman Catholic faith, and in succeeding months changes of religion took place at an increasing rate, but by summer the movement seemed to have spent its force. The religious movement was not a new manifestation in Bohemia, where religion and politics have already been interwoven. When the Germans controlled the Government in Austria under the Auersperg ministry many Czechs embraced the Russian Orthodox religion and built a Russian church in Prague. The Catholicism of the Czechs is of a very liberal stripe, and some of the lower clergy, preserving the Hussite tradition, have habitually been in opposition to the higher episcopal authorities. The Thun ministry has authorized the erection of a statue to John Huss in Prague to please a popular demand among the Czechs, although the Taaffe and Badeni Cabinets and the previous Liberal Cabinets, out of consideration for the Catholic clergy, refused to sanction this glorification of the Protestant national hero of the Czechs. The Germans of Bohemia have shown such indifference in religious matters that a change of faith for political reasons is an easy process for them.

Many of the Czechs, as well as the Germans, adopted the Old Catholic faith in its early days because the Old Catholics permit the marriage of the clergy and hold services in Czech or German instead of in Latin. The conversion of German Catholics to Protestantism began when the Taaffe Government granted the first concessions to the Czechs, especially when liberty of conscience in the schools was restricted in 1889. The manifestation was only sporadic at that time, but in 1899 it spread throughout the province, and whole villages went over to Protestantism. The action of the Government in canceling a grant of the anti-Semitic municipal council of Vienna of funds for the erection of a Catholic church, as well as the movement for emancipation from Rome, gave occasion for a conference of Catholic bishops at Vienna early in April, in which some of the lay Clerical leaders were permitted to take part. The highest administrative authority had, to the consternation of the Ultramontanes, declared grants of municipal funds for religious purposes to be illegal. The bishops at the conference requested the Government to transfer to the episcopacy the disposal of ecclesiastical funds. They also appealed to the Minister of Education to curb the school-teachers, who were alleged to have assumed an attitude of hostility toward the Roman Catholic Church. The Clericals bitterly reproached the Protestants for admitting as proselytes such converts as Herr Wolf, one of the Pan-Germanic leaders, and others of that party, whose ostentatious change of faith was only a demonstration in favor of the disruption of the empire. The Protestant movement extended even to Goritz, where numerous conversions took place among the Italian and Slovene population of the town. Roman Catholic Ruthenian students in Bukowina began to change their religion, in order to show their anti-Polish sentiments and leanings toward Russia, becoming members of the Greek Church.

In Hungary also, because the archbishop refused to employ the old Slav liturgy and many of the clergy lent themselves to the Magyarizing purposes of the Government, many Croatian Roman Catholics abandoned their traditional faith to join the Greek Orthodox community. The episcopacy, warned by the Protestant movement, became more chary in granting favors to the Czechs in the German provinces. There had been conversions even in Vienna, and when the Czechs desired to have services performed by their own priests for their countrymen in the capital the request was refused. The institution of a seminary for German priests in Silesia evoked clamorous remonstrances from both the Czechs and the Poles, although it is a standing grievance of the German Catholics that there are too few priests of their nationality. In Galicia, where the clergy assail the Social Democrats with extreme bitterness and accuse the teachers in the state schools of propagating irreligion, a Catholic congress at Lemberg was mobbed on May 14, necessitating the intervention of the military. The economic condition of Austrian Poland has long been such as to give cause for popular discontent, and it can be largely traced to negligence and nepotism in the semi-autonomous provincial administration, while the slackness of the educational laws has retarded the intellectual progress of the people and the indifference of the aristocracy to their welfare has turned them into sullen revolutionists. The peasant revolt toward the end of 1898, while ostensibly directed against the Jews, was in reality a protest against the permanent poverty of

the agricultural population. The landowners themselves are deeply in debt. In the early part of 1899 the Galician savings bank at Lemberg was found to be insolvent, owing to gross mismanagement, and the Diet had to make good the deficit out of the public funds to prevent a catastrophe. The German Liberal Opposition withdrew from the Diet of Lower Austria, leaving the Anti-Semitic Clerical majority in full possession. The exasperation of the socialistic working classes at the reactionary policy of the Government and the continuance of government under the emergency paragraph of the Constitution led them into noisy demonstrations and violent conflicts with the police at variance with their usual respect for order. With the clergy and the feudal nobility in control of the Government and absolutism in force, it seemed to them as though the times of Metternich were come again. A meeting of the Social Democratic party at Gratz to protest against a bill restricting municipal suffrage enacted by the Clerical Anti-Semitic majority of the Lower Austrian Diet having been broken up by the authorities on July 2, the audience mobbed the commissary of police and paraded noisily through the streets in defiance of the gendarmes who attempted to stop them. The Anti-Semitic burgomaster of Vienna was frequently threatened with violence, and conflicts occurred almost daily between the Socialists and the Anti-Semites. A violent conflict between Germans and Czechs took place in August at Cilli, Styria, where the Slovenes had arranged a Slav festival of fraternization, but the Germans drove out the Czechs who came to attend it. After a new *Ausgleich* with Hungary was concluded and promulgated in virtue of paragraph 14 and a heavy additional duty was laid on sugar the popular agitation against the Government became more uncontrollable in spite of press confiscations and the suppression of public meetings. The Socialists organized demonstrations in Vienna, Gratz, and other towns, in which cries for a republic were heard. The raising of the sugar duty from 12½ to 20 kreutzers a kilogramme and the prohibition of the sale of saccharine, a substitute much used by the poor, roused discontent even among the Czech working people. The Germans and Liberals encouraged and supported the Socialist demonstrations, and even the Anti-Semites echoed the outcry against this oppressive tax. In some of the manufacturing centers women took part in the street demonstrations, an unwonted spectacle in Austria. Hundreds of newspapers were suppressed because they denounced the imposition of the sugar duty without the sanction of Parliament as unconstitutional. Municipal councils and chambers of commerce gave their approbation to the agitation against the Government. In Salzburg blood was shed in conflicts between the populace and the military, which lasted several days. Risings occurred in Carinthia at Klagenfurt. In northern Bohemia many Germans were wounded, and some were killed in riots at Graslitz and Asch. On Sept. 23 the ministers resolved to resign in a body.

Hungary.—The Hungarian Parliament consists of a House of Magnates, in which 18 archdukes, 228 nobles, 44 archbishops, bishops, and other prelates of the Roman and Greek churches, 12 representatives of the Protestant communities, 79 life members appointed by the King or chosen by the house, 17 official members, and 3 delegates of Croatia-Slavonia, and the House of Representatives, composed of 453 members, 413 elected in Hungarian and Transylvanian towns

and rural constituencies and 40 delegates of Croatia-Slavonia. All male citizens of the age of twenty or upward who pay a certain low tax on house property, land, or income, or who have an educational qualification, are entitled to vote, the number of electors being about 1 in 18 of population.

The Cabinet of Ministers, constituted Jan. 15, 1898, was composed as follows: President of the Council and Minister *ad latus*, or near the King's person, *ad interim*, Baron Desiderius Banffy; Minister of Finance, Dr. Ladislav de Lukaacs; Minister of National Defense, Baron Geza Fejervary; Minister of the Interior, Desiderius de Perczel; Minister of Education and Ecclesiastical Affairs, Dr. Julius de Wlassics; Minister of Justice, Dr. Alexander Erdely; Minister of Industry and Commerce, Baron Ernest de Daniel; Minister of Agriculture, Dr. Ignatius de Daranyi; Minister for Croatia-Slavonia, Emerich de Josipovich.

Area and Population.—The Hungarian dominions, inclusive of Croatia and Slavonia, have an area of 125,039 square miles, with a population of 17,463,791 at the census of 1890. The number of marriages in 1897 was 151,176; of births, 765,436; of deaths, 529,020; excess of births, 219,077. About 51 per cent. of the population are Roman Catholic, 15 per cent. Greek Oriental, 10 per cent. Greek Catholic, 13 per cent. Calvinist, 7 per cent. Lutheran, and 4 per cent. Hebrew. Buda-Pesth had 617,856 inhabitants in the beginning of 1897.

Finances.—The revenue of the Government in 1897 was 556,964,000 florins, of which 511,082,000 florins were ordinary and 45,882,000 florins extraordinary receipts. The ordinary expenditure was 455,492,000 florins; transitory expenditure, 13,228,000 florins; investments, 70,019,000 florins; extraordinary expenditure, 9,392,000 florins; total, 548,131,000 florins. The total revenue for 1898 was estimated to be 498,775,291 florins, and the total expenditure 498,726,570 florins. The budget estimates for 1899 made the ordinary revenue 482,464,037 florins and the extraordinary revenue 20,839,566 florins; total, 503,303,603 florins. Of the ordinary revenue 1,502,241 florins come from the public-debt account, 1,000 florins from the Ministry *ad latus*, 3,641,888 florins from the Ministry of the Interior, 329,717,648 florins from the Ministry of Finance, 126,342,382 florins from the Ministry of Commerce, 18,091,211 florins from the Ministry of Agriculture, 1,820,667 florins from the Ministry of Instruction and Worship, 991,956 florins from the Ministry of Justice, and 355,044 florins from the Ministry of National Defense. The total ordinary expenditure for 1899 was estimated at 460,005,399 florins, transitory expenditure at 15,869,462 florins, investments at 27,389,585 florins; total, 503,264,446 florins. Of the ordinary expenditure 4,650,000 florins were required for the civil list, 78,307 florins for the Cabinet chancery, 1,783,966 florins for the Legislature, 28,318,076 for the matricular contribution to common expenses of the empire, 23,203 florins for the common pension fund, 9,044,927 florins for Hungarian pensions, 128,913,726 florins for the national debt, 13,671,340 florins for debts of guaranteed railroads acquired by the state, 293,028 florins for guaranteed railroad interest, 2,947,313 florins for other debts, 8,291,790 florins for the administration of Croatia, 153,135 florins for the Accountant General's office, 260,517 florins for the law courts, 482,815 florins for the Minister Presidency, 74,236 florins for the Ministry *ad latus*, 44,530 florins for the Ministry for Croatia,

19,600,367 florins for the Ministry of the Interior, 88,487,768 florins for the Ministry of Finance, 86,860,961 florins for the Ministry of Commerce, 19,769,585 florins for the Ministry of Agriculture, 13,111,264 florins for the Ministry of Public Instruction and Public Worship, 16,694,141 florins for the Ministry of Justice, and 16,450,404 florins for the Ministry of National Defense.

The consolidated debt of Hungary at the end of 1897 was 1,089,033,000 florins; annuities, 1,058,740,000 florins; treasury bonds, 14,891,000 florins; debts of the ministries, 65,214,000 florins; arrears unpaid, 250,067,000 florins; total indebtedness, 2,477,945,000 florins.

Cabinet Crisis.—The Clerical and Conservative Opposition in the Hungarian Parliament, supported by the dissident Liberals, prevented the transaction of any legislative business in the early part of 1899 by means of obstructive tactics with the object of forcing Baron Banffy to retire, as Dr. Wekerle, the preceding Prime Minister, had been compelled to lay down his office by machinations of the same parties. The present deadlock was not only demoralizing in a political sense and a blot on the fair fame of Hungary as one of the model parliamentary states of Europe, but it had even an injurious effect on the hitherto flourishing Hungarian trade and industry. The dissenting Liberals, under the lead of M. Szilagy and Count Julius Andrássy, had placed themselves in opposition to the Government on account of the *lex Tisza*, an enactment of Parliament giving the Government some degree of arbitrary authority in the event of the breakdown of parliamentary government, but not to the extent of the emergency paragraph of the Austrian Constitution. The Clericals desired the repeal of the civil-marriage act and other religious legislation of recent Liberal Cabinets, and objected to Baron Banffy as a Protestant and the foremost exponent of the policy of which such legislation was the outgrowth. Both they and the Liberal seceders accused the Premier of having connived at electoral corruption in the last elections. A motion was presented in the Chamber of Magnates, where the Conservatives have a majority, to solicit the exercise of the royal prerogative in putting an end to the extra-constitutional condition prevailing, but even the bishops voted against such an attempt to exert pressure on the Crown. Some of the chief men in the Clerical Conservative party, as well as the dissident Liberals, were disposed to abandon the policy of obstruction and come to terms with the Liberals in order to allow useful laws to be made on an *Ausgleich* settled with Austria, demanding only that Baron Banffy should withdraw from the ministry. Negotiations were begun in January, and were continued until the various sections of the Opposition pledged themselves not to obstruct the passage of certain urgent measures in the ministerial programme. On Feb. 23 Koloman Szell, an ex-minister, who had stood aloof from recent political conflicts until he was called to the aid of Baron Banffy to act as mediator in effecting a compromise with the Opposition, and had, as his chosen successor, taken part in the negotiations with the Austrian Government over the *Ausgleich*, took his place at the head of the Cabinet. The new ministry was constituted as follows: President of the Council and Minister of the Interior, Koloman Szell; Minister of Finance, Dr. Ladislav de Lukaacs; Minister of National Defense, Baron Geza Fejervary; Minister of Education and Worship, Dr. Julius de

Wlassics; Minister of Justice, Dr. A. Plosz; Minister of Commerce, Dr. von Hegedus; Minister of Agriculture, Dr. Ignatius de Daranyi; Minister for Croatia and Slavonia, Emerich de Josipovich. The Liberal party was strengthened by the accession of a part of the Nationalists, a section of the Opposition, which, without aiming at complete severance from Austria, as do the Kosuthites, would have the bond little more than a personal union. Their adhesion was the sign of a recession from the rigid secularist principles of the Tisza group, almost the last of whose representatives the Clericals, with whom the Nationalists had voted on the civil-marriage question, had now succeeded in driving out of the Cabinet. However, in a bill for the more effectual repression of electoral corruption a paragraph was inserted for the purpose of preventing the clergy from exercising illegitimate influence upon voters. Against this clause, in accordance with which the delivery of electoral addresses from the pulpit or the exhibition of the cross or other religious emblems at electoral meetings or polling places is sufficient to render an election invalid, the Ultramontane Clericals, under the lead of the Abbot Molnar, made a vigorous fight.

The Navigation of the Danube.—The Hungarian Government decided to impose a toll on the tonnage passing through the Iron Gates of the Danube. The Austrian and German merchants objected to the levying of such a toll, predicting that it would compel the grain trade to take the sea route. The Austrian Government

and the other riparian states of foreign governments raised a protest, in consequence of which the collection of the toll, which was to begin on May 1, was postponed, and a further investigation was promised before a final decision should be taken. The decision to confirm the tariff was announced in July, and it went into force on Sept. 1, together with regulations for the passage of vessels through the Iron Gates. The tariff is 10 kreutzers per registered ton, in addition to 9 kreutzers for every 100 kilogrammes of cargo.

Bosnia and Herzegovina.—Under a clause of the Treaty of Berlin, signed July 13, 1878, the Austro-Hungarian Government occupied the Turkish provinces of Bosnia and Herzegovina and the sanjak of Novi-Bazar, and took over the civil administration of the two provinces, which is conducted in the name of the Emperor-King by the provincial government, divided into the departments of finance, internal affairs, and justice, under the direction of the Bosnian bureau of the imperial Minister of Finance. The population of the provinces was 1,568,092 in 1895, comprising 828,190 males and 739,902 females. In religion 673,246 are Orthodox Oriental, 548,632 Mohammedan, 334,142 Roman Catholic, 8,213 Jewish, 3,596 Evangelical, and 263 of various faiths. Except the Arnauts of the south and gypsies scattered through the country, the people are of the Serbian race. The chief crop is tobacco, of which the Government has the monopoly. Dried prunes, beet sugar, and cattle are also exported. There are 431 miles of railroad.

B

BAPTISTS. The statistical tables of the Baptist churches in the United States, published in the American Baptist Yearbook for 1899, give the following numbers: Of associations, 1,633; of churches, 42,893; of ordained ministers, 28,409; of church members, 4,141,995; of Sunday schools, 24,619, with 183,338 officers and teachers and 1,726,693 pupils; of meeting houses, 18,802, with seating capacity for 2,640,066 persons; of parsonages, 1,571; increase by baptism during the year, 203,296; increase by experience and restoration, 46,941. Amount of contributions (so far as reported): For church expenses, \$9,160,319; for Sunday-school expenses, \$524,830; for State missions, \$299,536; for home missions, \$325,295; for foreign missions, \$446,614; for Bible and publication work, \$48,308; for education, \$109,027; miscellaneous contributions, \$1,021,508; total amount of contributions, \$11,927,851. Value of church property, \$83,942,243.

The 7 theological institutions returned 71 instructors and 1,100 students: 92 universities and colleges, 1,565 instructors and 23,601 students; 80 academies, seminaries, and institutes, 604 instructors and 10,433 students. In all these institutions 2,453 persons were studying for the ministry. Incomplete reports and estimates gave the theological seminaries \$2,022,662 of property, \$2,360,257 of endowment funds, and 135,883 volumes in their libraries; the universities and colleges \$22,728,760 of property, \$14,271,818 of endowments, and 873,436 volumes in libraries; and the academies, seminaries, and institutes, \$3,664,972 of property, \$1,265,158 of endowments, and 85,110 volumes in libraries.

The Yearbook gives lists of 34 Baptist charitable institutions having \$1,625,121 of property, and 127 weekly, monthly, quarterly, annual, and

special periodicals, including some in the German and Scandinavian languages.

The table of Baptists in the World gives for North America (including the United States, Canada, Mexico, Central America, and the West Indies) 44,148 churches, 29,180 ordained ministers, 4,285,093 members, and 208,976 baptisms during the year; for Europe (including Great Britain, Austria-Hungary, Belgium, Denmark, Finland, France, Germany, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, and Switzerland), 4,020 churches, 3,209 ordained ministers, 478,268 members, and 23,141 baptisms; for Asia (including Ceylon, China, India, Assam and Burmah, Japan, and Palestine), 1,602 churches, 852 ordained ministers, 119,745 members, and 8,178 baptisms; for Africa (including Central Africa and the Congo, South Africa, West Africa, and St. Helena and Cape Verde), 111 churches, 129 ordained ministers, 6,700 members, and 810 baptisms; and for Australasia, 236 churches, 169 ordained ministers, 19,261 members, and 1,252 baptisms; total for the world, 50,143 churches, 33,553 ordained ministers, 4,910,456 members, and 242,646 baptisms during the year, showing an increase over 1898 of 921 churches, 1,501 ministers, 111,332 members, and 6,312 baptisms.

Publication Society.—The seventy-fifth annual meeting of the American Baptist Publication Society was held at San Francisco, Cal., May 25 and 26. The annual report showed that the aggregate of sales for the year had been \$643,466, being a decrease of \$26,682 from the previous year. In the missionary department the receipts from invested funds and contributions by churches and individuals had been \$121,443. A deficit of \$8,464 existing at the beginning of the year had

been met from the proceeds of the gift of Mrs. Mercy M. Gray, deceased; but the income of the department had not been equal to its expenses, and another deficit of \$3,114 had been incurred.

A review of the seventy-five years' work of the society showed that 2,788 books, pamphlets, periodical tracts, etc., had been issued, and that the total amount received by the department from the beginning had been \$14,353,390. The profits accruing from publications had been applied in two directions—to the creation of a reserve or sinking fund for provision against contingencies, and to the missionary department, in behalf of whose work \$250,000 had been spent. Thirty-seven hundred and ninety agents, colporteurs, Sunday-school missionaries, and chapel-car workers had been engaged in the service of the society, through whose instrumentality 11,215 Sunday schools had been organized, 1,300 churches constituted, and 27,231 persons baptized. Resolutions were passed by the meeting expressing gratification at the complete agreement between this and the Home Mission Society concerning the prosecution of their respective works; rejoicing at the evidences of blessing upon the chapel-car work, urging a vigorous prosecution of the Bible work, and expressing sympathy "with all lovers of law, order, and decency" in efforts to prevent the seating of Brigham H. Roberts as member of the national House of Representatives from Utah.

Education Society.—The eleventh annual meeting of the American Baptist Education Society was held at San Francisco, Cal., May 24 and 25. It was represented in the report that there had been during the year a revival of activity for the endowment and better equipment of the higher institutions of learning. Grants had been made to 6 institutions, aggregating \$157,000, conditioned on their securing \$415,800 additional. Acadia University, Nova Scotia, had completed its effort to secure \$60,000 as a condition of the society's grant of \$15,000 in the previous year. On the second day of the meeting of the society a conference was held on the establishment of a theological seminary and other educational institutions in the Pacific States. An educational policy was approved, contemplating a united effort of the whole Pacific coast for the establishment of one theological seminary, two colleges—one on the north coast and one in California—for each of which an endowment of at least \$100,000 is aimed at. The American Baptist Education Society was invited to consider a plan of co-operation under which it should for a definite term of years give one dollar for every dollar raised by an institution approved by the Pacific Coast Convention to go toward constituting an irreducible endowment; the money, if the society prefers, to be held by it as a trust until the school has an endowment fund of \$100,000 if a college, or of \$50,000 if an academy.

Home Mission Society.—The sixty-seventh annual meeting of the American Baptist Home Mission Society was held in San Francisco, Cal., May 30 to June 1. The annual report showed that the debt of about \$14,000, with which the society had begun its fiscal year, April 1, 1898, had been paid, and there was now a surplus in the treasury of \$40,890, of which \$35,000 had been set aside as an emergency fund. The total receipts for the year had been \$461,802; the expenditures had been \$415,255. One thousand and ninety-two missionaries and teachers had been employed in whole or in part by the society—viz., 43 in the New England States, 84 in the Middle and Central States, 201 in the Southern States, 722 in the

Western States and Territories, 17 in Canada, 19 in Mexico, 2 in Alaska, 2 in Cuba, and 2 in Puerto Rico. Of the whole number, 300 missionaries and 12 teachers had been employed among the foreign population; 55 missionaries and 190 teachers among the colored people; 22 missionaries and 27 teachers among the Indians; 13 missionaries and 8 teachers among the Mexicans; 2 teachers among the Mormons; and 504 missionaries among Americans. The society aided in the maintenance of 31 schools established for the colored people, Indians, and Mexicans. The missionaries returned a total church membership of 52,755, 57 churches organized during the year, 1,151 Sunday schools under their care, with an aggregate attendance of 72,968 and \$87,782 of contributions.

A conference had been held in Washington, Nov. 23, 1898, between representatives of this society and those of the Home Mission Board of the Southern Baptist Convention, respecting the relations of the two bodies in Cuba and Puerto Rico, and concerning the adjustment of sectional divisions in Oklahoma and the Indian Territory. A resolution was passed expressing the sense of the conference that there should be harmony among the Baptist workers in the Indian Territory and Oklahoma, and recommending that the secretaries of the Home Mission Board and of the Home Mission Society visit those Territories and seek a basis for such harmony, with authority to associate with themselves brethren from neighboring States as advisers. A correspondence was afterward had with the corresponding secretary of the Southern Home Mission Board. Doubts were expressed by him as to the value of the visit to the Territories, and he intimated that the only solution of the question was for the Home Mission Society to withdraw its mission force from the region, and that New Mexico and Arizona should be surrendered to the Home Mission Board of the Southern Baptist Convention. Reply was made that the Home Mission Society, after fifty years' work in that region and the expenditure of half a million dollars, or about ten times the expenditure of the Southern Home Mission Board, was not prepared to consent to such an arrangement, and a plan of co-operation between the two organizations in their work in those Territories was submitted for consideration. Negotiations were terminated by the reply of the corresponding secretary of the Southern Home Mission Board that further correspondence on the subject was undesirable.

Co-operative work had been instituted with the Baptist City Mission of Chicago and with the Baptists of Detroit, Mich., with promise of excellent results; and conferences had been held with the Baptists of Buffalo, St. Louis, New York, and Brooklyn, in which definite conclusions had not yet been reached.

Missionary Union.—The eighty-fifth annual meeting of the American Baptist Missionary Union was held at San Francisco, Cal., May 29 and 30. The total receipts for the year had been \$520,995, of which sum \$103,389 had been contributed through the four Woman's Baptist Foreign Missionary Societies, and \$3,014 through the conference of German Baptist churches. The financial outcome, the Executive Committee represented in its report, had again proved disappointing, although in no previous year had more strenuous efforts been put forth to increase the income of the society. The books, when they were closed, March 31, showed a deficit of \$54,384. The year's work had been paid for, indeed, and the debt of the year 1897-'98 had been diminished by \$14,000;

but this amount of income could not be regarded as a satisfactory basis for the maintenance of the work on the scale now existing. The missions were suffering at every point, having for six years been held back from the normal advance. Only 13 new missionaries had been commissioned during the year, and the whole number now in service was less by 20 than it was four years ago. In regard to pushing missions into new fields, such as Cuba, Puerto Rico, Hawaii, and the Philippine Islands, an agreement had been made with the various foreign mission boards of the United States to proceed with due regard to the principles of comity. As to relations with sister Baptist societies, it had been early deemed important that a division of territory should be agreed upon. Accordingly, a joint committee of the Missionary Union and the American Baptist Home Mission Society had met in the fall of 1888, at New Haven, Conn., and agreed that the West Indies should be considered the legitimate field for home mission work, and the Philippine Islands and other fields contiguous to the Asiatic missions a legitimate field for foreign mission work. Among the noteworthy events of the year in existing missions were the addition of an Anglo-vernacular department to the Burman and Karen departments of the theological seminary at Insein and the opening of a new station among the savage people of the North Chin hills in connection with the Burman mission; continued numerous accessions to the churches in China; the prosecution of missionary work among the aborigines of Formosa by a native society recently organized at Sendai, Japan; and the acquisition of property at Sumba, on the Congo, from the Advent Missionary Society, which had retired from the region; while the station at Bolengi, on the Congo, had, in the reorganization of the mission, been transferred to the Foreign Christian Missionary Society.

Women's Societies.—The Women's Baptist Home Mission Society held its annual meeting at San Francisco, Cal., May 24. The annual report showed that 144 missionaries had been employed during the whole or a part of the year at 90 stations in the United States and 2 states of Mexico. The Baptist Missionary Training School had enrolled during the school year 49 students, of whom 14 were in the senior or graduating division. Work had been successfully prosecuted in the missionary training departments for colored workers in connection with Shaw University in North Carolina and Bishop College in Texas.

The twenty-first annual meeting of the Woman's American Baptist Home Missionary Society (Boston) was held in Portland, Me., May 4. The receipts for the general work had been \$36,663, and the expenditures \$35,733. For Alaska the receipts had been \$3,675, and the expenses \$4,752, the deficiency being supplied out of the general treasury.

The thirty-ninth annual meeting of the Woman's Baptist Foreign Missionary Society was held at Manchester, N. H., April 18 and 19. The treasurer reported that the total receipts of the society had been \$78,917, and the expenditures \$92,545. The net deficit, after supplying \$3,300 of the total deficit from the contingent fund, was \$10,328. The society had employed 69 missionaries in the foreign field, and had 4 young women under appointment. It sustained 390 schools, with 13,328 pupils, employed 169 Bible women, and returned 706 baptisms during the year. The report spoke of aid given to churches in Paris, France; a few stations in Burmah occupied only by women, and aggressive work carried on in all

the stations of that country; of hospital and dispensary work at Nellore and Nalgonda, India, and Banza Manteka, Africa; and of various features in the schools in India and Burmah. Kindergartens had been added to a number of mission stations.

The Woman's Baptist Foreign Missionary Society of the West at its annual meeting in 1898 returned its total receipts for the year as having been \$58,607. The report of the Home for Missionaries' Children showed receipts amounting to \$2,015, and expenditures to \$1,307. The society had 39 missionaries in Burmah, Assam, India, China, and Japan; 43 mission schools, with 113 teachers and 1,975 pupils; 66 Bible women; and 41 persons under training, with 264 baptisms reported during the year.

Young People's Union.—The ninth annual convention of the Young People's Baptist Union of America was held at Richmond, Va., July 12 to 16. Mr. John H. Chapman presided. The report of the Board of Managers represented the society as being in the third stage of its existence—the periods of the unbounded enthusiasm of a new organization and of the reaction from it having passed and the work being now to be carried on by those who are earnest and of set purpose. The past year had brought advance in some directions. The educational work was proving to be the strength of the movement. The number of examination papers in the Christian Culture Course (15,000) was larger than ever before, the increase having been mostly among the juniors, while the number of papers from seniors had fallen off. An inquiry into the subject had shown that only a limited proportion—about 180 out of 500 who pursued the course with considerable regularity and perseverance—were represented in the examination papers. A change was announced in the "Bible Readers' Course," by which in the daily Bible readings the accompanying brief comments on the several books will be replaced by a careful and comprehensive analysis of the book read and a summary of its essential religious teachings. The union was laboring under financial difficulties, for, while it was meeting its expenses, it could only make slow progress in paying its debts. The receipts and expenditures for the year were balanced at \$66,916.

Southern Baptist Convention.—A statistical table published in connection with the reports of the Southern Baptist Convention showed that there were in the region contributing to the societies of that body 18,701 churches, with 1,644,363 members; and that their contributions amounted to \$109,267, or \$14,982 less than in the previous year.

The forty-fourth meeting of the Southern Baptist Convention was held at Louisville, Ky., beginning May 12. Judge Jonathan Haralson, of Alabama, who had presided over the deliberations of the convention for ten years, declining a re-election, the Hon. William J. Northen, ex-Governor of Georgia, was chosen president. The Foreign Mission Board reported that a larger number of converts had been baptized during the past than in any previous year in its history. The total amount of contributions had been \$109,267, against \$124,249 in 1897-'98. All obligations had been met, and the board was out of debt. Fourteen new missionaries had been sent out, 13 missionaries had returned to their fields after visits to this country, 6 were now at home, and 9 had retired from service. The detailed reports from the fields represented 3 missions in China, where a Chinese Baptist Publication Soci-

ety had been organized at Canton; Mexico, where the work had been divided into a north and a south Mexican mission; Italy, where the English Baptists had turned their mission in Naples over to the board; Brazil, where the work showed a marked advance, and the line of missions extended from Manaus, on the Amazon, to São Paulo in the south, a distance of several thousand miles; and Japan. In all, the missions returned 100 churches, 140 out stations, 82 missionaries (35 men and 47 women), 27 ordained native missionaries, 101 unordained native laborers (87 men and 14 women), 845 additions by baptism, 5,347 members, 2,446 pupils in Sunday schools, 57 houses of worship, and 43 day schools, with 1,165 pupils. The contributions offered by the native members amounted to \$7,110. Of the whole number of members, 1,802 were in China, 541 in Africa, 518 in Italy, 1,091 in Mexico, 1,524 in Brazil, and 71 in Japan.

The Home Mission Board had employed (mostly in co-operation with State boards) 653 missionaries, against 467 in 1897, and returned 6,552 baptisms during the year, against 4,739 in 1897, and a total of 12,983 additions to the churches, against 9,509 in the previous year. Five hundred and twelve Sunday schools had been organized, with 14,768 teachers and pupils. The amount raised and expended on the field for home missions was \$65,819, and \$50,050 had been collected and expended in building houses of worship, making a total amount of money raised \$115,869, an increase of \$5,232 from the previous year. The whole amount of cash received by the board from the States was \$61,794. Co-operative work among the negroes was carried on in Georgia, Missouri, Kentucky, North Carolina, and Virginia. In Alabama the work had been discontinued through the withdrawal of the State board, while in South Carolina, the three years' agreement having expired, the arrangement was not continued. This co-operative work had been productive of much good in many ways, not the least of which was the increased harmony it produced between the races. The work in Cuba had been resumed, with stations at Havana, Matanzas, Cienfuegos, and several towns and cities in Santa Clara province. It was proposed to occupy Pinar del Rio, in the western province, and ultimately to cover the whole island with missions. The Woman's Missionary Union was becoming more and more helpful every year. Through its agency \$14,129 in money and the value of \$22,567 in boxes had been contributed to the board; and the women were represented in work among Germans, Mexicans, French, Chinese, and Italians. They had undertaken the charge of industrial schools among the Germans in Baltimore, and had labored with the colored people through Bible classes, industrial schools, and home instruction. The Sunday School Board reported a total income of \$67,173, of which \$61,876 were from sales of periodicals, books, etc. The whole was an advance of more than \$2,100 over the previous year. There were no unpaid balances against the board, while a credit balance remained sufficient for the beginning of the work of the new year. The board had sent out, on account of appropriations, 17,448 Bibles and Testaments, while the sale of Bibles besides was increasing every year. Books and tracts had been distributed to the value of \$3,391, and more than \$2,000 had been spent in publication, although caution had been used in exercising the privilege of publishing books and tracts. One gift of \$500 had been received as a "book endowment fund," which would be named from the wife of the donor, "the Eva Garvey Publish-

ing fund." Majority and minority reports were presented by a committee which had been appointed at the previous meeting of the convention to consider a resolution for the dissolution of the connection of the Theological Seminary at Louisville with the convention, so as to leave the institution under the unrestricted control of its trustees, and a request from the Kentucky General Association that each State interested in the seminary be permitted to elect its representatives on the Board of Trustees. The majority report recommended that the mover of the resolution be allowed to withdraw it, and the affairs relating to the seminary be left as they were. The minority report advised that the convention put itself on record as opposed to dissolving the connection between the seminary and itself, and offered reasons for preserving it, and advised that the request of the Kentucky association be not adopted. The majority report was adopted. A representative of the convention was appointed to co-operate with the deputation of the Baptists of England and Ireland in presenting a petition to the Czar in behalf of the Stundists in Russia. The convention resolved to observe the year 1900 as a year of thanksgiving, with special efforts to inform the people of the denominational life of the century, and to organize the forces of the churches for work during the coming century; and provision was made for carrying this resolve into effect. The employment of "a wise and discreet man" to work in the mountain regions of the South, establishing schools and preaching, was directed.

The annual meeting of the Southern Baptist Young People's Union was held in Louisville, Ky., May 11. The Rev. L. O. Dawson, D.D., of Tuscaloosa, Ala., presided. The report of the Executive Committee showed that there were about 2,500 unions in the South, and that they were represented in the convention by 165 enrolled delegates. Addresses were made relative to religious life and work.

The annual meeting of the Woman's Missionary Union was held at the same time with that of the Southern Baptist Convention. The union had raised \$24,153 for its work in co-operation with the Foreign Mission Board. It had instituted a system of regular correspondence to be carried on between the children of their missionaries and those of the home board, whereby they could be brought into closer relations.

Southern Baptist Theological Seminary.—The resignation of the Rev. Dr. W. H. Whitsitt as President of the Southern Baptist Theological Seminary, Louisville, Ky., and as Professor of Church History, which had been offered to them, was acted upon by the Board of Trustees of the seminary at their meeting in May. The friends of Dr. Whitsitt had desired that he should remain at the seminary, but, in view of the controversies that had been raised concerning his position on certain questions (see *Annual Cyclopædia* for 1898), had finally concluded that it would be expedient to consent to his withdrawal, voluntarily tendered. The resolution to accept his resignation was offered by one of those trustees who had acted most steadfastly in his behalf. It was divided into two parts, the first of which, accepting his resignation of the presidency of the seminary, was carried by a very large majority; while upon the second resolution, accepting the resignation of the professorship of church history, the vote was 22 to 20. In connection with this action the board adopted a minute which set forth that, "whatever differences may exist among us as to other matters, we are one in our

recognition of the exalted Christian character, rare ability, and scholastic attainments of Dr. Whitsitt, and in our appreciation of the extended and multiform services he has rendered our denomination and the cause of common Christianity during his connection with the seminary. We accord to him the utmost purity of motives and loyalty to truth, as God has given it to him to see the truth in prosecuting and publishing his researches. In parting with him, therefore, we would give him renewed assurance of our tender love for him personally, and our earnest prayer for his ever-increasing usefulness, and commend him to the confidence and fellowship of Christian people everywhere. Second, we would also have it go on record that, as we have twice before affirmed, we have not felt called upon in any way to pass upon the historical question or questions raised by Dr. Whitsitt, and that we do not, by accepting his resignation, purpose or desire to neutralize in the least the influence of those immortal principles of freedom of research and freedom of speech for which Baptists have so long and so constantly stood."

The Rev. J. P. Greene, President of William Jewell College, Liberty, Mo., was elected president of the seminary. He declining to leave the institution already under his charge, the Rev. E. Y. Mullins, D. D., of Newton Center, Mass., was chosen to the office and accepted it.

German Baptist Conferences.—These include seven conferences and a General Conference meeting every three years. At the twelfth triennial session of the General Conference, held at St. Louis, Mo., in September, 1898, reports were made concerning publication, educational work, and the care of orphans. The publication house at Cleveland, Ohio, issued one weekly and five monthly periodicals, and many books, tracts, and pamphlets. The establishment was estimated to represent a value of more than \$70,000. The academy and seminary at Rochester, N. Y., returned 5 professors, several tutors, and 53 students. Sixty-five thousand dollars—one half of the sum subscribed by German Baptists—had been secured toward a proposed endowment fund of \$100,000. The German Baptist Orphanage, which was practically owned by a single person, was surrendered to individual management, and a committee was appointed to make provision for the care of German Baptist orphans in private families.

The Baptist Congress.—The seventeenth Baptist Congress met in Pittsburgh, Pa., Nov. 14 to 16. The Rev. D. Purinton, D. D., President of Denison University, presided. In his address on the occasion of the opening of the sessions he spoke of the Baptists as standing for individualism as against sacerdotalism. They were opposed to all forms of proxy religion. They stood for dominance of truth in religion, and did not ask for any ecclesiastical authority for what they should believe as truth. The subjects on the programme of discussions were, as a rule, each treated by two writers and two speakers. The first topic, The Resurrection of the Body, was considered by Prof. James Ten Broeke, Prof. Norman Fox, the Rev. Walter Calley, and the Rev. Dr. H. C. Applegarth, from the various points of view of the speculative aspects of the question, the exposition of the Scripture teaching, the identity of the raised body, and the connection of the resurrection of the body with the redemptive work of Christ. The subject of The Improvement of Theological Education was discussed by the Rev. Dr. O. P. Eaches, the Rev. Robert McDonald, the Rev. F. G. Woods, and

Prof. E. P. Pollard; on the subject of What Constitutes Denominational Loyalty? a variety of views were expressed as to details, while an agreement appeared to exist respecting the fundamental principal of loyalty. The Rev. Dr. J. T. Christian, the Rev. Dr. A. S. Hobart, the Rev. E. W. Hunt, and Prof. S. C. Mitchell were the readers and speakers. On the subject of What is the Duty of the Church in improving the Condition of the Laboring Men? the Rev. George R. Robbins, Prof. Lee D. Dodge, and the Rev. Riley A. Vose emphasized the spiritual aspects of the question, and the Rev. Dr. T. Edwin Brown presented a view of the essential principles of the relation of the Church to social concerns. To the question, Is there a Place for Authoritative Creeds in Religion? the Rev. S. B. Batten, the Rev. Dr. H. M. Sanders, the Rev. Howard L. Jones, the Rev. J. R. Brown, and the speakers in the general discussion all offered negative answers. The last subject was The Priesthood of Believers, and was treated of by the Rev. C. H. Pendleton and the Rev. Dr. George E. Rees. The closing addresses, summarizing the results of the congress, were made by the Hon. Francis J. Torrance, the Rev. Dr. George E. Horr, and the Rev. Charles H. Dodd.

Baptists in Canada.—Chancellor O. C. Wallace gives the number of Baptist members in Canada as less than 100,000, about 50,000 of whom are in the maritime provinces, while the rest are scattered from New Brunswick to the Pacific Ocean, with about 40,000 in Ontario and 5,000 or 6,000 in Quebec, Manitoba, the Northwest Territories, and British Columbia. They have but few men of very large fortunes, and the average pay of their ministers is small. The largest salary is \$3,500; one pastor receives \$2,500, three or four \$2,000 each, about half a dozen from \$1,500 to \$2,000, a large number from \$600 to \$800, and many less. Yet competent and suitable men to fill the pulpits are not lacking. The educational institutions include Acadia University, at Wolfville, Nova Scotia, with three departments and a theological department contemplated, and about 300 students enrolled; the Feller Institute, at Grande Ligne, for the French; and MacMaster University, at Toronto, with four departments, and between 400 and 500 students; and preparations are making to establish a school in Manitoba as soon as the money can be secured. A similar purpose is entertained in British Columbia. A closer intercourse than has heretofore prevailed is developing between the Baptists of the maritime provinces and those farther west, largely through the influence of common interests in the Grande Ligne Mission and in Manitoba.

Baptists in Great Britain.—While it has been usual in compiling the numerical tables in the Baptist Handbook to supply gaps in the reported statistics of the churches in Great Britain and Ireland with estimates, based on reports from previous years or upon other information, these were dropped in the edition of 1899, and only members actually reported for the year were given, while the nonreporting churches were assigned to a separate list. From 2,697 churches were returned 355,218 members, 51,430 teachers, and 525,533 pupils in Sunday schools, 1,951 pastors in charge, and 5,111 local preachers, with 16,805 baptisms during the year. New chapels had been erected during the year in England, Ireland, and Wales, affording 14,532 sittings, at a cost of £70,059, and £47,680 additional had been expended on chapel improvements, new school-rooms, classrooms, etc. At the same time chapel debts had been paid off to the amount of £77,113.

The annual assembly of the Baptist Union of Great Britain and Ireland was held in London, beginning April 24. The Rev. Dr. John Clifford was chosen president for the year. The council reported 16,805 baptisms during the year, a higher number than in any year since 1894; an increase of 50 churches, 3 chapels, 8,438 members, 1,030 teachers, and 11,917 pupils in Sunday schools, 90 local preachers, 35 pastors in charge; £70,059 expended on new chapels, as against £42,976 in 1897; £47,680 on improvements and additions, as against £56,806; and £77,113 in removal of debt, as against £56,418. The union's income, under various heads, had been £18,390. The Ministerial College, at Dublin, had been recognized as qualifying theological students for the inscription of their names in the Handbook list of ministers. The idea of a Baptist Church house had taken shape, and the erection of a building for such purpose was intended on the site of the Kingsgate Street Church, which was to be demolished in the course of street improvements. The council had already taken measures for the institution of a special fund in honor of the coming in of the twentieth century, to be collected by the beginning of the year 1901. A resolution was adopted by the meeting instituting this fund, to be called the "Twentieth Century fund," and fixing the amount to be raised at "a quarter of a million pounds from half a million Baptists." It was further ordered that this fund should have four sections—the historic, in memoriam, Sunday-school, and young people's sections, the last section being divided so as to appertain to the Christian Endeavor and to other kindred societies. A historic roll was ordered prepared, to contain the names (if possible, subscribed by themselves) of all contributors and collectors of ten shillings and upward; that the fund be opened and the historic roll begun May 7, 1899, and the roll be closed March 31, 1901, after which no fresh names shall be received; that friends be invited to contribute to the in memoriam section in memory of their loved ones and of a Baptist ancestry, and an in memoriam roll also be formed; that both rolls contain only names of subscribers, not amounts; and that both be preserved among the historical documents at the Baptist Church House. A special committee was instituted to take charge of matters relating to this fund. The fund was allocated as follows: £125,000 for the evangelization of the country, church extension in London and large towns and cities and villages where the Baptists are not adequately represented, and where the religious need is not met by other evangelical churches; £30,000 for the assistance of the weaker churches and the maintenance of their pastors; £30,000 for the annuity fund for aged ministers and the widows of ministers; £6,000 for the establishment of scholarships to be held at some seat of learning, open to any students in the Baptist colleges who intend to enter the home ministry; not exceeding £34,000 for the erection of a Baptist Church house; and £25,000 for educational and other objects which in the judgment of the council may appear to be desirable in the interests of the denomination. While all contributions were required to be placed at the full disposal of the council, in accordance with the general provision for the allocation of the fund, the option was left to donors to assign to either "close" or "open" (communion) churches that proportion of their contribution which is allocated to the scheme of church extension. The council was authorized to unite with the Baptists of the United States and Canada in sending a deputation to the Czar of

Russia to ask for a mitigation of the sufferings of the Stundists unless there should be a favorable change; and a deputation was authorized to seek an interview with the King of Saxony in behalf of a removal of the disabilities under which Baptists in that country are placed. Resolutions were adopted congratulating the Church Missionary Society and the Religious Tract Society on their centenaries; protesting against the establishment of a state-supported Roman Catholic university for Ireland; protesting against the publication of Sunday editions of the daily newspapers; and honoring the memory of Oliver Cromwell, whose tercentenary was in celebration.

The annual meeting of the Baptist Missionary Society was held in London, April 20. The report showed that the total receipts of the society had been £75,331, or about £2,500 more than in the previous year; and the expenditure had been £71,301, an increase of £319. The review of the various mission fields as presented in the general report was interpreted as showing much cause for encouragement, especially in that it indicated a large increase in the membership of native churches.

The general receipts of the Zenana Mission for 1898 amounted to £9,921, while the expenditure exceeded the income by £728, but £300 had been contributed toward reducing this deficit. The society employed 61 missionary workers in India, with 213 native Bible women and school-teachers, and 7 European missionaries in China.

The capital of the Baptist Building fund, as reported upon at the annual meeting, April 27, stood at £51,692, and by its means 271 churches had been aided during the year in their building operations.

The income of the Bible Translation Society for 1898 was £1,246, and a small balance remained over the expenditures. The reserve fund stood at a little more than £1,600.

The autumnal session of the union was held in Leeds, beginning Sept. 27. The regular opening meeting was preceded by a meeting for the reception of fraternal deputations from other religious bodies. The Rev. Dr. Clifford presided and delivered the opening address, on the subject of *The Christ of the Coming Century*; or, *The Primitive Christian Faith in its Application to the Institutional Life of Men*. A "first *ad interim* statement" was made concerning the "Twentieth Century fund," the chief work on which, since its inauguration in May, had been preparatory organization. Every county association had unanimously and enthusiastically adopted the resolution to support it. Three hundred and ninety-six of the 2,224 churches had so far appointed their secretary for the fund, received literature, and begun their work, while only 176 churches had as yet made a financial report. The Welsh churches had conferred and promised £50,000. Irish Baptists had promised £5,006. Considerable gifts were mentioned as having been pledged by a number of English churches, besides £32,000 which had been secured at the spring meeting of the union from a few persons. A resolution was adopted pledging the assembly to put forth every effort to raise the fund. Another resolution recognized the great difficulties of her Majesty's Government in its relations with the Transvaal Republic and the great disabilities of which the Uitlanders complained, but prayed the Government to be so patient and moderate that all the world might see its desire to avoid strife in securing justice. Another resolution condemned the reconversion of Capt. Dreyfus by the French military court; and another called atten-

tion to the recommendations in the report of the Royal Commission on the Licensing Laws with regard to Sunday closing and the sale of drink to children, and urged the churches to use every means in their power to influence legislative opinion on the lines of the minority report. In an address before a public meeting the Rev. Dr. Mac-laren laid down as the "quaternion" of great principles that underlie every one of the free churches: The supremacy of Scripture and its sole authority in the doctrines and practices of every Christian church; the spirituality and consequent freedom of Christ's Church; faith, and faith only, the band of union between Christ and his people and the channel of spiritual life and spiritual blessing; and the universal priesthood of believers, carrying with it the privilege of direct access to God. At a meeting in behalf of the Missionary Society approval was given to a suggestion in favor of Sunday schools assuming the support of individual missionaries; and it was shown that 6 out of 24 missionaries and 70 out of 89 evangelists independently maintained were maintained by Sunday schools. The subject of interest in missions was also presented at the young people's meetings.

At the meeting of the Baptist Union of Ireland in June Mr. H. H. Graham, of Belfast, presiding, it was represented that the membership had doubled in ten years from 1,400; 5 self-supporting churches had been increased to 9; contributions for home-mission work had risen from £450 to £1,000 per annum; and £20,000 had been spent in the erection of new chapel buildings. An effort was resolved upon to raise a twentieth century fund with the aid of England, Scotland, Wales, and the United States, and more than £4,000 of subscriptions were already recorded. The number of baptisms during the year was given as 268.

Baptists in Jamaica.—At the annual meeting of the Baptist Union of Jamaica in March a net decrease of 317 members was returned. This result was attributed to the stringent condition of general affairs in the colony. The whole number of members was 33,638, and 24,000 pupils were enrolled in the week-day and Sunday schools. The findings of the Education Commission had not been well received.

BELGIUM, a constitutional, representative, and hereditary monarchy in western Europe. The Senate contains half as many members as there are in the lower chamber, and in addition two, three, or four from each province, according to the population, who are elected indirectly. The others are elected directly for eight years by citizens thirty years old or over. The members of the Chamber of Representatives are elected directly for four years by all citizens over twenty-five years old. Those possessing real property worth 48 francs a year, or having investments in the Belgian funds or money deposited in savings banks yielding an income of 100 francs, can vote twice; also those over thirty-five years of age who have legitimate issue or those who have diplomas from the higher educational institutions or have practiced one of the professions or filled public offices. Any one possessing three or more of these qualifications is entitled to cast three votes. The number of electors in 1897 was 1,401,951, possessing 2,141,041 votes.

The reigning sovereign is Leopold II, King of the Belgians, born April 9, 1835. The Cabinet of Ministers in the beginning of 1899 was composed of the following members: President of the Council and Minister of Finance, M. De Smet de Naey-

er; Minister of Railroads, Posts, and Telegraphs and Acting Minister of War, J. H. P. van den Peereboom; Minister of Foreign Affairs, P. de Favereau; Minister of Justice, V. Begerem; Minister of the Interior and Public Instruction, M. Schollaert; Minister of Agriculture and Public Works, L. de Bruyn; Minister of Industry and Labor, M. Nyssens.

Area and Population.—The area of Belgium is 11,373 square miles. The population on Jan. 1, 1898, was 6,586,593, comprising 3,285,543 males and 3,301,050 females. On Jan. 1, 1899, the total was 6,669,732. The number of marriages in 1897 was 54,198; of births, 190,987; of deaths, 113,502; excess of births, 77,485. The number of immigrants in 1897 was 26,878, and of emigrants 21,830. The population of Brussels at the end of 1897 was 551,011, including suburbs; of Antwerp, 271,284; of Liège, 167,305; of Ghent, 161,125.

Finances.—The revenue of the Government, ordinary and extraordinary, in 1896 was 480,940,000 francs, and the expenditure 437,608,000 francs. The budget estimate of receipts from all sources for 1899 was 435,037,428 francs. The ordinary receipts for 1898 were estimated at 388,298,598 francs, of which taxes on property were expected to produce 25,456,000 francs; personal taxes, 20,085,000 francs; trade licenses, 7,400,000 francs; mines, 600,000 francs; customs, 36,246,632 francs; excise, 52,420,297 francs; succession duties, 19,940,000 francs; registration duties, 19,900,000 francs; stamps, 6,500,000 francs; various indirect taxes, 5,771,000 francs; river and canal tolls, 1,590,000 francs; railroads, 154,000,000 francs; telegraphs, 6,880,000 francs; the post office, 13,160,020 francs; pilotage and navigation dues, 1,430,000 francs; domains and forests, 2,718,000 francs; amortization fund, securities, and national bank, 10,051,900 francs; repayments, 4,149,749 francs. The total ordinary expenditure was estimated at 385,278,702 francs, of which 114,152,253 francs were for interest and sinking fund of the national debt, 4,930,200 francs for the civil list and dotations, 21,517,990 francs for the Ministry of Justice, 2,757,065 francs for the Ministry of Foreign Affairs, 116,337,880 francs for the Ministry of Railroads, 26,378,070 francs for the Ministry of the Interior and Public Instruction, 21,773,694 francs for the Ministry of Agriculture and Public Works, 48,320,375 francs for the Ministry of War, 19,514,515 francs for the Ministry of Finance, 4,917,100 francs for the gendarmery, 2,743,560 francs for the Ministry of Industry and Labor, and 1,896,000 francs for repayments.

The debt of Belgium was raised almost exclusively for the construction of useful public works, especially railroads, and all the loans are being extinguished by means of a sinking fund. The amount of debt outstanding in 1898 was 2,346,593,476 francs, all funded at 3 per cent. In addition to this there is an old debt of 219,959,632 francs, paying 2½ per cent. interest, which was assumed by Belgium as her share upon the partition of the former kingdom of the United Netherlands. The total liabilities of the Government are therefore 2,566,593,476 francs.

The Army.—The army is recruited mostly by conscription, every Belgian being liable to serve from the age of nineteen. A part of the troops are still obtained by voluntary enlistment. The strength of the army on the peace footing was in 1898 as follows: Infantry, 1,745 officers and 27,900 men; cavalry, 304 officers and 5,760 men; artillery, 534 officers and 8,214 men; engineers, 146 officers and 1,860 men; gendarmery, 59 officers and 2,831 men; general staff, adminis-

tration, military school, train, etc., 631 officers and 1,449 men; total, 3,419 officers and 48,014 men, with 9,040 horses, besides 1,845 for the gendarmery, and 204 guns. The war strength is 4,466 officers and 143,628 men, with 25,823 horses. The civil guards, organized in the towns for the defense of the national territory, number 42,827 men.

Commerce.—The imports in the general trade for 1897 were valued at 3,090,829,820 francs, and exports at 2,837,271,890 francs. Of the imports 1,522,554,528 francs came by sea and 1,503,275,292 francs by land and river; of the exports 1,326,318,124 francs went by sea and 1,410,953,766 francs by land and river. The value of the transit trade was 1,268,800,000 francs. The imports for domestic consumption were 1,818,000,000 francs in total value; the exports of domestic produce and manufacture, 1,268,800,000 francs. The values of the principal special imports were 312,505,000 francs for cereals, 161,912,000 francs for textile materials, 102,503,000 francs for timber, 101,828,000 francs for chemical manufactures and drugs, 89,415,000 francs for mineral substances, 89,132,000 francs for metals, 83,680,000 francs for gums, resins, etc., 64,867,000 francs for hides and skins, 60,828,000 francs for coffee, 60,781,000 francs for woolen, cotton, and silk goods, 49,803,000 francs for oil seeds, 46,816,000 francs for live animals, 38,086,000 francs for coal and coke, 35,478,000 francs for animal products, 28,718,000 francs for linen, woolen, and other yarns, 25,893,000 francs for dyes and colors, 24,834,000 francs for machinery, 24,565,000 francs for wines, 16,698,000 francs for fertilizers, 13,519,000 francs for butter and margarine, and 10,217,000 francs for tobacco. The values of the chief exports of domestic produce and manufacture were 107,153,000 francs for linen, woolen, and other yarns, 90,731,000 francs for coal and coke, 84,358,000 francs for cereals, 80,168,000 francs for textile materials, 76,082,000 francs for glass, 74,961,000 francs for machinery and vehicles, 72,590,000 francs for iron, 72,135,000 francs for chemicals and drugs, 66,573,000 francs for leather and hides, 63,147,000 francs for steel, 59,382,000 francs for sugar, 55,841,000 francs for textile goods, 50,494,000 francs for mineral substances, 42,597,000 francs for zinc, 35,095,000 francs for horses, 34,519,000 francs for animal products, 28,328,000 francs for fertilizers, 26,078,000 francs for bitumen, 23,032,000 francs for dyes and colors, 21,839,000 francs for meat, and 21,179,000 francs for oil seeds.

The values in francs of the special imports from and exports to the principal foreign countries in 1897 are given in the following table:

COUNTRIES.	Imports.	Exports.
France.....	296,583,000	297,938,000
Germany.....	233,972,000	363,254,000
Great Britain.....	275,576,000	302,085,000
Netherlands.....	159,271,000	184,083,000
United States.....	231,743,000	60,436,000
Russia.....	139,165,000	40,998,000
Roumania.....	98,681,000	70,980,000

Navigation.—The number of vessels entered at the ports of Belgium during 1897 was 8,241,

of 7,971,950 tons; cleared, 8,210, of 9,727,525 tons. Of the total 4,551, of 3,023,916 tons, were entered from and 5,781, of 4,644,281 tons, cleared for English ports, and 361, of 929,991 tons, were entered from and 238, of 690,333 tons, cleared for United States ports.

The merchant navy of Belgium on Jan. 1, 1898, comprised 5 sailing vessels, of 917 tons, and 56 steamers, of 84,510 tons.

Railroads, Posts, and Telegraphs.—The length of railroads in operation on Jan. 1, 1897, was 2,851 miles, of which 2,056 miles were operated by the Government and 795 miles by companies. The number of passengers carried in 1896 on the state railroads was 82,676,592, paying 52,877,800 francs; on the companies' railroads, 24,155,216, paying 13,184,718 francs. The total receipts were 160,434,763 francs on the state railroads, and expenses 90,757,306 francs; on the companies' railroads the receipts were 43,182,882 francs, and expenses 20,429,910 francs. The total cost of the state railroads was 1,434,552,921 francs.

The post office in 1897 carried 117,848,690 private and 23,145,817 official letters, 49,420,449 postal cards, 96,456,423 printed packets, and 110,587,241 newspapers. The receipts were 21,625,862 francs; expenses, 11,141,089 francs.

The telegraph lines had in 1897 a total length of 3,955 miles, with 41,895 miles of wire. The total number of messages sent during that year was 9,448,856; receipts, 7,141,089 francs; expenses, 6,068,318 francs.

Political Events.—In the beginning of 1899 the Cabinet had under discussion an electoral reform bill for establishing uninominal voting—that is, voting for single candidates in separate districts, instead of list voting. Under the existing law the Conservative Clerical party had elected 112 Deputies, while the Opposition parties were represented by only 40—28 Socialists and 12 Liberals—yet the coalition between Socialists and Liberals was likely to change very much the composition of the Chamber, for these parties together had polled 980,000 votes in the last election, while the total number of Clerical voters was 930,000. The secession from the Clerical party of the Christian Socialists, led by the Abbé Daens, who were now affiliated with the Socialist Democrats, constituted a new and serious danger to the continued supremacy of the Conservative Clericals. The changes to be brought about by a combination of the Opposition parties would occur chiefly in the representation of the great towns. In Brussels, for instance, the 60,000 Socialists and 40,000 Liberals, voting together, could displace the whole list of 18 Clerical Deputies, who had been elected by 90,000 votes. The Socialists and Liberals denounced the proposed electoral bill as a gerrymandering device, and when it was reported that the King had approved it, as he must any bill presented by the Government, charges were made that he was influencing the Cabinet to force upon the country this unpopular measure. The demand of the Socialists was universal suffrage, on the principle of one man one vote. The Liberals, although upholding the political doctrine of universal suffrage, or at least not venturing openly to condemn a principle which Liberals everywhere make a part of their creed, were less inclined to promote its immediate realization in Belgium than were the Clericals, who would gain votes thereby from the peasantry and working classes, though the Socialists would profit most, whereas the Liberals would get no votes from the classes to be enfranchised. The last exten-

sion of the franchise gave the Clericals their preponderating strength over the Liberals, but it also made the Socialists a great party. The Cabinet had not yet come to a decision on the new electoral bill when invidious accusations were made against King Leopold such as have not infrequently been uttered to the discredit of this once popular monarch. The Prime Minister was opposed to the suggested solution of the electoral question, and when the majority of the ministers, after long deliberation, gave their approval to the plan of uninominal voting he and his colleague, M. Nyssens, Minister of Industry and Labor, tendered their resignations, which were accepted on Jan. 23. M. Van den Peereboom, Minister of War, took the premiership, while M. Liebart became Minister of Finance in succession to M. De Smet de Naeyer, and M. Cooreman was made Minister of Industry and Labor. The new Premier, a representative of the extreme Clericals, announced that the Government was not committed to the uninominal system, and would examine all the schemes for electoral reform. The question was postponed for a time. On March 29 the Socialists provoked a stormy scene in the Chamber when they interpellated the Government regarding the expulsion from Belgium of the French ex-priest Victor Charbonnel. When the president suspended the sitting the members of the Left advanced in a threatening manner against the Deputies of the Right, and, amid a deafening uproar, abusive epithets were interchanged and challenges to duels offered, while in the galleries the spectators fought with the ushers who tried to eject them and with soldiers who were called in to assist.

In the middle of April a great strike of coal miners began, extending from the Charleroi and central districts to Mons, Seraing, Liège, and other coal fields. The gendarmery of the disturbed districts was strengthened, and attempts to interfere with men at work were severely dealt with, so that tranquillity was maintained in most places where the strikers were inclined to be violent, but as a rule they were orderly. There was soon complete cessation of work in all the principal coal mines, and the industrial establishments were compelled to work with a reduced supply of coal, some of them to stop work altogether. In a very few days the situation was relieved by the arrival of large supplies from France, Germany, and Great Britain. The masters, pointing out that wages had been increased 20 per cent. in two years, offered to accept the arbitration of the agents at the mines and the workingmen inspectors. The men had no confidence in the proposed arbitration. They held out for nearly a month, but the arrival of coal from abroad in abundance compelled them to give way at last, and return to work without obtaining what they demanded. Just after the collapse of the strike the International Miners' Congress met at Brussels in the great hall of the newly opened Maison du Peuple, the clubhouse and meeting place of the Socialist Labor party. These people's houses have been erected in all the industrial towns of Belgium in connection with co-operative bakeries, which are a valuable prop to the vigorous Socialistic party in Belgium. Every member of the co-operative society, of which there are 18,000 in Brussels, is required to sign a declaration approving the programme of the party. The bakeries of the society in Brussels, distributing 220,000 loaves daily, employ 200 persons, who work eight hours, have a week's vacation every year, earn a minimum wage of 5 francs, besides 2½ per cent. of the

profits, and receive gratuitous medical attendance in sickness. These societies are the largest producers of bread in Belgium, and they have compelled the bakers to reduce the price of loaves. Some of the profits are used for political and educational purposes. More recently the Socialists have started a trade in tobacco, the entire profits of which are devoted to the election fund for Socialist candidates. The Miners' Congress, which assembled on May 22, consisted of 47 delegates, representing 1,433,000 miners in Great Britain, France, Belgium, Germany, and Austria. A vote in favor of establishing a legal eight-hour day from bank to bank was opposed only by the delegates of the 30,000 miners of Northumberland, and was carried by the 1,403,000 others. A motion from the German and Austrian delegates that the law should apply also to surface workers was carried unanimously. The congress adopted unanimously a resolution holding employers liable for all accidents, and forbidding either workmen or employers to contract themselves out of the provisions of the law.

The electoral reform proposed was an adaptation of a complex system of proportional representation that was put into force in 1892 in the Swiss canton of Ticino, and had been adopted for municipal elections in Belgium. By this plan each party puts forward a list of candidates, as many as they expect with certainty to elect, every elector having as many votes as there are seats to be filled, the upper classes in Belgium twice or thrice as many in virtue of their possessing property, education, or families. Each vote for an entire list, and for no candidate on any other, is put down as a vote for this list. When the votes are counted those candidates are declared elected who receive an absolute majority of the votes cast, and the remaining seats are apportioned by the process of a complicated arithmetical calculation among the various lists in proportion to the number of votes given for them. A number of substitutes are elected along with the regular ticket, and a part of those nominated by the victorious party also obtain seats in addition to the regular candidates, their number being regulated by the excess of the vote over the proportional vote required to seat all those on the regular list. The other supplementary candidates are held in reserve to fill vacancies caused by death or resignation. The bill was therefore intended to do away with by-elections, and in various ways was advantageous to the party in power, which might promote spurious candidatures to divide the votes of its opponents or place moderates on its regular list to be replaced later by extreme partisans from the supplementary list, as was done when this system of voting was first put in practice in Switzerland. The main grievance in the proposed bill to the Socialists and the Liberals and Radicals was that it prevented their intended alliance in such constituencies as Brussels more effectually than the uninominal system would, and that it was made applicable only to the constituencies where it would impair their chances of winning or was certain to reduce their representation, while in the smaller districts, where it would enable them to take some seats away from the Clericals, the system of voting was left unchanged. The representation of minorities was to be given, indeed, only to the few cities electing six or more Deputies—namely, Brussels, Antwerp, Ghent, Liège, and Charleroi—in which the minorities are Clericals. By abolishing second ballots it defeated the proposed coalition between the Social Democrats, the Progressists, and

the Moderate Liberals, since these parties, agreeing only in their common enmity to the Clericals, could not consistently support each other's candidates until the first ballot had proved that their own had no prospect of being elected.

Opinion was much divided on the question of establishing a minimum living wage, and, while the majority believed that one ought to be established by law sufficiently high to allow a decent existence, all agreed that this minimum must vary according to local conditions.

Toward the end of June the Government brought forward the electoral bill that had been decided upon. This embodied not the proposal for cutting up the country into single districts, but a plan advanced by M. Van den Peereboom, which he called a compromise, but which was even more obnoxious to the Socialists and Liberals, because it was more flagrantly unfair. The former proposal was withdrawn because it encountered not only the fierce resistance of the various sections of the Opposition, but was condemned by the moderate Conservatives and some even of the stricter sect. As soon as the Government bill was announced the Brussels Socialists agreed to order a general strike of the workers of the city on July 5, when the debate would begin in the Chamber. A universal strike is a political weapon that has been employed in Belgium alone, where all workers are organized in trade unions and all unions are controlled by the Labor party. It was by means of a political strike that the extension of the franchise was wrung from the Government in 1893. On June 28 a great assemblage of demonstrators surrounded the Parliament buildings and the royal palace, which was dispersed only after a sharp conflict with the gendarmery, who charged repeatedly with fixed bayonets and drawn swords. The next day the Socialists in the Chamber called the Government to account for what they described as the brutalities of the police. The Prime Minister defended his electoral scheme as being of the nature of a compromise, and said that any other would be equally liable to attack. M. Van der Velde, one of the Socialist leaders, declared that his party would call upon the people to defend themselves, and M. Lorand demanded the postponement of the electoral law, declaring that otherwise disorder would continue both in the Chamber and in the streets. M. Furnemont moved to censure the Government, and his resolution was rejected by 87 to 31 votes. The sitting was suspended, owing to the uproar that followed, and cries for a republic were raised in the crowd assembled outside as the Deputies left the hall. The Socialist members marched at the head of an immense procession, which burst through the cordons of police that blocked the way and filled the great square, where M. Van der Velde delivered a speech. In the evening a mob made a demonstration before the Ministry of War which mounted gendarmes were unable to stop, and later the crowd showered stones upon the gendarmes, who charged with drawn swords in the great square. When the people began to pull up the paving stones to use as missiles against the gendarmes, these were replaced by civic guards. The next day and evening fiercer riots took place, and the gendarmes who attempted to clear the great square used ball cartridges after several useless bayonet charges, while the rioters hurled all kinds of missiles from the streets and houses, and began throwing up barricades. Before morning the military were brought into requisition. About 100 persons were injured. On the following day

the Premier, in reply to an appeal for conciliation from the Socialists on grounds of humanity, promised to postpone action in order to study the situation. The burgomasters of Brussels, Ghent, Antwerp, and Liège declared that they could not answer for public order if the electoral bill were proceeded with. Civic guards cheered the Socialist parades, and in some places went to Socialist meetings with arms reversed in token of surrender. Regular soldiers also attended these meetings in uniform. The royal family were said to be getting ready to flee from Belgium. In Liège the entire civic guard joined the Socialists at the Maison du Peuple. Monster meetings were held by Socialists and Radicals together at Antwerp, Brussels, and other places. The workmen of the mining districts and the great factory towns agreed to join in a general strike. On July 4 Minister Van den Peereboom proposed to appoint a committee, in which all parties should be represented, to consider fresh electoral proposals. M. Theodor, an independent member, then brought forward a proposal to extend the system of full proportional representation to the whole country. M. Van der Velde, speaking for both parties of the Left, accepted the Premier's proposal to refer all electoral schemes to a committee, as this amounted to a withdrawal of the original scheme, and said that the Left consented to form part of the committee as representing the country, which had achieved a great victory. All traces of agitation disappeared as soon as the Government thus capitulated. The committee was appointed, consisting of 15 members. On July 31 it reported against the Government measures, rejecting also the other proposals submitted to it. In consequence of the committee's decision the ministers on Aug. 1 tendered their resignation, and the King called upon M. De Smet de Naeyer to form a Cabinet. This was constituted on Aug. 4 as follows: Premier and Minister of Finance and of Public Works, M. De Smet de Naeyer; Minister of the Interior, M. De Trooz; Minister of Justice, M. Van den Heuvel; Minister of War, Gen. Cousebant Alkemade; Minister of Foreign Affairs, M. De Favereau; Minister of Agriculture, Baron Van der Bruggen; Minister of Industry and Labor and provisionally of Railroads, M. Liebart. The new Premier announced the adoption of a modification of M. Theodor's proposal of complete proportional representation. Instead of allowing a party commanding a clear majority of the electoral vote of a district to elect a whole list of candidates and fill all the seats, a new system is introduced limiting the seats assigned to the proportion of votes cast by each party, thus giving minorities full proportional representation everywhere. The Government bill provided for the addition of 15 new members to the Chambers.

BOLIVIA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 18 members, elected for six years, and a House of Representatives of 64 members, elected for four years. Every male Bolivian of full age who can read and write possesses the franchise. The President is elected for four years by the vote of the nation, and is not re-eligible for the next succeeding term.

The President is Severo Fernandez Alonso, who entered upon the office on Aug. 15, 1896. The First Vice-President and President of the Congress and Senate is Dr. Rafael Peña; Second Vice-President, Dr. Genaro Sanjines. The Cabinet at the opening of 1899 was composed of the following members: Minister of Foreign Affairs

and Worship, Dr. Manuel M. Gomez; Minister of Finance, L. Gutierrez; Minister of the Interior and Justice, Macario Pinilla; Minister of Public Instruction, Colonization, Telegraphs, Public Works, and Industry, T. Valdivieto; Minister of War, J. E. Herrero.

Area and Population.—The area of Bolivia is 567,430 square miles. The population is estimated at 2,019,549, exclusive of about 250,000 uncivilized Indians. About one fourth the people are of European descent, one fourth mixed, and one half Indian.

Finances.—The revenue in 1896 was 3,566,777 bolivianos, or dollars, and the expenditure 4,264,681 bolivianos. In 1897 the revenue was 4,840,300 bolivianos, of which 2,691,723 bolivianos came from customs, 406,281 bolivianos from alcohol, 679,582 bolivianos from silver and minerals, 149,003 bolivianos from export duty on rubber and from patents, 238,890 bolivianos from postage and revenue stamps, and 149,000 bolivianos from nickel coinage. The revenue for 1898 was estimated at 5,194,593 bolivianos, and the expenditure at 5,713,897 bolivianos. The chief expenditures were 1,817,490 bolivianos for instruction and public works, 1,517,483 bolivianos for financial administration, and 1,519,218 bolivianos for the army.

The internal debt amounted in 1898 to 3,707,541 bolivianos. There was an external debt of 1,084,555 bolivianos due to Chilean creditors, having been reduced from the original sum of 6,500,000 bolivianos. For the payment of this 40 per cent. of the customs duties of the port of Arica was devoted.

The Army.—The standing army is about 2,000 strong. The National Guard is made up of all able-bodied Bolivians, who under the conscription law of 1892 are liable to serve between the ages of twenty-one and fifty in the line, the reserve, the extraordinary reserve, and the territorial guard. The total number in the army and the various reserves is reported to be 82,000 men.

Commerce and Production.—Bolivia produces enough wheat, corn, beans, and potatoes for food, and large numbers of cattle, sheep, and llamas. These last are the common beasts of burden. The wool grown in the country is made into cloth for the common people. Coffee is exported to Chili and the Argentine Republic. Sugar is grown and distilled into rum, and more is imported from Peru. Rubber is exported in increasing quantities. Cinchona and coca are also important articles of export. Bolivia is exceedingly rich in minerals, producing silver, tin, copper, lead, zinc, antimony, gold, and bismuth. The silver mined in 1894 amounted to 14,519,296 ounces. About 4,000 tons of concentrated tin ore and 2,000 tons of extracted metal are produced annually. The annual product of copper in the form of barilla is 3,000 tons. The value of the foreign trade is known only by estimates. The total imports were valued in 1897 at 24,467,100 bolivianos. The chief articles were provisions, hardware, wines and liquors, cotton, linen, woolen, and silk tissues, and apparel. The major part of the goods came from Germany, and considerable quantities from England. The total exports were valued at 23,121,320 bolivianos. The export of silver was 14,876,000 bolivianos in value; tin and bismuth, 3,821,000 bolivianos; copper, 2,650,000 bolivianos; rubber, 1,351,000 bolivianos. In addition to the reported exports, large quantities of goods are smuggled out of the country without paying duties. In addition to the above articles, wool, hides and skins, gold, coffee, cinchona bark, and coca are exported, and

rubber, the annual value of which is about 900,000 bolivianos.

Railroads, Posts, and Telegraphs.—A railroad runs from the Chilean port of Antofagasta to Uyuni, Huanchaca, and Oruro. About 500 miles are in Bolivian territory. Railroads to Peru and the Argentine Republic are projected.

The telegraph lines have a length of 2,260 miles. The post office in 1897 carried 1,983,522 internal and 516,722 international letters.

Overthrow of the Government.—An uprising against the Government of President Alonso met with success in April, 1899. The revolutionists under Col. Pando won a victory over the Government forces in a pitched battle, and when they entered Oruro the President fled over the border into Chili. A new Government was constituted immediately, and in a few days quiet was restored.

BRAZIL, a federal republic in South America. The legislative power is vested in the National Congress, consisting of a Senate of 63 members, 3 from each state and the federal district, and a House of Deputies, containing 212 members. The Senators are elected for nine years, one in each state every three years, by direct suffrage. The Deputies are elected every three years, as many for each state as it has multiples of 70,000 population. All male Brazilians able to read and write possess the franchise with the exception of soldiers in active service, members of monastic orders, and paupers and criminals. The President of the republic is elected by the direct vote of the nation for the term of four years.

The President is Dr. Manoel Ferraz de Campos Salles, who was elected for the term beginning Nov. 15, 1898. The Vice-President is Dr. Francisco Rosa e Silva. The Cabinet in the beginning of 1899 was composed of the following members: Minister of Foreign Affairs, Gen. Dionysio E. de Castro Coqueira; Minister of Finance, Dr. Bernardino de Campos; Minister of War, Gen. J. T. de Cantuaria; Minister of Industry, Marshal J. Rodriguez de Moraes Jardim; Minister of the Interior and Justice, Dr. Amaro Cavalcanti; Minister of Marine, Rear-Admiral Manoel J. Alves Barbosa.

Area and Population.—Brazil has an area of 3,209,878 square miles, with a population of 14,333,915 at the census of 1890, divided into 7,237,932 males and 7,095,983 females. The population of Rio de Janeiro was 522,651. The number of immigrants in 1896 was 157,948, of whom 96,324 were Italians, 24,154 Portuguese, 11,366 Austro-Hungarians, and 1,070 Germans.

Finances.—The revenue for 1897 was 293,223,100 milreis, and the expenditure 328,974,000 milreis. For 1898 the estimated revenue was 325,197,123 milreis; expenditure, 372,812,424 milreis. The budget estimate of revenue for 1899 was 346,164,000 milreis, of which import duties were expected to produce 222,000,000 milreis; railroads, 45,080,000 milreis; posts and telegraphs, 12,900,000 milreis; stamps, 10,000,000 milreis; waterworks of Rio de Janeiro, 2,000,000 milreis; lottery taxes, 1,000,000 milreis; tobacco duties, 2,000,000 milreis; other sources, 46,184,000 milreis. The expenditure for 1899 was estimated at 346,000,423 milreis, of which 16,009,897 milreis were allowed to the Ministry of the Interior and Justice, 1,832,412 milreis to the Ministry of Foreign Affairs, 26,439,932 milreis to the Ministry of Marine, 46,329,296 milreis to the Ministry of War, 89,464,676 milreis to the Ministry of Industry, and 165,924,210 milreis to the Ministry of Finance. The revised estimates made the total revenue 351,114,000 milreis, and expendi-

ture 328,941,000 milreis. For 1900 the general revenue is estimated at 285,498,000 milreis in currency and 19,321,000 milreis in gold; special revenue at 23,920,000 milreis in currency for the redemption fund, including an issue of 20,000,000 milreis of nickel coins, and 9,026,000 milreis in gold for the guarantee fund. The total expenditure, including funding bonds, for 1900 is estimated at 267,109,000 milreis in currency and 34,641,000 milreis in gold.

The foreign debt on Jan. 1, 1898, was £34,697,300 sterling, equal to 308,420,444 milreis. Internal loans amounted to 637,425,000 milreis, Government paper money to 439,614,276 milreis, bank notes to 315,344,330 milreis, and the floating debt to 299,473,041 milreis, making the total liabilities of the Federal Government 2,000,277,691 milreis, inclusive of the foreign debt, but not counting the Western Minas loan of £3,606,000. A new internal loan of 60,000,000 milreis at 6 per cent. and a short gold loan of £2,000,000 at 5 per cent. were raised in 1898 for the payment of the floating liabilities. The unpaid interest on the foreign loans, including railroad guarantees amounting to £1,130,000 a year, and an internal gold loan have been refunded in accordance with an arrangement made with the creditors in 1898 into a 5-per-cent. loan of £10,000,000, secured on the customhouse receipts. Another internal gold loan paying 4 per cent. has been converted into a 5-per-cent. currency loan. The sinking fund for the redemption of the foreign debt was in 1898 suspended for thirteen years. The interest on the foreign loans is 4 and $4\frac{1}{2}$ per cent.; on the domestic loans, from 4 to 6 per cent. The improved financial position in 1899 enabled the Government to purchase and destroy 40,000,000 milreis of paper money, in accordance with a promise made to foreign creditors. An exchange was effected of 4-per-cent. internal gold bonds of 1889 for 6-per-cent. currency bonds of 1897, 1,800 milreis of the latter being given for 1,000 milreis of the former. The Government also redeemed 22,000,000 milreis of treasury bills given for military and naval purposes, and negotiations were begun for the redemption of the internal gold loan of 1868. The expenses in all departments of the administration were cut down, and by this means the total expenditures were reduced 17,000,000 milreis. By abolishing the naval and military arsenals 1,200,000 milreis were saved, and by disbanding over a fifth of the military force 7,000,000 milreis.

The Army and Navy.—The active army in 1897 numbered 4,000 officers and 24,160 men. Service is obligatory on all Brazilians for three years in the active army and three years in the reserve. The gendarmerie numbers about 20,000 men. In 1898 the active army numbered 18,794 men, but in 1899 the effective was cut down to 14,824.

The naval force comprises 2 battle ships of the third class, the *Riachuelo* and *24 de Maio*, the smaller armorclads *Marshal Deodoro* and *Marshal Floriano*, the cruisers *Tamandare* and *Barrozo*, 2 smaller cruisers, 5 monitors and coast-defense vessels, 12 small cruisers and gunboats, the torpedo cruisers *Tamoyo*, *Timbira*, and *Tupy*, and 8 first-class and 6 third-class torpedo boats. The latest vessels are the *Floriano* and her sister ship, built in France, displacing only 3,162 tons, yet having 13.7 inches of Harveyized steel side armor and a battery of 2 9.4-inch guns, 2 6-inch howitzers, and 4 4.7-inch quick firers.

Commerce and Production.—The chief crop of Brazil is coffee, of which 8,000,000 to 10,000,000 bags of 60 kilogrammes are produced annually.

The state of Pernambuco produces 22,860,000 pounds of sugar annually. In Rio Grande do Sul, the great grazing state, 340,000 cattle were slaughtered in 1898. In Minas Geraes gold is mined, and in Bahia there are mines of silver, lead, zinc, iron, manganese, and copper. The iron deposits of Brazil are enormous, but they are remote from coal mines. Cotton is grown in São Paulo, Bahia, and other states, and is manufactured into cloth under a protective tariff. Rubber is exported from Pará, gathered throughout the Amazon region. The exports of merchandise in 1897 were valued at the total sum of 831,806,918 milreis. The value of imports was 671,603,280 milreis. The chief articles were cotton cloth, woollens, iron, machinery, coal, flour, cattle, jerked beef, rice, codfish, pork, lard, corn, butter, olive oil, macaroni, tea, candles, salt, petroleum, timber, wine, and spirits. On spirits, tobacco, matches, provisions, cotton and woolen cloths, drugs, and medicines the import duties range from 80 to 120 per cent.; on machinery and agricultural implements they are light. The exports of coffee were valued in 1897 at 509,190,115 milreis; of rubber, 149,691,325 milreis; of tobacco, 23,971,821 milreis; of hides, 13,427,229 milreis; of cacao, 12,757,957 milreis.

The foreign colonies in southern Brazil are an important wealth-producing element in the total population of the country. They have settled away from the seacoast in the states of Rio Grande do Sul, Santa Catarina, Paraná, and São Paulo, where the climate is temperate and an enormous area of great fertility awaits development. In the first three of these states the natural facilities of the land are favorable to cattle growing, to agriculture of all kinds, to the raising of fruits, and to various small industries, while São Paulo is noted for its coffee, and produces little else. Here in the city and country there is an Italian population exceeding 100,000, which is being constantly augmented by fresh immigration. In Rio Grande do Sul and Santa Catarina the German residents already number over 60,000, mostly settled in Blumenau and the smaller colony of Brusque, in the latter state. German colonizing companies buy up large tracts of land at low prices, which they divide into small farms, to be sold on a system of easy installments to working colonists. In Rio Grande do Sul are also many Italians. Paraná has 93 foreign colonies, and 50,000 persons have immigrated since 1860. Of this number 23,000 were Poles, 17,500 Austrians, and 7,500 Italians. The Italians are trying to establish a silk industry. Nearly all the foreigners are prosperous and contented. They have no part in the public administration, but they enjoy complete liberty and pay few or no taxes. The state of Minas Geraes contains areas on the higher plateau that are well adapted to European settlement. It produces cattle and coffee, and contains promising gold fields recently discovered in many different localities. Bahia is the seat of the diamond-mining industry of Brazil, which after a long eclipse has a prospect of revival, new diamond fields having been discovered near the source of the San Francisco river, close to the border of Minas Geraes. Bahia and Pernambuco produce coffee, sugar, and cotton—staples which flourish throughout the central parts of the republic. In the northern provinces, occupying the valley of the Amazon, are the rubber forests, supplying \$50,000,000 worth of this product in 1898. The commercial situation of Brazil has been improved by the withdrawal of a part of the inflated paper currency and the consequent rise

in exchange. Still the exchange value of the milreis, which at par would be 54 cents, was only 12 cents in 1899. Coffee, the main product of the country, was still very depressed in 1899, owing chiefly to overproduction, the world's crop of 1898 having been about 850,000 tons, of which Brazil produced 660,000 tons, while the world's requirements were only 750,000. The crop of 1899 in Brazil was almost 600,000 tons. In 1900 many new plantations will come into bearing.

Navigation.—During 1897 there were 1,274 vessels from foreign ports, of 2,146,834 tons, entered at the port of Rio de Janeiro; 948, of 1,145,706 tons, at Pernambuco; 285, of 258,368 tons, at Ceará; 189, of 260,443 tons, at Maranhão; 241, of 51,763 tons, at Rio Grande do Norte; 194, of 185,488 tons, at Parahyba; 429, of 227,713 tons, at Paranaguá; and 474, of 294,145 tons, at Rio Grande do Sul.

The merchant fleet in 1898 comprised 229 steamers, of 94,262 tons, and 344 sailing vessels, of 88,000 tons. There were 212 steamers, of 70,680 tons, and 388 sailing vessels, of 26,637 tons, employed in 1897 in the coasting trade, in which, under the law that entered into force in December, 1896, no foreign-owned vessels can participate.

Railroads, Posts, and Telegraphs.—The railroads of Brazil had on Jan. 1, 1897, a total length of 8,662 miles completed and 4,670 miles under construction, besides 4,670 miles surveyed and 8,440 miles more projected. Of the completed lines, 1,982 miles belonged to the National Government, 3,260 miles to the states, 2,430 miles to subsidized companies, and 990 miles to other companies. Of the lines under construction 880 miles belonged to the states, 3,699 miles to subsidized companies, and 384 miles to other companies. The Government usually guarantees 6 or 7 per cent. interest on the capital of the subsidized lines. The cost of the Government railroads was 257,674,937 milreis, and the sums paid to cover deficiencies in the revenue amounted to 11,118,481 milreis.

The Government telegraph lines have a total length of 10,143 miles, with 21,936 miles of wire. The number of messages sent in 1895 was 1,283,695. The receipts were estimated for 1897 at 3,600,000 milreis; expenses, 9,844,722 milreis.

The postal traffic in 1897 was 33,441,000 letters and postal cards and 37,674,000 samples and printed packets.

Political Affairs.—Before the meeting of Congress on May 3 the Brazilian Government had agreed in principle to the proposition of Great Britain to submit to arbitration the question of the boundary line between Brazil and British Guiana, and had sent Joaquim Nabuco to London to negotiate an arbitration treaty. The country had remained perfectly tranquil since Campos Salles assumed the presidency. In his message to Congress the President asked for a revision of the pension law and the creation of a law dealing with the stamp duties, which the separate states had unconstitutionally appropriated. He also proposed measures to improve the collection of customs duties and other dues. The economic and financial reconstruction of the country required the good-will and the efforts of all Brazilians. The equilibrium of the budget without the aid of fresh issues or loans and without fresh taxation, which the country could not bear, the President hoped to achieve by strict retrenchment and economies. The commercial policy to be followed was to export everything that Brazil can produce better than other countries and import everything that other countries

can produce better than can Brazil. He approved the leasing of railroads, as the small lines already leased, which gave deficits under Government management, are now under private control yielding surpluses. The income derived from the railroads already leased, together with the payment by the banks of their indebtedness and the sale of Government assets, go to constitute the redemption fund, while the guarantee fund is derived from the gold customs duties, increased 5 per cent. The President asked Congress to abrogate the law of 1875 authorizing temporary issues. When Dr. Prudente de Moraes Barros transmitted the presidency to Dr. Campos Salles in November, 1898, he had effectually broken down the system of militarism that oppressed and demoralized the country during the administrations of Deodoro da Fonseca and Floriano Peixoto, though the effort nearly cost him his life on Nov. 5, 1897, at the hands of conspirators belonging to a band of unscrupulous political opponents, who plotted to bring his reforms to an abrupt end by assassination. The bullet struck down Marshal Bittencourt, the Minister of War, instead of President Moraes. The murderers were finally sentenced on July 5, 1899, to undergo thirty years of imprisonment.

BRITISH COLUMBIA, the westernmost province of the Dominion of Canada.

Politics and Legislation.—To the Pacific coast portion of Canada 1899 was a most progressive year, and at the same time a very stormy one politically. The Legislature was opened on Jan. 6 by Lieut.-Gov. T. R. McInnes. In the "speech from the throne" he said:

"In nearly all the leading industries of the province growth and improved conditions are to be observed. The output of the coal mines largely exceeded that of the previous year. The development of the quartz mines, especially of those in Kootenay, has been most satisfactory, while a like activity to that which has occurred there, it seems probable, may soon be witnessed in the Boundary creek district, when, by the completion of the railway now in process of construction, the immense bodies of ore known to exist there can be profitably developed. On the west coasts of the mainland and island there is also every probability of considerable mining developments shortly taking place. There is also likely to be a large increase within the present year in placer and hydraulic mining operations. Already some large enterprises of this character have been put in successful operation in Cariboo and, on a small scale, in the Om'neca district; while the recent discoveries at Atlin lake, in the northern part of the province, has disclosed deposits of auriferous gravel rich in quality and spread over a large area. In anticipation of an influx of population into that region, my Government has already taken steps for the proper administration of the district. In order to conserve the natural wealth in these gold gravels for the benefit of Canadian miners and Canadian traders, a bill will be placed before you prohibiting the acquisition of placer claims by aliens. After some years of depression the outlook for the lumbering industry appears more favorable, while the enterprise of those engaged in it has opened new and large markets for the products of our forests. I regret that the past season has not been a successful one for the salmon-canning industry on the Fraser river, owing to a combination of adverse circumstances. With abundant crops and an ever-expanding home market, there is little doubt that in the future agricultural pursuits will contribute much more largely to the wealth of the province.

"A great calamity visited the city of New Westminster in the disastrous conflagration in September last. But the energies and courage of her citizens rose to the emergency, and, encouraged by the sympathy and material assistance of the people of all parts of Canada, they put forth such efforts as have already caused the city to rise from its ashes. You will be asked to pass legislation to put the civic finances on such a stable basis as will maintain the high reputation of the royal city.

"With a view to remove existing inequalities in the present system of taxation, measures will be submitted to you for the remission of that part of the tax on personal property commonly known as the mortgage tax, and for the repeal of the law requiring men working in mines for wages to hold a free miner's certificate.

"Realizing the advantages to be derived from an absolute security in the titles to land and from an easy and inexpensive system of transfers of real-estate titles, my Government will lay before you a bill to introduce into this province what is known as the Torrens system of registration, under such arrangements as will make its adoption both convenient and advantageous to the owners of the property.

"In order to open up the public domain for settlement, while securing to the province the full benefit which it should derive from such a valuable asset, you will be asked to sanction certain changes in the land act.

"For the better protection of miners in coal mines, a bill will be laid before you prohibiting the employment underground of Japanese in these mines.

"You will also be asked to consider a measure designed to afford to prospectors on lands within the boundaries of the grants to railway companies the same freedom to prospect for the precious metals as is accorded to them on Crown lands.

"My Government has given much consideration to the present financial position of the province, and to the means by which important public works can be carried out without imposing undue burdens on the taxpayers; and you will be asked to pass legislation to provide for the deficit in the revenue for the last two years, and for obligations incurred under the authority of acts already on the statute books. Also to authorize certain changes in the methods of dealing with the provincial debt and in the management of the finances, whereby it is anticipated that both the credit of the province will be enhanced and important economies be effected."

Mr. Thomas Forster, who had been for eight years a member of the Assembly, was elected Speaker. In view of the closeness of the vote, as between the Semlin ministry and possible Opposition combinations, interest centered early in the session upon the vacating of certain seats through the trial of election petitions. The Government met the difficulty by introducing a bill to the effect that no petition should be tried during the current session, and that one member in particular should be free to sit in the House for a defined period. There could be no doubt as to its unprecedented nature, and the Opposition at once proposed the following amendment:

"That legislation in the direction of staying the course of the administration of justice is vicious in principle and is subversive of law and order and good government, and is calculated to bring the administration of justice into disrepute and make the courts of law mere mandatories of the political power that may be in the ascend-

ency. It has even been opposed to proper precedent to affect pending litigation, and therefore be it resolved that interference with the trial of an election petition, and the staying of the trial thereof, is wrong in principle and unwarrantedly trespasses upon the functions of the court, and is a matter that ought not to be dealt with by any bill."

The amendment was, however, defeated on a party division of 19 to 13. The election-petition bill was eventually passed, and then one of the most important measures of the session was dealt with—the alien mining law. The terms of the bill were as follow:

"1. The act may be cited as the 'placer mining act amendment act, 1899.'

"2. Section 3 of chapter 136 of the Revised Statutes is hereby repealed, and the following substituted therefor:

"3. (1) Every person who is not less than eighteen years of age and is a British subject shall be entitled to all the rights and privileges of a free miner under this act, and shall be considered a free miner under this act upon taking out a free miner's certificate, as long as such certificate remains in force. A free miner's certificate shall not be transferable. (2) No joint-stock company or corporation shall be entitled to take out a free miner's certificate under this act unless the same has been incorporated, and not simply licensed or registered under the laws of this province; and unless such company or corporation is authorized to take out a miner's certificate by the Lieutenant Governor in Council, such authorization may at any time be canceled, and in case of such cancellation such company or corporation shall not be entitled to take out a free miner's certificate under this act, but any free miner's certificate now in force shall remain in force until its expiry. The word 'person' in this section shall include only such companies or corporations aforesaid. (3) A miner's certificate taken out by any person not authorized so to do by this section shall be null and void. (4) This section shall not affect free miners' certificates issued before the coming into force of this section; and in case any person or corporation not allowed under this section to take out a miner's certificate has, prior to the coming into force of this section, acquired any interest in any claim under the provisions of the 'placer mining act,' such license may be renewed from time to time, but such renewed certificate shall not entitle the holder thereof to hold or acquire any interest in any claim under the said 'placer mining act,' except such interest so acquired prior to the coming into force of this section. (5) No free miner, after the coming into force of this section, shall hold any claim under said 'placer mining act,' or any interest therein, as trustee or otherwise, for any person who is not a British subject or for any corporation not authorized to take out a free miner's certificate as above provided."

The measure was duly passed, and it created consternation among the American miners in the province, and was the cause of vigorous protests addressed to the governments at Ottawa, Washington, and London.

The House sat for thirty-seven working days altogether, and on the thirty-eighth day the Lieutenant Governor came down to the House and assented to 101 bills, which, including the four previously so dealt with, made 105 bills in thirty-seven days.

One of the important measures was the act to provide for the settlement of disputes as to min-

ing claims in the Bennett lake and Atlin lake mining divisions. On account of uncertainty as to the boundary between British Columbia and the Northwest Territories, and on account of the manner in which the recorder's office in the Bennett lake and Atlin lake mining division was conducted under the late Government, disputes had arisen as to the ownership of placer mining claims in those mining divisions. It was desirable that such disputes should be settled in a summary and inexpensive manner, and therefore the Government introduced the "Bennett-Atlin commission act, 1899."

Another important act, introduced by the Chief Commissioner of Lands and Works, provided for construction of roads and imposing tolls for the use of them. It is cited as the "development toll roads act, 1899," and under it the Lieutenant Governor in Council may, out of moneys borrowed for that purpose, construct public roads in any part of the province, to be known as development toll roads.

Another, and a very much needed change, was the amendment to the land act, which sought to prevent speculators from getting hold of valuable portions of the province. The "land act amendment act, 1899," provides among other things that every person desiring to purchase unsurveyed, unoccupied, and unpreserved Crown lands shall place at one angle or corner of the land to be applied for a stake or post, to be known as the initial post, and upon such initial post he shall inscribe his name and the angle represented thereby. The applicant shall give one month's notice of his intended application to purchase by a notice inserted, at the expense of the applicant, in the British Columbia Gazette and in any newspaper circulating in the district wherein such land lies. Such notice shall not include a greater area than 640 acres, and shall be dated, and state the name of the applicant, the locality, boundaries, and extent of the land applied for, and shall be posted in a conspicuous place on the land sought to be acquired and in the Government office, if any, in the district. The applicant shall also forthwith make an application (in duplicate) to the Chief Commissioner of Lands and Works to purchase the said land, and in such application shall describe, as accurately as possible, the location of the land, especially with reference to any rivers, streams, lakes, or other waters, and the applicant shall also state the purpose for which he requires the land.

It shall be the duty of the surveyor to classify the lands so surveyed as timber lands, first-class, second-class, or third-class lands, and he shall make full and accurate field notes of his survey, and upon completion of the survey shall file the notes and a report of his survey in the office of the Chief Commissioner of Lands and Works, accompanied by a statutory declaration verifying the notes, and showing the area of first-class, second-class, or third-class lands embraced in such survey; and such declaration shall also state whether in his opinion any of said land, and if so what, is likely to be required for the purpose of a town site or fishing station, and whether the granting of such land, or any of it, would prevent or hamper the development of any adjoining natural resources. The minimum price for the first-class lands shall be \$5 an acre; that of second-class lands \$2.50 an acre; and that of the third-class lands \$1 an acre. Provided, however, that the Chief Commissioner may for any reason increase the price of any lands above these prices.

The clause of the old act referring to reserves was amended so that the Lieutenant Governor in Council may at any time, by published notice signed by the Chief Commissioner of Lands and Works, reserve any lands not lawfully held by pre-emption, purchase, lease, or Crown grant for the purpose of conveying them to the Dominion Government in trust, for the use and benefit of the Indians, and may also similarly reserve any such lands for railway purposes or for such other purposes as may be deemed advisable.

The first session of the Eighth Parliament adjourned on March 2, after the following bills, among others, had been assented to in the Queen's name:

- To amend the police and prisons regulation act.
- To reduce the number of grand jurors.
- To incorporate several railway companies.
- Respecting the registration of real property.
- To amend the small debts act.
- To amend the master and servant act.
- To amend the provincial elections act.
- To incorporate the Chartered Commercial Company of Vancouver.
- To incorporate the Big Bend Transportation Company, Limited.
- To amend the escheats act, 1898.
- To amend the Constitution act.
- Respecting the Department of Mines.
- Respecting the Department of Lands and Works.
- To extend the rights of the Crown to prospect for minerals on railway lands to all free miners.
- Respecting liquor licenses.
- To amend the succession-duty act.
- To amend the assessment act.
- To amend the revenue-tax act.
- To amend the inspection of metalliferous mines act.
- To amend the mineral act.
- An act to provide for the settlement of disputes as to mining claims in the Bennett lake and Atlin lake mining divisions.
- To amend the liquor traffic regulation act.
- To amend further the placer-mining act.
- To borrow \$2,800,000 for certain purposes.
- To amend the farmers'-institutes and co-operation act.

In February a most complicated controversy took place as to jurisdiction between the provincial Government and the city of Vancouver, in connection with the leasing by the first named of Deadman's island, in Vancouver harbor, to an American manufacturer for sawmill purposes. The policy of the matter was also bitterly denounced in the city. During the same month the hottest by-election contest ever held in Victoria resulted in the return of the late Premier, J. H. Turner, and two supporters. About the same time the correspondence between the Government and Messrs. Mackenzie and Mann, refusing to carry out a contract authorized by the late Government for the construction of the Pentiction Railway, caused much angry comment and controversy.

Late in June Joseph Martin, the Attorney-General, spoke at a banquet in Rossland, and used language so gross as to be only excusable from a cause which he did not advance. It appears to have been the culmination of a series of circumstances which made it impossible for him to remain longer in the ministry, and on July 3 Mr. Semlin requested his resignation, which, after protest and a sustained effort to hold his place, even by upsetting the Government and trying to form a new one, was finally given, and he was replaced as Attorney-General by Alexander Henderson.

Mr. Martin's influence was dependent upon the labor vote, and this he continued to hold. From the time of his retirement he devoted himself to forming new combinations against the ministry, and at the end of the year Mr. Semlin was holding office by a very slight thread.

Revenue and Expenditure.—The income of the province for the year ending June 30, 1899, was \$1,434,525. The principal items were: Dominion of Canada, railway lands, \$100,000; land sales, \$104,180; free miners' certificates, \$139,756; mining receipts general, \$159,432; real-property tax, \$109,367; personal-property tax, \$112,160; revenue tax, \$84,555; mineral tax, \$36,061; registry fees, \$63,093; "Chinese restriction act, 1884," \$29,900. The expenditures amounted to \$1,764,873.81, the principal items being: Public debt, \$362,330.31; civil government (salaries), \$176,662; administration of justice (salaries), \$134,838; legislation, \$34,525; public institutions (maintenance), \$111,610; hospitals and charities, \$50,700; administration of justice (other than salaries), \$112,600; education, \$304,560; public works, \$335,698.50.

The Speaker's salary was reduced from \$1,500 and sessional allowance to \$1,000. The hospitals were placed on a different basis. Each will receive \$500 a year and 50 cents a day for each patient treated. For the protection of works on Columbia river at Revelstoke \$40,000 was put down; for the courthouse at New Westminster, \$30,000; for the courthouse at Victoria (alterations), \$12,000; for Government buildings at Atlin and other places in North Cassiar, \$10,000. The Superintendent of Education, who formerly received \$2,400 per annum, was cut down to \$1,800 this year, and instead of four inspectors three only were provided for. Provision was made for the salary of a minister of mines at \$4,000, and of the deputy minister of mines at \$150 a month. These were new officers. For a provincial exhibit at the Paris Exposition \$15,000 was set apart. On the Cariboo trunk road \$24,000 is to be expended. The capitation grant to the cities of the province for education was as follows: Victoria, \$21,500; Vancouver, \$23,500; New Westminster, \$7,000; and Nanaimo, \$8,000.

Railways.—Large sums were spent in railway construction in 1898-'99. It is understood that the Canadian Pacific Railway Company has spent more than \$9,000,000 in building the Crow's Nest Pass Railway from Fort MacLeod to Kootenay lake. This outlay, \$6,000,000 in excess of the Government subsidy, has been in a great measure local. The procuring of ties, piles, and timber and the cutting of rock and other extensive works inseparable from railway construction in mountainous districts have caused expenditures materially beneficial to the entire province and western territories. The settlers in Alberta and adjacent territories found for the first time a continuous demand for all the garden and dairy produce they could bring to market, and the ranchers found local sale for a large quantity of cattle for slaughter. The demand for supplies was felt as far as the coast cities, and added materially to the boom that came with the Klondike migration.

The Boundary Creek Railway is another extensive work now under way, and it is estimated that the cost of the main line and its branches to the mines will exceed \$4,500,000. The building of this line along the Boundary creek and Kettle river valley has been undertaken without subsidy or other public aid. Along the line of construction the mining towns have felt the stimulating effect of these large expenditures, and the

sudden growth peculiar to mining regions has assumed a more permanent and substantial aspect. With the best modern appliances for construction work, the cost of the Crow's Nest Pass Railway has reached, according to reliable statements, \$28,000 a mile. In addition to these outlays, the Canadian Pacific Railway Company has built wharves at Nelson and at the railway terminus at the foot of Kootenay Lake. They have also established a steamer and barge service between these points, thus filling in the gap in the new route from the east into the mining districts of southern British Columbia.

Provincial Timber.—Mr. R. J. Skinner, Timber Inspector, in his annual report shows that the timber and cord wood cut on Crown lands during the eleven months ending Nov. 30, 1898, and not including that from Dominion lands and Esquimalt and Nanaimo Railway lands, was 70,755,866 feet; on timber leaseholds, 42,192,178; total, 112,948,044 feet, on which \$56,473.83 was paid in royalty. On private property, not subject to royalty, the cut was 11,598,614 feet, making the grand total cut 124,546,658. The estimated amount of royalty to be allowed for rebate on exportation was \$18,775.54. The net royalty on timber then would be \$37,698.29; to which must be added \$11,883.61, royalty collected on cord wood, making the total net royalty \$49,581.90. Add to this rental accruing from timber leases in 1898, \$46,012.29; special licenses (86 at \$50), \$4,300; and general licenses, \$6,210, and the total net revenue from timber sources is seen to be \$106,104.29.

Land Returns.—The total number of pre-emption records issued in 1898 was 467, against 462 in 1897; certificates of improvement, 144, against 204; certificates of purchase, 765, against 977; Crown grants, 951, against 766; the total acreage deeded was 371,394, against 609,597 in 1897; while 9,126 letters were received by the department, against 8,034 in the previous year.

Conservative Platform.—For the first time in the history of the province it has been decided to conduct elections on straight party lines, and the following is a summary of the Conservative platform as adopted at a large convention in New Westminster, Oct. 6, 1899: Approval of the principle of the eight-hour law; state ownership of railways; revision of voters' lists; aid in the construction of trails; official inspection of hoisting gear; to improve the administration of justice; to provide an effective system for settlement of disputes between capital and labor; to aid in agricultural development; to have the fisheries controlled by the province; to make the London agency of British Columbia effective; that indigent laborers be discouraged from seeking work in British Columbia; that servant girls be encouraged to immigrate to British Columbia; that mining be actively aided; that medical men and hospitals be aided in the interior; that the system of education be improved.

Salmon Canning.—There was a large falling off in the salmon pack in 1898. Irksome and frequently changing fishery regulations, coupled with the enforcement of the collection of duty on fish from United States waters, were detrimental to the fisheries in British Columbia, while these difficulties acted as a stimulus to the industry on Puget Sound, where last year the pack was double that of Fraser river. Still keener competition is feared from this quarter in future, owing to the easier conditions prevailing, the large amount of fresh capital recently invested, and the activity and forethought of the state fisheries authorities in propagating salmon. During

the season of 1898 only 443,085 cases of salmon (approximately) were put up, against 1,015,477 cases during 1897, by the British Columbia canneries. The duty on fish caught on the American side in traps (one half cent a pound) was enforced during the season, and led to large business being done in salmon canning on Puget Sound, where the catch was 244,700 cases.

Shipping.—The Canadian Pacific Railway steamers to the Orient continued to carry full cargoes, and the Australian outgoing traffic increased largely. Shipping on the coast during the first part of 1898 was very lively, but afterward became dull. This, of course, was due to the time that Klondikers selected for going into that country. During the season steamers left almost every day for the Yukon ports. Deep-sea vessels other than the regular mail steamers were few in 1898 compared with other years, owing largely to the smallness of the salmon catch.

Agriculture.—The importance of this interest continued to advance with the larger home markets growing up in the mining and coast towns of the province. The area of land under cultivation has increased considerably, and in hops, fruit growing, and general farming there has been material progress. The dairy industry, with the improved methods recently introduced, has become quite important, and a good market is found for all the butter and cheese produced. Cattle raising, from the improved prices prevailing, is increasing, and a ready market within the province readily absorbs all produce placed upon it, besides a large import of mutton from Australia. Tobacco has been grown with marked success in Okanagan valley.

Mines and Minerals.—The Rossland Miner, in a review of the local work in 1898, says that the year had seen the installation of the heaviest machinery ever operated in British Columbia: "The period has passed when small temporary plants would suffice in operating the mines here, and immense works are being erected. In point of size, the new electrical hoist and gallows frame at the War Eagle is the largest. It will cost, complete, \$80,000. The Mascot has a new electrical compressor of seven-drill capacity. The Deer Park has put in a seven-drill compressor costing \$10,000. The No. 1 has been equipped with a hoist and an outfit costing \$5,000, while the Great Western has been similarly equipped. The Nickel Plate has been provided with a compressor costing \$12,000. The Velvet is contracting for a complete new power outfit that will cost \$5,000, and the Umatilla group on Sophia mountain is putting in power. The Le Roi and the Center Star have each put in complete new hoisting plants. The heavy machinery either erected or contracted for in the past year amounts in value to \$150,000. Exactly 1,033 men are employed in 28 of the more important properties over Rossland camp. Other properties will employ about 200 men more, which will make the mining pay roll of the camp 1,200 men. On the average of \$100 a month, the mines disburse \$120,000 every pay day, or \$1,440,000 a year. The increase in the pay roll in the past year has been nearly 100 per cent."

In 1898 the value of British Columbia's production of coal was \$3,407,595; of gold, \$2,939,852; of silver, \$3,272,289.

Chinese-Japanese Legislation.—In 1897 the Turner Government passed a measure prohibiting immigration of Japanese or Chinese into the province, and in February, 1899, the Semlin Government passed 14 bills granting company charters that expressly excluded laborers of either of

these nationalities. The Imperial Government requested the Dominion Government to veto these measures out of consideration for the friendly relations which it was desired to have with Japan, though it was intimated that no objection would be offered to similar legislation affecting the Chinese alone. Of course there was a storm in labor circles in British Columbia, and the Government at first threatened to pass the legislation again. But in July Sir Wilfrid Laurier gave in Ottawa a fair explanation of the whole matter, which it was generally felt must prevail. He described the difference between the two nationalities, and closed with the following words: "It will not do for us as British subjects only to sing 'God save the Queen,' and boast our British connection at banquets and celebrations; we must also be prepared to make some sacrifices. I know I do not in this Chamber utter sentiments which are mine alone when I say all should be prepared and ready to make every sacrifice which our imperial connection may demand at our hands. If we are to share the glory and participate in the advantages, we must also assume the duties, and be ready for them. These are the reasons which have actuated the Government in relation to this question."

The Chinese labor question is one of the great problems of the province, and the feeling is very strong. The position may therefore be briefly defined. At the census of 1881, the year in which taxation was first imposed on Chinese landing in the province, the Chinese population amounted to 5,004 persons, which fell to 4,542 in 1886, and further to 4,444 in 1891. In April, 1896, the local census revealed a further fall to 3,711. During the period 1881 to 1896 the poll tax was \$50 a head; and this seemed sufficient for the purpose of preventing a large influx of the Chinese, except for the circumstance that in 1894 and 1895 the arrivals shown by the customs returns were found to have been somewhat more than the departures. In 1896 the Chinese immigrants act amendment act raised the poll tax to \$500, and limited the number of Chinese passengers that may be carried by vessels to one for every 200 tons burden. This act was to remain in force only until the Asiatic restriction act, 1896, which was reserved for her Majesty's assent, and was afterward vetoed, should come into operation. In 1896 the amount paid by the Chinese as poll tax was \$6,350, and in 1897 the sum was \$1,200.

Miscellaneous.—The burning of New Westminster evoked wide sympathy, and more than \$50,000 came to the relief fund. The city was soon rebuilt, although the losses, after deducting insurance, were nearly half a million dollars. In May it seemed as if the Pacific cable scheme, in which the province naturally took great interest, was in danger of falling through, and the ministry promptly made an offer in behalf of British Columbia to bear one ninth of the entire cost. The arrangement was ultimately completed.

BULGARIA, a principality in eastern Europe under the suzerainty of Turkey, formerly a Turkish province. It was created an autonomous tributary principality by the Treaty of Berlin, signed July 13, 1878. Eastern Roumelia, created an autonomous province under a governor general nominated by the Sultan, rebelled in 1885 and proclaimed its union with Bulgaria, which was virtually sanctioned by the Sultan when, after a conference of representatives of the signatory powers, he issued a firman on April 6, 1886, confiding the administration to the Prince of Bulgaria, and appointing him Governor General.

The legislative power is vested in the Sobranje, a single Chamber containing 157 members, 1 to every 20,000 inhabitants, elected for five years by manhood suffrage. A Great Sobranje of 300 members, specially elected, is summoned when an amendment of the Constitution, the succession to the throne, the appointment of a regency, or the cession or annexation of territory is in question.

The reigning Prince is Ferdinand, Duke of Saxony, the youngest son of Prince August of Saxe-Coburg-Gotha and of Princess Clementine of Bourbon-Orleans, daughter of Louis Philippe, King of the French. He was elected by the Great Sobranje on July 7, 1887, after the deposition of Prince Alexander of Battenberg, and was finally recognized by the signatory powers in March, 1896. The heir to the throne is Boris, born Jan. 30, 1894, son of Prince Ferdinand and Princess Marie Louise of Bourbon, daughter of Robert, Duke of Parma. Prince Boris was baptized a Roman Catholic, but on Feb. 14, 1896, was received into the Greek Orthodox Church. The Cabinet of ministers in the beginning of 1899, first constituted on Sept. 7, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs and of Worship, Dr. C. Stoiloff; Minister of Finance, Theodor Theodoroff; Minister of Justice, G. Zgureff; Minister of the Interior, N. Beneff; Minister of Public Instruction, Ivan Vazoff; Minister of War, Col. N. Ivanoff; Minister of Public Works and Ways and Communications, J. Madjaroff; Minister of Commerce and Agriculture, C. Velitchoff.

Area and Population.—The area of Bulgaria proper is 24,380 square miles, and that of Eastern Roumelia, or South Bulgaria, is 13,700 square miles. The population of South Bulgaria at the census of Jan. 1, 1893, was 998,431; that of the whole of Bulgaria was 3,310,713, comprising 2,504,336 Bulgars, 569,728 Turks, 62,628 Roumanians, 58,518 Greeks, 52,132 gypsies, 27,531 Spanish-speaking Jews, 16,290 Tartars, 6,445 Armenians, 3,620 Austrians and Germans, 1,221 Albanians, 928 Russians, 905 Bohemians, 818 Serbs, 803 Italians, and 3,820 of other nationalities. Sofia, the capital city, has 46,593 inhabitants; Philippopolis, the capital of Eastern Roumelia, 41,068. The number of marriages in 1895 was 31,230; of births, 138,338; of deaths, 90,210; excess of births, 48,128.

Finances.—The revenue was estimated for 1898 at 84,445,713 francs, and expenditure at 84,487,975 francs. For 1899 the direct taxes were expected to yield 33,836,000 francs, and indirect taxes 32,451,000 francs. The estimated requirements for the public debt were 20,934,146 francs; for the army, 22,623,224 francs; for the interior, 7,860,501 francs; for instruction, 7,548,555 francs; for public works, 6,731,693 francs.

The public debt consists of a loan of 41,290,000 francs for the purchase of the Varna and Rustchuk Railroad effected in 1888, 26,975,000 francs of the loan of 1889, and 98,825,000 francs borrowed under the loan act of 1892, besides 9,699,256 francs of the Russian occupation debt and 5,826,875 francs due to the Turkish Government. The Eastern Roumelian tribute was assumed by Bulgaria, but the Bulgarian tribute to the Porte and Bulgaria's share of the Turkish debt have never been fixed. In December, 1898, the Sobranje authorized a 5-per-cent. loan of 290,000,000 francs for the purpose of converting all categories of the national debt into a uniform debt.

The Army.—Military service is obligatory on all Bulgarians from the age of twenty. Mohamedans may pay for exemption, and on those

who are physically incapable of bearing arms a military tax is levied. Out of 40,000 young men called up annually about 16,000 are drawn by lot for active service. The nominal strength of the army in 1898 was 2,500 officers and 40,555 men, with 7,400 horses. The war effective is 126,970 men, with 23,432 horses and 312 guns. The infantry weapon is the Mannlicher repeating rifle of 8 millimetres bore. The artillery is armed with Krupp and Creuzot guns.

Commerce and Production.—The chief article of export is wheat. Other exports are live animals, woolen cloth, attar of roses, skins, cheese, eggs, silk cocoons, timber, and tobacco. The imports are textiles, metal goods, machinery, groceries, petroleum, paper, coal, salt, and fish. The total value of the imports in 1897 was 83,994,236 lei, or francs, against 76,530,278 lei in 1896; of the exports, 83,994,236 lei against 108,739,977 lei. The distribution of the commerce in 1897 is shown in the following table, giving values in francs, or lei:

COUNTRIES.	Imports.	Exports.
Great Britain	23,077,913	17,293,824
Austria	21,614,362	3,600,351
Turkey	9,488,518	10,935,194
Germany	10,623,657	7,784,811
France	4,117,603	8,505,413
Belgium	2,367,079	5,128,891
Russia	4,209,018	74,684
Italy	3,158,751	753,691
Roumania	2,296,595	365,898
Greece	2,405,086	1,042,851
Servia	1,085,954	256,351
Switzerland	936,301	7,000
United States	328,525	17,354
Other countries	281,274	4,024,198
Total	83,994,236	59,790,511

Navigation.—During 1897 there were 8,306 vessels entered at Bulgarian ports, of 2,432,282 tons, and 8,298 cleared, of 2,434,875 tons.

Railroads, Posts, and Telegraphs.—The length of railroads open for traffic in 1898 was 612 miles, and 457 miles were building.

The post office forwarded 18,783,017 pieces of mail matter during 1897. The state telegraph lines had a total length of 3,250 miles, with 6,910 miles of wire. The length of telephone wire was 1,028 miles. The number of telegraphic dispatches sent during 1897 was 2,316,826. The receipts from the post office and telegraphs were 3,013,003 francs; expenses, 3,352,259 francs.

Political Events.—Differences between Prince Ferdinand and his ministers concerning the railroad and financial policy of the Government led to the resignation of M. Stoiloff and his colleagues on Jan. 28, 1899. M. Grekoff was intrusted with the formation of a coalition ministry, which he accomplished on Jan. 31, after his first negotiations with M. Radoslavoff led to nothing, and M. Stoiloff had declined to undertake to reconstitute the Cabinet, and M. Radoslavoff had failed to get one together independently. Finally, M. Radoslavoff consented to take office under M. Grekoff with three of his followers and four members belonging to no special groups. The arrangement was completed on the day of the death of the Princess of Bulgaria, Marie Louise of Bourbon, Princess of Parma, who had been a conspicuous figure in Bulgarian politics at the time when, against her desire, her son was baptized into the Greek faith, but who had since won the respect and admiration of the Bulgarians by her quiet and affable demeanor and her multitudinous charities. The new Cabinet was constituted as follows: Premier

and Minister of Foreign Affairs, M. Grekoff; Minister of the Interior, M. Radoslavoff; Minister of Public Instruction, M. Ivantchoff; Minister of Public Works, M. Tontcheff; Minister of Finance, M. Teneff; Minister of Commerce and Agriculture, M. Natchovich; Minister of Justice, M. Pesheff; Minister of War, Col. Paprikoff. The cause of the fall of M. Stoiloff's Cabinet was a bill passed through the Sobranje sanctioning the transfer to the Bulgarian Government of that part of the European railroad system of Turkey which passes through the principality. The contract itself encountered much opposition from residents of certain districts through which they wished the Government to build a competitive line. An arrangement was also concluded for the conversion of all the Bulgarian railroad loans. The haste of the Government in stipulating that the transfer of the railroad should take effect on Feb. 1 incensed its opponents the more. In the bill it was made dependent on the sanction of the Porte, and when M. Stoiloff and his colleagues expressed a determination to carry out the agreement with the Eastern Railroad Company even if the Porte should fail to sanction it before Feb. 1, or, indeed, should withhold its approval altogether, the Prince intervened in the controversy to prevent a possible conflict with Turkey. The Ministers of Finance and the Interior first offered their resignations, and then the Cabinet as a whole. The country at this time was suffering from a severe financial crisis, for which the Stoiloff Cabinet was held to be responsible. The new Cabinet proceeded with the negotiations with the Porte relative to the railroad lease. The Turkish Government raised difficulties, and in the end the proposed lease fell through. The agitation in favor of Macedonian emancipation had been revived in Bulgaria, and in Macedonia the Bulgarian propaganda and the rivalries between the Bulgarian, Servian, Greek, and Roumanian schools and languages produced unusual excitement. The new Bulgarian ministry was not disposed to countenance the resuscitation of the Macedonian question, the less so because it had to face serious financial difficulties, and was at a loss where to find the funds to meet the obligations of the Government. It opened negotiations with the Eastern Railroad Company for the transference to it of the sections of the parallel line already built for the purpose of forcing the company in self-defense to cede to the Government the Bul-

garian section of its railroad system, thus terminating the conflict into which the Stoiloff Cabinet had plunged with this powerful company, composed of the German and Austrian bankers who had undertaken the loan of 1892. In addition to the parallel railroad the late ministry had begun the construction of other railroads and of harbors at Varna and Bourgas, a programme greatly in excess of the present financial means of the Government. The ministry of M. Grekoff thus found these unfinished works on its hands, and had to meet at once a debt of nearly 50,000,000 francs. The parallel railroad, on which 4,000,000 francs had been expended, it was decided to abandon if the part constructed could not be sold to the company. Of the other unfinished constructions only the almost completed railroads connecting Sofia with Shumla and Rustchuk with Tirnova and the harbor works at Varna and Bourgas would be proceeded with. Peace having been made with the syndicate of foreign bankers, these were willing to help the Government out of its immediate difficulties with an advance of 5,000,000 francs, with the option of loaning 45,000,000 francs later at the price of 87 per cent., with interest at 6 per cent. The Bulgarian Government pledged itself to repay 15,000,000 francs obtained in recent years, and the syndicate undertook to carry out the conversion of the national debt, including the recent loan of 28,000,000 francs, by the creation of a unified 5-per-cent. loan of 200,000,000 francs, to be taken at 89½ per cent. This arrangement was concluded early in March. On May 7 a new Sobranje was elected, in which the Ministerialists obtained 104 seats and the various groups of the Opposition 53. The submission of the Government to the foreign syndicate, from whose control over the railroad communications and public finances the people hoped to be emancipated, created much indignation, and produced a situation that was almost revolutionary. The Stambuloff group in the Sobranje withdrew its support from the Government. The Prince was made the object of violent attacks, and these led to restrictions on the liberty of the press. The Government obtained an additional loan from the syndicate in May, but this was not sufficient to relieve its needs. The salaries of officials were months in arrears for the first time since Bulgaria became a nation, and the scarcity of money was acutely felt throughout the country.

C

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; and 1,208,130 in 1890. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, Henry T. Gage; Lieutenant Governor, Jacob H. Neff; Secretary of State, Charles F. Curry; Comptroller, Edward P. Colgan; Treasurer, Truman Reeves; Attorney-General, Tiley L. Ford; Surveyor-General, Martin J. Wright; Superintendent of Public Instruction, Thomas J. Kirk; Superintendent of Printing, Alfred J. Johnston; Adjutant General, W. H. Seaman; Commissioner of Labor, F. V. Meyers; Railroad Commissioners, E. B. Edson, C.

S. Laumeister, N. Blackstock; Board of Equalization, Alexander Brown, R. H. Beamer, Thomas O. Toland, and J. C. Edwards, who died, and was succeeded in May by Lewis H. Brown; Commissioners of the Supreme Court, H. S. Foote, Wheaton A. Gray, and E. J. Pringle, who died, and was succeeded in May by James A. Cooper; Building and Loan Commissioner, Frank H. Gould; Bank Commissioners, John Markley, A. W. Barrett, and B. D. Murphy; Chief Justice of the Supreme Court, W. H. Beatty; Associate Justices, T. B. McFarland, C. H. Garoutte, R. C. Harrison, Walter Van Dyke, F. W. Henshaw, Jackson Temple; Clerk, George W. Root. The officers elected in 1898 were chosen on the Republican ticket, excepting T. O. Toland and Walter Van Dyke, who were candidates of the Fusionists. Justice Temple is a Democrat.

Finances.—The balance on hand June 30, 1898, in the general fund was \$2,001,093. The aggregate valuation of real estate of the counties this year was \$667,722,881; the value of improvements on real estate, \$264,881,957; of personal property, \$164,070,620; of money and solvent credits, \$50,694,940; the value of railroads as assessed by the State Board of Equalization, \$46,394,275; total valuation, \$1,193,764,673. The original assessed value of mortgages was \$160,860,992; the assessed value of university and other State mortgages, \$1,249,000. The rate of State taxation is 60.1 cents. The funded debts of the counties amount to \$3,663,400; and their floating debts, with the estimated interest, \$116,846. The State has claims against the General Government aggregating more than \$4,000,000, for furnishing, equipping, and paying volunteers during the civil war.

Education.—The number of children between five and seventeen years of age entitling towns to receive State school money is 347,624; the amount apportioned for the semiannual payment in January was \$2,044,029.12; the amount for each child, \$5.88. The number of children has increased during the year by 6,672. In July \$1,032,443.28 was apportioned, giving \$2.97 for each child.

The regents of the university proposed to charge tuition fees in order to avoid the annual deficit of about \$50,000, but afterward decided upon a registration tax; but in July it seems to have been finally concluded to do away with the tax altogether. Dr. Benjamin Ide Wheeler was chosen president in June, and accepted on the condition that the regents should recognize the president's right to make all appointments in the faculty; to be the sole means of communication between the faculty and the regents; to recommend all professors and instructors for promotion; and, especially, his entire power in the matter of salaries; also, that when the regents shall have decided upon any measure by a majority vote the board shall give its entire support to the measure without factional opposition. Dr. Wheeler took charge at the opening of the college year, and was inaugurated Oct. 25. The first prize of \$10,000 for plans for the buildings which it is hoped will some time arise on the university grounds was awarded to Architect Benard, of Paris. The other four prizes were won by American architects—Howells, Stokes & Hornbostel, of New York; Desphanelles & Stephen Codman, of Boston; Howard & Cauldwell, of New York; and Lord, Hewlett & Hull, of New York—in the order given. M. Benard's plans show "a hall for every art and science, two gymnasiums, and a splendid amphitheater for races and games. Toward the bay, where the grounds are now entered through the botanical garden, are two large open spaces or parks, which give a fine and airy appearance to the design. One of these vast squares is in front of the main educational building, devoted to pedagogy, philosophy, jurisprudence, and half a dozen other departments of intellectual work. Toward the south are the gymnasiums, one for men and one for women, and the tribunes for the athletic sports. These tribunes are so planned that crowds may easily be handled, two streets and an entrance through the gymnasium serving as outlets. The military building and the parade ground are set off above the portion sacred to athletics. On the hill above the general building are placed all the natural-history buildings, with an isolated infirmary at the farthest edge of the grounds. The dormitories and clubhouses are near the gymnasium, while the public parts of the university, the

museums, lecture rooms, and the two auditoriums, are placed where they will be conveniently accessible to the public. The portions of the university with which the general public has little to do are placed behind these other portions farther up the hill, while on the highest ground of all, crowning the entire scheme, stands the observatory. A thing that won special favor in Benard's plan was the fact that the French architect made notable use of all the natural advantages of the site, which he never has seen. He has preserved in a remarkable degree the creeks and forests of the grounds. This was one of the things specially desired, and in the Benard plan the oaks, the creeks, and the hills are left almost unchanged."

Stanford University received from Mrs. Stanford, in May, personal property in stocks and bonds to the market value of \$10,000,000, and real estate in different parts of California amounting in value to \$317,000. At the meeting of the trustees at which the deeds were given Mrs. Stanford made an address, in which she expressed her wishes as to the future management of the university. She wished the number of women allowed to attend to be limited to 500. The percentage of woman students has been steadily increasing. In 1891-'92 there were 559 students, of whom 25.4 per cent. were women; in 1898-'99 the total was 1,153, and the percentage of women was 41. This provision caused great surprise, and the president of the university gave the following explanation:

"This action of Mrs. Stanford simply follows the original plans of the construction of the university, and is in no sense a criticism of the scholarship or character of the young women attending here. The presence of young women has never kept away any young man whose attendance was desired. It was Mrs. Stanford's idea before the university opened that about one fourth of the students would be women. This was the percentage during the first years of college, but the number has gradually increased, showing that Mrs. Stanford did not foresee how popular the university would become with women students.

"I have no sympathy with the view that the presence of women lessens college spirit. College spirit that will not show itself before girls is not a desirable additional feature of college life. There is no foundation for the statement that any legitimate activity in athletics is checked by the presence of women.

"In all probability, there will be no occasion for taking any action in this matter for a year or so. There are now about 460 women in the university, and the number who have just gone out will about balance the number entering next September. The probable solution of the matter will be that women will be admitted to the upper classes only.

"I wish to emphasize again the fact that this action is in no way meant as a criticism of the women students, but is simply the carrying out of Mrs. Stanford's wish—that the university be, primarily, for men."

Charities and Corrections.—The Reform School for Boys, at Preston, provides for 141 inmates, at a yearly cost for each of \$338.

The managers of the Stockton Asylum for the Insane have leased 324 acres of reclaimed land for a farm to be worked by such of the patients as are strong enough and are not dangerous.

Serious scandals have arisen in regard to the management of some of the State institutions, in reference to which the Governor was reported,

Aug. 1, to have said: "I have received a partial report of past conditions of affairs at some of these State institutions, and the facts have shocked me. It is frightful that servants of the people, paid out of the public treasury to maintain decency, to say the least, have shown such utter disregard of the importance of their duties. I intend to investigate the conduct of every public institution in the State. Several have already been inspected and privately overhauled by my orders without the knowledge of those in charge, and something will drop as soon as I return to Sacramento. It makes my blood boil when I think of some of these things." As a consequence of the investigation at the Agnews Asylum, the superintendent was dismissed on charges of immorality and two of the doctors for incompetency.

The Legislature was asked to make more stringent laws in order to stop the trade in opium at San Quentin prison. Guards were accused of smuggling in the drug for the use of convicts.

From a confession by one of the prisoners in March it was learned that a conspiracy had been formed to kill the guards and effect a wholesale delivery of prisoners, and on investigation the directors were convinced that the matter had not been exaggerated. Later, in May, a murderous assault was made upon one of the guards by a life prisoner. In view of these and instances of assaults by convicts upon their fellow-prisoners, the directors ruled that hereafter when a convict is found with a deadly weapon in his possession he shall be kept in solitary confinement for the rest of his term, even though that term be for his natural life. This went into operation, and in July seven men were undergoing this awful punishment—the man who assaulted the guard and the leaders of the conspiracy above mentioned. Four of them are life prisoners.

Railroads.—The right of the Railroad Commissioners to regulate the fares and freight charges of the Southern Pacific road has been the subject of litigation since 1895, in which year the board sought to establish a reduction of 8 per cent. in grain rates. The suit was dismissed on motion of the railroad company in May, the commissioners of this year having rescinded the action of their predecessors. A new schedule made by the commissioners, June 12, was resisted by the company, and threatened to bring on further litigation. The reductions were estimated to amount on the average to about 2 per cent.

The fruit growers of the State, having failed to get what they deemed fair and just rates from the owners of lines of refrigerator cars, formed an organization and determined to establish an independent line owned or controlled by the orchardists of the State.

A San Francisco newspaper makes the following comparison between the assessed value of railroad and other property: In 1884, when the mileage of the State was 2,721, the assessed value of railroad property was \$50,746,500. Last year, when the number of miles operated exceeded 4,400, the Board of Equalization assessed the railroads of the State at \$44,457,473. In the first-named year (1884) the assessed value of all other than railroad property was \$770,364,265. In 1898 it had increased to \$1,086,426,224. It is impossible that the value of other property than that belonging to the railroads should have increased 28 per cent., while that of the corporations declined 14 per cent. The value of the railroads was placed in 1899 for assessment at \$46,394,375.

Banks.—According to the report of the Bank Commissioners, the bank deposits in the State have increased during the past two years by the sum of \$50,000,000. The increase is not confined to any one locality, but has been distributed in almost equal proportions among commercial, national, and savings banks in city and country alike. The deposits in the savings banks of San Francisco amounted to \$113,294,213 at the date of the report, a gain of \$6,961,372.35 over the previous year; the deposits of interior savings banks aggregated \$37,648,949.60, an increase of \$2,862,565.33 for the year. The showing of the commercial banks incorporated under State laws is equally good, those of San Francisco exhibiting a gain of \$6,195,663.91 in deposits over those of the preceding year, and totaling \$40,677,836.57. The interior commercial banks had deposits to the amount of \$36,946,850.63, this being \$4,204,627.06 in excess of the preceding year. In addition to the above the national banks held deposits amounting to \$31,858,489.22, the increase in the past year being \$4,010,150.67. These figures, when aggregated, present a grand total of \$258,864,395.47, and an increase in one year of \$24,155,111.31.

The Union Savings Bank of San José was closed Jan. 30, and was declared insolvent. The County Bank at San Luis Obispo, the Commercial Bank of the same place, and the Bank of Paso Robles closed in March. The latter two were permitted later to resume. The Bank of Mendocino, at Ukiah, was closed in May.

Water Supply.—The Los Angeles Times published in August the results of an exhaustive inquiry into the recent development of a water supply in southern California. The Times prints reports from all the irrigated districts there, by which it appears that since the drought began a systematic search for water has been made, with a result that during twelve months past 30 inches have been added to the previous total. Of this, 10,797 inches are credited to Los Angeles County, 3,77 to San Bernardino County, 3,175 to Riverside County, 12 to Orange County, and 5 to San Diego County. In the case of the latter county the Times says that about 2 inches have been developed from wells, but that the permanent output is one fourth that. The estimates are the result of personal inspection by a member of the Times's staff, who traveled thousands of miles on his zigzag rounds of inquiry.

A convention for the conservation of the flood waters of the State was held in November. Resolutions were adopted, which were summarized in the statement that the convention favors the storage of flood waters by the National Government to the extent that such aid can be had by the State when national aid fails, and by private enterprise if both fail; the leasing of the public grazing lands is favored, and the inclusion in forest reserves of all public timber land lying about the head waters of our streams. The convention concluded its labors with the creation of a water and forest association, which is to be provided with an adequate income and is to labor for the measures which have received the approval of the convention.

Products.—The State's output of gold in 1898 was somewhat larger than that of 1897, and the yield of silver somewhat smaller. The estimate of gold produced was about \$14,833,721; of silver, \$414,055. The copper industry is growing, especially in Shasta and Siskiyou Counties. Shasta's copper product amounted to \$2,465,830. The value of the oil produced is placed at more than \$7,000,000 a year. The entire mineral product of

the State in 1898 was valued at \$27,289,079, more than \$2,000,000 above that of 1897.

The yield of oranges was about 12,000 car loads of 12 tons each, and that of lemons 2,500 car loads. These sold at wholesale and in auction rooms for \$11,018,125. About 25,000 tons of beet sugar were made. The fruit pack was approximately 2,000,000 cases, or about 50,000,000 cans. The dairy product was estimated at 23,391,128 pounds of butter and 5,148,372 of cheese. The estimated quantity of dry wines was 12,000,000 gallons; of sweet wines, 7,000,000; and of brandy for ten months, 1,050,000 gallons. The raisin crop was about 70,000,000 pounds. The prune crop was much smaller than usual, amounting to about 55,000,000 pounds by the lowest estimate. Only about one third of the usual wheat crop was raised—9,666,666 bushels.

San Francisco.—The number of manufacturing in the city during the year ending March 1 was 1,846; employees, 32,104; and the value of the product, \$77,189,116. The total transactions of the Clearing House in 1899 were estimated at \$985,000,000. The largest amount of clearings heretofore was that of 1891—\$892,426,713. The imports in 1899 to the port amounted to \$35,747,535.

Coulterville.—This mining town, in Mariposa County, was destroyed by fire in July—the third time it has suffered in this way.

San Pedro Harbor.—The beginning of work on the breakwater designed to make San Pedro a harbor of commerce and refuge was celebrated, April 26, by a jubilee, attended by about 20,000 people. The first load of rock was dumped by electric agency set in motion by the President at Washington.

Randsburg.—This mining district was organized Dec. 20, 1895. In 1896 it produced gold amounting to between \$200,000 and \$300,000; in 1897, \$500,000; in 1898, \$1,125,000. Recent developments are said to warrant expectation that when the account is made for 1899 it will show \$3,000,000. This was one of the most desolate regions in the West four years ago. A recent observer reports that the ore chamber of the Yellow Aster mine is already 40 feet high, and as many broad, without finding the outside terminus of the ledge in any direction. The excavation is too large to be timbered, and the owners are to put the mill in the mine, in the heart of the mountain. It is the intention to begin on top of the mountain and remove the whole mountain down to the ore bed.

Legislative Session.—The Legislature was in session from Jan. 2 till March 19. Thomas Flint was chosen President *pro tem.* of the Senate, and Frank L. Brandon secretary. Howard E. Wright was elected Speaker of the House, Alden Anderson Speaker *pro tem.*, and C. W. Kyle chief clerk.

A successor was to be chosen to United States Senator Stephen M. White. After a prolonged and bitter contest adjournment was had without an election, 104 ballots having been taken. The Republicans had 85 votes on joint ballot, the Democrats about 32. Republican candidates were Ulysses S. Grant, Daniel M. Burns, W. H. L. Barnes, Irving M. Scott, Robert N. Bulla, George A. Knight, Thomas R. Bard, and others; there was no caucus candidate. Democrats voted for Senator White, John Rosenfeldt, and others. D. M. Burns, to whom there was strong opposition on the ground that he was understood to be the candidate of the Southern Pacific Railroad Company, held about 30 votes only, but the opposition was not united. The final ballot stood: Grant, 30; Burns, 30; Barnes, 18; Scott, 4; Pat-

terson, 4; Estee, 1; White, 24; Phelan, 6; Rosenfeldt, 2; De Vries, 1. Charges of corruption having been made in connection with the vote for Senator, an investigation was ordered by a committee of the Assembly, whose report was filed Jan. 27. The findings of the committee were that the Speaker of the Assembly, Howard E. Wright, had received aid in his election to the Legislature or to the speakership from the friends of at least three of the candidates for the senatorship on the expressed or implied promise of his vote and support, and that he had secured the support of the San Francisco Call by leading the owner and the manager to believe that he was wholly unpledged. In regard to the charge that money was unlawfully expended for the election of Ulysses S. Grant, the report declared that Milton J. Green had spent a large amount of money to secure the election of Republicans to the Legislature, presumably to aid in the election of U. S. Grant to the senatorship. The report concluded:

"That, in view of the above findings of fact, your committee recommends: That the conduct of Howard E. Wright, Speaker of the Assembly, as above set forth, be held to be reprehensible in an extreme degree, and that no mere censure on the part of the Assembly can meet the requirements of justice.

"That the expenditure of large sums of money in aid of the candidacy of a United States Senator in the manner above set forth is wrong and reprehensible, in that it is calculated to corrupt morals, to debauch the political system, to deter poor men of ability from entering upon a senatorial campaign, and to give to the rich an unwarranted and unjustifiable advantage over men of equal ability and qualifications, but of limited means; that the receiving of money by legislative candidates from probable senatorial candidates, either directly or indirectly, in aid of their own candidacy, is reprehensible for the same reasons."

In consequence of this report the Speaker resigned, Jan. 30. Alden Anderson, Speaker *pro tem.*, was elected to the vacancy, and F. E. Dunlap to Mr. Anderson's place. A resolution to expel the ex-Speaker was defeated by a vote of 60 to 10. The affair was ended, March 9, by the dismissal of the contempt proceedings against M. J. Green. A bill was passed prohibiting candidates for the United States Senate from assisting directly or indirectly with money or property in the election of candidates for the State Legislature, on the expressed or implied promise that their votes shall be given to the senatorial candidate, and making the acceptance as well as the giving of such money or property a felony.

The bills introduced in the Assembly numbered 1,015; in the Senate, 750.

Several measures changing the regulations for election were carried. The form of the Australian ballot was altered by one of these, the chief provision of which requires that the names of the nominees of the different parties shall be printed in parallel columns, each column to be headed in display type by the name of the party whose candidates are listed therein. It does not follow the plan of permitting the voter to affix a mark under the party designation, and thus vote the straight ticket, but requires a mark to be placed opposite the name of each candidate voted for. The order in which the party names are to go on the ballot shall be directed by the Secretary of State, precedence to be given to the party which polled the highest vote at the previous State election. The purpose of the bill is to get the names of the candidates of each party together

as they used to be before the Australian ballot system went into effect.

Another of these measures states that a general primary election for all parties under the Australian ballot system is to be held in each county on a specified day previous to the conventions. It makes the primary mandatory, permitting nominations to be made only by conventions made up of delegates chosen under its provisions.

Provision was made for the punishment of offenses against the primary-election law. Other election enactments provided that, instead of printed registers, the signed affidavits that citizens make when registering shall be used by the precinct boards at the polls; ordered the posting outside the polling place of the result of the count there by the precinct election board before adjournment; and directed that the count of votes be continued each day, Sundays and holidays excepted, and for not less than six hours each day, until completed. Provision was made for the holding of municipal elections in odd-numbered years, as prescribed by the new San Francisco charter, and for special elections to choose boards of freeholders or to vote on charters or charter amendments.

An act was passed intended to repeal the State mining law relating to locations, and leave the United States law alone in force. The act has been supposed to have missed its design because by its wording it did not repeal the law of 1897, which was clearly its intent.

By the terms of the "anticartoon law" it is made unlawful to publish in any newspaper, handbill, poster, book, or serial publication or supplement thereto the portrait of any living person, a resident of California, other than that of a person holding a public office in this State, without his written consent. The only exception is the portrait of a person convicted of a crime. The act also prohibits the caricaturing of residents of California. In its sweep it includes offenses of publications made outside of California.

The so-called "signature bill" provides that "every article, statement, or editorial contained in any newspaper or other printed publication printed or published in this State, which by writing or printing tends to blacken the memory of one who is dead, or to impeach the honesty, integrity, virtue, or reputation, or publish the natural or alleged defects of one who is alive, and thereby expose him or her to public hatred, contempt, or ridicule, must be supplemented by the true name of the writer of such article, statement, or editorial, signed or printed at the end thereof." Owners or publishers of newspapers are made liable to a forfeit of \$1,000 for every such article published unsigned, half of which is to go to the State treasury and half to the plaintiff in the action. If the libel is in a book, it is sufficient if the author's name is on the title page. If it is in telegraphic news not furnished by the newspaper's own correspondent, but by a news agency, it is enough to have the name of the agency printed in connection with the dispatch.

A railroad consolidation act was passed, providing that "any railroad corporation owning any railroad in this State may sell, convey, and transfer its property and franchises, or any part thereof, to any other railroad corporation, whether organized under the laws of this State or of any other State or Territory, or under any act of Congress; and any such railroad corporation receiving such conveyance may hold and operate extensions and branches thereof, and do

any other business in connection therewith, as fully and effectually to all intents and purposes as if such corporation were organized under the laws of this State." This measure will have the effect of permitting the Santa Fé to operate its system as a whole and purchase the line from Mohave to the Colorado river, as it could not under former laws. Opposition was made to the bill on the ground that it would permit the Southern Pacific of Kentucky to carry out its scheme of combining the Central Pacific and the Southern Pacific for the purpose of reorganizing the same and making a foreign corporation of them, and remove the Southern and Central Pacific beyond the pale of the State's authority and enable the Southern Pacific to reorganize the roads on such a basis that their overcapitalization will result in heavily taxing the commerce of the State. City and town authorities were authorized to grant franchises to railroad corporations for construction of piers and wharves for terminal facilities, without offering the franchise for sale.

The new charter of San Francisco, which was adopted by popular vote at the spring election of 1898, was approved by the Legislature. It was afterward attacked in the courts on the ground that the elections were not conducted strictly according to law. Decision in the Superior Court was in favor of the charter, and appeal was taken to the Supreme Court.

By another act it was provided that no action against the State or its officers for percentages to the counties for collecting taxes can be maintained. This does away with threatened suits by which the State was in danger of being compelled to pay the counties an amount estimated at \$1,500,000. More than 40 of the counties had agreed to pay the law firms proposing to bring the suits from 25 to 50 per cent. of the amounts recovered. The claim made was, that an act of 1893, which was supposed to repeal a law of 1871-'72 providing for commissions to be paid to the auditors and assessors of the counties for collecting the State's portion of the taxes, was invalid because it received only 20 out of 40 votes in the Senate—not a majority, as appeared from the journal of that date. The Governor said in his message that he had examined the original roll call, and was satisfied that 21 Senators had voted in the affirmative, but one name was omitted by mistake in the printing.

A section of the political code was amended so as to provide for assessment for taxation of stock in national banks, though other bank stock is not taxed; but other banks are taxed for personal property, while national banks are exempt from such taxation under United States laws. A suit was brought in July to test the validity of the act.

A stringent law was made for protection of trade marks. Measures in the interest of farmers and horticulturists provide for prevention of the sale of process or renovated butter, for inspection of dairies and dairy stock, for a horticultural quarantine officer and a quarantine of diseased trees, cuttings, and fruit, and for the destruction of diseased shipments. It was provided that every commission merchant, agent, factor, or broker who deals in farm produce, poultry, grain, seeds, fruit, honey, or dairy products shall give a \$10,000 bond to the people of the State of California to insure the fulfillment of his contracts with consignors.

The office of State veterinarian was created. His salary is limited to \$2,000 and his expenses to \$500 a year, and he is to have an assistant

appointed by the Governor. This law was designed for the benefit of the cattle raisers of the State, who were injured by the establishment by the United States authorities of a quarantine line along the entire eastern border of California, over which cattle could not pass into Nevada. The State veterinarian is to determine from time to time with the Governor's approval the quarantine and other regulations necessary to prevent the spread among domestic animals of any malignant, contagious, or infectious disease found to exist among live stock, and he shall to that end co-operate with and obtain the assent of the United States authorities to the establishment or changing of quarantine lines.

New school laws provided for fire escapes on all schoolhouses more than one story in height; for the setting apart of a teachers' salary fund each year; for the establishment of kindergartens, grammar and evening schools, and the employment of superintendents in counties of the fifth class; and amended the law on the teachers' annuity and retirement fund. An appropriation was made for a State normal school in San Francisco. The State normal schools are each again to have a board of five trustees, exclusive of the Governor and Superintendent of Public Instruction. There is also to be a joint board, to be composed of the chairman and two other members of each local board. It shall meet in succession at San José, Chico, Los Angeles, and San Diego. An appropriation of \$45,000 was made for the completion of the San Diego Normal School.

The Adjutant General and others were authorized to examine the tracts of land offered for a camp of instruction at Santa Cruz, and select one if they thought best. A bill for reorganizing the National Guard was vetoed.

Other acts were:

Providing that State officers must pay for the printing, ruling, and binding done for them out of the funds granted for that purpose; and all work must be authorized by the State examiner.

Making it a misdemeanor to desecrate the United States flag by printing on it or attaching to it any advertisement.

Making it a misdemeanor to keep a book from a public library for thirty days after notice to return has been served.

Making it a misdemeanor to wear, unless entitled to, the badge, button, or other insignia of any organization.

Requiring the payment into the State treasury of all moneys belonging to the State received by institutions, commissions, and officers, and providing for the disbursement of all State moneys at the capital.

Requiring that street cars be provided with fenders and brakes.

Changing the boundary between Shasta and Lassen Counties.

The office of expert to the Comptroller was created; also that of Lake Tahoe road commissioner. The Supreme Court Commission was continued for two years, and the office of Commissioner of Public Works was continued, the annual salary being fixed at \$2,500.

The collateral inheritance tax law was amended so as to make it apply to legacies left to brothers, sisters, nieces, and nephews, who were formerly exempt.

It was enacted that "any person not authorized by law who brings into either of the State prisons of the State of California, or any reformatories therein, or within the grounds of such institutions, any opium, morphine, cocaine, or other

narcotics, or any intoxicating liquors of any kind whatever, or firearms, weapons, or explosives of any kind, is guilty of a felony, and upon conviction thereof shall be punished by imprisonment in the State prison for a term not less than one nor more than five years, and shall be disqualified from holding any State office or position in the employ of this State."

The following is a new section of the penal code: "Any appraiser appointed by virtue of section 1444 of the Civil Code of Procedure, who shall accept fees, reward, or compensation other than that provided for by law from any executor, administrator, trustee, legatee, next of kin, or heir of any decedent, or from any other person, is guilty of a misdemeanor."

Another section prohibits all prize fights, but permits sparring exhibitions not to exceed a limited number of rounds with gloves of not less than five ounces each in weight by a domestic incorporated athletic club upon the prepayment by such club of an annual license, to be fixed by the supervisors of each county; provided, that such club shall have a physician in attendance to examine the boxers prior to each exhibition, and determine whether they are in perfect physical condition.

By an amendment to the political code the trusts and estates created for the founding, endowment, and maintenance of Stanford University are confirmed, and power is granted to the trustees to receive property, wherever situated, for the university, and the Legislature may by special act exempt any or all of the university property from taxation. This provision made it possible for Mrs. Stanford to endow the university as noticed under "Education" in this article. The law before amendment did not allow an educational institution to accept such gifts.

Twenty-three constitutional amendments were proposed in the Senate, and 25 in the Assembly. Among those that were passed was one to exempt from taxation all bonds hereafter issued by the State or by any county, city and county, municipal corporation, or district in the State. Another exempts from taxation all buildings and so much of the real property on which they are situated as may be required for the convenient use and occupation of said buildings when the same are used solely and exclusively for religious worship, but property rented for religious purposes will not be exempt. Still another provides that each Superior Court judge may appoint a competent stenographer for his court, who shall hold office during good behavior, and whose salary shall be paid by the State. His fees for transcription are payable in criminal cases by the county, and in civil cases by the party ordering the transcript. The salaries and fees are to be fixed by law. Another proposition is to amend so as to allow the payment of claims against San Francisco incurred in 1892-'93, amounting to \$210,000.

The general appropriation bill carried items for State officers, bureaus, and district agricultural societies, etc., amounting to \$5,056,944. The tax levy for the two following fiscal years will be \$12,096,494, including \$4,866,680 for the school fund, \$800,000 for orphans, half orphans, and abandoned children, and \$282,870 for interest and sinking fund. The cost of the legislative session was \$170,533, exclusive of the printing. The State printing office spent \$96,000 or more, the larger part of which was for work for the two houses.

The Governor vetoed a bill to make the golden poppy the State flower, and the Assembly voted to pass it over the veto, a proposition which re-

ceived but two votes in the Senate. A large number of bills failed to receive the approval of the executive. Many of these were appropriations, amounting in the aggregate to over \$800,000. Among the larger appropriations vetoed were \$250,000 for the San Francisco exposition, \$100,000 for the improvement of San Diego harbor, \$43,000 for buildings for the State University, \$25,000 for Lake Tahoe wagon road, \$31,000 for improvements at Mendocino Hospital, \$30,000 for improvements at Whittier School, \$20,000 for cottages at the Home for Feeble-minded Children, \$25,000 for a macadamized road between Sacramento and Folsom, \$100,000 for Oakland harbor, and \$7,500 for a well on the Capitol grounds. A bill to issue bonds for \$1,000,000 to complete the San Francisco sea wall was vetoed; one granting suffrage to women at school elections; one to create a State board of charities; others to create a free employment bureau to regulate the practice of horseshoeing, to regulate the practice of dental surgery, to suppress employment agencies, compelling banks to furnish sworn statements of funds on hand, and fixing the legal rate of interest at 6 per cent.

Earthquake.—Early in the morning of Dec. 25 a large part of southern California was shaken by an earthquake. The center of the disturbance was at San Jacinto, Riverside County, and the undulations continued about twelve seconds. Many buildings were damaged, and some walls and chimneys fell. It was reported that six squaws were killed on the Sabota reservation.

CANADA, DOMINION OF, a federated group of British provinces in North America.

Government and Politics.—The House of Commons was opened at Ottawa, March 16, 1899, by the Earl of Minto, Governor General of Canada, with the usual formalities. The speech from the throne, outlining the Government policy for the session, contained these passages:

"The negotiations which were set on foot during the recess between her Majesty's Government and that of the United States in reference to the settlement of certain questions in dispute between Canada and the latter country were, I grieve to say, greatly delayed by the illness and subsequent death of two of the most eminent members of the commission appointed for that purpose. Considerable progress has been made on several of the subjects submitted, but a serious disagreement arose between her Majesty's commissioners and the commissioners of the United States on the question of the delimitation of the boundary between Canada and Alaska. The question was referred by the commissioners to their respective governments, the commission being adjourned to the second day of August next, in the hope that in the meantime the difficulty might be overcome.

"I observe with pleasure that the mother country, Canada, and other British possessions have recently adopted a penny-postage letter rate. The satisfaction with which this action has been received by the Canadian people is a further proof of the general desire existing among our people for closer relations with the mother country and the rest of the empire. I am also glad to be able to state that the satisfactory condition of the finances of the country permitted a reduction, on Jan. 1 last, of the Canadian domestic letter rate from three to two cents, and, although such reduction involves a temporary loss of revenue, it is, nevertheless, confidently expected that the cheapened rate will prove of such service in the promotion of trade and in the general interchange of correspondence that,

within a reasonable time, the revenue of the Post-office Department will be restored to its former figure.

"Much information has been obtained since you last met relative to the extent and value of the deposits of gold and valuable minerals in the Yukon and other parts of Canada. The returns from the Yukon have so far proved sufficient to meet the heavy expenditure it was found necessary to incur for the purpose of preserving law and order, and it has been thought expedient in the public interest to authorize the construction of a line of telegraph for the purpose of maintaining speedy communication with the people of those distant territories. A measure will be submitted to you for the better arrangement of the electoral districts throughout the Dominion, as also several enactments of less importance."

THE EARL OF MINTO, GOVERNOR GENERAL OF CANADA.

Sir James D. Edgar was re-elected Speaker of the House, and upon his death, later in the session, Mr. Thomas Bain was chosen to succeed him. The following resolution was introduced by the Government in favor of reforming the constitution of the appointive Senate—which was largely opposed to them in politics—but was subsequently withdrawn:

"That an humble address be presented to her Majesty the Queen setting forth that the provisions of the British North America act, 1867, respecting the powers of the Senate of Canada in the making of laws, are unsatisfactory, and should be brought more into harmony with the principle of popular government, and praying that her Majesty may be pleased to recommend to the imperial Parliament a measure for the amendment of the said act, in such terms as will effectually make provision as follows: If the House of Commons passes any bill which the Senate rejects, or fails to pass, or amends in a way not accepted by the House of Commons, then if the House of Commons, at the next following session, again passes such bill, and the Senate again rejects or fails to pass it, or amends in a way not accepted by the House of Commons, the Governor General may, by proclamation, convene one or more joint sittings of the members of the two houses for the further consideration of such bill or amendments, and a

question whether such bill or amendments shall pass shall be decided by a majority of the members of the two houses present and voting, and the vote of any such joint sitting shall, as respects such bill or amendments, have the same force and effect as a vote of the Senate under the existing constitution."

The proposal was opposed by the Conservatives, mainly on the ground that its nature was unprecedented; that it could not be made to work in harmony with British principles of government; and that the equality of provincial representation in the upper house would be practically destroyed.

During the session Sir Charles Tupper, as Opposition leader, moved the following resolution in connection with preferential trade relations within the empire:

"In the opinion of this House it is the duty of the Government, in response to these repeated advances by the imperial authorities, to endeavor to secure for the produce of Canada that preferential treatment in the markets of the United Kingdom which would be of such inestimable value to the farmers and other producers of Canada competing against foreign rivals in the markets of the United Kingdom, would set in motion a great tide of immigration to our shores, people the vast wheat areas of the Canadian Northwest, enhance farm values in the older provinces, promote the unity of our empire, and speedily deliver it from dependence upon a foreign food supply."

It was defeated by a party vote of 77 to 41, the position of the Government being that their tariff discrimination of 25 per cent. in favor of Great Britain was all that could be done at present, and that Canada must trust to time and sentiment in England for the overthrow of free-trade principles and the establishment of a preference there for Canadian products. The Conservatives claimed that Canada should have asked for this before granting a preference in its own market.

The Transvaal situation evoked an interesting debate and a loyal resolution. The House adjourned on Aug. 11, after discussing a long resolution introduced by the Hon. G. E. Foster, in behalf of the Conservative party. It is given here as very fully propounding in an historical manner the policy of the Opposition and their view of the Government's administration:

"That the Liberal party went to the country in 1896 with a policy declaring, among other things, for (a) reduction in taxation, (b) decrease in expenditure, (c) diminution of the public debt, (d) extermination of the principle and practice of protection, (e) independence of Parliament and purity of the electorate, (f) abolition of railway bonuses or subsidies, and (g) an honest, economical, and business administration.

"That, comparing 1899 and 1896, the amount of customs and excise taxation has been increased by nearly \$7,000,000, or by over \$1 a head of the population, and the total amount collected from the people by over \$8,000,000, or about \$1.27 a head. The total expenditure has been increased by about \$8,000,000, or over \$1.25 a head; while the total amount, not including next year's supplementary, voted for the year 1899-1900 reaches the astounding sum of \$51,796,344, or \$13,000,000 more than was voted, and \$14,847,197 more than was expended, for the year 1896. The net debt has increased about \$6,000,000, and must be seriously augmented by the enormous expenditures authorized at the present session of Parliament.

"That, instead of exterminating protection and

establishing a system of free trade, or tariff for revenue only, we have incorporated the principle of protection into the tariff acts of 1897 and 1898, and the results of the year 1898-'99 showed that they have imposed a rate of 28.74 per cent. on all dutiable goods imported for home consumption, as compared with 29.94 per cent. in 1896, or upon dutiable and free imports for home consumption of 16.95 per cent., as compared with an average of 17.47 per cent. for the years 1892-'96 inclusive.

"That the independence of Parliament and the purity of the electorate have been illustrated by the traffic in seats in both houses of Parliament for purely party purposes; by the arbitrary and indefensible dismissals from office; by interested and unnecessary appointments to public offices in all branches of the service; by the written and authorized promise of office emoluments and subventions given to members of Parliament and others by the Premier and other members of the Government for electoral and party purposes; by the practical repudiation of the safe principle of open competition, tender and contract, as applied to the expenditures of public money, and the giving of contracts by private arrangement to party friends, who thus make profit for themselves at the expense of the country. That, instead of abolishing the system of bonus and subsidies to railways, they have this year, in addition to the payment of \$1,600,000 for the Drummond County Railway and \$140,000 yearly for ninety-nine years as rental to the Grand Trunk Railway Company, authorized the expenditure of not less than \$6,500,000 for general railway bonuses, in many instances for unnecessary and parallel lines. That the promise to maintain an honest, economical, and businesslike administration has been illustrated by: (a) The entry upon enterprises unauthorized by Parliament, and for which no appropriation had been made, which involved the expenditure of millions of dollars and the diversion of moneys specifically voted for distinct and well-defined services to these purposes, thus setting at naught the constitutional principle of parliamentary sanction and appropriation. (b) By undertaking the construction of public wharves and buildings which are either totally unwarranted on grounds of public necessity, or which should be left to provincial, municipal, or private enterprise. (c) By an extravagant, inefficient, and useless expenditure proposed and carried out in the Yukon district, and a management of affairs there which has exposed the whole system to general suspicion and provoked charges seriously affecting the character and efficiency of the administration and its officials, and compromising the good name of Canada, which have been refused thorough and adequate investigation before an independent and judicial commission. (d) By its inefficient conduct of the business of Parliament; its failure to achieve much-needed legislation for the good of Canada, to secure a fast Atlantic service, to settle any of the vexed international questions at issue, to induce any mutually preferential trade with other portions of the empire, or to open up a single new market under improved conditions, reciprocal or otherwise, in any quarter of the world."

The motion was defeated on a strict party vote after it had served its purpose of discussion, and the following measures, among many other minor ones, were then assented to by Lord Minto in the name of the Queen:

To incorporate the Edmonton and Slave Lake Railway Company.

To incorporate the St. Clair and Erie Ship Canal Company.

Respecting various railway and mining companies.

To incorporate La Compagnie du Chemin de Fer de Colonization du Nord.

To incorporate the Russell, Dundas and Grenville County Railway Company.

To incorporate the Athabasca Railway Company.

To authorize the amalgamation of the Erie and Huron Railway Company and the Lake Erie and Detroit River Railway Company.

To incorporate the Edmonton and Saskatchewan Railway Company.

To incorporate the Klondike Mines Railway Company.

To incorporate the Canadian Inland Transportation Company.

To incorporate the Canadian Permanent and Western Canada Mortgage Corporation.

To amend the winding-up act.

To incorporate the Sudbury and Wahnapiata Railway Company.

To incorporate the Rockland and Noyan Railway Company.

To incorporate the Canada Mining and Metallurgical Company, Limited.

There were no changes in the Government, except that the Hon. C. A. Geoffrion died, and on Sept. 30 James Sutherland was made a minister without portfolio. So far as the session was concerned, the Laurier Cabinet held its own, and it was not until afterward that slowness in the Transvaal contingent matter affected in some measure its popularity in the country. Besides Sir James D. Edgar, the Hon. J. F. Wood and the Hon. W. B. Ives died during this time, and in the year Senators Bellerose, Price, Sanford, Temple, Adams, Sutherland, and Boulton passed away. As nearly all these Senators were Conservatives, their successors have helped to modify the Senate problem from the Liberal standpoint. A political event of importance was the reorganization of the Conservative party by Sir Charles Tupper, and an exhibition of marvelous personal activity in traveling, speaking, and working on the part of the Conservative leader, who is now on the verge of seventy-nine years. Meanwhile, however, the Liberal majority in the House has grown steadily through by-elections, as is usual in Canada.

Federal Finances.—The total revenue on account of the consolidated fund was \$46,796,268, and expenditure on the same account \$41,760,343, so that there was an apparent surplus of \$5,036,625. But there was also an expenditure of \$9,130,772 on capital account, which raised the total expenditure for the year 1898-'99 to \$50,891,115, or \$4,094,747 more than the receipts. This, of course, caused an increase in the public debt, which stood at \$345,130,754 gross and \$266,054,711 net on June 30, 1899, as compared with \$338,370,254 gross and \$264,086,358 net on June 30, 1898. A noticeable feature of the public debt is that, in spite of the heavy increase in taxation, as shown by the enlarged revenue from customs, and excise, it was found necessary to make a temporary loan of £800,000 (\$3,893,333.33). On June 30, 1898, there was no temporary loan.

There was much generous legislation during the session of 1899 in favor of railways, etc., and the Hon. Mr. Tarte, as Minister of Public Works, announced that it was the policy of the Government to regulate its subsidies, etc., in accordance with the growing needs and prosperity of the country. Hence supplementary pledges, in

addition to the above-mentioned actual expenditure, were made, which increased the total of liabilities incurred for the year to \$60,000,000.

In the statement of the public debt on June 30, 1898, and on June 30, 1899, the liabilities were as follow:

ITEMS.	1898.	1899.
Payable in England	\$227,958,837	\$227,958,837
Temporary loan	3,893,333
Canada	9,111,611	8,931,644
Bank circulation fund	1,927,206	2,046,834
Dominion notes	22,178,194	24,236,467
Savings banks	50,113,941	50,241,715
Trust fund	8,518,495	8,643,743
Province accounts	16,406,444	16,672,687
Miscellaneous and banking	2,155,326	2,505,494
Total	\$338,370,254	\$345,130,754

The statement of assets was as follows:

ITEMS.	1898.	1899.
Sinking funds	\$40,876,158	\$43,358,643
Other investments	6,371,528	6,371,528
Province accounts	10,603,220	10,671,783
Miscellaneous and banking	16,432,991	18,674,090
Total assets	\$74,283,897	\$79,076,044
Net debt, June 30	\$264,086,358	\$266,054,711

Prohibition.—Following upon the prohibition plebiscite or referendum in 1898, by which a small majority had been recorded for the principle in the Dominion as a whole, and a large majority against it in the province of Quebec, there was much discussion throughout the country. The Government refused to take any action under the circumstances, and the ensuing letter, dated March 4, 1899, from Prime-Minister Laurier to a prominent prohibitionist in Toronto, explains its position fully:

"When the delegation of the Dominion Alliance waited upon the Government last fall to ask, as a consequence of the plebiscite, the introduction of prohibitory legislation, they based their demand upon the fact that, on the total of the vote cast, there was a majority in favor of the principle of prohibition. The exact figures of the votes recorded were not at that time accurately known, but the official figures, which we have now, show that on the question put to the electors 278,487 voted yea and 264,571 voted nay. After the official figures had been made public, it was contended by some of the opponents of prohibition that the margin of difference between the majority and the minority was so slight that it practically constituted a tie, and there was, therefore, no occasion for the Government to pronounce either one way or the other. The Government does not share that view. We are of the opinion that the fairest way of approaching the question is by the consideration of the total vote cast in favor of prohibition, leaving aside altogether the vote recorded against it. In that view of the question, the record shows that the electorate of Canada, to which the question was submitted, comprised 1,233,849 voters, and of that number less than 23 per cent., or a trifle over one fifth, affirmed their conviction in the principle of prohibition. If we remember that the subject of the plebiscite was to give an opportunity to those who have at heart the cause of prohibition, who believe that the people were with them, and that if the question were voted upon by itself, without any other issue which might detract from its consideration, a majority of the electorate would respond, and thus show the Canadian people prepared and

ready for its adoption, it must be admitted that the expectation was not justified by the event. On the other hand, it was argued before us by yourself and others that, as the plebiscite campaign was carried out by the friends of prohibition without any expenditure of money and without the usual excitement of political agitation, the vote recorded in favor of it was comparatively a large one. This statement I did not then controvert, nor do I controvert it here and now. I would simply remark that the honesty of the vote did not suffer from the absence of those causes of excitement, and that even if the totality of the vote might have been somewhat increased by such cause, its moral force would not have been made any stronger. I venture to submit for your consideration, and the consideration of the members of the Dominion Alliance, who believe in prohibition as the most efficient means of suppressing the evils of intemperance, that no good purpose would be served by forcing upon the people a measure which is shown by the vote to have the support of less than 23 per cent. of the electorate. Neither would it serve any good purpose to enter here into further controversy on the many incidental points discussed before us. My object is simply to convey to you the conclusion that, in our judgment, the expression of public opinion recorded at the polls in favor of prohibition did not represent such a proportion of the electorate as would justify the introduction by the Government of a prohibitory measure."

This view of the case naturally did not please the Prohibitionists, and at a meeting in Toronto of 400 delegates, on July 11, the following resolutions were passed, together with an expression of opinion in favor of woman suffrage and the support of prohibition candidates in ensuing elections:

"That in view of the substantial majority in favor of prohibition of all the votes polled throughout the Dominion in the recent plebiscite, including an overwhelming majority in all the provinces but one, and a large proportion of all the possible votes in those provinces, this meeting desires to express its strong dissatisfaction at the failure of the Government to take any steps to give effect to the will of the people as expressed at the polls.

"That this convention declares that nothing short of the total prohibition of the manufacture, importation, and sale of intoxicating liquor for beverage purposes throughout the Dominion can be accepted as a settlement of the liquor question. That such prohibition is the right and only effective remedy for the evils of intemperance, and must be steadily pressed for until obtained.

"That, in view of the large vote and the great majority recorded in favor of prohibition in six provinces and the Northwest Territories, the least measure of immediate legislation that could be looked upon as reasonable would be such as would secure the entire prohibition of the liquor traffic in and around these provinces and territories.

"That such legislation ought to be enacted by the Dominion Parliament, which alone could prohibit the sending of intoxicating liquor into prohibition provinces from places in which prohibition was not in operation.

"That failure to enact at least this measure of prohibition must be considered inexcusable disregard and defiance of the strong moral sentiment of the electorate so emphatically expressed in the plebiscite.

"That Prohibitionists ought to oppose any

government or party, or any candidate, that will refuse to recognize and respond to the demand of the people to at least the extent of such legislation."

The Pacific Cable.—Progress was made in connection with the important project of an all-British cable between Canada and Australia after an interval during which it threatened to fall through altogether. On July 24, 1899, the Postmaster-General, the Hon. William Mulock, moved a formal resolution in Parliament to provide for its construction. He pointed out that the subject was one with which the public had become comparatively familiar. The enterprise was not intended primarily as an investment from which dividends were expected, but was designed to unite more firmly the different portions of the empire. The subject was first mooted at the conference of 1887 in London, and afterward at the conference of 1894 at Ottawa. The question that chiefly concerned the people now was that of cost. He did not think that the monopoly enjoyed by the Eastern Extension Cable Company at Hong-Kong for twenty-five years, from 1893, would seriously interfere with this new enterprise, or prevent it from securing a fair share of the business of China and Japan. The Imperial Government had power, if it wished, to purchase the line from Hong-Kong to Singapore for £300,000, and in any event it was quite inconceivable, if Canada and Australia had decided to unite themselves by the construction of a cable, that any monopoly could prevent them from establishing a connection with China and Japan. He believed that the Eastern Extension Cable Company would recognize the irresistible force of the empire, and render a duplication of lines unnecessary unless the volume of business should happen to require it. As to the extent to which the scheme would involve Canada financially, it was of course impossible to give anything but estimates. The line would have to be laid in places at a depth of 3,000 fathoms, which exceeded the depth of any cable at present; but once it was laid this circumstance would help to preserve it. The estimate of cost made by the Imperial Pacific Cable Committee was £1,422,000. Since then the cost of material had appreciated to the extent of about £170,000, making the total estimated cost £1,592,000. To this it was proposed to add £108,000 as a margin, and to figure the total cost at £1,700,000. It was confidently anticipated that the cable would become a paying enterprise within a very few years. The cost of maintenance, repairs, sinking fund, and interest would be £144,886, and it was believed by experts that, after paying off these charges, there would be a surplus for the first year of operation of £1,114, which would increase by the fifth year to £124,565. The proposal involved Canada's becoming interested to the extent of five eighteenths in the profit or loss. Great Britain would have five eighteenths, and New Zealand, Queensland, New South Wales, and Victoria two eighteenths each. The intention was, that each country should be represented on the governing board in proportion to its interest, but in order to bring this about the board would have to consist of 18 members, which would be too large. It had therefore been decided that the board should be composed of 8 members, of whom 3 would be from Australasia, 3 from Great Britain, and 2 from Canada.

The Militia.—In 1899 there were upon the regimental establishment of the militia 3 regiments of a permanent force—practically regulars—numbering 61 officers and a total of 986 officers

and men. The active militia numbered 36,650 men, with 3,736 horses, and the Government expenditure in 1897-'98 was \$1,681,613. Gen. Hutton, as commander of the militia, during the year made strenuous efforts to improve the spirits, the training, and the drill of the force. The annual drill throughout the country was the most successful ever held. The general's annual report to the Government was a widely discussed and most important document. In it he says:

"The existing condition of the military forces of the Dominion can only be characterized as unsatisfactory in the extreme. The troops themselves generally are endowed with a profound patriotism, gifted with an excellent physique, and infused with that zeal and aptitude for military service which is an historical attribute of the Canadian people. The Canadian militia consists of a number of small units of cavalry, artillery, and infantry, of varying strength and of a varying condition of discipline and efficiency. Valuable as such a force may be in the fighting qualities of its personnel, it is useless for military purposes in the absence of a trained general staff, in the absence of administrative departments, and in the absence of an adequate supply of those stores of arms, ammunition, and equipment which are indispensable to the maintenance of an armed force intended for military operations. The militia force of Canada is not, under the existing system, an army in its true sense; it is but a collection of military units without cohesion, without staff, and without the military departments by which an army is moved, fed, or ministered to in sickness. There are no officers of the Canadian militia who have received training in the higher functions and responsibilities of the general staff of an army. I need hardly remark that it is the staff which constitutes the brains and motive power of an army. There are no military administration departments at present in existence. With the exception of blankets and tents, there are not sufficient stores to enable a military force of any size to be placed in the field. A reserve of arms and ammunition is required, based upon a recognized scale. There are no stores of reserve clothing. I am not in a position to report fully upon the standard of military proficiency attained by the whole of the troops under my command. The fact, however, that the training of rural battalions has in the past been spasmodic and uncertain renders the efficiency generally of the whole of the militia an undetermined factor of defense. Until the training of the rural troops is an annual fixture it would be folly to suppose that the militia of Canada as a whole can attain any satisfactory standard of military knowledge, or be reckoned upon as a solid and dependable military force. It may be assumed that two factors govern the future organization and administration of a Canadian army, as follows: (a) The defense of Canadian soil; (b) the power to participate in the defense of the British Empire. It was justly claimed for Canada that she is now a nation. In establishing this claim it must equally be accepted that with her birth as a nation are indisputably born the responsibilities of self-defense. The defense of its own territory is the primary duty of a state. As a most important element in the defense of Canada, I can not but impress the necessity of the naval defense of Lakes Erie and Ontario. The militia act of 1886 contemplated the formation of a naval militia brigade, and I strongly recommend that steps should be taken with that intention. Training ships with an instructional staff might be ob-

tained from the Admiralty. I feel sure that the formation of such a force would be productive of most valuable results, not only as a strong and most important element of defense, but as a means of educating the seafaring population and of improving the shipping interests of the inland waters of Canada. For the power to participate in the defense of the British Empire it will be obvious that the field troops above alluded to could be made quickly and readily available. Active operations could thus be undertaken conjointly with other British troops in whatever part of the empire it might be the desire of Canada to employ them.

"Under the existing circumstances considerable increase to the present strength of the militia force is inadvisable, but I wish most strongly to urge that a complete though gradual change should be effected in the organization and administration of the whole force, so as to conform to the requirements of the principles which I have ventured to submit. This change can be effected with comparatively small increase to the yearly budget. It will be of interest to note that the Canadian people, who have a frontier of 3,260 miles contiguous to a foreign state, pay less per head of its population toward the defense of its own soil than any other country in the world. It has been estimated that, exclusive of capital expenditure upon guns, stores, etc., an expenditure of \$1,650,000, or 33 cents per head of the population, would be sufficient for the requirements of the force proposed during the next financial year. This will be an increase of \$130,000 upon the estimates of 1897-'98. A comparison of the military expenditure with that of other self-governing colonies of the empire will make it apparent that the annual outlay of \$2,000,000 upon her defenses will be the lowest expenditure to expect of the Dominion in the near future, with its vast resources, its increasing wealth, and its ever-widening responsibilities. The creation of a militia army upon the lines indicated will transform existing militia units into a military force which shall in some degree, at least, be worthy of the Canadian nation, and be equal to maintaining the rights and liberties of the Canadian people. It will be in its true sense a national army, and will as such be able not only to keep inviolate the integrity of Canadian soil, but it will be capable of contributing to the military defense of the British Empire in a manner and with a power which will place Canada in a position of unparalleled dignity and influence among all the possessions of the Crown."

Canada and South Africa.—The pivotal point of Canadian history in 1899 was the sympathy shown to fellow-subjects in South Africa, the wave of imperial sentiment which swept over the country, and the sending of the Canadian contingent. On July 30 the following resolution was passed unanimously by the House of Commons on motion of the Premier, seconded by Mr. G. E. Foster, and approved by a letter from Sir C. Tupper:

"That this House has viewed with regret the complications which have arisen in the Transvaal Republic, of which her Majesty is suzerain, from the refusal to accord to her Majesty's subjects now settled in that region an adequate participation in its government.

"That this House has learned with still greater regret that the condition of things there existing has resulted in intolerable oppression, and has produced great and dangerous excitement among several classes of her Majesty's subjects in her South African possessions.

"That this House, representing a people which has largely succeeded, by the adoption of the principle of conceding equal political rights to every portion of the population, in harmonizing estrangements, and in producing general content with the existing system of government, desires to express its sympathy with the efforts of her Majesty's imperial authorities to obtain for the subjects of her Majesty who have taken up their abode in the Transvaal such measure of justice and political recognition as may be found necessary to secure them in the full possession of equal rights and liberties."

The Senate passed a similar resolution. As soon as it became apparent that war was inevitable private offers for military service were made to the Canadian and Imperial governments in large numbers, sometimes whole regiments offering. The reply was issued, both in Canada and in Australasia, that no troops were needed. Then, on Oct. 2, at a large meeting of officers that was held in Toronto, the following resolution was passed:

"That the members of the Canadian Military Institute, feeling that it is a clear and definite duty for all British possessions to show their willingness to contribute to the common defense in the case of need, express the hope that, in view of impending hostilities in South Africa, the Government of Canada will promptly offer a contingent of Canadian militia to assist in supporting the interests of our empire in that country."

There was some hesitation on the part of the Government at first. No precedent existed, and they did not know how the step would be taken by the French Canadians. The Premier made a tentative announcement that he could not do anything without a meeting of Parliament, and, as every one believed, that would make the offer too late. Within a few days the sentiment from one end of the country to the other was so strongly shown, and the Opposition, led by Sir C. Tupper, so clearly expressed its willingness to any action taken, that the Government gave way and at once organized with efficiency and dispatch the contingent of 1,000 men, which was all the Imperial Government would accept. A political storm was raised, however, by Mr. J. Israil Tarte, Minister of Public Works, insisting, in behalf of the French-Canadian element, that the order in council should include words declaring that the action ought not to be considered a precedent. It was decided that the expenses of the contingent should be paid to Cape Town only, although vigorous protests against this decision were made. There was no question of loyalty or disloyalty in the matter. Mr. Tarte, as the Liberal party leader in Quebec, expressed himself in a published correspondence as being really in favor of imperial federation, and as believing that the French Canadians themselves would support it when it was fully placed before them. But he regarded the sending of the contingent as practically a part of imperial federation, and he did not wish to be rushed into the policy without parliamentary consideration and public discussion. This slight and vague opposition helped to raise the popular feeling to an intense degree of enthusiasm, and it is doubtful if any event in Canadian history has aroused such manifestations as the raising and departure of the volunteers from the different Canadian centers—Vancouver, Winnipeg, Halifax, St. John, Toronto, Montreal, and Quebec. The contingent sailed on Oct. 30, and arrived at Cape Town on Nov. 29.

The Alaska Boundary.—This question produced much international discussion. The general failure of the Joint High Commission, after its prolonged sessions at Quebec and Washington, was due to difficulties in this connection, and on Feb. 20, 1899, Senator Fairbanks and Sir W. Laurier issued the following statement from the United States capital:

"The commission adjourned, to meet at Quebec on Aug. 2, unless the chairmen of the respective commissions shall agree upon another date. The commission has made very substantial progress in the settlement and adjustment of many of the questions upon which it has been earnestly engaged. But it has been unable to agree upon the settlement of the Alaskan boundary. The problem has been a complicated and difficult one; but the commissioners, acting in the utmost friendliness and cordiality, have been unable to agree upon a satisfactory adjustment. The difficulties, apart from the immediate delimitation of this boundary by the commission itself, arise from the conditions under which it might be referred to arbitration.

"The British commissioners desired that the whole question should be referred on terms similar to those provided in the reference of the Venezuelan boundary line, which, by providing an umpire, would insure certainty and finality. The United States commissioners, on the other hand, thought the local conditions of Alaska so different that some modification of the Venezuelan reference should be introduced. They thought the reference should be made to six eminent jurists, three chosen by each of the high contracting parties, without providing for an umpire, they believing that finality would be secured by a majority vote of the jurists so chosen. They did not see any present prospect of agreeing to a European umpire, to be selected in the manner proposed by the British commissioners, while the British commissioners were unwilling to agree to the selection of an American umpire in the manner suggested by the United States commissioners. The United States commissioners further contended that special stipulations should be made in any reference to arbitration, that the existing settlements on the tide waters of the coast should in any event continue to belong to the United States. To this contention the British commissioners refused to agree. It was therefore deemed advisable to adjourn to a convenient date, in order to enable the respective governments to consider further the subject with respect to which no conclusion yet has been reached."

The commission did not meet again, and during the entire summer negotiations proceeded between the three governments. Charges were very freely made by the American press that Canada was blocking the way; that she wanted American territory, and was generally aggressive and unreasonable. On July 23 the Canadian Parliament was the scene of an international sensation. Sir Charles Tupper spoke at length upon the subject of the boundary, and in vigorous language declared that it must be settled in one way or another; and Sir Wilfrid Laurier replied in carefully chosen words, of which the following paragraph aroused wide discussion:

"Under such circumstances there are only two methods of settling the difficulty on fair and honorable terms. One is, giving and taking—Canada surrendering a little of her pretensions and the United States surrendering a little of her pretensions—but I have no hope up to this moment, or very little hope, that we can settle the question by any compromise at all. If we have

no hope that we can settle the dispute by compromise, there are only two other ways in which we can settle it. One would be by arbitration, and the other would be by war. I am sure that no one would think of war; and everybody would agree that, though sometimes our patience would be sorely tried, though sometimes we might believe that our opponents were taking undue liberties with us and undue advantage over us, still everybody would agree that we must exhaust all peaceful means of reaching a settlement by arbitration."

The idea set forth by Sir Charles Tupper was, in substance, that it was time to do more than indulge in amiable and endless palaver with our American cousins. They, being in practical possession of the disputed territory, were only too willing to keep up the discussion indefinitely, while in the meantime American miners were taking out most of the gold and American traders were enjoying all the commercial advantages of the Yukon. Sir Charles paid his respects to English statesmen in a manner which probably did not afford them any great pleasure. He told them, in good round terms, that his long years of experience and observation had taught him that the abiding weakness of the powers that be in England is a tendency to consult the feelings and wishes of the United States altogether too much. He congratulated the Canadian Government upon its determination to have no more meetings of the Anglo-American Commission unless and until this question was in a fair way of settlement. By way of meeting the situation as it now stood, he suggested that the Government take power to construct a railway from Kitimat Arm in British Columbia to Dawson via Teslin lake, and also to provide that no mining licenses should be issued to any but British subjects. He assured the Government of hearty support from the Conservatives in whatever might be done to uphold the interest and the dignity of Canada.

Sir Wilfrid Laurier evidently thought that the remarks made by Sir Charles with reference to a railway were a weak point in the argument, and he enlarged upon it at some length in an attempt to show that the leader of the Opposition had repudiated the Senate's action of the preceding session in rejecting the Mackenzie-Mann scheme. As to the Alaskan boundary, the Premier pointed out, as above, that there were only three possible modes of settling such a controversy—compromise, arbitration, or war. The attempt at compromise had failed, and nobody contemplated the possibility of war. Only arbitration remained, and Sir Wilfrid's remarks on the point were of the nature of the physician's statement that "while there's life there's hope." From his general tone it was evident that he did not expect to see in the near future any agreement reached between Great Britain and the United States. There was a distinct note of discouragement in his appeal to the people of Canada to be patient for a few months longer. While discouraging the proposal to exclude American miners from the Yukon country, he did not say that it would be impossible for circumstances to arise under which such a policy might be contemplated. He confined himself to a contention that such action would almost certainly lead to retaliation, to be followed very probably by non-intercourse. On July 30 was published an elaborate defense of the Canadian position by the Hon. David Mills, Minister of Justice, and from it the following is quoted:

"The United States obtained a cession of this

territory from Russia at a time when the Alabama claims were unsettled, and the long strip of territory extending from Mount St. Elias along the coast of the southeast of Prince of Wales island ought undoubtedly to be a Canadian possession. If a similar strip of territory lay between the mainland of the United States and the sea, I am quite sure its acquisition by us would be regarded as a menace to that country. But it is too late to consider how far this is injurious to this country. Under the treaty of 1825 the line drawn between the recognized territory of Russia and Great Britain was begun at the southeast of Prince of Wales island, and from that point was to ascend north along the channel called Portland channel. This could hardly be the channel called Portland channel in modern maps, because Portland channel of this day lies due east from the southern extremity of Prince of Wales island, a distance of 130 miles. The line was to ascend the channel to a point on the coast on the fifty-sixth degree of north latitude. Now what is known as Portland channel falls short of that point. The line was also to extend north in such a way as to leave Prince of Wales island to Russia. If the boundary started from the south extremity of Prince of Wales island and ran due east, it would have left the whole of the island to Russia; but if drawn north from the south extremity, it would have cut off a small portion of the southeast end of the island. So the treaty would indicate a line drawn up that channel which is east of Prince of Wales island to the fifty-sixth degree of north latitude, a point which could not be reached by what is known as Portland channel. So you see the initial point of the boundary is in controversy. The boundary when it reached the fifty-sixth degree was to follow the summit of the mountains, which extend in a line parallel to the coast from the fifty-sixth degree to the intersection with the one hundred and forty-first parallel; but when the mountains prove to be more than 10 marine leagues from the coast, the limit between the British possessions and the coast was to be a line parallel to the coast, but which should never exceed a distance of 10 marine leagues. It is clear that the makers of the treaty assumed that there was a mountain range which for the most part was within 10 leagues of the coast. The treaty also provides that neither contracting party shall form settlements within the territory of the other. The United States received all the right of Russia, and no more. But the United States authorities seem to think that not only have they the right to form settlements on our side, but also that when they do so the territory ought to be considered as theirs, and under no reference to arbitration should the sovereignty over our territory thus encroached on be open to question. I return again to Lynn Canal. Bear in mind what the treaty says about the line, which should follow the coast, being within 10 leagues of it. If a line were drawn around the head of Lynn inlet, as the United States contends it should be, the point where it passed that inlet would be at least 20 leagues from the coast. There is a well-defined coast line from the one hundred and forty-first meridian to Cape Spencer, on the fifty-seventh degree of north latitude, and by the terms of the treaty the boundary could not be more than 10 leagues from the coast. It must, in fact, be much nearer, because the range in this latitude sets in near the coast. The United States refuse to arbitrate unless we abandon our claim to the Lynn Canal. Why should we abandon it? The

British commissioners offered to compromise. The United States rejected the offer, because it recognized our claim to Pyramid harbor and a strip of territory leading therefrom to what is indisputably our territory in the Yukon. Under this compromise the United States would have held both Dyea and Skaguay, which, we think, are in Canadian territory. Let me, in conclusion, recall history for the benefit of the American people. When the disputed boundary between Maine and New Brunswick was being discussed by the two governments we claimed territory south of the St. John's river, known as the Madawaska settlements, because it was a settlement of French Canadians, who had for a long series of years been under British protection. Did the United States consent to concede it for that reason, which is the same contention they are making about Dyea and Skaguay? Not at all. It claimed that as it was on territory which, in its opinion, was part of Maine, no matter how long it had been under British protection, it ought to be yielded up. Can any American statesman give any reason for the retention of Madawaska which would not at the present time apply to Dyea and Skaguay if found by a competent tribunal to be on Canadian territory?"

Sir Wilfrid Laurier visited Chicago on Oct. 9, and in speeches delivered there dealt also at length with this issue. Eventually, the text of a *modus vivendi* as finally agreed upon and announced on Oct. 21 was as follows:

"It is hereby agreed between the governments of the United States and Great Britain that the boundary line between Canada and the Territory of Alaska, in the region about the head of Lynn Canal, shall be provisionally fixed, without prejudice to the claims of either party in the permanent adjustment of the international boundary, as follows: In the region of the Dalton trail, a line beginning at the peak west of Porcupine creek, marked on map No. 10 of the United States Commission, Dec. 31, 1895, and on sheet No. 18 of the British Commission, Dec. 31, 1895, with the number 6500, thence running to the Klehini (or Klahela) river, in the direction of the peak north of that river marked 5020 on the aforesaid British map; thence following the high or right bank of the said Klehini river to the junction thereof with the Chilkat river, a mile and a half, more or less, north of Klukwan; provided, that persons proceeding to or from Porcupine creek shall be freely permitted to follow the trail between the said creek and the said junction of the rivers into and across the territory in the Canadian side of the temporary line wherever the trail crosses to such side, and, subject to such reasonable regulations for the protection of the revenue as the Canadian Government may prescribe, to carry with them over such part or parts of the trail between the said points as may lie on the Canadian side of the temporary line such goods and articles; and from said junction to the summit of the peak east of the Chilkat river marked on the aforesaid map No. 10 of the United States Commission with the number 5410, and on map No. 17 of the aforesaid British Commission with the number 5490. On the Dyea and Skaguay trails, the summits of the Chilkoot and White passes. It is understood, as formally set forth in communications of the Department of State of the United States, that the citizens who are subjects of either power found by this arrangement within the temporary jurisdiction of the other shall suffer no diminution of the rights and privileges which they now enjoy. The Government of the United States will at once ap-

point an officer or officers to meet an officer or officers to be named by the Government of her Britannic Majesty to mark the temporary line agreed upon by the erection of posts, stakes, or other appropriate temporary mark."

Trade and Commerce.—The external trade of Canada went up by leaps and bounds during the year. In 1898 it was \$288,257,521; in 1899 it was \$306,104,708. The imports rose from \$130,698,006 to \$152,021,058, while the exports decreased from \$159,524,953 to \$154,083,650. To Great Britain the exports for the year ending June 30, 1898, were \$104,998,818; to the United States, \$45,705,336; to France, \$1,025,262; to Germany, \$1,837,448; to Newfoundland, \$2,167,860; to the West Indies, \$2,749,080; to South America, \$1,060,420; to China and Japan, \$511,919; to other countries, \$1,630,711. During the same year the imports from Great Britain were \$32,500,917; United States, \$78,705,590; France, \$3,975,351; Germany, \$5,584,014; West Indies, \$1,080,266; South America, \$1,425,653; China and Japan, \$2,317,971.

Railways.—The annual report of the Department of Railways and Canals was presented to Parliament on March 23, 1899, by the Hon. A. G. Blair. When Canadian railways are mentioned the names of the three great trunk lines—the Canadian Pacific, Grand Trunk, and the Intercolonial—suggest themselves; but a reference to the official figures at this time shows that there were 146 railways in actual operation in Canada. Some of these are amalgamated or leased; but after allowing for them, and excluding the Government railways, there are 84 controlling companies in active existence. With all these separate interests it might be expected that the people of Canada would enjoy the boon of competitive rates, but the truth of the statement that competing railways do not compete has been learned to the sorrow and financial loss of many. The completed mileage is 16,870 miles, an increase of 183 miles during the year 1898. This total does not include 2,248 miles of sidings. The magnitude of Canadian railway interests is indicated by the following figures: The paid-up capital amounted to \$941,297,037, an increase of \$19,439,805. The gross earnings amounted to \$59,715,105, an increase of \$7,361,829; and the working expenses aggregated \$39,137,549, an increase of \$3,968,884 as compared with those of the previous year, leaving the net earnings \$20,577,556, or an increase of \$3,392,945. The number of passengers carried was 18,444,049, an increase of 2,272,711; and the freight traffic amounted to 28,785,903 tons, an increase of 3,485,572 tons. The total number of miles run by trains was 50,658,283, an increase of 4,977,432. The accident returns show 5 passengers killed.

The Government expenditure on railways prior to and since the date of confederation (1867) amounted on capital account to \$123,551,091 (including a payment of \$25,000,000 to the Canadian Pacific Railway Company), and for railway subsidies charged against the consolidated fund the further sum of \$17,619,222.11, making a total expenditure of \$140,834,731.29. In addition there has been an expenditure since confederation for working expenses of \$73,029,631.74, covering the maintenance and operation of the Government roads, or a grand total of \$213,863,363.03, all of which, with the exception of \$13,881,460.65, has been expended on railways during the past thirty-one years. The revenue derived from the Government roads during the same period amounted to \$64,510,650.18.

The Canadian Pacific Railway had under traffic during the year 6,334 miles of road. Its gross

earnings were \$25,470,796.18 (against 6,314 miles of railway and earnings of \$21,242,638.75 the previous year). The total expenditure for working expenses was \$14,684,790.65, making the net earnings \$10,786,005.53, an increase of \$2,120,167.20 over the net earnings of the previous year. The company carried 3,327,368 passengers and 5,493,030 tons of freight. The gross earnings of all the Government roads—the Intercolonial, the Windsor branch, and the Prince Edward Island Railway—for the same fiscal year amounted to \$3,313,847.10, and, compared with those of the preceding year, showed an increase of \$253,772.72. The gross working expenses amounted to \$3,577,248.88, an increase of \$399,979.27. The net loss on the operations of the year was \$263,401.78. These features included the sum of \$70,000 rent paid for the extension of the Intercolonial into Montreal, under an agreement which became effective in March.

On March 1, 1898, the operations of the Intercolonial were extended to Montreal by means of leases obtained from the Grand Trunk and Drummond County Railway Companies, making an addition of 169.81 miles to the operation of the Government line, its length being 1,314 miles instead of 1,145. During the fiscal year there was an addition of \$252,756.80 to the capital account expenditure, making the total expenditure chargeable to capital on the whole road up to June 30, 1898, \$55,668,913. The additions made during the year included \$56,651 for increased accommodation at Halifax, \$93,943 for increased accommodation at Moncton, \$19,820 for the extension to deep water at North Sydney, and \$65,510.92 on rolling stock. The gross earnings of the year amounted to \$3,117,669.85, an increase of \$251,841; and the working expenses, exclusive of \$70,000 rent paid for the extension to Montreal, to \$3,259,648, an increase of \$331,679.84, making the excess of expenditure \$139,978. There was a profit of \$19,045 in the operation of the Windsor branch, and a loss of \$72,468 upon the Prince Edward Island Railway. Comparing the earnings with those of the previous year, the passenger traffic produced \$1,053,864, an increase of \$74,849; the freight traffic amounted to \$1,857,740, an increase of \$170,689; and the carriage of mails and express freight produced \$206,065, an increase of \$6,093. The earnings per mile were \$2,594.53, an increase of \$91.45.

The total projected length of the Crow's Nest Railway in British Columbia is 344 miles; from Lethbridge to Knoknoack Station, Kootenay lake, 290 miles; and from Knoknoack Station to Nelson, 54 miles. The work of construction has so far been confined to the section between Lethbridge and Knoknoack Station, 290 miles, over which the track laying was completed on Oct. 8, and the line over this section is in safe condition for public traffic. A train transfer landing has been constructed on Kootenay lake at Knoknoack, so that cars with their loads can be transferred without transshipment from that point to Nelson, which will greatly assist mining operations through the Kootenay district. The amount of subsidy paid up to Nov. 1, 1898, was \$2,162,190. Surveys have been made of the remainder of the line subsidized—viz., from the south end of the Kootenay lake to Nelson—but the final plans of location have not yet been filed in the department, as a revision of the location is in contemplation, with a view of reducing the severity of the curves in some instances.

A most important railway event of the year was the retirement of Sir W. C. Van Horne on June 12 from the presidency of the Canadian

Pacific Railroad, his election as chairman of the board, and the appointment of Mr. T. G. Shaughnessy as his successor.

Canals.—The expenditure charged to capital on the original construction and the enlargement of the several canals of the Dominion up to June 30, 1898, was \$72,504,401. A further sum of \$15,067,096 was expended on the repairs, maintenance, and operation of these works, making a total of \$87,571,498. The total revenue derived, including tolls and rentals of lands and water powers, amounted to \$11,710,240. The expenditure for the fiscal year ending June 30, 1898, was as follows: On construction and enlargement, \$3,207,249; and a further sum of \$624,755 for repairs, renewals, and operation, making a total for the year of \$3,832,005. The net revenue for the year was \$407,662, an increase compared with the net revenue of the previous year of \$22,882. The net canal tolls amounted to \$344,057, an increase of \$22,429; and the rents received to \$44,050, a decrease of \$549. The total expenditure on canal staff and maintenance, repairs, and renewals amounted for the year to \$624,755, a decrease of \$8,520, and the total net receipts amounting, as above, to \$407,662. The amount of expenditure in excess of receipts was \$217,093, compared with an excess expenditure the previous year of \$248,495. The following features of the principal canal traffic during the season of navigation of 1897 will be of interest: On the Welland Canal 1,274,292 tons of freight were moved, a decrease of 5,695 tons; 1,050,093 tons passed eastward and 224,199 westward; 1,244,750 tons were through freight, of which 1,026,458 tons passed eastward. Of this through freight, Canadian vessels carried 345,977 tons, an increase of 4,847 tons; and United States vessels 898,773 tons, a decrease of 3,693 tons. The quantity of grain passed down the St. Lawrence canals to Montreal was 560,254 tons, an increase of 99,205 tons compared with the previous year. The further quantity of 43,023 tons of grain passed down the St. Lawrence canals only to Montreal, making the total 603,277 tons. Seven cargoes of grain, aggregating 2,324 tons, were taken down direct to Montreal through the Welland and St. Lawrence canals.

On the Sault Ste. Marie Canal the total movement of freight was 4,947,063 tons, an increase of 369,660 tons, carried in 4,268 vessels, the number of lockages being 2,604. Of wheat, 17,924,802 bushels, and of other grain 3,253,405 bushels, were carried; 1,093,456 barrels of flour, 3,572,854 tons of iron ore, and 7,799,156 feet, board measure, of lumber. All these items show a considerable decrease. The total traffic at the point accommodated by the two canals—the American and Canadian—amounted to 18,986,689 tons, an increase of 1,730,266 tons, carried in 17,080 vessels, a decrease of 1,497. The total quantity of wheat carried was 55,931,779 bushels, a decrease of 7,532,097; and of other grain 24,968,136, a decrease of 2,747,129. Of lumber the total was 802,240,156 feet, board measure, an increase of 113,366,356. As having an interesting bearing on the question of canal *versus* railway transport of grain from the West, it may be noted that, whereas grain and peas passed down to Montreal through the St. Lawrence canals to the extent of 560,254 tons, an increase of 64,386 tons over the previous year, the quantity carried to Montreal by the Canadian Pacific and Grand Trunk Railways amounted to 228,586 tons, an increase of 74,869. The quantity of grain carried to tide water on the New York State canals was 569,362 tons, a decrease of 183,677 tons, while

the quantity carried by the railways of the State to tide water amounted to 4,132,740 tons, an increase of 267,980 tons.

Mr. Collingwood Schreiber, chief engineer of railways and canals, reported a marked improvement in the manner in which the St. Lawrence Canal Deepening Works are being carried on. The necessity for fulfilling the wishes of the Government and the general expectation that the canals should be opened for a 14-foot navigation next spring has been strenuously urged upon the contractors from time to time, and they have responded by the increase of their plant and the extension of their organizations—as required of them—putting forward every effort to place their respective sections in a condition for operation by the desired date. Based on the contract prices, the estimated cost of the thirteen sections of the Soulanges Canal, including land purchases and damages, is \$5,250,000. The total payment to Nov. 1, 1898, including October estimates, is \$4,251,158. This leaves a balance of \$998,841 still to be earned by the contractors. There has been expended on the enlargement of the Lachine Canal, now almost completed, \$8,112,832. The approximate value of the work under construction is \$576,000, of which \$555,939 has been paid. The works of construction and enlargement of the Cornwall Canal, estimated to cost \$4,710,000, are practically completed, and all that is required is some cleaning up. The amount expended on these works, including Sheek's island dam, to Nov. 1 is \$4,593,939. Mr. Schreiber says that if the contractors continue to push forward their operations as they have done recently the Farran's Point enlargement work will be ready for navigation in the spring of 1900. The estimated cost is \$720,000, and \$420,208 of this has been expended. The Rapide du Plat enlargement has been completed. The work cost \$1,833,400. It is estimated that the Galops Canal work will cost \$4,030,000. So far the expenditure has reached \$2,729,565.

The Indians.—The annual report of the Indian Department for 1898 was made public on March 17. The Indian population throughout the Dominion, as shown by statistics, which are closely approximate and as accurate as the circumstances of the case admit of, reached an aggregate of 100,093 souls in 1897-'98, against 99,364 for the preceding year. The area of land under cultivation by Indians during the year aggregated 111,880 acres. In considering the amount of crops secured relatively to the acreage farmed, a distinction must be made between the area described as under cultivation, which includes fallow lands, new breaking, and "made" pasturage, and the area actually seeded down, which in the spring of 1897 was 40,368 acres. The crop of cereals, vegetables, and roots harvested in the autumn of that year amounted to 1,120,900 bushels, and of hay and other fodder 76,458 tons were secured, the increase over the preceding year being 101,500 bushels and 2,164 tons respectively. The receipts of the Indians from various sources aggregated \$2,633,395. This amount exceeded by \$167,793.30 that of the year before, which was \$2,465,601. In Ontario the earnings of Indians from wages and general industries surpassed those of the preceding year by \$85,757. In Quebec the decrease in agricultural earnings extended to general industries; but, as many of the Indians of this province have depended on the United States for a market for the baskets and fancy wares manufactured by them, a considerable falling off in revenue from this source has necessarily resulted from the

withdrawal by the American Government of the privilege so long accorded them of passing their manufactures and exchanges through the customs without exaction of duty. These deficits were more than counterbalanced by the renewed opportunity afforded a good many for earning money in consequence of a greatly revived demand for moccasins and snowshoes to supply the influx of gold seekers into the Klondike region. In Manitoba many Indians depend almost entirely upon fishing and hunting, and reference to the table of earnings will show a decrease from these sources in that province amounting to \$39,519.05. In the Northwest Territories there has been an increase from all sources, aggregating \$49,357.

During the year 273 schools (including day, boarding, and industrial) were in operation. The total enrollment was 9,886; the average attendance 5,533, or 55 per cent. of the enrollment. The enrollment during the preceding year was 9,628, and the average attendance 5,357, so that there has been something gained in both directions. On June 30 the balance to the credit of the Indian fund was \$12,203. The deposits, upon which interest is allowed at the rate of 3 per cent., amounted during the year to \$4,452, and the withdrawals to \$4,088. During the year 1,416,845 acres of surrendered surveyed Indian lands were sold, and realized the sum of \$27,318, as against \$12,520 obtained from 1,445,110 acres disposed of the year before. The much higher aggregate value thus obtained is principally attributable to the fact that a large proportion of the lands sold in 1897-'98 were in the Passapachase reserve, near Edmonton, and brought good prices. Collections during the year amounted to \$105,382, and the capital of the Indian trust fund stood at \$3,725,746 on June 30. Disbursements in the course of the year aggregated \$267,324. Expenditure from the consolidated fund amounted to \$952,590.

The Post Office.—On March 20 the report of the Postmaster-General for the year 1897-'98 was made public. The workings of the department during the year were marked by several changes. The deficit, which for the fiscal year ending June 30, 1896, amounted to \$781,152, was reduced to \$47,602 at the close of the fiscal year 1897-'98, a result rendering possible the reduction of the domestic letter rate from three to two cents an ounce, and the rate between Canada and the mother country and a large number of Great Britain's colonial possessions from five to two cents a half ounce. The deficit, which for the fiscal year 1895-'96 amounted to \$781,152.19, was in the following year reduced to \$586,539.92; and in the fiscal year 1897-'98 was further reduced to the sum of \$47,602.30, being a reduction of \$733,549.89 in the two years following July 1, 1896.

In the past year 1,064 mail services have been let by public tender for sums aggregating \$139,923. The previous yearly cost of these same services was \$167,647. The result of these changes was an annual saving of \$27,721, or for the four years that the contracts run, \$110,886. In several cases mail services have been transferred from stage to railway, the net result being that the mileage of the combined railway and stage mail services for the fiscal year 1897-'98 exceeds that for 1895-'96 by 938,283 miles.

At the close of the fiscal year 1897-'98 there had been a net increase of 179 in the number of post offices compared with the number in operation on June 30, 1896. In the year the number of money-order offices was increased from 1,349

to 1,739, and the rate of commission on money orders was reduced. These increased facilities, accompanied by cheaper rates, have resulted in an increase of 2,648 in the number of money orders issued during the year, and an increase of \$1,531,249 in the amount of money-order business of the department, compared with that of the previous fiscal year. The estimated number of letters sent through the post office in the year exceeds that of the previous year by 11,145,000, the total number in 1898 being 134,975,000. Ten years ago the number of letters sent through the mails in Canada was 80,200,000. In addition to letters handled last year, there were 28,153,000 post cards, 3,534,500 registered letters, 5,372,000 packages of printers' copy, photographs, etc., 1,813,000 packets of fifth-class matter, 316,000 parcels by parcel post, and 33,000 packets for the United Kingdom and other countries. The gross revenue of the department was \$4,636,649, and the net revenue was \$3,527,829, an increase over the revenue of the previous year of \$324,871, equal to about 1.14 per cent. There was paid out by check from the parliamentary appropriation \$3,575,411. During 1898 money orders to the value of \$14,518,000 were issued, of which \$12,082,000 were payable in Canada. The aggregate balance at the credit of the depositors in the Post-office Savings Bank at the close of the fiscal year was \$34,480,000, an increase of \$2,100,000 over the previous year. The average amount at the credit of each individual was \$242.47, against \$238.55 in 1897. Postage stamps to the value of \$4,240,000 were issued to postmasters, an increase over the previous year of \$8,042. The revenue from sales of stamps during 1898 exceeded that of the previous year by \$337,000.

Failures and Fire Insurance.—The business failures in Canada in 1898 were 1,300, with assets of \$7,692,094 and liabilities of \$9,821,323, a large decrease from all preceding years since 1894 in numbers and values.

It may be said that 1898 was an unsatisfactory year for the fire insurance companies doing business in Canada. According to figures compiled by the Insurance and Financial Chronicle of Montreal, the average loss ratio was, in round numbers, 74 per cent., which, when the expense ratio of 30 per cent. is added, makes a total of 104, or about 10 per cent. in excess of 1897. The premiums received by all companies were \$54,759 more in 1898 than in 1897, but losses were \$713,522 greater. British companies suffered the largest percentage of losses, while Canadian companies suffered the least, which were actually \$20,217 less in 1898 than in the previous year.

Marine and Fisheries.—The report of the Department of Marine and Fisheries for 1898 shows that the total number of vessels on the register book of the Dominion at the close of that year, including every description of sailing vessels, steamers, and barges, was 6,643, measuring 693,782 tons register, a decrease of 41 vessels (37,972 tons register) compared with 1897. Placing the average value at \$30 a ton; the value of the registered tonnage of Canada at the end of 1898 was \$20,813,400. The number of vessels built in the Dominion during the twelve months was 278, measuring 24,522 tons. Estimating the value of the new shipping at \$45 a ton, gives a total value of \$1,103,490 for new vessels.

The total expenditure on the different fishery services of Canada was \$442,499 in 1898. This amount comprised the fisheries proper, \$90,332; fish culture, \$28,002; fisheries protection, \$106,316; bounties, \$157,504; and miscellaneous, \$59,627. The amount of revenue from fishery licenses,

finer, etc., was \$113,603, this sum also including the *modus vivendi* licenses granted to the United States fishing vessels, on account of which \$6,923 was paid. Of the amount which the deep-sea fishermen in 1897 received in bounties, \$60,939 was divided among the owners of 790 vessels and their crews, and \$96,565 was distributed to 23,612 boat fishermen, using 13,939 boats. The claims for bounty numbered 14,847, of which 118 were refused. The rate of payment was: For vessels, \$1 per ton, and \$6 each to the crew; to boat owners \$1, and \$3.50 per fisherman. Since the inception of the bounty system in 1882 more than \$2,500,000 have been paid to Canadian fishermen to encourage them in the development of the sea fisheries. Of this sum Nova Scotia received more than half, \$1,006,230; Quebec, \$494,396; New Brunswick, \$250,352; and Prince Edward island, \$170,921. The number of men engaged in the Canadian fishing industry is 7,895, employing a capital aggregating \$9,370,794. Nearly 1,200 schooners and tugs, manned by 8,879 sailors, were employed, in addition to the 70,000 fishermen, using 37,693 boats and more than 5,500,000 fathoms of nets. The lobster plant is valued at \$1,349,000, representing 738 canneries, with 15,165 employees. The total value of the fisheries is computed at \$22,783,546, being an increase of \$2,500,000 over the previous year.

Agriculture.—The exportation of Canadian butter showed a slight falling off in 1898 compared with 1897, both in value and in quantity, the figures being 11,253,787 pounds, valued at \$2,046,686, as compared with 11,453,351 pounds, valued at \$2,889,173, in 1897. On the other hand, there was a decided increase in the exports of cheese, 196,703,323 pounds, valued at \$17,572,763, being sent out of the country. In 1897 the figures were 164,220,699 pounds, valued at \$14,676,239. As an indication of the growth of the trade, it may be stated that in 1890 94,260,187 pounds of cheese, valued at \$9,372,212, were exported. Again the number of Canadian cattle exported to the United States shows an increase. The numbers exported during the three previous years were as follow: In 1895, 882; in 1896, 1,646; in 1897, 57,857; in 1898, 88,605. These figures indicate that the removal of the regulations which required a quarantine detention of ninety days on cattle entering the United States from Canada has enabled the farmers and stock raisers of the Dominion to find a large and increasing market in the United States for their live stock. The following comparative statement of the value of the exports of some of the farm products of Canada during the years 1896 and 1898 shows the growth in that short period:

EXPORTS.	1896.	1898.
Wheat	\$5,771,521	\$17,313,916
Flour	718,433	5,425,760
Oats	273,861	3,041,578
Oatmeal	364,655	554,757
Peas	1,299,491	1,813,792
Cattle	7,082,542	8,723,292
Cheese	13,956,571	17,572,763
Butter	1,052,089	2,046,686
Pork, bacon, hams	4,446,884	8,092,930
Eggs	807,086	1,255,304

Crime and Criminals.—In the period 1887-'97 there were 407,417 convictions under the two heads of indictable offenses and summary convictions. This is a yearly average of 37,037. The year 1897 supplied 37,978 convictions. During the period 1887-'97 convictions for crime against the person increased from 749 in 1887 to 1,205 in 1897, an increase of 60 per cent. In the same

period convictions for crimes against property increased from 2,522 to 4,516, an increase of 79 per cent. The greatest increase in this subdivision is in offenses against females, which increased from 60 to 163, or 172 per cent. Analysis of this group shows that the chief increase is under the head of assaults on women, wife beating, etc. During 1887-'97 the convictions for crimes against property show generally large increases. Burglary increased from 265 to 549, an increase of 108 per cent.; larceny increased from 1,993 to 3,558, or 178.8 per cent. Forgery increased from 264 to 409, or 55 per cent.

Banks.—The 38 banks of Canada, with their 641 branches, made large profits during the year. In the statement of June 30, 1899, their liabilities included the following items: Capital paid up, \$63,674,085; reserve fund, \$28,956,908; amount in circulation, \$39,097,708; public deposits on demand, \$91,852,000; public deposits on notice, \$166,549,940; balance due to banks in United Kingdom, \$6,536,052. The chief assets were as follow: Specie, \$9,240,810; Dominion notes, \$16,959,927; deposits with Dominion Government, \$2,016,573; notes, etc., of other banks, \$11,015,876; deposits with other banks on demand, \$3,600,522; balance due from Canadian banks, \$21,674,085; balance due from United Kingdom banks, \$10,170,065; Dominion Government debentures, \$4,898,019; municipal and other securities, \$16,232,301; railway securities, \$14,875,470; call loans, \$30,659,460; current loans, \$250,974,389; loans to provincial governments, \$3,150,714.

Mines.—Of the gold output of Canada the main feature of 1898 was the very large increase in that of the Yukon. This accounted for \$7,500,000 of the enlargement, which is three times as great an estimated output as that of 1897. With the exception of the gold washings of Saskatchewan river in the Northwest Territories, there were increases in all the other districts of the Dominion. There were increased outputs of coal in all the districts. In copper the largest increase was in Ontario, which amounted to more than 50 per cent. of the previous year's output. British Columbia showed also a considerable enlargement, while in Quebec a falling off was apparent. A rise in the price of the metal made the proportional increase in value greater than that of quantity. In nickel the increase in the quantity was greater than that in the value, owing to a fall in the average price of the metal. A falling away of the production of both lead and silver was in the former case partly offset by the rise in the average price, while in the latter case a lower price for the year aggravated the proportional decrease in the value compared with the quantity. The following is a summary of the total production of minerals in 1898: Copper (fine in ore, etc.), \$2,159,556; gold, Yukon district, \$10,000,000; all other, \$3,700,000; iron ore, \$152,510; lead (fine in ore, etc.), \$1,206,399; nickel (fine in ore, etc.), \$2,583,298; nonmetallic asbestos and asbestic, \$486,227; coal, \$8,227,958; coke, \$219,200; gypsum, \$230,440; mica, \$177,598; mineral water, \$155,000; natural gas, \$320,000; petroleum, \$981,106; pyrites, \$128,872; salt, \$248,639; structural and clay products, \$4,602,177; all other nonmetallic, \$11,282,419. The total non-metallic was \$15,884,596; the total metallic, \$21,622,601.

Roughly speaking, \$13,000,000 worth of gold and \$8,000,000 worth of coal were produced in 1898. The previous year the figures, roughly, were \$7,000,000 of coal and \$5,500,000 of gold. A summary report of the mineral production of Canada, issued by the Geological Survey, showed

an increase of more than \$9,000,000, or nearly 32 per cent., compared with 1897. Compared with 1886, the first year for which statistics were issued, there was an increase in the value of mineral products in thirteen years of nearly 270 per cent. In this period the increase in population was about 14 per cent., so that the proportional importance of the mining industry of the country is very much greater than it was at the beginning of the period dealt with. Thus the per capita value of the mineral production of the country has increased from about \$2.20 to \$7.20.

Immigration.—The number of immigrants that arrived in Canada in 1898 was 22,781. Of these, 9,119 were from the United States, 9,475 from England, 733 Irish, 1,400 Scotch, 563 German, 724 Scandinavian, 545 French and Belgian, 5,509 Galicians, and 3,832 other nationalities. There was also a marked falling off in juvenile immigration under the auspices of philanthropic persons and societies. The statistics in this latter class of immigration since 1893 show a total of 11,184. The Department of the Interior made a vigorous effort to fill a long-felt want by sending a special agent to Scotland to secure domestic servants, and the result was that 59 girls came to Canada, all but 3 of whom went to Winnipeg and points west. The chief difficulty with regard to inducing female domesticity to come to Canada seemed to be their unwillingness to leave the old country unless employment was secured for them before their departure. In regard to immigration, the Canadian High Commissioner, Lord Strathcona, suggested that the work in England would be greatly assisted by more help from Canada. His idea was that committees for this work should be formed in all the electoral districts of Canada to assist the Government agents in looking after new arrivals, and to persuade such arrivals to keep up communication with their friends in the United Kingdom.

Miscellaneous.—In October, 1899, a permanent papal delegate arrived in Canada in the person of Mgr. Falconio, as a result of questions arising in which Roman Catholic interests are concerned in a country where 40 per cent. of the population are of that faith. The Hon. Peter Mitchell died during the same month, and in him passed away a prominent old-time figure in Canadian politics. The death of Grant Allen removed a famous Canadian author, and in the person of Dr. William Kingsford the most elaborate of Canadian historians passed away, while in Sir William Dawson the country lost its greatest scientist and one of its chief educators.

CAPE COLONY AND SOUTH AFRICA.

The Cape of Good Hope, first settled by the Dutch and Huguenots in the seventeenth century, was taken from the Netherlands by the British in 1806. Many descendants of the original settlers who were unwilling to accept British rule migrated in 1835 beyond the Great Fish river, which was then the eastern boundary, and founded an independent commonwealth in Natal, on the east coast; others crossed the Orange river in 1836 and succeeding years and established the settlements that were declared independent and organized into the Orange River Free State in 1854. In the meantime Great Britain annexed the Natal settlements, whereupon a majority of the Boer colonists abandoned their farms and, trekking far into the wilderness, established in 1849, on the farther side of the Vaal river, a new commonwealth, called the Transvaal Republic, whose independence was recognized by Great Britain in 1852. Natal was separated from Cape Colony and erected into a colony in

1856. British Kaffraria was incorporated in Cape Colony in 1865, and Tembuland, East Griqualand, and the Transkei territories in later years; also the harbor of Walfisch Bay, on the southwest coast. Griqualand West, originally a part of the Orange River Free State, was annexed by Great Britain in consequence of the discovery of diamond mines at Kimberley, and it also now forms an integral part of Cape Colony. Basutoland was annexed to Cape Colony in 1871, but after the Basuto war it was detached and made a direct dependency of the Crown in 1884. In the same year Germany declared a protectorate on the southwest coast of Africa over Damara-land, extending from Cape Frio, the southernmost point of Portuguese West Africa, to Walfisch Bay, and over Namaqualand, extending from Walfisch Bay southward to the Orange river, which forms the northern boundary of Cape Colony. British Bechuanaland was annexed by Great Britain at the same time after the forcible expulsion of the Boers from the Transvaal, who had proclaimed the independent republic of Stellaland, with its capital at Vryburg. In 1885 a British protectorate was proclaimed over independent Bechuanaland, the country still ruled by Chief Khama. In the east British control was established over Zululand after the Zulu war of 1879. A portion next to the Natal border was set apart as a reserve for loyal Zulus who had aided the British in the war; the rest was restored to Cetewayo in 1883, but in 1887 about two thirds of this territory, together with the Zulu Reserve, was formally declared British territory and placed under the administration of the Governor of Natal, and in 1897 the whole of Zululand and British Amatongaland were incorporated in Natal.

The Transvaal Republic was annexed by Great Britain in 1877, and a British administrator was appointed; but in 1880 the Boers took up arms, expelled the British officials, and, after successfully resisting the British troops that were sent to conquer them, obtained by the treaty of 1881 the restoration of self-government in internal affairs, while the control of external relations was reserved to the British Government under the name of suzerainty. In 1884 a new convention was signed at London, by which Great Britain recognized the new style of South African Republic adopted by the Transvaal, and abandoned the assertion of suzerainty, or at least expunged the word from the treaty, though requiring every treaty made by the Government of the South African Republic with foreign powers or with independent native chiefs to the north or east of the Transvaal to be submitted to the British Government. A new republic founded by Boer trekkers in Zululand was subsequently incorporated as the district of Vrijheid in the South African Republic with the assent of Great Britain. By the convention of 1890 a part of Swaziland also was added to the South African Republic. All the territories north of the Transvaal, including Matabeleland, ruled by King Lobengula, with the neighboring countries of the Mashonas, Makalakas, and other tribes that paid tribute to him, and comprising all the region north of 22° of south latitude, east of 20° of east longitude, and west of the Portuguese district of Sofala were declared to be within the British sphere of influence. In 1889 a royal charter was granted to the British South Africa Company, which was authorized to organize an administration for these territories. The company was empowered to take also under its administration, subject to the approval of the Im-

perial Government, the regions north of the Bechuanaland protectorate and the Kalihari region west of it as far as the German boundary.

Portugal originally claimed by virtue of early conquests and continuous occupation, more or less effective, both banks of the Zambesi river from its mouth up to its source and the country still farther west, reaching to the Portuguese possessions on the west coast, a continuous zone extending across the whole of Africa from Mozambique to Angola. Yielding under threat of war to superior force, the Portuguese Government in 1891 agreed to recognize as a British protectorate the countries south of the Zambesi, including the Manica plateau, and also the Barotse kingdom and all other regions north of the Zambesi up to the border of the Congo State, including the Shire highlands and the Lake Nyassa region, where British missionaries were active. In 1891 the British Government extended the field of operations of the British South Africa Company so as to embrace the territories north of the Zambesi, known as Northern Zambesia, or British Central Africa, excluding only the Nyassaland districts, which had been declared in 1889 to be within the British sphere, and were now proclaimed a British protectorate.

Pondoland was annexed to Cape Colony in 1894, and in 1895 the Crown colony of British Bechuanaland was handed over to the colonial administration.

Cape Colony.—The colony of the Cape of Good Hope has possessed responsible government since 1872. The legislative power is vested in a Legislative Council, consisting of 23 members elected for seven years, and a Legislative Assembly of 79 members elected for five years. The franchise is possessed by adult males able to register their names, addresses, and occupations, and further qualified by the occupation of house property of the value of £75 or the receipt of a salary of £50 or more per annum. The number of registered electors in 1898 was 109,888.

The Governor of the Cape of Good Hope and High Commissioner for South Africa is Sir Alfred Milner, who succeeded Lord Rosmead in 1898. The ministry at the beginning of 1899 was composed as follows: Prime Minister and Colonial Secretary, W. P. Schreiner; Treasurer, J. X. Meriman; Attorney-General, R. Solomon; Commissioner of Public Works, J. W. Sauer; Secretary for Agriculture, A. J. Herholdt; without portfolio, Dr. Te Water.

Area and Population.—The area of the colony, including Griqualand West, East Griqualand, Tembuland, the Transkei, Walfisch Bay, Pondoland, and British Bechuanaland, is 276,775 square miles, with a population of 1,766,040, of whom 382,198 are whites and 1,383,842 colored. The number of marriages in 1896 was 7,860; of births, 14,733 Europeans and 35,696 colored; deaths, 7,070 Europeans and 25,871 others. The number of arrivals by sea in 1897 was 30,203; departures, 20,531.

Finances.—The revenue for the year ending June 30, 1897, was £7,389,966 from all sources. Of the total £2,936,426 came from taxation, £4,023,772 from services, £306,046 from the colonial estate, and £123,721 from fines, stores issued, etc. The total expenditure was £8,637,854, of which £1,255,231 went for interest and sinking fund of the public debt, £1,940,570 for railroads, £375,588 for defense, £432,278 for police and jails, £166,066 for the civil establishment, and £1,785,466 under loan acts. The total expenditure for 1899 is estimated at £6,682,088.

The public debt on Jan. 1, 1898, amounted to

£27,282,405. On June 30, 1899, the loans outstanding amounted to £32,474,000, against which there was a sinking fund of £4,200,000.

Military Forces.—The British naval station of Simon's Bay is well fortified, and here a contingent of the imperial army is stationed. The British expenditure in 1897 was £275,474. The colonial military force, called the Cape Mounted Rifles, numbers 1,015 officers and men. The volunteers numbered 7,007 in 1897; the Cape police, 68 officers and 1,843 men.

Commerce and Production.—The colony in 1898 produced 1,950,831 bushels of wheat, 1,447,353 of oats, 907,920 of barley, 2,060,742 of mealies, 1,140,615 of Kaffir corn, 3,934,277 pounds of tobacco, 4,861,056 gallons of wine, 1,387,392 gallons of brandy, and 2,577,909 pounds of raisins. There were 1,201,522 cattle, 382,610 horses, 85,060 mules and asses, 12,616,883 sheep, 5,316,767 goats, and 267,693 ostriches in 1898. The production of wool was 39,141,445 pounds; of mohair, 8,115,370 pounds; of ostrich feathers, 294,733 pounds; of butter, 2,623,329 pounds; of cheese, 36,729 pounds.

The total value of the imports in 1897 was £17,997,789, and of the exports £21,660,210. The imports of merchandise were £16,490,739 in value; exports of colonial produce, £19,176,061. Of the merchandise imported, the value of £13,429,000 was subject to duty, and the duties collected were £2,189,580, representing an average rate of about 16 per cent. The imports include goods destined for the Boer republics and the Bechuanaland and Basutoland protectorates, and a large part of the exports are their products. The protectorates and the Orange Free State are united to Cape Colony in a customs union, which Natal also joined in September, 1898. The principal imports were textiles and apparel of the value of £4,598,682, and food and drink of the value of £3,817,828. The value of gold, the product of South African mines, exported during the financial year 1897 was £10,991,926; of diamonds, £4,454,376; of wool, £1,496,779; of Angora hair, £676,644; of ostrich feathers, £605,058; of hides and skins, £514,167; of copper ore, £300,772; of wine, £17,715; of grain and meal, £13,027. The total exports of diamonds for the thirty years that the Kimberley mines have been open have amounted to £83,311,000. For 1898 the imports were valued at £24,500,000, having risen from £5,700,000 in ten years, and the exports at £26,700,000, compared with £8,876,000 in 1888.

Navigation.—The number of vessels entered from abroad during 1897 at the ports of Cape Colony was 1,093, of 2,694,370 tons, and the number cleared was 1,089, of 2,709,795 tons. The British vessels numbered 743, of 2,350,064 tons, of those entered, and 761, of 2,390,798 tons, of those cleared. The vessels entered coastwise numbered 1,278, of 3,725,831 tons; cleared, 1,278, of 3,723,409 tons.

Railroads, Posts, and Telegraphs.—The Government railroads in 1898 had a total length of 1,901 miles, besides which there were 359 miles privately owned. The railroad running north from Kimberley to Mafeking and Buluwayo was built by a private company connected with the British South Africa Company, which built the section of 96 miles from Vryburg to Mafeking now operated by the Cape Government at the company's expense. The total capital invested in the Cape Government railroads is £19,323,155, a cost per mile of £10,165. There were 9,223,676 passengers and 1,340,414 tons of freight carried in 1897. The gross earnings were £3,070,897;

expenses, £1,898,316. The net earnings for 1898 were nearly 4.7 per cent.

The post office in 1897 forwarded 19,484,524 letters, 9,168,960 newspapers, 633,796 post cards, 633,796 books and samples, and 513,720 parcels.

The telegraph lines have a total length of 6,609 miles. The number of messages in 1897 was 2,392,503. The receipts were £148,558; expenses, £132,586.

The New Assembly.—In the elections for the Assembly under the redistribution act passed by the last Legislature the Progressist party espoused the imperial policy advocated by Cecil Rhodes and the South African League, and came thus to a direct issue with the Afrikaner Bond. The main contest was over by the end of September, 1898, when the members opposed to Mr. Rhodes numbered 40, his adherents 35, and independent members 4. After carrying a vote of want of confidence by a majority of 2 on Oct. 12, 1898, Mr. Schreiner formed a government, displacing Sir J. Gordon Sprigg. His followers were afterward increased and the strength of the Rhodes party diminished by the transfer of 3 seats on election petitions. The 16 new seats created by the redistribution act were filled by a succession of elections which took place in the early months of 1899 and were hotly contested. In Vryburg the volunteers who had taken part in the campaign against the Bechuanas in 1897 insisted on registering and voting, in the hope of securing the seats for the Progressives. The final results gave Mr. Schreiner a majority of from 8 to 13 votes in an Assembly of 95 members. The Government presented to the Parliament, which assembled on July 14, measures to restrict the immigration of undesirable aliens, to secure the purity of elections and the proper registration of voters, to prohibit the engagement of native labor for places beyond the colony by other than authorized Government agents, to improve education, to authorize railroads for the opening of new districts, and to relieve distressed agriculturists by the reduction of quit rents or the price of land. An extradition treaty with the South African Republic was concluded after long negotiations. The revenue of the colony was insufficient to meet the outlay, owing to the reduction of taxation and the customs union, and to restore the equilibrium an income tax was proposed, estimated to yield, with other new taxes, £250,000, about half the decrease caused by the customs union and remissions. Under the customs union the average duty on imports had been reduced from 20 to 15 per cent. The Cape Government agreed to collect at customs-union rates the duties on articles destined for Rhodesia, and for articles grown or manufactured within the customs union free trade with Rhodesia was secured. Although the Afrikaners had won the elections over the Progressives, the more advanced section among them predominated over the extreme Dutch Conservatives who composed the Afrikaner Bond, and therefore Mr. Schreiner was called to the premiership rather than Mr. Hofmeyer. The policy of the Ministerial party was to govern South Africa in the interest of the South Africans, not for objects of imperial expansion nor to suit the views of European capitalists. How far the idea of severing the imperial connection was from the thoughts of the Afrikaner statesmen was shown in the vote of the Parliament to give the promised contribution to the naval defense of the empire, not in the form of an ironclad, as was first proposed, but in an annual grant of £30,000. More important yet was the surrender by the

Schreiner ministry to the imperial naval authorities of the control of the port of Simon's Town under conditions which place it almost in the position of an English dockyard port for naval purposes, a concession that the Rhodes ministry refused in 1890 for fear of facilitating imperial intervention in South African affairs.

Basutoland.—The Basutos are the most industrious of the Kaffir tribes, raising mealies, wheat, and Kaffir corn for export, wool also, and herds of cattle. The area of their territory is 10,293 square miles, and the population about 250,000. The Resident Commissioner is Sir G. Y. Lagden. The imports in 1898 were valued at £100,280, and exports at £138,500. The revenue is derived from a native hut tax of 10s. and from licenses. Of 320,934 cattle in the country, perhaps 75 per cent. died of the rinderpest in 1897.

Bechuanaland Protectorate.—The protectorate embraces the lands between the Molopo and Zambesi rivers, occupied by the Bamangwato under Chief Khama, the Bakhatla under Lenchwe, the Bakwena under Sebele, the Bangwaketse under Bathoen, and the Bamaleti under Ikaneng. The area is estimated at 213,000 square miles, and the population at 200,000. The natives rear cattle and cultivate the soil. The white mounted police numbered 127 officers and men in 1897, and the native police 60. The Resident Commissioner is Major H. J. Goold Adams. The revenue in 1897 was £47,511. The expenditure was £88,448 in that year, £40,102 being required for police, £24,152 for native relief on account of the rinderpest and drought, and £4,707 for extra police and for burning the carcasses of cattle that died of the plague.

Natal.—The legislative authority is vested by the Constitution of 1893 in a Legislative Council of 11 members, nominated for ten years by the Governor, advised by his ministers, and a Legislative Assembly elected by owners of real estate worth £50, occupiers paying £10 rent, and persons having at least £96 income. All appropriations of money must be recommended by message of the Governor, whose assent, revocable within two years, is required for all other legislation.

The Governor is Sir Walter Francis Hely-Hutchinson, appointed in 1893. The ministry appointed on Oct. 4, 1897, was composed as follows: Premier and Colonial Secretary, Sir Henry Binns; Attorney-General and Minister of Education, Henry Bale; Minister of Public Works, Lieut.-Col. Albert Henry Hime; Minister of Native Affairs, J. L. Hulett; Treasurer, William Arbuckle; Minister of Agriculture, F. A. R. Johnstone. On the death of Sir Henry Binns the ministry was reconstituted, on June 9, as follows: Prime Minister and Minister of Lands and Works, Lieut.-Col. Hime; Attorney-General and Minister of Education, Henry Bale; Secretary for Native Affairs, Frederick Robert Moor; Colonial Secretary, C. J. Smythe; Treasurer, W. Arbuckle; Minister of Agriculture, William Daniel Winter.

Area and Population.—The area is estimated at 35,000 square miles, inclusive of Zululand. The population in 1898 was 829,005, of whom 61,000 are Europeans, 53,370 Indians, and 714,635 Kaffirs. Zululand, including British Amatongaland, with an area of 14,238 square miles, had a population of 1,131 whites and 196,511 natives in 1897. The capital of Natal is Durban, which had 24,595 inhabitants in 1898.

Finances.—The revenue for the year ending June 30, 1897, was £2,213,074; expenditure, £1,624,998. The receipts from railroads were

£1,285,249; from customs, £413,390; from excise, £20,216; from land sales, £44,112; from the post office, £56,822; from telegraphs, £22,924; from stamps and licenses, £31,408; from the native hut tax, £94,038. The expenditure for railroads was £560,455; for public works, £90,419; for defense, £156,021; loan expenditure, £649,587. The revenue of Zululand was £67,658; expenditure, £68,518. The public debt of Natal on June 30, 1897, amounted to £8,019,143. The revenue for 1900 was estimated at £2,099,855; ordinary expenditure, £2,073,332; expenditure from the loan fund, £1,011,225.

Defense.—The colony maintains a corps of 490 mounted police, which cost £57,766 in 1896. The volunteers number 1,391.

Commerce and Production.—Europeans have 247,160 acres under cultivation; natives, 598,790 acres. Europeans in 1892 owned 125,992 cattle, 54,795 Angora goats, 649,475 sheep, and 26,921 horses; natives had 114,829 cattle, 252,183 goats, 21,487 sheep, and 21,760 horses. The herds of cattle had greatly diminished in consequence of the cattle plague. The output of the coal mines in 1897 was 243,960 tons. This industry is becoming important, as there is a demand for coal for export, and the rich beds of iron ore that have been found in different places offer opportunities for further development. The total value of imports in 1897 was £5,983,589, which includes much merchandise destined for the Transvaal and the Orange Free State. The value of the exports was £1,621,923. The principal imports were iron and iron goods of the value of £612,864; haberdashery, £480,208; clothing, £414,269; machinery, £397,528; flour and grain, £338,277; leather manufactures, £263,708; wine, beer, and spirits, £142,904; cotton goods, £75,638; woolen goods, £74,311. The export of wool was £474,681 in value; of coal, £89,863; of hides and skins, £51,220; of Angora hair, £34,892; of gold, £18,223; of bark, £17,659; of sugar, £12,011. In 1898 the total value of imports was £5,323,216; of exports, £2,184,667. The Government expects to make large tracts of the midland country available for European settlement by a comprehensive scheme of irrigation.

Navigation.—The number of vessels arriving in 1897 was 780, of 1,246,390 tons; the number departing was 789, of 1,248,703 tons. The merchant marine of the colony consisted of 14 sailing vessels, of 699 tons, and 15 steamers, of 2,954 tons.

Railroads.—The length of railroads open for traffic in 1898 was 487 miles, all belonging to the Government. A line 307 miles in length, from Durban through Pietermaritzburg to the frontier of the South African Republic, has been extended 204 miles farther through Johannesburg to Pretoria. Branches from the main line lead north and south along the coast, and one enters the Orange Free State, terminating at Harrismith. The cost of building the railroads was £6,588,507. The receipts in 1897 were £1,051,359, and the expenses £583,088, showing a net profit of 7.20 per cent.

The Transvaal Question.—After three years of comparative quiescence which followed the Jameson raid the conflict between the British Government, supporting the demands of the Uitlanders in the Transvaal, and the Government of the South African Republic again became acute in consequence of a renewal of the agitation among the Uitlanders. The occasion of an excited state of feeling being revived in Johannesburg was the homicide of Tom Jackson Edgar, an Englishman, accused of having

fatally wounded another man in a quarrel, by a police constable named Jones, who broke into his house to arrest him on a criminal charge, and shot him because he hit one of the policemen with a stick. The previous trial and acquittal of a German named Von Veltheim, who had shot and killed Woolf Joel, a Rand capitalist, had been regarded in some quarters as an indication of the partiality of Boer courts and juries in dealing with the rights of British subjects. Von Veltheim was expelled from the Transvaal under the law passed in consequence of the Jameson raid, giving the President power to expel any alien regarded as dangerous to the peace of the country. This law was repealed at the request of the British Government, but the Raad in 1898 re-enacted its essential provisions. The Uitlanders, who followed the counsels of the South African League and desired British intervention, made this and the other acts passed in 1896 to protect the state against a recurrence of such disturbances as the Johannesburg revolution and the Jameson raid one of their chief grounds of complaint against the Transvaal Government. Von Veltheim returned to the Transvaal without permission in January, 1899, and was sentenced to four months' imprisonment, to be re-expelled on the expiration of the sentence. When the public prosecutor reduced the charge against Jones from murder to culpable homicide, and released him from custody on the recognizance of his comrades of the police force, Clement Davies Webb and Thomas Robery Dodd, the vice-president and secretary of the Transvaal section of the South African League, called a public meeting in the public square at Johannesburg on Dec. 24, 1898, and there a petition to the British Government was signed by over 4,000 British subjects. The vice-consul at Pretoria declined to forward a petition couched in such terms as this one was, and Webb and Dodd were arrested by the Transvaal authorities on the charge of having violated the public-meetings act of 1894, which forbids the holding of a meeting in a public place without authorization. The political animosity of the Afrikaners in Johannesburg and other parts of the Transvaal against the Rhodes party was aroused by the sudden revival of the demands of the Uitlanders. The editor of one of their papers called for the removal of the acting British agent at Pretoria, and was consequently arrested for malicious slander. The Uitlanders, on the arrest of Webb and Dodd, arranged for a meeting on Jan. 14, 1899, in a public building at Johannesburg to protest against this alleged fresh violation of the rights of British subjects and generally to express their grievances and sign a new petition. This meeting was permitted, since there is no law against assembling in a closed place; but when they came together Boers also rushed in, many of them said to be policemen in plain clothes and employees of the Government, and these raised such a tumult that no speeches could be heard. A hand-to-hand conflict took place between the Englishmen and the disturbers, with which the police officials who were present declined to interfere, although Englishmen present pointed out some of their antagonists and demanded that they should be arrested.

On Jan. 13 Mr. Chamberlain sent a dispatch in regard to the dynamite monopoly, which, as carried out in the Transvaal, he held to be a contravention of the article in the convention of 1884 granting equal trading rights to British subjects. A monopoly in explosives was first given to Edward Lippert, a German, in 1887, on

his undertaking to erect factories and supply the requirements of the Transvaal with dynamite manufactured in the country as far as possible from materials produced in the country, other ingredients to be imported free of duty, while on dynamite itself a heavy duty was laid. The French company to which Lippert transferred the privilege erected buildings in which cartridges were filled with dynamite imported under another name. The British Government objected to the granting of a monopoly to a private individual as a breach of the convention, and when the Cape customhouse officials in 1892 stopped consignments of so-called raw materials, and showed them to be fully manufactured dynamite, the Transvaal Government canceled the concession. In September, 1893, the Volksraad adopted regulations reserving to the Government the monopoly of the manufacture and sale of explosives, imposing an import duty of 9*d.* a pound on dynamite, but giving the Government the right of importation, and providing that the monopoly may be transferred to an agent, who for eight years might charge a maximum price of £5 a case, and was to pay the Government a royalty of 5*s.* a case of 50 pounds and 20 per cent. of the net profits. The price to the mine operators was fixed at a third less than under the former monopoly. The agent appointed was L. G. Vorstmann. The contract, which ran for fifteen years, bound the concessionaire to erect a factory within two and a half years and manufacture dynamite, using imported materials only in case they were not produced in the Transvaal, but having in the meantime the right to import all materials. Consumers received the right to import dynamite by paying a heavy duty. The real concessionaire was still Lippert, for Vorstmann was only a man of straw. Dynamite was still imported under the name of *guhr impregne*. When Nobel, the European manufacturer of dynamite, offered to build a factory in the Transvaal the Government made Lippert put down the price to £4 5*s.* a case. Afterward Nobel and Lippert, with the French company, formed a company together, and on May 24, 1864, a new concession was granted, under which the Government advanced £400,000 to the company for the purchase of explosives, afterward increasing the loan to £500,000, on which no interest was charged. It was provided that permits to import dynamite should not be given to outsiders unless the stock on hand fell below 10,000 cases. The new contract allowed to Lippert a royalty of 6*s.* a case for fifteen years and 2*s.* more for three years. When the time for beginning manufacture came no factory had been built. The importation of dynamite went on, contrary to the agreement. The mine owners of the Rand, who in 1893 had offered to build a factory themselves and give the Government 50 per cent. of the profits, made complaints. German manufacturers offered to supply good dynamite at 40*s.* a case, and thus save them an expense of £500,000 a year, whereas they had to pay 85*s.* for a quality that was dangerous. The Raad appointed a commission in 1897, which reported that the company had failed to keep its agreement in various particulars, and that the excessive price of the explosive was a serious burden on the industry. The outcome was that on May 1, 1898, the price of dynamite was reduced to £3 15*s.* a case, the Government having abandoned its royalty of 5*s.* a case and induced Lippert to forego 5*s.* of his. The dynamite factory was completed in 1896, but was only capable of supplying 80,000 cases, a fifth of the demand,

and therefore the Volksraad allowed two and a half years more in which to extend the works so as to supply the whole demand of the country. A technical commission appointed by the Government of the South African Republic came to the same conclusions as the commission of the Volksraad. The materials for the manufacture of dynamite could not be produced on a commercial scale, and the profit of 100 per cent. or more over the market price went to enrich individuals without bringing any benefit to the state. Mr. Chamberlain in his letter admitted that a monopoly in favor of the state, even if carried out by a concessionaire, would not be inconsistent with the London convention if intended in good faith to benefit the state generally, and not simply to favor the concessionaire. The Volksraad by resolution had left it discretionary with the Executive to proceed to the cancellation of the contract with the company if the latter had failed to fulfill its obligations, or to take steps to supply the mines with cheaper dynamite by allowing importations subject to the payment of ordinary duties or otherwise. The Government of the South African Republic was advised by the State Attorney that it could not legally annul the concession. Instead of attempting to do so, the Government of the South African Republic proposed to the Volksraad to extend the concession another fifteen years, subject to a further reduction of 5s. per case in the price of dynamite. Against such extension the British Government protested. F. W. Reitz, the State Secretary of the South African Republic, in replying on March 9 to the letter of Mr. Chamberlain, said that the monopoly did not deprive foreigners residing in the Transvaal of the same trading rights and obligations as burghers, which was all that the London convention secured to them. He claimed for the republic the exclusive right to fix on what conditions the manufacture of explosives should take place; refused to admit that it depends on whether the concession is intended in good faith to benefit the state generally, though if it did the republic itself must judge what is best for it, and must take not only financial considerations into account, but all the circumstances that are of interest to the country; did not admit, however, that the monopoly was not financially profitable to the state, equally with the contractor, nor that the present to the mining industry of 5s. a case made it less a state monopoly; declared that the abrogation of the contract would be a breach of established rights, and therefore prejudicial to the good name and welfare of the republic; and on these grounds considered that the British Government was not justified in protesting. Previous to the sending of this dispatch Mr. Lippert, in behalf of the Government of the South African Republic, submitted to leading representatives of the mining industry a programme for the settlement of the gravest differences between the Government on the one part and the whole Uitlander population and the mining industry on the other. He obtained, on Feb. 27, the consent of E. Birkenruth, A. Brakan, and G. Rouliot, representing the Chamber of Mines, to a conference, and President Krüger, Dr. Leyds, the State Attorney, and the State Secretary consented to open negotiations on the suggested basis. London capitalists interested in the mines gave their approval in advance to any arrangement that would produce harmony and secure administrative and financial reform. The mining representatives did not consider themselves qualified to speak for the gen-

eral body of the Uitlanders, and, since the programme was to be adopted or rejected as a whole, they declined to commit themselves until these had given an expression of opinion. The Government offered to throw open to the mining industry all its reserved mineral territory, the *bewaarplaatsen*, water rights, and machine stands at a valuation to be fixed by competent engineers, giving to surface holders the preferential right to acquire the undermining rights; also to appoint a state financier and auditor acceptable to the mining community, who should have a seat in the Executive Council and approve any new scheme of taxation; to obtain a reduction in the price of dynamite to £3 10s.; and to grant full burgher rights, excepting the right to vote for President, to Uitlanders seven years from the date of their becoming qualified to vote for the Second Raad and taking the oath of allegiance. The Government of the South African Republic asked in return for these concessions that the

FALLS IN ORANGE RIVER.

hostile press agitation should cease and the political organization having for its object the stirring up of strife and promoting of dissension between the nationalities should be discouraged and repudiated; also that the Uitlanders should support the Government in seeking the sanction of the British Government for restrictive measures designed to control the immigration of Indian coolies, Cape boys, and British subjects belonging to other colored races. The representatives of the business houses declined to accept the proposed settlement of the dynamite question except on condition that the Government should receive again its royalty of 5s. and that the concession should not be extended, but at the end of the fifteen years the factory should be turned over to the Government at a valuation not including good will or future profits. With regard

to the franchise, the Government's proposals were referred to representative Uitlanders, who reported that it would be useless to lay them before the Uitlander population in their present form, for the reasons that they gave no consideration to residence already completed; they still required the approval of the application for citizenship by two thirds of the burghers of the ward; they demanded that the applicant must forswear his former allegiance; they left him for seven years a citizen of no country, and in danger of having the promised citizenship revoked by the Volksraad before the time of probation expired; and they made no provision for additional representation of the Rand in the Volksraad. While discussion with the leaders of the mining industry was still proceeding President Krüger voluntarily announced his intention to expropriate the dynamite company, appoint a state financier, sell the *bewaarplaatsen*, or Government mining claims, to owners of adjoining mines, and introduce a bill reducing the period of residence necessary to obtain full burgher rights from fourteen to nine years. This proposal regarding the franchise was at once characterized by Mr. Chamberlain in England as being not of the slightest value, the rest of the promises as illusory, and President Krüger was charged with having broken his word before. The President denied having made promises that he had not kept; he had offered to forgive and forget the Jameson affair, but enemies from without did their utmost to create fresh unrest when the people on the Rand were satisfied. The Government had established an English school at Johannesburg, but the British Uitlanders were not satisfied, and subscribed £100,000 to build schools of their own.

Negotiations between the capitalists and the Boer Government were interrupted when the prospect of conciliation seemed best by a new manœuvre of the South African League, which circulated a petition addressed to Queen Victoria, to which over 21,000 signatures were obtained. The Boers believed that three quarters of them were spurious, the papers having been signed by visitors at a sporting tournament, by women, children, and Kaffirs, even supplemented with pages of names from old petitions to the Volksraad. Over 24,000 Uitlanders of Afrikaner sympathies, including some of the British and Americans, as well as Dutch, French, and Germans, signed a counter-declaration, expressing satisfaction with the administration of the Transvaal Government, and ascribing the political unrest to the machinations of speculative capitalists. To counteract the effect of this the British party obtained additional signatures to the petition to the Queen, which was handed on March 24 to Conyngham Greene, the British agent in Pretoria, forwarded by him to Sir Alfred Milner, the High Commissioner, and by him accepted and laid before the British Government, with a covering dispatch in which he described the existing crisis as a popular movement like that of 1895, arising out of the Edgar incident, which inflamed the public mind against the police and forced the South African League to take action. The police had proved incompetent to deal with the illicit liquor traffic, but were harsh to people whom they dislike, as was evident from their ill treatment of colored people, and their conduct was a grievance rankling in the breasts of the Uitlanders. None of the grievances complained of in 1895 had been remedied, but others had been added, notably the lowering of the status of the High Court by the new draft of the

Grundwet, which laid down the principle that any resolution of the Volksraad is equivalent to a law. The political turmoil in the Transvaal would never cease unless the Uitlander population were admitted to a share in the government, and while that turmoil lasts no tranquillity or adequate progress is possible in South Africa. The spectacle of thousands of British subjects kept permanently in the position of helots, constantly chafing under undoubted grievances, and calling vainly to the British Government for redress was undermining the influence and reputation of the British Government even in British colonies, where a section of the press preaches openly the doctrine of a republic embracing all South Africa, supporting it by menacing references to the armaments of the Transvaal, its alliance with the Orange Free State, and the active sympathy it would receive in case of war from a section of the colonists. Language is frequently used which seems to imply that the Dutch have some superior right to their fellow-citizens of British birth. Sir Alfred Milner drew the conclusion that a striking proof of the intention of the British Government not to be ousted from its position in South Africa was necessary to put a stop to this propaganda, and that intervention in the Transvaal, though temporarily it might aggravate, ultimately would extinguish the race feud. The petition of the 21,000 British subjects in the Transvaal set forth that for many years discontent has existed among the Uitlanders, who are mostly British subjects. The Uitlanders possess most of the wealth and intelligence in the country, and they have no voice in its government. In spite of the promises of the Transvaal Government and the petitions addressed to the President, there have been no practical reforms. The discontent culminated in the insurrection of 1895. The people then placed themselves in the hands of the High Commissioner, and President Krüger promised reforms. Since then their position has been worse. Legislation has been unfriendly. The petition cites as examples the aliens' immigration act, withdrawn at the instance of the British Government; the press law, giving the President arbitrary powers; the aliens' expulsion law, permitting the expulsion of British subjects at the will of the President without appeal to the High Court, while burghers can not be expelled, this being contrary to the convention. The municipality granted to Johannesburg is ineffective. Half of the councilors are necessarily burghers, though the burghers and Uitlanders number 1,000 and 23,000 respectively. The Government rejected the report of the industrial commission, which was composed of its own officials. The High Court has been reduced to a condition of subservience, the revenues of the country have been diverted for the purpose of building forts at Pretoria and Johannesburg, in order to terrorize British subjects; the police are exclusively burghers, ignorant and prejudiced, and are a danger to the community; jurors are necessarily burghers, and justice is impossible in cases where a racial issue may be involved.

Mr. Chamberlain's dispatch of May 10, in reference to the Uitlanders' petition, contained a severe arraignment of the Transvaal Government, which collected a revenue of £4,000,000, mainly from Uitlanders, to administer a country having a quarter of a million white inhabitants; which, in addition to the dynamite concession, was granting practical monopolies of matches, paper, mineral waters, soap, oil, chocolate, and starch; which in its state system of education endeavor-

ored to force upon the children of Uitlanders the habitual use of the Dutch language; which had retained the right of veto over the acts of the Johannesburg Municipal Council, and had denied a limited form of self-government to the gold-mining industry and commercial firms; which neglected to enforce the liquor law, though the police had brutally treated colored British subjects when arresting them for being without passes; which by the press laws of 1896 and 1898 threatened that freedom of the expression of opinion which was guaranteed by the Constitution, as these empower the President, with the consent of the Executive Council, to prohibit the circulation of printed matter deemed contrary to good morals or a danger to the peace and order of the republic; which under the aliens' expulsion law has power to expel aliens alleged to have incited disobedience of the law or acted in a manner dangerous to public peace and order, while burghers, who can not be banished, may have a special place of residence assigned to them; and which by the law of 1897 instructs the President to dismiss any judge who refuses to recognize resolutions of the Volksraad as having the force of law, consequently confirming the power of the Volksraad to amend laws by a mere resolution and placing the highest court of justice at the mercy of the Executive. The Uitlanders, being for the most part British subjects, accustomed to the exercise of full political as well as municipal rights, had for a long time been striving to obtain an amelioration of their condition prior to the disturbances of 1895, and since then, in spite of the promise of President Krüger to submit to the Legislature all complaints properly presented to him, no substantial measures of reform had been passed; the action of the Executive, on the whole, had the effect of increasing rather than of removing the causes of complaint. Having regard to the position of Great Britain as the paramount power in South Africa, and its duty to protect all British subjects residing in a foreign country, the British Government could not permanently ignore the exceptional and arbitrary treatment to which British subjects and others are exposed and the indifference of the Government of the republic to friendly representations made to it on the subject. Mr. Chamberlain proposed that a meeting be held at Pretoria between the President and the High Commissioner for the purpose of discussing the situation in a conciliatory spirit, in the hope that an arrangement might be made which the British Government could accept and recommend to the Uitlander population as a reasonable concession to their just demands and the settlement of the difficulties that threatened the good relations between Great Britain and the South African Republic. Mr. Hofmeyer and Mr. Schreiner, the leaders of the Afrikaner party at the Cape, at the very same time conceived the idea of a conference between the High Commissioner and the President, to be held neither in Cape Colony nor at Pretoria, but at Bloemfontein, and suggested it to President Steyn, of the Orange Free State, who sounded President Krüger, and found him willing. Sir Alfred Milner was willing too, provided it was first made clear on what understanding the meeting should be founded. In accepting the invitation he expressed the hope of arriving at a satisfactory settlement of the situation which the British Government could accept and recommend to the Uitlanders as a reasonable concession to their just demands. Although Sir Alfred Milner's acceptance was ex-

pressed in terms that went further than President Krüger's intention, he also accepted, declaring that he would gladly discuss every proposal conducing to a good understanding with England, provided that the independence of the Transvaal was not impugned. The answer of the British Government to the Uitlanders' petition also declared the expectation that the conference would result in a solution which should satisfy the reasonable aspirations of the unfranchised.

When the Volksraad assembled on May 1 a new franchise proposal of President Krüger was submitted. Any male stranger who has committed no crime against the independence of the state, who possesses real property worth £150 or draws a salary of £100, or makes an independent living by farming or cattle breeding, and who declares his intention on arriving of permanently residing in the country or obtains naturalization after two years' residence, would have full burgher rights, except the right to vote for the President, nine years after his arrival, on condition of his forswearing allegiance to any other government; and those already resident in the country for nine years could obtain the franchise after two years, while others already naturalized would have to wait only five years. The Rand was to be given 4 additional members. Of the 28 members of the First Raad, 19 are elected in 16 districts in which there are no foreigners or very few, 5 in 3 districts where the Uitlander element is strong but not predominant, and 4 in the Uitlander districts of Barberton, Heidelberg, Krügersdorp, and Johannesburg, which have a male population of 81,000, but only 4,000 voters on the roll, whereas 13 purely Boer districts, with a total male population of 35,000 and a voting roll of 12,000, send 16 members to the Raad. The demand of the Uitlanders was for immediate enfranchisement and an increase in the representation of their districts by at least 5 members.

While the franchise proposals of the President met with strong opposition on the part of the old burghers, they found no favor with the Uitlanders, who demanded British intervention. As these became more and more obstreperous, the party favorable to the Government among the Uitlander workingmen also gathered strength. There was yet a prospect of an alliance between the Government and the mine owners, who deprecated political agitation on account of its effect on business, when Mr. Chamberlain's menacing dispatch arrived. On May 16 the Transvaal police arrested on charges of high treason Richard Floyd Nicholls, George Patterson, Charles Agar Ellis, John Allen Mitchell, Edward James Tremlett, Robert Poole Hooper, and Jens Fries, most of them reported to be commissioned officers in the British army, and in fact they were ex-soldiers, though only one or two had held commissions. Excepting two, who were informers, they were ringleaders in a plot either to seize the new fort at Johannesburg with arms obtained in Natal or to destroy it with dynamite, and about 2,000 persons were said to have engaged in the conspiracy, of which the Government had been aware for four months. The fort was garrisoned just previous to the arrests.

The conference between Sir Alfred Milner and President Krüger lasted from May 31 till June 5. Sir Alfred Milner proposed that the full franchise should be given to every foreigner who had been resident in the Transvaal for five years, declared his intention to reside there permanently, and took an oath to obey the laws, undertake all obligations of citizenship, and defend

the independence of the country; the franchise to be confined to persons of good character possessing a certain amount of property; finally, that there should be some increase of seats in the districts where the Uitlanders principally reside. The President considered this proposal tantamount to handing over his country to foreigners. He desired to make any arrangement regarding the franchise contingent on the British agreeing to arbitrate differences between the two governments, but the High Commissioner insisted on discussing it apart from all other questions. The President then presented a counter-proposal, according to which newcomers who apply for naturalization, commit no act against the law or the independence of the republic, possess fixed property or an income of £200, and take an oath similar to that of the Orange Free State, which does not require formal renunciation of previous allegiance, should receive the full franchise five years after naturalization—that is, seven years after their first arrival—on proof of having registered continuously and obeyed the laws; further, that residents since 1890 who become naturalized could become full burghers two years thereafter, and those who had been residents for two years or more could receive immediate naturalization after six months' notice and full citizenship at the end of five years. As this plan gave none of the clamorous Uitlanders the suffrage under two and a half years, since only the adherents of the Boer party were already naturalized, Sir Alfred Milner rejected it as inadequate. He thought that a man ought to be admitted to full citizenship at once, and not wait a number of years after abandoning his old citizenship. It would be a considerable time before any number of Uitlanders worth mentioning could vote for the First Volksraad, and then they could only command one or two seats. The old burghers ought not to be swamped, but as long as the newcomers had no representatives in the First Volksraad they would as a body remain an inferior caste. He suggested giving local self-government to the Rand, but the President refused to entertain the idea, as it would be equivalent to setting up another government in the country. President Krüger offered later to recommend to the First Volksraad an increase in number of its members, whereby the gold fields would be represented by 5 members instead of 2, and the new population would in addition exercise considerable influence on elections in other districts where they were registered. He stated that persons already naturalized five years would be immediately entitled to the full franchise. He pointed out that even in Cape Colony citizenship did not necessarily bring with it the full franchise; that by naturalization the new population obtained the right to vote for the Second Volksraad, and could thereby make their influence felt on questions affecting their particular interests, as the First Volksraad seldom reviewed the work of the Second Volksraad where it concerns the interests of the mining community; that naturalized citizens have the right to serve as jurymen and to select local officials. British subjects becoming burghers would be better off than before, he argued, because in Great Britain and important colonies enfranchised citizens do not elect the members of the highest legislative chamber. He considered that his plan would bring about the gradual fusion of the two sections, but that of the High Commissioner would result in an immediate overmastering of the old citizens. As regards the alternative plan of local government for the

gold fields, a wide measure of self-government had already been accorded, and the Volksraad would doubtless be willing to extend it, so long as it did not constitute an *imperium in imperio*. At the last sitting the High Commissioner objected to the exclusion from the franchise of the persons who had taken part in the revolutionary disturbance of 1895. Three new members for the gold fields he thought too few. He aimed at immediate representation for the Uitlanders to relieve the tension. The situation was grave, and no small measure would any longer be of use. The President replied that his franchise proposal went as far as was possible in the interests of the people and the state, and in principle it was impossible for him to depart from it. In regard to arbitration, he suggested a plan that would avoid the intervention of a foreign government, to which the British Government would not consent under any conditions; this was to refer matters in dispute between the two governments to three arbitrators, two of them South African jurists selected respectively by the two governments, the third to be chosen by the other two, and to be neither a British subject nor a citizen of the South African Republic. Sir Alfred Milner said that he would approve the principle of arbitration if it were possible to avoid foreign intermediation; but the President's did not, because the third member of the tribunal, who would be the real arbitrator, must be a foreigner. Before separating the President made the final proposal to recommend his franchise scheme to the Volksraad if the High Commissioner would recommend his request about arbitration to the British Government, with the expectation that it should be granted, otherwise the people of the republic could not be expected to approve the comprehensive proposal with regard to the franchise. Sir Alfred Milner declined to enter into any engagement, and the conference ended, leaving both parties where they were in the beginning.

When arbitration was first suggested by the Transvaal Government Mr. Chamberlain rejected it as incompatible with the Queen's suzerainty. Dr. Leyds, the then State Secretary, denied that suzerainty existed. In the preamble of the convention of Pretoria, which restored self-government to the Transvaal in 1881, suzerain rights were reserved to Great Britain, and these were specified in that convention as the incompetency of the Transvaal to negotiate directly with foreign powers, the right to maintain a British resident at Pretoria, having control of external and certain internal affairs, and the right of conducting British troops through Transvaal territory. Commissioners were sent to London in 1883 to request modifications of the convention, and their principal task was to obtain the abolition of suzerainty. At their urgent request Lord Derby omitted the word from the new convention, declaring it meaningless, though he objected to an article specifically revoking suzerain rights. The rights themselves were, however, revoked, except that of vetoing within six months any treaty concluded by the South African Republic with any foreign power. The deputation explained to Lord Derby that the convention of 1881 was a unilateral document framed by a royal commission in which the Boers were not represented, and that they wanted to replace it with a new agreement of the nature of the original Sand river treaty, thus changing the relation of a dependency by public law and restoring that of two contracting powers.

On their return to the Transvaal the deputa-

tion reported that the new convention made an end of the British suzerainty and restored full self-government to the republic. Mr. Chamberlain, in answering Dr. Leyds, on Dec. 15, 1898, took the ground that, while the articles of the convention of 1884 substituted a fresh definition of suzerainty, the preamble of the convention of 1881 remained unchanged. Secretary Reitz, Dr. Leyds's successor, on May 9, 1899, reaffirmed the view of the Transvaal Government that the convention of 1881 was entirely abrogated. By the convention of 1884, which superseded it, certain limited and specified rights were guaranteed to Great Britain without there being any further mention of self-government, and thus it follows that the existing absolute self-government is not derived from conventions, but from the inherent right of the republic as a sovereign international state. Mr. Chamberlain declared that the claim to be a sovereign international state was not warranted either by law or history, and wholly inadmissible. He repeated the views of former ministers that the Sand river convention of 1852 itself was not a treaty between two contracting powers, but a declaration that the emigrant farmers beyond the Vaal river, who prior to that were British subjects, would be permitted to manage their own affairs without interference; that annexation in 1877 brought the Sand river convention to an end; that the convention of 1881 restored freedom of action to the Transvaal so far as was not inconsistent with the rights expressly reserved to the suzerain power, the term suzerainty being chosen as most convenient for describing superiority over a state possessing independent rights of government subject to reservations with reference to certain specified matters. He quoted Lord Derby's explanation in the House of Lords in answer to a statement that the object of the convention of 1884 was to abolish the suzerainty of the British Crown, that the word suzerainty was vague and not capable of a precise legal definition, and that, therefore, they had abstained from using it in the new convention; but whether you call it a protectorate, or a suzerainty, or the recognition of England as a paramount power, the substance is retained when the state that exercises the suzerainty has a right to veto negotiations into which the dependent state may enter with foreign powers. During the interviews at Bloemfontein the State President put forward other requests besides the one for the arbitration of disputes arising under the convention—the unfortunate convention, he called it, because the Boers and the English could in no wise understand it in the same manner. He desired the incorporation of Swaziland, which Sir Henry Loch had proposed to allow after seven years, a period to which the Boer Government at that time objected. He pressed for the payment of indemnity for the Jameson raid, for which the Government had demanded £678,000 for material and £1,000,000 for moral or intellectual damages. The second part of the claim Mr. Chamberlain had declined to consider. The actual expenses and losses the British Government accepted responsibility for, and these the British South Africa Company would be required to pay; but when an itemized statement was furnished on request the company's secretary questioned most of the details and demanded vouchers. The company having proposed to submit the claim for material damages to arbitration, Mr. Chamberlain, on May 13, 1899, made a proposition to that effect. The President in his plea for general arbitration suggested that the coolie

law, which required Indians to reside in stations, but to which the British Government objected because they are British subjects, entitled under the London convention to equal freedom with burghers, although similar laws in the colonies are allowed, would be a fit subject for arbitration; also the Swaziland convention. Without arbitration the President could not go to the Volksraad with proposals for giving the franchise to Uitlanders; but if they could agree on a plan regarding the franchise, and dispose of the questions of the indemnity for the Jameson raid and the extension of Transvaal administration to Swaziland, then in the future, arbitration being accepted, all questions arising between the Government and the British subjects who do not want to become burghers could be arbitrated, and the British Government would no longer interfere with the internal government of the republic. The franchise proposals of Sir Alfred Milner were considered by President Krüger to be tantamount to giving over the country to strangers, and the suggestion of an advisory board of Uitlanders to instruct the Government as to the demands and requirements of the Rand population to be equal to establishing the rule of foreigners over the republic. Notwithstanding the failure of the conference, President Krüger submitted his new franchise proposals, making them more liberal than his Bloemfontein memorandum suggested. The income qualification was reduced to £100. The renunciation of former allegiance was no longer required, nor was the consent of two thirds of the applicant's neighbors. Young men born in the country whose fathers are naturalized were given the same status as their fathers, and must register with the field cornet from the age of sixteen. The President also proposed increased representation of the gold fields in accordance with his promise. The members of the Reform party of 1895 who had not received dishonoring sentences would not be excluded from the franchise. The Government in all its various franchise plans retained the discretionary power to confer full burgher rights on Uitlanders who have not completed their stipulated term of residence. Popular meetings were held on the Rand and throughout the republic and colonies, at which the Imperialists expressed approval of Sir Alfred Milner's position, the Afrikaners of that of President Krüger.

Immediately after the conference an exodus of women and children and many men began to take place from Johannesburg, and as the prospect of an armed conflict grew more imminent the flight was attended with panic and disorder. The Government franchise proposals were considered by meetings of burghers in every district, for, as President Krüger explained at the Bloemfontein conference, and gave as his strongest reason for dreading an overwhelming flood of new burghers, the Constitution of the republic requires that such questions be submitted to the people, and makes the will of the majority when formulated in memorials the supreme law, to which the Volksraad must bow. At these meetings the franchise project was either approved or left to the judgment of the Volksraad. War preparations went on actively on both sides. Even during the conference President Krüger demanded an explanation of the strengthening of garrisons on the Natal border. Sir Alfred Milner too wanted to know why Afrikaners had been armed with new rifles, and the President explained that when it was found at the time of the Jameson raid that many were unarmed guns were provided for them, and then all wanted

new guns; that the burghers had always been armed, but their armaments had been suffered to fall into neglect. The Free State Volksraad voted money for equipping burghers and increasing the defenses. The Cape ministers told Sir Alfred Milner that they thought the franchise proposal of President Krüger practical, reasonable, and a considerable step in the right direction, and that nothing had arisen to justify active interference in the affairs of the Transvaal. Mr. Fischer, a member of the Orange Free State Cabinet, and Mr. Hofmeyer, after consultation with Mr. Schreiner, went to Pretoria to urge President Krüger to modify his proposals so as to admit persons resident before 1892 immediately to full citizenship, and to give the option of obtaining the full franchise after seven years without naturalization five years previously. Accordingly, on July 13, the President submitted to the Volksraad a new draft law embodying these changes, with the provision that to obtain the full franchise after a domicile of seven years, past residence also being taken account of, the intention to become naturalized must be notified from the beginning. The Government also proposed to give an extra seat each to Zwartkopburg and Pretoria, as well as 4 to the Rand. Sir Alfred Milner would not accept these concessions as satisfactory, having taken the position that his own proposal was the irreducible minimum. When Mr. Reitz proposed a scheme for general arbitration Sir Alfred Milner, while condemning the plan as unworkable and as involving foreign interference, took the position that nothing should be considered until the grievances of the Uitlanders were redressed. Mr. Chamberlain, in a dispatch dated July 27, referred to the position of Great Britain as the paramount power in South Africa and the responsibilities arising out of the conventions, which he regarded the republic as having violated in raising the period of residence necessary for citizenship from one year by successive stages to fourteen years, which was a complete reversal of the conditions of equality between the white inhabitants subsisting when the British Government granted internal independence in 1881. The successive proposals of President Krüger for extending the franchise to Uitlanders he admitted to be each more liberal than the preceding one, and he proposed the appointment of delegates by the Chief Commissioner and the State President to inquire into the matter, to be followed after they had made their reports by another conference. A proposal for arbitration he would be willing to consider, but not the suggestion of a foreigner for president of the tribunal, nor would he admit the question of suzerainty to be subject of arbitration. When the British Government had asked to have the latest enfranchisement bill submitted for its consideration before it went to the Volksraad the State Secretary returned a polite negative. The measure was passed by the Volksraad and promulgated on July 26. On July 31 Mr. Chamberlain proposed the appointment of delegates to discuss whether the reforms would give immediate and substantial representation to the Uitlanders, and, if not, what alterations would be necessary. On Aug. 1 he telegraphed an invitation to President Krüger to confer with Sir Alfred Milner on the franchise question, arbitration without the introduction of a foreign element, and other matters. Before this British cruisers had been sent to Delagoa Bay, and immediately after the invitation was delivered to President Krüger several battalions were dispatched from England to

Natal. When questioned in the House of Commons, Mr. Chamberlain said they were sent for the defense of Natal at the request of the Governor, and that preparation was being made for all contingencies. Fortifications were erected at Ladysmith, and British troops encamped on the frontier. In Rhodesia Col. Baden-Powell enlisted a regiment of volunteers. Offers of military contingents were sent to London from Australia, Canada, and other colonies; even colored troops were offered by Malay rajahs and by the West African colonial authorities. The Indian Government was asked how many troops it could spare, and a force of 12,000 was got ready to embark for South Africa. Lieut.-Gen. Sir William Butler, who when acting temporarily as High Commissioner had described the Transvaal troubles as the work of the South African League, and said the question was capable of peaceful adjustment, was removed from the chief command of the forces in South Africa, and Lieut.-Gen. Sir Frederick Forrestier-Walker appointed in his place.

The Transvaal Government replied on Aug. 19 to the note of Aug. 2 with an offer to comply with Sir Alfred Milner's irreducible minimum by making five years' residence instead of seven a requisite for full citizenship, and to increase the representation of the gold fields to 10 members in the First Raad, with the assurance that their proportion should never fall below one fourth, with a like addition in the Second Raad if desired; the new electors to have the same right of voting for the President and Commandant General as the old electors; also to accept any amendments or simplifications that the British agent might suggest. This offer was made conditional on the abandonment by Great Britain of assertion of suzerainty and on its agreeing to submit questions in dispute to arbitration, excluding any foreign element, but not reckoning the Orange Free State under this exclusion; the present intervention regarding the franchise not to be regarded as a precedent, and Great Britain in future to abstain from interfering with the internal affairs of the republic. The Transvaal Government suggested that if its alternative proposals were accepted the Raad would be dissolved, and, after consulting the people, the new law would go into force within a few weeks, the object being to avert war in South Africa, which would have far-reaching results.

In answer to this, Mr. Chamberlain wrote on Aug. 27 that the British Government had absolutely repudiated the view of the political status of the Transvaal taken by the Transvaal Government, claiming the status of a sovereign state, and would consider no proposal made conditional on the acceptance of this view. Great Britain was prepared to accept the franchise proposals, assuming that they provided for immediate and substantial representation of the Uitlanders, provided a commission of inquiry, whether joint or unilateral, showed the new scheme to be unencumbered with nullifying conditions, as to previous registration, qualification, and behavior, assuming that the new members of the Raad would be allowed to speak their own language. If this were acceded to, the British Government would be willing to settle the details of the proposed tribunal of arbitration in a conference between the President and the High Commissioner, the questions to come before the tribunal for decision being neither Uitlander grievances nor questions of the interpretation of the convention. Should the reply be negative, the British Government must consider the situation *de novo*, and formulate proposals for a final settlement.

On Sept. 5 the Transvaal Government responded that it then withdrew its franchise proposals, which were more liberal than those put forward by the High Commissioner at Bloemfontein. The Transvaal had never desired Great Britain to abandon any right that it possessed in virtue of the convention of 1884 or in virtue of international law, but it wished to assure itself that Great Britain would abide by the London convention and international law, and that the differences in question would be solved in accordance with the rules of justice and equity recognized by civilized states. If a unilateral inquiry should show that the existing electoral law could be made more efficacious, the Transvaal Government was willing to make proposals to the Volksraad on the subject, but was of the opinion that the result of such an inquiry would be of little value. Nevertheless it was anxious to satisfy Great Britain in regard to the electoral law and the representation of the mining districts, and was ready to appoint delegates to hold a joint investigation. The Transvaal was ready also to negotiate on the question of a court of arbitration, though the restrictions imposed would seem to prevent the object aimed at from being attained. The Transvaal offered seven years' franchise, past residence being counted, without naturalization or notice being required except from newcomers. Equality of languages was refused, and no further concessions would be made. The Government of the Orange Free State indorsed the reply of the Transvaal. Mr. Chamberlain, in the last sitting of Parliament, intimated that England had the right to insist on the restoration of the franchise of 1881. The Transvaal officials denied that the franchise bill imposed irksome conditions. All an applicant who is not already registered had to do was to hand in his name to the field cornet with the affidavits of two reputable burghers to the effect that he has resided seven years in the country; if he is registered, the affidavits are unnecessary. Even sedition does not disqualify nor any offense against the law except high treason or heinous crime. During the correspondence war preparations were actively proceeding on both sides. Large consignments of ammunition and arms were forwarded to the Orange Free State through Cape Colony, and others passed by way of Delagoa Bay into the Transvaal. Mauser rifles were distributed among the burghers in the place of the Martini rifles that they had before. Arms were given out to the Free State burghers as well, and some to the Dutch farmers inside the Natal border. A large force of workmen was employed in making trenches, earthworks, and other defenses about Pretoria. A Boer was arrested in Bechuanaland for trying to incite Khama and his chiefs to disaffection. Over 4,000 Germans formed a corps to fight for the independence of the Transvaal in the event of war. Hollanders and other foreigners volunteered their services also. In the middle of August two cargoes of Mauser rifles and cartridges were stopped at Delagoa Bay, orders having come from Lisbon to prevent the further landing of war materials. The Transvaal Government protested against this breach of international law and treaty rights, sending police officials to investigate, who were placed under arrest when they reached Lourenço Marques. In a few days the Portuguese authorities withdrew their embargo. At the same time the Cape ministry allowed munitions to pass freely into the Free State, and, when called severely to account by Sir J. Gordon Sprigg, the leader of the Pro-

gressives, Mr. Schreiner said that, while the relations with the Orange Free State were friendly, it would be a violation of the customs convention to refuse permits. He read a dispatch from President Steyn saying that his republic would only take up arms to defend itself or fulfill treaty obligations, that he hoped the differences between Great Britain and the Transvaal were capable of a peaceful settlement, for war would be a crime against civilization. Mr. Schreiner himself protested his loyalty, and said that if war between white men broke out he would do his best to keep the colony aloof as the only salvation for the future, as the two races would have to live together after the storm. The Transvaal Government issued a proclamation calling on all the inhabitants to take up arms if martial law should be proclaimed. This was an old provision of the Constitution, but the State Secretary assured the British Uitlanders that the Government would never commit the tactical blunder of trying to make them fight against their country or of commandeering any foreigner against his will.

The Transvaal Government on Sept. 6 asked an explanation of the massing of troops on the frontier, and received from Sir Alfred Milner the reply that the troops were for guarding British interests and preparing against contingencies. Boer troops were mobilized and sent to the Natal frontier. The police at Johannesburg tried to arrest the editor Monypenny and several other leaders of Uitlander opinion; but only the journalist Pakeman was caught, and the authorities at Pretoria denied having ordered the arrests. The rest fled to Durban, and the business men of the city fled also in alarm, causing a cessation of much of the traffic and industry that was still going on, and consequent distress among the working people, many of whom also joined the exodus. The Boer forces encamped at Volksrust, and when more battalions arrived at Durban from England and India and marched up to Ladysmith and Glencoe President Krüger dispatched an ultimatum demanding the cessation of these movements within forty-eight hours, otherwise he would consider that a state of war existed. (See SOUTH AFRICAN REPUBLIC.)

Rhodesia.—The region south of the Zambesi river lying north of the Transvaal and the Bechuanaland protectorate, and extending from the Portuguese possessions on the east coast to the German sphere in southwest Africa was declared a British protectorate in 1888, and was committed in October, 1889, by a royal charter to the British South Africa Company. In consequence of the machinations of the company's officers against the Government of the South African Republic and the Matabele and Mashona uprisings the charter was amended on Nov. 25, 1898, by an order in Council which vests the High Commissioner for South Africa with direct authority over the military forces and a general control over the administration that he did not formerly possess. A Resident Commissioner is appointed by the Imperial Government, and the administrator of the Chartered Company is assisted by a Legislative Council, composed of the Resident Commissioner, the Administrator, 5 members nominated by the company and approved by the Secretary of State for the Colonies, and 4 members elected by the registered voters of the colony for three years, which is the duration of the Legislative Council. Every colonist has a vote who occupies a house worth £75 or receives £50 a year income and can read and write. Ordinances passed by the Adminis-

trator and Legislative Council go into effect as soon as they have been approved by the High Commissioner, but any ordinance may be canceled within twelve months by the Secretary of State in London. A Secretary for Native Affairs is to protect the liberties and interests of the natives, who shall enjoy all the rights of Europeans except in regard to the possession of arms and ammunition and the purchase and consumption of spirituous liquors. Land shall be assigned from time to time for tribal settlement, and whenever such land is reclaimed for mineral development by the company, which reserves all mining rights, new lands must be assigned to the natives whose occupation is disturbed. The authorized capital of the British South Africa Company is £5,000,000. It has issued £4,375,000 of shares and debentures for £1,250,000.

The area of British South Africa, or Southern Rhodesia, is 174,728 square miles, divided into Matabeleland, which has an area of 60,728 square miles and a population estimated at 240,000, and Mashonaland, which has an area of 114,000 square miles, with about 210,000 inhabitants. The country is rich in gold reefs, which extend over an area of 5,250 square miles. Silver, copper, lead, tin, antimony, arsenic, and coal have also been discovered. The Administrator of Mashonaland is W. H. Milton. Matabeleland has also an Administrator, Capt. A. Lawley. The Chartered Company derives its revenue from mining, trade, and professional licenses, town business stands, and the postal and telegraph services. The railroad from Kimberley to Vryburg, 126 miles, built by the British South Africa Company, and afterward transferred to the Cape Government, has been extended by the Bechuanaland Railroad Company to Buluwayo, the capital of Matabeleland, with the aid of a subsidy for ten years of £20,000 a year from the Imperial and £10,000 from the Cape Government. It is intended to continue the line to the Zambesi, and eventually to Tanganyika, and perhaps through Congo State or German territory to Uganda and the Nile. The Rhodesia and African Transcontinental Telegraph Company, organized for the purpose of building a continuous telegraph line through the length of Africa by the same route, had 2,635 miles of line, with 3,613 miles of wire, in September, 1898. A railroad outlet for the Mashonaland mines has been provided by the Beira Railway Company, which opened the line from Beira, on the Portuguese coast, to New Umtali in 1898. This railroad has been continued to Salisbury by the Mashonaland Railway Company, and was opened on May 1, 1899. The link between Salisbury and Buluwayo has not yet been completed. The extension to the frontier from Buluwayo and branch lines to Gwanda and other gold fields and the coal deposits at Wankie have been undertaken by the Bechuanaland Railway Company, transformed into the Rhodesia Railways Company, in which the Chartered Company has one half and the De Beers Company and the Bechuanaland Railway Trust each one quarter interest. The Chartered Company and the gold companies have contributed to the bonds of the Rhodesia Railways Company, which has a grant of alternate blocks of all the lands along the railroads and the exclusive right of building new railroads in Rhodesia. Mr. Rhodes sought to obtain the guarantee of the Imperial Government for the capital necessary to extend the line to the Zambesi, but this was refused. The Chartered Company then offered to guarantee the bonds issued for the line through its territory up to Lake Tanganyika.

The route traverses various gold fields, the Mafungabesi coal fields, and a promising copper field on the Karful river, north of the Zambesi. The railroad from Vryburg to Buluwayo has a length of 600 miles. The next section of the projected Cape to Cairo trunk line will run northeast to Gwelo, 250 miles; thence the intention is to carry it northward at a distance from the sea of from 500 miles, at which the route crosses the Zambesi, up to 800 miles, to some point in Uganda, where it will connect with an extension of the Egyptian system. The route north of Gwelo traverses first an extensive auriferous region, then a wide, level coal area, then the fertile valley of the Zambesi, beyond which it rises gradually to the plateau overlooking the Loangwa valley. This plateau, having an altitude of nearly 6,000 feet, is suitable for cattle rearing or agriculture, and lies midway between Nyassa and Bangweolo lakes, reaching to Lake Tanganyika, about 1,500 miles from Gwelo. The railroad from Vryburg to Buluwayo cost £2,000,000; from there to the Zambesi the estimated cost is £900,000, and the cost of the continuation to Tanganyika is estimated at £3,000,000. This sum was obtained at par and 4 per cent. in the summer of 1899. The railroad is expected not only to open up new regions to European settlement and enterprise, but to supply Rhodesia with needed fuel from the Mafungabesi coal fields and the still more needed labor from the populous countries north of the Zambesi, where the natives are willing and eager to work for 6s. a month, whereas in Southern Rhodesia £4 is the present rate in the mines. From the south to the north end of Tanganyika, 400 miles, steamboats will at first connect the railroad with the one running through German territory for 450 miles to the southern frontier of Uganda. The hope of obtaining the aid of imperial credit, thereby saving £250,000 a year in interest on a probable cost of £10,000,000 for the whole line, has not been abandoned. The telegraph line is being erected with capital furnished by Mr. Rhodes and his associates. The total length from the Cape to Alexandria is 6,670 miles, of which the Cape system from Cape Town to Mafeking supplies 870, and the Egyptian system, when carried to Fashoda, 2,090 miles. The Chartered Company has built the link between that point and Salisbury, 985 miles, and the African Transcontinental Company, of which Mr. Rhodes is the principal shareholder, has undertaken to construct the 2,725 miles connecting Salisbury with the southern boundary of the Soudan. Early in 1899 Mr. Rhodes had a conference with the German Emperor, and through him obtained from the German Government the right of way for the telegraph line through German East Africa on condition that at the end of forty years the line should pass into the possession of the Government, which undertook, however, to make no higher charges for through telegraphy than were necessary to pay the cost of maintenance.

Rhodesia has not advanced in population or prosperity since the first influx of immigrants, partly because the mines are not profitable under present conditions and the climate is not attractive to European settlers, partly also on account of the peculiar land and mining laws of the Chartered Company. At the time when the country was being settled a large number of Dutch farmers were induced to leave other parts of South Africa by promises of grants of land and assistance. Only a few of these obtained the promised farms. The others found temporary employment, principally as transport riders, but

when hard times set in they applied to the Chartered Company for assistance. When the Chartered Company repudiated all responsibility the authorities of the Transvaal offered them farms, and a large number were settled on the lands which the Boers had just before taken away from the Makatse after defeating the chief Mpefu and his followers.

The number of mining claims registered on Sept. 30, 1898, was 130,000, spread over a country 500 miles long by 200 miles broad. The Chartered Company receives half the vender's scrip for each mine that is floated. The companies that were crushing ore in 1898, when there were 4 batteries at work, obtained an average of 14½ pennyweight to the ton, without cyanide, which would give about 4 pennyweight more, making the ore nearly twice as rich as that of the Witwatersrand. There are veins 40 feet broad, and in the ancient mines, which were abandoned on account of water, the reefs run equally wide and quite as rich.

The revenue of the Chartered Company falls far short of the expenditure, which in 1898 amounted to £783,985, while the receipts were £258,786. The white police force numbers 1,200 men, and costs £259,000 a year. The new Council of Rhodesia, which met for the first time in May, 1899, sanctioned taxes on luxuries, the colonists heretofore having been free from all taxation. Machinery and foodstuffs were exempted, though food imported in tins and most articles in common use are taxed at even a higher rate than such luxuries as plate and jewelry. The people and their elected representatives objected to this mode of taxation, by which the poorer classes pay most and the rich companies, including the Chartered Company, are quite exempt. The settlers called upon the elected members of the Council to resign as a protest against being taxed by a private commercial company.

British Central Africa.—The area of British Central Africa, or Northern Rhodesia, is estimated at 251,000 square miles, with a population of about 650,000. The resident Europeans number 350. Experiments are being made in coffee growing. Gold is found in the south. The Stevenson road connecting the Nyassa and Tanganyika lakes has been repaired. The British South Africa Company, which has undertaken the development of the region, intends to establish a station on the Tanganyika plateau, which is believed to be healthful, but its representative, Robert E. Codrington, has hitherto remained at Blantyre, in Nyassaland. The telegraph line from the Cape through the British South Africa territory, Portuguese East Africa, and Nyassaland has been continued from Zomba northward to the end of Lake Nyassa, and thence to the south end of Lake Tanganyika.

In the country of the Barotse, on the west side of British Central Africa, the British South Africa Company is represented at the king's capital by Major R. T. Coryndon, as Resident Commissioner. The region between Lakes Nyassa, Tanganyika, Mweru, and Bangweolo is divided into the districts Chambezi, Tanganyika, Mweru, Luapala, and Loangwa. The Europeans are engaged mostly in planting or trading, but the smaller branches of trade are carried on by Banyans. The imports for the year ending March 31, 1897, amounted to £114,000, including £14,000 of specie. The exports were valued at £40,000, showing an increase of £10,000 over 1898. The chief articles were coffee for £24,000, rubber for £10,000, and ivory for £3,000. The coffee brings the highest price of any that is sold

in the London market. Rice and mealies are grown and tobacco cultivation has been begun. The rubber export was nearly ten times as great as in 1898. Revenue increased as well as trade. The hut tax yielded 50 per cent. more than in the previous year. The armed force consists of 1,000 natives, instructed by Sikhs and commanded by British officers of the regular army. The Angonis, who were formerly troublesome, have settled down to peaceful occupations, and laborers for the plantations are obtained without hindrance. A strong garrison is kept in a fort on their plateau. Many hundreds of natives of the lake districts have gone south to work in the mines of Southern Rhodesia. Toward the end of June, 1899, the troops of the protectorate were sent out to punish Angura and Yao chiefs south-east of Lake Nyassa, on the Portuguese border. The Portuguese of Mozambique joined in an expedition against the chief Mataka, who harbored the chiefs Makanjira and Grafi after they were driven over the border, and assisted them in raiding British territory.

British Central African Protectorate.—The district of Nyassaland, declared a British protectorate on May 14, 1891, is administered by a Royal Commissioner, Alfred Sharpe, under instructions from the Foreign Office in London, and the expenses in excess of the local revenue are defrayed by means of a grant in aid from the Imperial Government. The area is 42,217 square miles. The population in 1897 was 844,995 natives, 300 Europeans, and 293 Banyan traders from India. Blantyre, the chief town, has a population of 6,000 natives and 100 Europeans. The local revenue in 1897 was £24,538, of which £8,966 were derived from customs. The expenditure was £65,715. The imports in 1898 were valued at £86,428, against £78,655 in 1897; exports, £27,437, against £23,299. The principal imports are cotton cloth, machinery, agricultural implements, provisions, and hardware. The exports of coffee in 1898 were £22,402 in value. Ivory is the only other important export. Rice, wheat, oats, and barley are grown. A military force of 185 Sikhs and 800 native soldiers is maintained for the suppression of the slave trade. There is also a police force of 200 men. Gunboats are kept on the Zambesi and Shire rivers and on Lake Nyassa.

Portuguese East Africa.—The Portuguese possessions, now confined to the east coast north and south of the Zambesi, are divided into the provinces of Mozambique, Zambesia, and Lourenço Marques, the military district of Gaza, and the districts of Inhambane, Manica, and Sofala. The total area is estimated at 301,000 square miles; the total population at 3,120,000. The boundary between Portuguese and British Manica was arbitrated, and early in 1899 the commissioners of the two governments agreed on a rectification of the proposed line, concessions being made on both sides to suit the respective interests. The Mozambique Company, possessing sovereign rights under a royal charter for fifty years from 1891, administers the two last-named districts, and the Nyassa Company has like authority in the region between the Rovuma, the Lurio, and Lake Nyassa. The Government maintains a military force of 4,888 men, of whom 3,246 are natives. The revenue for 1898 was estimated at 4,232,326 milreis, the expenditure at 3,945,765 milreis. The imports at the port of Mozambique in 1897 were valued at £151,823, and exports at £160,571; at Beira the imports were £578,500 in value, and the exports £35,460; at Lourenço Marques the imports were

£784,000, and exports £38,000 in value: at Quilimane the imports for 1895 were valued at £94,537, and exports at £76,344. Gold mining has been attempted by English companies in Manica. The Delagoa Bay Railroad has a length of 57 miles on Portuguese territory, and extends 290 miles into the Transvaal to Pretoria. The Beira Railroad runs for 222 miles on Portuguese territory to the border of Mashonaland. Telegraphs connect Beira with Salisbury and Lourenço Marques with Pretoria. The number of vessels that entered the port of Mozambique in 1897 was 236, of 171,471 tons, of which 57, of 84,328 tons, were German, and 24, of 32,394 tons, British: Beira was visited by 237 vessels, 118 of them, of 131,667 tons, British, and 58, of 86,061 tons, German: Lourenço Marques, by 267 vessels, of 691,000 tons: Chinde, by 69 vessels, of 32,850 tons.

German Southwest Africa.—The total area of the German sphere in Southwest Africa is estimated at 322,450 square miles, with a population of about 200,000 Hottentots, Bushmen, Damaras, and Kafirs. The number of whites in 1897 was 2,628. The military force numbers 755 officers and men, exclusive of the native troops. The revenue for 1896 was 1,856,860 marks, of which only 156,860 marks were collected in the country and 1,700,000 marks were contributed from the imperial treasury. The expenditure was 1,991,480 marks. For 1899 the revenue is estimated at 6,970,000 marks, including an imperial contribution, and the expenditure at 5,001,000 marks. The chief imports are cotton cloth and provisions. The exports are guano and ostrich feathers. The total value of the imports for 1897 was £244,366, and of the exports £62,337. The German authorities, following the example of Natal and Rhodesia, have taken measures to restrict and hamper the operations of Hindu traders. One edict forbids any more selling of goods to the natives on credit, because the Indian dealers have reduced the coast natives to a state of dependence by means of usurious contracts; and another edict imposes excessively high trading licenses.

CHARITIES OF THE UNITED STATES.

The object of this article is to show, as nearly as possible, the amount appropriated or expended by each State as a unit and by the largest municipalities as units toward the support and proper care of institutions and individuals under certain specified headings within their respective boundary limits, and also to exhibit, as completely as can be done from available reports, the totals of individuals benefited by such appropriations or expenditures. These headings, grouped together, represent the principal charities recognized officially by State and municipal governments. The classes treated of include: 1. Poor in poorhouses, etc. 2. Destitute children. 3. Sick and injured. 4. Blind. 5. Deaf and dumb. 6. Feeble-minded. 7. Insane. 8. Epileptics.

Some of the minor classes are not mentioned in the foregoing, and several combinations are omitted because they are exceptional. For example, in Colorado there is an institution for deaf and blind. A special appropriation is made in that State also for dependent children, for whom a home is provided, and still another for a soldiers' and sailors' home. Idaho has an appropriation under the special heading, Blind, dumb, and deaf. In several States, notably Indiana and Iowa, special provision is made for soldiers' orphans. In Massachusetts the appropriation for insane includes provision for epileptics and dipso-maniacs. Nebraska sustains a home for the

friendless. West Virginia has established a home for incurables.

State and municipal provision for the criminal classes is not included in this article. Owing to a lack of proper definition with reference to industrial and reform institutions for children, it has been deemed best not to include here items that are given under headings referring to these classes.

It is impossible within the limits of this article to exhibit much more than an outline; but, through the courtesy of State executives, their departmental officers, the general secretary of the National Conference of Charities and Corrections, the Commissioner of Labor in Washington, the special agent in charge of statistics of crime, pauperism, and benevolence for the eleventh census, and others who are interested in the general subject, a sufficiently full showing has been made available to form a statement of great interest. A summary of recent and pending legislation and the latest Federal statistics on the subject of pauperism and benevolence will be found at the end of this article.

Alabama.—According to an official statement recently received, there are only two charitable institutions supported by the State—i.e., the Institute for the Deaf, Dumb, and Blind, at Talladega, and the Asylum for the Insane, at Tuscaloosa. From the latest report it is noted that what is known as the Institute for the Deaf, Dumb, and Blind embraces three distinct establishments, divided into numerous departments, including 171 deaf pupils, 100 blind pupils, and 53 negro deaf-mutes and blind. The insane asylum is known as the Bryce Insane Hospital. It will hold 1,100 patients, but the daily average is in excess, being 1,276. The expenditure for this latter institution in 1897-'98 was \$145,424. There are no statistics available concerning paupers in county poorhouses. Children of more than ten years of age are not allowed to remain in poorhouses, but are assigned by probate judges to respectable families. There are orphan homes in connection with the churches. All the larger cities of the State have hospitals.

Alaska.—No means have been provided in Alaska for the care of orphans, old people, deaf and dumb, blind, or insane persons. Steps have been taken to provide, through Congress, for the establishment of an asylum or sanatorium west of the main range of the Rocky mountains for care and custody of persons legally adjudged insane in Alaska. Orphan children were formerly made slaves, but the Christian missions have largely done away with this cruelty. In the village of Sitka are several men totally blind. They are good fishermen, and earn their living for the most part by fishing. Old people are sadly neglected, unless one should be a woman of high caste who has children. Such are well taken care of.

Arizona.—The poor, sick, and injured are cared for in county hospitals; blind and deaf-mutes are sent to a blind asylum in an Eastern State, expense being paid by the Territory; no provision is made for feeble-minded children; 168 insane patients are maintained entirely by the Territory in the asylum at Phoenix.

Arkansas.—Reports have been received from three institutions—viz., the State Lunatic Asylum, the School for the Blind, and the Deaf-mute Institute. The lunatic asylum is at Little Rock, and has a nominal capacity of 650. The daily average number of patients is 550. The State appropriation for two years ending April 1, 1899, was \$120,000. It is reported that the number

of applications for admission is steadily increasing. The total enrollment for the blind school, 1897-'98, was 265. The appropriations, 1897-'98, amounted, in round numbers, to \$61,000. The total enrollment for the Deaf-mute Institute, 1898, was 276. The appropriations, 1897-'98, amounted, in round numbers, to \$86,000.

California.—A very determined effort was made before the Legislature of 1899 to establish a State board of charities and correction. The bill introduced passed both houses, but was refused by the Governor. A bill for the disestablishment of the Home for Adult Blind, and bills for the further improvement of the Home for the Care and Training of Feeble-minded Children, and especially for the epileptic colony, newly established under the care of said home, also passed both houses, but were vetoed by the Governor.

Two new hospitals have been opened—one supported by a charitable Hebrew organization, but absolutely nonsectarian as to its patients; the other was organized by representatives of several Protestant churches, the Masonic order, and Odd Fellows, called the Christian Hospital Association, and is designed to care for people of a good class not able to pay usual hospital rates.

Aged and infirm poor are maintained by their respective counties in hospitals, poor farms, and almshouses. In most counties the healthy poor are not separated from those who are sick or injured. From the counties reporting, 9,375 of these two classes have been maintained during the year 1898. In the San Francisco Almshouse the number reached 1,000.

Destitute children are maintained chiefly in orphanages supported by the State. A few are allowed in poorhouses in distant counties. During the half year ending June 30, 1898, 863 orphans, 5,160 half orphans, 536 abandoned children, and 186 foundlings were supported, at a cost to the State of \$204,701.91.

The two State institutions for the care of the blind are the Home for Adult Blind, in Oakland, and the Deaf, Dumb, and Blind Asylum, in Berkeley. There were 237 inmates in the latter institution for 1898. From the former we could obtain no information. In 1897 there were 100 inmates.

No separate State institution is maintained for deaf-mutes, they being received into the home at Berkeley with the blind. The Catholic Sisters of St. Joseph have opened during the past year a home for deaf-mutes, and have some 60 pupils.

Idiotic and feeble-minded persons are kept in a home at Eldridge. The number of inmates, 1898, was 576. This included those in the school, custodial and industrial departments. The sum of \$199,700 was allowed by the last Legislature for two years' support.

There are five insane asylums in the State. The State Insane Asylum is at Stockton. Its nominal capacity is 1,000 males and 500 females. The average number of inmates is 1,564. The expenditure for this asylum, 1897-'98, was \$193,733. The Napa State Asylum for the Insane has a nominal capacity of from 900 to 950. According to the latest available report, 1894-'95, the number of patients treated during that fiscal year was 1,689. The expenditure for that year is reported as being \$198,862. The report of the Agnew State Hospital, at Agnew, shows a nominal capacity of 1,000. The number of patients treated, 1897-'98, was 1,109, the daily average being 914. The expenditure for the year was \$121,169.

The City and County Hospital, San Francisco, is a general hospital. Total receipts, \$91,394; total expenditures, \$91,394; number of beds, 437; daily

average number of beds occupied, 378; number of in-patients, 4,401; number of out-patients, 772; cost per in-patient per day, 67 cents.

Information concerning charitable institutions supported by cities in this and other States is given in the second part of the article, which is devoted exclusively to municipal establishments under the general heading of Charity.

Colorado.—From the official report, 1897-'98, concerning State charities, it is gathered that the appropriation for deaf and blind for that year was \$5,000. This amount was for one institution, having 115 patients. An expenditure of \$50,318.52 is shown for one insane asylum. Twenty thousand dollars was appropriated toward the support of dependent children. An appropriation of \$40,000 is credited to soldiers and sailors, and \$3,000 for upkeep of the State Board of Charity.

The appropriation mentioned above for dependent and neglected children was a special one, intended to defray the cost of a permanent site and building. The lunacy act of the State has been revised, rendering its provisions similar to those of New York, and including insistence on the deportation of pauper insane not residents of the State. Appropriations by the Legislature for maintenance and improvements recommended by the State Board of Charities and Correction were very liberal, considering the condition of the State treasury.

The appropriations for 1900 were as follow: State Home for Dependent Children, \$15,000; State Insane Asylum, \$30,000; State School for Mute and Blind, \$22,000; State Soldiers' and Sailors' Home, \$20,000.

Besides these legislative appropriations, a regular tax of one fifth mill goes to the State School for Mute and Blind, and a one-fifth-mill tax is appropriated for the support of the State Insane Asylum. Appropriations in addition to the foregoing are made for improvements, for the erection of new buildings, and for the purchase of a permanent site for the State Home for Dependent Children.

An important measure has been passed in the State Legislature, whereby a penalty is imposed for the commitment to or retention in county temporary homes for dependent children of any demented or idiotic children or children suffering from incurable or contagious diseases. An effort was made to provide for the commitment of such children to the care of the boards of management of the county homes, in order to have them under responsible supervision, but not to place them in the homes with other children, and the matter is still under consideration. A bill to transfer the cost of support of children in the county homes from the State, where it now rests, to the towns from which the children are committed, will probably be defeated. Another bill has been introduced, providing that no complaint should be brought for the commitment of a child to a county home until after it had been investigated and approved by the town committee.

Only a portion of the counties have poorhouses or poor farms, relief being given at the homes and the sick being cared for in private hospitals. The approximate population of dependent paupers is about 250 in the State. In the Soldiers' Home, March 1, 1899, 146.

In the State Home for Dependent Children, March 1, 1899, 64; in private orphanages, 500 (approximate number); in county institutions, none.

There are 25 hospitals in the State, nearly all under private auspices, having an average population of about 500.

The State Institution for the Education of the Deaf and Blind on March 1, 1899, had 114 inmates.

There is no institution in the State, either public or private, for feeble-minded children. Statistics show a population of 250 such.

The insane in the State Hospital, March 1, 1899, numbered 473; at Dr. Work's sanatorium at Pueblo, March 1, 1899, 56; in the county hospital, Denver, 15; none in county poor farms or jails.

Connecticut.—From the official report for the year ending Sept. 30, 1898, it is ascertained that the following appropriations were granted by the Legislature: Blind, 1 institution, \$52,000; deaf and dumb, 1 institution, \$40,000; insane, 3 institutions, \$297,000; hospitals, 14 institutions, \$117,000; almshouses, 8 institutions, \$129,000.

A temporary home is provided in each of the 8 counties for the shelter of dependent and neglected children between the ages of four and eighteen until suitable family homes can be found for them. The average number of inmates in the county homes is 680.

The sick and injured poor are cared for in a number of city hospitals at the expense of the towns that send them and of the State, which furnishes appropriations for most of these hospitals. Fitch's Home for Soldiers, at Noroton, has an average number of 470 inmates.

The State has about 70 blind beneficiaries, of whom 20 are supported at the Perkins Institution, South Boston, and about 50 at the Institute and Industrial Home for the Blind in Hartford.

The State supported during the past year 108 deaf pupils, of whom 74 were at the American School for the Deaf, at Hartford, and 34 at the Mystic Oral School.

Feeble-minded children are cared for and instructed at State expense at the Connecticut School for Imbeciles, Lakeville. Average number, 170.

The Connecticut Hospital for the Insane, at Middletown, has an average of about 1,900 inmates, but is considerably overcrowded. The Retreat for the Insane at Hartford has an average of 150 patients. The number of insane persons in the State is increasing gradually, but it has not yet been shown that the increase is out of proportion to the increase in population.

Bridgeport Hospital is a general hospital. Total receipts, \$28,792; total expenditures, \$28,598; number of beds, 90; daily average number of beds occupied, 65; number of in-patients, 819; number of out-patients, —; cost per in-patient per day, \$1.21.

New Haven Hospital is also a general hospital. Total receipts, \$55,327; total expenditures, \$57,145; number of beds, 165; daily average number of beds occupied, 118; number of in-patients, 1,154; number of out-patients, —; cost per in-patient per day, \$1.33.

Delaware.—The last Legislature made the following appropriations: Society for the Prevention of Cruelty to Children, \$1,800; Babies' Hospital, \$500; State Insane Hospital, \$92,000.

The average of poor in poorhouses is about 350 adults and 10 children (temporarily) in the three county almshouses. The aged poor in homes average 72.

The various homes and orphanages provide for all the destitute children of the State. All are private charities, aided by small appropriations from the Legislature and the Levy Court.

Sick and injured are provided for in county almshouses and in the Delaware and Homœopathic Hospitals. Patients attended in hospitals, 500; dispensary cases, 3,000.

There are no institutions for blind and deaf-mutes. Appropriations from the Legislature permit three from each county to enter schools elsewhere.

Appropriations from the Legislature permit five from each county to enter the Feeble-minded School at Elwyn, Pa.

The State Hospital for the Insane has 165 men and 120 women patients. The new building erected last year has proved a valuable addition and aid in caring for and in the proper treatment of cases. The bacteriological department introduced by legislative enactment this last year is considered of marked importance.

District of Columbia.—The bill to create a board of charities for the District of Columbia, which was carried over from a previous session of Congress, was crowded out, and failed to receive final consideration. The Fifty-sixth Congress will be asked to consider it. A bill to create a municipal hospital was introduced, but could not be given an advanced position, and consequently failed to receive consideration. Five sectarian child-caring institutions were dropped from the list of assisted institutions. A heavy deficiency in current appropriations for care of dependent children under official guardianship was met by adequate appropriation. An appropriation of \$65,000 was secured for new buildings for an official institution long neglected.

Poor in almshouse, 229; dependent children, 824; in hospitals, 339; blind, 21; deaf-mutes, 36; feeble-minded, 47; insane, 964.

Two important charitable organizations have recently been established in the District—one, a private voluntary corporation, having for its object the better care of the adult blind; the other, a semipublic corporation, formed, at the solicitation of the local government, for the purpose of receiving such contributions as citizens may make for the relief of the poor in their own homes, and such income from invested funds as has heretofore usually been distributed to the poor by the metropolitan police. This corporation, known as the Citizens' Relief Committee, is the result of several years of careful work for the reformation of the troublesome matter of outdoor relief, and it is believed that it will furnish an agency for the distribution of such relief wholly trustworthy, and having for its particular duty the giving of outdoor relief.

Florida.—It is reported in the statement of the Superintendent of Public Instruction issued this year that \$10,000 was appropriated for 1898 in aid of the Deaf and Blind Institute. This establishment, according to the last report, provided for 33 deaf and 9 blind white pupils and 18 deaf and 2 blind negro pupils. The superintendent of the Florida Asylum for the Insane, in his last report, says that the State appropriation granted for 1899 was \$70,000. An equal amount has also been set aside for 1900. The expenses of the institution for the year ending Dec. 31, 1898, were \$56,850.55. The nominal capacity is 650.

Georgia.—No official statements procurable. It is learned from unofficial sources that the State Lunatic Asylum, Milledgeville, has a nominal capacity of 2,400; daily average number, 2,247.

Idaho.—The State appropriations for charities for the two years ending January, 1901, is reported as \$102,000. Of this total, \$12,000 was set apart for blind, dumb, and deaf. The appropriation for insane patients amounted to \$80,000. The sum of \$10,000 for the Soldiers' Home is included in the total amount given. The latest available report from this State shows that a

measure has become law requiring that the indigent must be supported by the relatives of the same as far as their ability will permit.

The State maintains the insane asylum located at Blackfoot. It has a nominal capacity of 170; daily average, 166. The Soldiers' Home, Boise City, is supported in part by the State, which avails itself of the federal provisions for such purposes. Some of the counties maintain poor-houses. The blind, deaf-mute, and feeble-minded children are educated at the expense of the State, under the direction of the State Superintendent of Public Instruction, who places these defectives in the schools or homes for defective youth of the adjoining States.

Illinois.—The State appropriations for charitable institutions, 1899–1900, amounted to \$4,285,361.12. This amount was divided up as follows: Blind, \$102,967; deaf and dumb, \$217,700; insane, \$3,355,894.12; orphans, \$138,100; hospitals for eye and ear, \$74,200; miscellaneous charities, \$396,500.

The chief event of the year in the field of charities and correction has been the passage of the bill to regulate the care and treatment of dependent, neglected, and delinquent children. For a year past the subject has been vigorously agitated. The State Conference of Charities of 1898 devoted its entire time to this subject. The Board of Public Charities considered the subject carefully. The State Federation of Women's Clubs and many of the local women's clubs discussed it. The Chicago Bar Association adopted a unanimous resolution in favor of suitable legislation, and appointed a committee to draft a bill. The committee consulted with representatives of the children's institutions and the various organizations interested, and finally produced a bill which, after considerable amendment, became a law.

The purpose of the bill is expressed in its last section, as follows: "This act shall be liberally construed, to the end that its purpose may be carried out, to wit: that the care, custody, and discipline of a child shall approximate, as nearly as may be, that which should be given by its parents; and, in all cases where it can be properly done, the child be placed in an approved family home, and become a member of the family by legal adoption or otherwise."

The bill is outlined as follows: A "juvenile court" is established in the city of Chicago, to be presided over by a circuit judge chosen by his fellow-judges. Confinement of children under twelve years of age in county jails or police stations is prohibited. Probation officers are authorized, but without public compensation. Children are brought before the court by summons instead of warrant.

"Dependent children"—i. e., those dependent on the public, homeless, abandoned, begging, peddling, performing, cruelly treated, having vicious parents, etc., having been adjudged dependent—may be committed to the guardianship of an individual, a society, or an institution, with power to dispose of by adoption or indenture.

"Delinquent children"—i. e., offenders against State laws or municipal ordinances—may be committed to an institution or to the care of a probation officer or to an accredited association.

The law provides that it shall be unlawful to confine any in the same building or in the same yard or inclosure with adult convicts, or to bring any child into any yard or building in which adult convicts may be present.

Associations receiving children under this act are subjected to the supervision and inspection of the State Board of Public Charities, and must

report as required by the board. County boards of visitation may be appointed by county judges to inspect institutions and societies receiving children under this act.

Associations incorporated in other States must furnish the Board of Public Charities with such guarantee as they may require that they will not introduce children "having any contagious or incurable disease, or having any deformity, or being of feeble mind or of vicious character, and that they will remove from the State any child which may become a public charge within five years after having been brought in."

The following details have been made available concerning 13 charitable institutions supported by the State. The figures given are for the fiscal year ending June 30, 1898. The expenses shown are what is known as "ordinary expenses." The number of inmates given represent those remaining on June 30, 1898: Northern Insane Hospital: inmates, 1,059; expenses, \$152,093.16; Eastern Insane Hospital: inmates, 2,216; expenses, \$305,187.49; Central Insane Hospital: inmates, 1,187; expenses, \$158,099.67; Southern Insane Hospital: inmates, 962; expenses, \$121,499.79; Western Insane Hospital: inmates, 354; expenses, \$16,599.14; Asylum for Insane Criminals: inmates, 152; expenses, \$29,935.50; Institution for the Deaf and Dumb: expenses, \$97,112.41; Institution for the Blind: expenses, \$45,874.26; Asylum for Feeble-minded Children: inmates, 699; expenses, \$105,634.51; Soldiers' Orphans' Home: inmates, 306; expenses, \$58,926.45; Eye and Ear Infirmary: inmates, 101; expenses, \$28,769.61; Soldiers' and Sailors' Home: inmates, 1,399; expenses, \$145,120.95; Soldiers' Widows' Home: inmates, 23; expenses, \$7,053.02.

Indiana.—The sum expended by the State in behalf of charitable institutions for the year ending October, 1898, was \$901,009.66. This amount was divided up as follows: Blind, \$31,235.04; deaf, \$64,627.77; insane, \$549,559.24; soldiers' and other orphans, \$93,637.99; Soldiers' Home, \$78,110.61; for feeble-minded, \$83,839.01.

The Legislature made specific appropriations to the Central Hospital for Insane to the amount of \$178,000, of which \$49,000 was to provide for two dining rooms for men and one for women, and \$110,000 for a hospital. These changes will increase the capacity of the institution by 205. Specific appropriations were made to the Northern Hospital for Insane, amounting to \$85,000, \$80,000 of which is to be used to erect new buildings, one for men, the other for women, with a capacity of 100 each. The Eastern Hospital for the Insane received \$75,200, out of which are to be built two hospital cottages, one each for men and women, to accommodate 30 beds each, costing \$33,000, and one cottage for men with a capacity of 48, costing \$28,900. The Southern Hospital for Insane received specific appropriations amounting to \$66,000, including \$40,000 for the erection of a wing to accommodate 132 patients.

An appropriation was made to build and furnish a dwelling house for the superintendent of the Institution for the Deaf, by reason of which it will be possible to readjust the disposition of inmates so as to accommodate 40 more. For the School for Feeble-minded \$47,000 was appropriated specifically, \$42,500 of which is to be used for the erection of two custodial cottages, one to accommodate 100 girls, the other 100 boys.

During the past year societies for organizing charity have been formed in Franklin and Alexandria. In the latter place work among tramps is receiving particular attention. A Home for

the Friendless has been established in Elwood, a Door of Hope in Terre Haute, and hospitals for the sick and injured in Goshen and Evansville. Near Middletown is a new institution for the aged poor, under the management of the German Baptists; and at Greensburg there is being erected an orphans' home by the Independent Order of Old Fellows. A hospital for the treatment of mental and nervous diseases has been organized in Indianapolis, and during the past year has begun active operations. Two counties in the State—Allen and Vanderburgh—have taken advantage of the law authorizing the organization of boards of children's guardians in counties having a population of 50,000.

There were in county poor asylums, Aug. 31, 1898, 3,102; in the Soldiers' Home, Jan. 31, 1899, 553.

The number of dependent children in the Soldiers' and Sailors' Orphans' Home, Jan. 31, 1899, was 629; county orphans' homes, Oct. 31, 1898, 1,596; in county poor asylums, Aug. 31, 1898, 153.

In the Institute for the Blind, Jan. 31, 1899, there were 132 pupils; county poor asylums, Aug. 31, 1898, 151.

The Institution for the Deaf on Jan. 31, 1899, contained 326 pupils; county poor asylums, Aug. 31, 1898, 49.

The School for Feeble-minded Youth on Jan. 31, 1899, contained 595 pupils.

The total enrolled population of the four insane hospitals, Jan. 31, 1899, was 3,459; county poor asylums, Aug. 31, 1898, 422.

The following details have been made available concerning nine charitable institutions supported by the State. The figures given are for the fiscal year ending Oct. 31, 1898. The expenses shown are the net total expenses. The number of inmates given represents the total enrolled on Oct. 31, 1898: Central Hospital for the Insane: inmates, 1,680; expenses, \$261,806.35; Northern Hospital for the Insane: inmates, 636; expenses, \$94,327.41; Eastern Hospital for the Insane: inmates, 545; expenses, \$93,067.37; Southern Hospital for the Insane: inmates, 534; expenses, \$98,667.07; Soldiers' Home: expenses, \$70,933.70; Soldiers' and Sailors' Orphans' Home: expenses, \$93,637.99; Institution for the Deaf: expenses, \$63,468.09; Institute for the Blind: expenses, \$30,494.01; School for Feeble-minded: expenses, \$80,000.

Indian Territory.—The Indian Territory is unorganized so far as general legislation is concerned. The five civilized tribes have each a legislative body, but the acts of these pertain only to the tribal limits. There are orphan schools in each tribe. The work of these has been quite effective in many cases. In the Choctaw nation a school is conducted for orphan girls at Garvin, Indian Territory, one for boys at Academy, Indian Territory, and the nation arranged by special contract with the Atoka Baptist Academy to care for 50 orphan children.

Work to about the same extent is done for orphans in the other nations. There are many poor white people renting land of the Indians and working in mines or cutting timber. There are thus many chances of orphanage, with but poor opportunity of relief. A very hopeful work has been started at Pryor Creek for the purpose of caring for the white orphans. This movement is dependent wholly upon contributions for support.

There are no poorhouses in the Territory. In some of the tribes special provision is made for the indigents. An effort was made two years ago to establish a school for the blind at Fort

Gibson. Particulars as to its success are not forthcoming. A few hospitals have been established. The railroads operating in the Territory have hospitals in the adjoining States, and send the injured and sick there for treatment. A few deaf-mutes have received instruction in the States by special arrangement. It is not known that any insane asylum exists in the Territory.

Iowa.—The sum expended by the State in behalf of charitable institutions for the year ending January, 1899, was \$693,984.45. This amount was divided up as follows: Blind, \$34,041.34 for two institutions; deaf and dumb, \$43,321.43 for one institution; insane, \$493,594.17, with 3,430 patients in three institutions; soldiers' orphans, \$47,599.47; Soldiers' Home, \$75,428.04.

The Legislature of Iowa meets biennially, and was in session in 1898. The reports of the various institutions are made to cover the same period, as a rule. This being the case, Mr. Burnett's report for 1898, which was as follows, so far as charitable institutions are concerned, applies equally well this year.

The number of adults in the poorhouses of the State is comparatively few, as several excellent institutions for the care of aged and infirm are in operation.

The State maintains an orphanage for destitute children at Davenport. The average during 1897 was 490, the number of girls being 200 and boys 290. Three fifths of them were soldiers' children. Less than 50 children are supported in the almshouses and at public expense in the various counties of the State.

The State maintains a central school for the blind at Vinton, with a smaller one at Knoxville. According to the last biennial report of the superintendent at Vinton, there are 246 inmates.

The State maintains an institution near Council Bluffs for the education of deaf-mutes.

The magnificent institution for feeble-minded at Glenwood, lately injured by fire, was reported in 1898 as being rebuilt, with about 730 pupils, with many applicants unable to be admitted for lack of room. The estimated value of equipment is \$350,000.

Three asylums for the insane are now in operation, and the fourth, at Cherokee, will soon be completed. A great number of insane patients, deemed incurable, are kept by the counties in local asylums. At Clarinda, according to the latest report, there were 747 patients. At Mount Pleasant the ninth biennial report gives an average of 885. Independence Hospital has a capacity for 1,000 patients, and is full. An industrial building, erected in 1897, contains shops for male patients to work in, chiefly during the winter season. In these shops repairs are made to clothing and shoes, and a number of useful articles, such as slippers, brooms, harness, baskets, rag carpets, cocoa-fiber matting, door mats, and pictures, are produced. There is also a printing office, from which a monthly paper is issued. The hospital also maintains a large farm, a training school for nurses, and a well-appointed pathological laboratory.

Kansas.—The State charitable institutions of Kansas include the State Insane Asylum, Topeka; Insane Asylum, Osawatimie; Institutions for the Education of the Deaf and Dumb, Olathe; Institution for the Education of the Blind, Kansas City; Asylum for Idiots and Imbecile Youth, Winfield; and Soldiers' Orphans' Home, Atchison. A new ward building, for which \$65,000 was appropriated by the Legislature of 1897, is now a part of the institution. The same Legislature

appropriated \$12,000 for improved drainage and water supply at the Institution for the Education of the Deaf and Dumb. Within the past three years \$35,000 was granted for improvements at the Soldiers' Orphans' Home. In addition to these appropriations, the sum of \$37,000 has been granted for improvements at the Institution for the Education of Idiotic and Imbecile Youth. According to the latest available official report, the number of inmates at the Topeka Insane Asylum was 781; Osawatimie Insane Asylum, 1,026; Institution for Deaf and Dumb, 261; Institution for the Blind, 98; Asylum for Idiotic and Imbecile Youth, 132; Soldiers' Orphans' Home, 175.

A prepared statement of expenditures by the State for these various institutions and for all charitable and benevolent purposes during the fiscal year ending June 30, 1899, shows the following totals: Blind Asylum, \$19,998; Deaf and Dumb Asylum, \$42,430.22; Idiotic and Imbecile Asylum, \$52,614.82; two insane asylums, \$314,686.09; Soldiers' Orphans' Home, \$30,342.62; State Soldiers' Home, \$44,857.10; maintenance of destitute insane, \$223,130.40.

Included in the totals for the two insane asylums is \$37,737.15 expended for new buildings and permanent improvement, and also included in the total for idiotic and imbecile asylum is \$20,846.75 for buildings. The item for hospitals and homes is an appropriation of \$700 each to 16 different private hospitals and homes in the State. The item for maintenance of destitute insane is an appropriation made by the last Legislature directly to the various counties for the care and maintenance of insane persons cared for by the counties because there was no room for them in the State asylums. They were allowed 50 cents per day per person so cared for, and the accounts covered a period of from one to four years back.

Kentucky.—There were 317 inmates in the almshouse on the first of the year; received during year, 240; number at close of year, 323.

During the year the Children's Free Hospital cared for 117 afflicted children; received at City Hospital during the year, 1,686 patients; remaining at close of fiscal year, 136.

The Kentucky Institute for the Blind received during the year 112 pupils in the white department; in the colored department, 24; total, 136. This institution was extensively remodeled, adapting it thoroughly for its special work.

In the Institute for Feeble-minded Children an increase was noted in the number of inmates over the previous year. Twenty were admitted during the year. At the close of the fiscal year there were 134 inmates.

The three insane asylums of the State showed at the beginning of the year 2,650 patients. Admissions during the year, 778; present at close of fiscal year, 2,705.

Louisiana.—The State appropriations for charitable institutions for the current fiscal year include the following: Blind, \$10,000 for one institution; deaf and dumb, \$18,000 for one institution; insane, \$100,000 for one institution; hospitals, \$108,000 for two institutions; Soldiers' Home, \$17,940; Lepers' Home, \$7,000.

Shakespeare Almshouse shelters 125 old people of both sexes; Faith Home for Aged Colored Widows, 18; Dames Hospitalities, 29 paupers of both sexes; Memorial Home for Young Women, 34; Touro Infirmary, 29.

About 2,000 orphans are sheltered in sectarian asylums.

The Charity Hospital of New Orleans has a daily average of 622 inmates.

The State School for Deaf and Dumb in Baton Rouge takes care of 90 inmates.

The State Insane Asylum at Jackson contains about 1,200 insane persons, both male and female.

Maine.—Very little legislation was enacted in the last Legislature under the heading of charities and correction. Destitute children are well cared for in the State. The sick and injured are carefully provided for in the various city hospitals. The Maine General Hospital is in a prosperous condition, as are the other hospitals of the State, being supported in part by the State, but receiving also liberal donations from time to time.

The blind are cared for out of State institutions. Deaf-mutes are cared for in the main School for Deaf-mutes, which is a most excellent institution, situated in Portland, and supported by the State. Feeble-minded children are cared for in the Massachusetts School for Feeble-minded. The insane asylum is receiving increased attention every year by the Legislature and those interested in the care of this class of unfortunates. Its nominal capacity is 600; daily average number, 727.

The total receipts of the Maine General Hospital were, in 1898, \$58,209; total expenditures, \$51,404; number of beds, 146; daily average number of beds occupied, 91; number of in-patients, 1,335; number of out-patients, —; cost per in-patient per day, \$1.49.

Maryland.—Interest in hospital provision is growing in Maryland. The Railroad Young Men's Christian Association Hospital, opened Nov. 28, 1898, is now in operation at Hagerstown. A small charity hospital has been opened at Cambridge, the State contributing \$1,500. The sum of \$10,000 has also been given, with a comfortable house and 13 acres of ground, for the Hospital for Consumptives, situated about 6 miles from Baltimore. Provision has now been made for 50 insane women at the Springfield Insane Hospital, until recently used for male patients only. The Henry Watson Children's Aid Society takes special interest in wayward and dependent children.

Baltimore City Insane Hospital has a nominal capacity of 450; daily average number, 425; Hospital for the Insane, Catonsville: nominal capacity, 450; daily average number, 515; Mount Hope Retreat, Baltimore: nominal capacity, 570; daily average number, —; Sheppard Asylum, Baltimore: nominal capacity, 150; daily average number, 81.

Johns Hopkins Hospital, Baltimore, is a general hospital. Total receipts, \$200,964; total expenditures, \$200,964; number of beds, 320; daily average number of beds occupied, 241; number of in-patients, 3,633; number of out-patients, 64,273; cost per in-patient per day, \$1.55.

Massachusetts.—The State appropriations for charitable institutions, 1898, include the following: Blind, \$30,000; deaf and deaf-mutes, \$60,000; insane, including dipsomaniacs and epileptics, \$416,492.32; feeble-minded, \$48,000; indigent and neglected children, \$105,000; hospitals for consumptives and eye and ear, \$45,000; paupers, \$235,047.20; almshouses, \$189,230.

The Legislature of 1898 passed an act providing for the establishment of a State Board of Insanity, to which were transferred most of the powers and duties relating to the insane, hitherto belonging to the State Board of Lunacy and Charity. The last-named board has become the State Board of Charity, and has the supervision of the State sane poor and the State minor wards, together with all pauper statistical work, and the

investigation of settlements of both the sane and the insane poor.

The Legislature has also passed an act providing that "whenever a woman shall be committed to any insane hospital or asylum the magistrate committing her shall, unless she is accompanied by her father, husband, brother, or son, designate a woman who shall be an attendant or one of the attendants to accompany her to the hospital or asylum of commitment."

The new State Hospital for Epileptics, which was opened nearly a year ago, has already more than its complement of numbers; and the Legislature has appropriated money for the erection of a new building, which, when completed, will, with the other buildings, enable the trustees to provide for about 350 patients, and secure a better classification of the inmates than can be arranged for at present. The Legislature has also changed the age of commitment to this institution, so that, instead of providing for the care and treatment of adults only, the hospital now receives patients of fourteen years of age and upward.

The State Board of Charity has for two successive years recommended that all dependent children—that is, those who become a public charge because they are orphans or because their parents are too poor to maintain them—as well as juvenile offenders and neglected children, should be cared for, maintained, and controlled by the State, irrespective of the question of their local settlement. The effect of the law would be to provide better care and treatment, on the whole, for the children, and, while it would impose an additional burden on the Commonwealth, would relieve many of the small towns of considerable expense. A bill embodying this recommendation was recently presented to the Legislature, and was favorably reported on by the committee; but differences of opinion arose with regard to the wording of certain clauses of the bill, and the whole matter has been referred to the next general court.

The number of poor in State institutions, 1898, was 1,278; in local almshouses, 3,796; in families, 435; total, 5,509.

Of destitute children, State charges in families, there were 1,728; town charges in institutions, 584; town charges in families, 439; total, 2,751.

The number of deaf in institutions is 313; blind, 251.

In hospitals and asylums, according to the latest available report, there are 6,969 inmates; boarded out from hospitals, 106; in local almshouses, 1,214; town charges in families, 98; in school for feeble-minded, 602; total, 8,989. In addition to the above, there are 74 sane inmates of the Massachusetts Hospital for Epileptics and 190 inmates of the Massachusetts Hospital for Dipsonians and Inebriates.

Boston Insane Hospital has a nominal capacity of 526; daily average number, 480; Danvers Lunatic Hospital: nominal capacity, 1,000; daily average number, 871; Hospital for Mental Diseases, Brookline: nominal capacity, 25; Medfield Insane Hospital: nominal capacity, —; Northampton Lunatic Hospital: nominal capacity, 550; daily average number, 544; Receptacle for the Insane, Ipswich: nominal capacity, —; State Almshouse, Tewksbury: nominal capacity, 1,300; daily average number, 1,292; Taunton Lunatic Hospital: nominal capacity, —; Westborough Insane Hospital: nominal capacity, 625; daily average number, 561; Worcester Insane Asylum: nominal capacity, 400; daily average number,

428; Worcester Insane Hospital: nominal capacity, 900; daily average number, 871.

Boston City Hospital is a general hospital. Total receipts, \$374,000; total expenditures, \$374,194; number of beds, 768; daily average number of beds occupied, 676; number of in-patients, 11,634; number of out-patients, 22,712; cost per in-patient per day, \$1.40.

The City Hospital, Worcester, is also a general hospital. Total receipts, \$72,727; total expenditures, \$64,229; number of beds, 140; daily average number of beds occupied, 95; number of in-patients, 2,218; number of out-patients, 2,205; cost per in-patient per day, \$1.55.

Michigan.—The sums expended by the State in behalf of charitable institutions for the two years ending June 30, 1898, were as follow: Blind, \$25,200; deaf and dumb, \$91,635.69; insane, \$88,430.15; dependent children, \$66,766.98; feeble-minded, \$75,503.20.

Two laws have been enacted by the Legislature of 1899 relating to charitable and correctional matters—namely, one prohibiting non-incorporated societies, associations, organizations, or persons from receiving, maintaining, or placing out minor children in homes; and one providing for State supervision of, and the reporting to the State Board of Corrections and Charities by all incorporated societies the whole or a part of the business of which is to receive, maintain, or place out minor children in homes.

There is now pending in the Legislature a bill providing for State care of defective dependent children. The statistical information here given is of the date of June 30, 1898, the close of the last biennial period of Michigan:

Poor in poorhouses number 6,065; destitute children, at the State Public School, 159; under control in homes, 1,304; total, 1,463; blind, in Michigan School for the Blind, 109; deaf-mutes, in Michigan School for Deaf, 398; feeble-minded children, in Michigan Home for Feeble-minded and Epileptic, 201.

The number of insane in State asylums is 4,217; in county homes, 145; in jails, 13; in private asylums, 226; total, 4,601.

The insane asylums and hospitals include the Asylum for Dangerous and Criminal Insane, Ionia: nominal capacity, 305; daily average number, 230; Asylum for the Insane, Kalamazoo: nominal capacity, 1,254; daily average number, 1,244; Eastern Michigan Asylum, Pontiac: nominal capacity, 950; daily average number, 1,059; Northern Michigan Asylum, Traverse City: nominal capacity, 1,000; daily average number, 994; St. Joseph's Retreat, Dearborn: nominal capacity, —.

Grace Hospital, Detroit, is a general hospital. Total receipts, \$36,232; total expenditures, \$36,347; number of beds, 128; daily average number of beds occupied, 56; number of in-patients, 975; number of out-patients, 2,964; cost per in-patient per day, \$1.76.

Minnesota.—The sums expended by the State in behalf of charitable institutions for the year ending July 31, 1899, were as follow: Blind, \$21,300; deaf and dumb, \$49,400; insane, \$541,400; dependent children, \$37,581.75; for feeble-minded, \$105,000; for other asylums, \$140,000; for crippled and deformed children, \$4,000.

The most important legislation in the field of charity enacted during the recent session of the Legislature was the provision made for additional care of the chronic insane. Two State asylums were authorized, each to be located on a large farm, each to have two buildings with a capacity of at least 100 inmates, the cost of construction

and equipment for each building not to exceed \$31,250. This legislation was a compromise between the advocates of the State hospitals and the advocates of county asylums similar to those existing in Wisconsin.

There is at present an overcrowding in each of the three Minnesota hospitals, although a detached ward has recently been completed, increasing the capacity at Fergus Falls by 200. A bill providing for a detention ward for the insane in the hospitals of the three largest cities was favorably considered, and came near passing. By a new law the superintendent and the secretary of the board of trustees for the State hospitals for insane now have a right to discharge patients from the three respective hospitals.

The deportation of nonresident insane has been successful, and the Legislature increased the appropriation for the execution of that law.

The State Board of Corrections and Charities is made responsible for the execution of the new law to restrict the importation of dependent children. It is not the purpose of this law to prohibit such importation, but to compel importing societies to conform to the same rules that are observed by Minnesota institutions and societies in investigating the homes and supervising the children whom they place. The age of children over whom the child-placing societies may acquire absolute guardianship has been increased from two to ten years.

The probate courts of Minnesota may now give the entire guardianship of children to volunteer institutions which have the approval of the State Board of Corrections and Charities, but this does not involve any payment on the part of the State to the institutions thus acquiring guardianship.

Truant officers may be appointed by the school boards.

On nomination of the State Board of Corrections and Charities the district judges are to appoint probation officers for a period of two years. The probation law is modeled after the Massachusetts law, except that it applies simply to juveniles; and, after sentence is pronounced, it may be suspended pending satisfactory conduct instead of being postponed, as in Massachusetts.

District poorhouses may now be established in counties having a joint population of at least 35,000, the property and equipment to be paid by the interested counties in proportion to their assessed valuation. The poorhouses are to be managed by the chairmen of the boards of commissioners in the counties interested, and payment is to be made in proportion to the number of days' board furnished inmates sent by the respective counties.

The State Board of Corrections and Charities was given power to condemn lockups analogous to power which it has had for many years to condemn county jails. The condition of lockups has greatly improved since the passage of a law in 1895 obliging towns and cities to obtain the approval of the State Board of Corrections and Charities before lockups can be erected or extensively repaired.

The Odd Fellows are erecting a widows' and orphans' home at Northfield, Minn. This is the first orphanage established in a number of years.

The poor in poorhouses number 495; destitute children in State Public School, 233; sick and injured in hospitals, 898; blind in School for Blind, 70; deaf-mutes in School for Deaf, 233; feeble-minded children, 643.

There are three State insane hospitals, with over 3,000 inmates; none in jails or poorhouses.

Fergus Falls State Hospital for the Insane has a nominal capacity of 1,200; daily average number, 1,011; Rochester State Hospital: nominal capacity, 1,000; daily average number, 1,103; St. Peter State Hospital: nominal capacity, 650; daily average number, 977.

Mississippi.—No official statement procurable. It is learned from unofficial sources that the East Mississippi Insane Asylum, Meridian, has a nominal capacity of 300; daily average number, 260; also that the State Lunatic Asylum, Hinds County, has a nominal capacity of 825; daily average number, 825.

Missouri.—The Missouri General Assembly of 1899 passed a bill to establish an insane asylum in southeast Missouri with an appropriation of \$150,000. This will make the fifth institution for the care of the insane in this State. A bill was also passed establishing a colony for feeble-minded and epileptics. At least it had met the approval of the Senate at the latest report.

The cornerstone of the Provident Association Building, to cost \$70,000, was laid a few months ago. During the five years of Dr. Finney's administration the methods and management of this charity have been revolutionized, modern ideas and appliances have been introduced, new industries added, until now the Provident Association takes front rank in quality and quantity of organized charity work in this country. Investigation precedes relief. During the last year 12,608 cases were investigated. Having no municipal outdoor relief, about 75 per cent. of all that is given comes from the St. Louis Provident Association.

Poor in poorhouses number 4,000, including St. Louis Poorhouse. Destitute children, 2,500 in private institutions; 400 a year cared for by St. Ann's, Bethesda, and Colored Orphans' Home. Sick and injured, 215 soldiers in the State Federal and Confederate Homes at St. James and Higginsville; 823 in the Female and City Hospitals at St. Louis; 43,963 cases treated at the City Dispensary in St. Louis in 1898. Blind in the State, 2,456—about one half of these under the school age, twenty-four years; in the State Blind School in St. Louis, 106 pupils. Deaf-mutes in the State, 2,003; 350 pupils in the State School at Fulton. Feeble-minded children in the State, 5,000; 1,600 within the limit of the school age.

There are 3,600 inmates in the asylums at St. Joseph, Nevada, St. Louis, Fulton, and on the poor farms.

The insane asylums and hospitals include St. Louis Insane Asylum: nominal capacity, 300; daily average number, 516; State Lunatic Asylum, No. 2, St. Joseph: nominal capacity, —; State Lunatic Asylum, No. 3, Nevada: nominal capacity, 760; daily average number, 628.

Kansas City Hospital is a general hospital. Total receipts, \$35,000; total expenditures, \$18,261; number of beds, 240; daily average number of beds occupied, 145; number of in-patients, 1,842; number of out-patients, —; cost per in-patient per day, 35 cents.

Montana.—The most important legislation of the last Legislature in the field of charities and correction was the establishment of a home for feeble-minded and a law permitting children to be taken from inhuman parents. A home for children until they can be adopted by worthy people has been established.

The poor in poorhouses are pretty well cared for in most counties; destitute children are cared for in Orphans' Home; sick and injured are cared for in hospitals. For blind and deaf-mutes there is one school.

The insane are cared for at State expense in an excellent manner at Warm Springs, Deer Lodge County, Mont. Its nominal capacity is 450; daily average number, 350.

Nebraska.—The State appropriations for charitable institutions for the two years ending November, 1898, were as follow: Blind, \$45,775; deaf and dumb, \$55,250; insane, \$366,895; feeble-minded youth, \$77,400; Soldiers' Home, \$93,350, with 325 inmates; Home for Friendless, \$31,500.

Among bills passed by the last Legislature was one to provide for the control and maintenance of the Home for the Friendless as a State institution. A bill was introduced to create a State board of charities. The bill was framed so as to be in harmony with the State Constitution. So much sympathy was expressed that for a considerable time the friends of the bill expected it to carry. It failed, however; but the friends are determined to succeed, and are confident this measure will be carried at the next Legislature, two years hence.

The aged poor are largely provided for in county almshouses, and the number has greatly increased of late years in large centers of population because of the increase in the number of the insane. Seven old persons are now being provided for by the State in the Home for the Friendless.

Most of the dependent children of the State are provided for by private associations. One State institution, the Home for the Friendless, has 38 children. This is also a placing-out agency, and children are only kept temporarily. Some of the larger counties have the care of a few dependent children.

No provision is made for sick and injured by the State. There is only one county hospital, and it is located at Omaha. Most of the hospitals are supported by churches.

There is one State institution for the blind, with 79 inmates.

There is one institution for deaf-mutes. It has 149 inmates. Oral and manual methods of teaching are employed.

There is one institution for feeble-minded, with 216 inmates. Many appeals are made for the admittance of others, who are refused from lack of accommodations. A good many of these are provided for in county houses, and others are under private care.

There are three hospitals for the insane, one of them for incurables. The total number of patients, according to the last report, was 1,121. It is difficult to estimate the number of patients in county houses. There are 90 in Douglas County Hospital alone. There are also two soldiers' and sailors' homes, with a total of 254 inmates.

The insane asylums and hospitals include the Hospital for Chronic Insane, Hastings: nominal capacity, 650; daily average number, 600; Hospital for the Insane, Lincoln: nominal capacity, 350; daily average number, 350; Norfolk Hospital for the Insane, Norfolk: nominal capacity, 208; daily average number, 204.

Nevada.—The Secretary of State reports that the only appropriations for public charities made each year by the State of Nevada are: For care and support of the indigent insane, \$35,500; for the support of the State Orphans' Home, \$14,700. The expenditures for 1898 for the former amounted to \$32,058.84; for the latter, \$13,229.31. The nominal capacity of the Hospital for Mental Diseases, Reno, is 225; daily average number, 197.

New Hampshire.—The Secretary of State reports an expenditure of \$42,742 for charitable institutions for the year ending May, 1899. This

amount includes the following items: Blind, \$3,994; deaf and dumb, \$4,510; insane, \$24,745; feeble-minded, \$1,094; soldiers' homes, \$8,399.

Important among the changes made by the Legislature of 1898-'99 was that relating to the beneficiaries of the Deaf and Dumb, Blind, and Feeble-minded fund. New Hampshire gives \$10,000 annually for the support of these defectives in institutions outside of the State. The law, as it now stands, places the nomination of these beneficiaries in the hands of the Board of Charities, upon whose recommendation only the Governor and Council can appoint children to fill the vacancies. A joint resolution authorizes the Governor and Council to appoint a commission, to work with one appointed by the State Conference of Charities and Corrections, to investigate the jail systems of the State and the State control of the insane as compared with the county care of the indigent insane, and to report to the next Legislature. Appropriations were granted to the State Insane Asylum, \$50,000; Soldiers' Home, \$20,000 annually for two years. Towns and cities are privileged to expend \$5,000 in the establishment of a free bed in any hospital for the benefit of the cities' sick poor, or to spend \$300 annually for a yearly bed in such an institution.

The most important new movement to be recorded is the establishment, on a permanent basis, of a New Hampshire Conference of Charities and Corrections. The State Board of Charities inaugurated this movement, and the first meeting was held at Concord, Feb. 21, 1899. The outcome of this meeting was the incorporation of the conference, with Judge H. E. Burnham, Manchester, president; President William J. Tucker, of Dartmouth College, first vice-president; John M. Gile, M. D., Hanover, secretary; Mrs. Lillian Streeter, Concord, treasurer.

The results of the first conference were increased appropriations for the insane asylum and the appointment of a committee authorized by law to investigate our jail systems and the State care of the indigent insane. The Sociological Committee of the Federation of Women's Clubs aided in getting up this conference, while the Concord Woman's Club paid all the bills thereof.

A magnificent new operating room, known as the Wells Building, has been given to the Elliot Hospital, in Manchester, by Mrs. Charles Wells. The Odd Fellows are soon to establish an orphans' home.

There are ten counties, and the amounts disbursed by their officials during the year ending Dec. 31, 1898, included \$403,155 for support of paupers. The eleven cities of the State paid during the same period, for support of poor, including aid to hospitals, \$105,207. The 224 towns, which comprise one half of the aggregate population, undoubtedly paid in 1898 for support of poor at least \$50,000. (Private charity helped to maintain 5 homes for the aged, 3 orphans' homes, 10 hospitals, 1 mercy home for females, by contributions estimated at \$100,000. Fraternal and benevolent organizations dispensed in charity not less than \$75,000.)

Taking into account contributions from all sources, it is estimated that at least \$1,000,000 is contributed annually in the State for charitable purposes.

The poor in its poorhouses include, in almshouses, 692; in families (figures not procurable); county charges in almshouses, 83; in orphan asylums, 327; placed out in families, 201.

Blind children are placed in institutions outside the State. Thirteen are now provided for.

Deaf and dumb children are placed in institutions of other States. There are 25 now provided for.

Insane and feeble-minded in State Asylum, 431; in county almshouses, 522; in Massachusetts School for Feeble-minded, 4; total, 957.

New Jersey.—The sum of \$41,000 has been appropriated for the necessary cottages for the State Village for Epileptics and the administration of the work. The sum of \$15,000 was appropriated the previous year for the purchase of land.

An act has been passed creating a State Board of Children's Guardians, being a nonpartisan board of seven persons, of whom two are women, who are appointed by the Governor and serve without compensation. All children who are or become public charges are the wards of this board. The children are to be placed in families

vania, \$8,881; blind children, placed in New York and Pennsylvania institutions, \$13,355; imbeciles, placed in Connecticut school, \$394; deaf-mute children, in New Jersey School for Deaf-mutes, \$40,096; insane, at State Hospital, Morris Plains, \$323,080; at State Hospital, Trenton, \$252,359; county almshouses, \$204,714; Home for Disabled Soldiers, \$20,500. The total number of defectives is shown to be 5,290, maintained at a cost of \$702,820. The total number of dependents is given as 9,139, maintained at a cost of \$509,853.

New Mexico.—No official statement procurable. It is learned from unofficial sources that the number of destitute children in the Territory is about 200; sick and injured in hospitals, about 125; deaf-mutes, about 50; insane, 75.

New York.—The past year has been noticeable for the number and importance of the bills introduced in the Legislature relating to chari-

STATE CUSTODIAL ASYLUM (MAIN BUILDINGS), NEWARK, NEW YORK.

of the faith of their parents, with or without the payment of board. The expense of the maintenance falls upon the counties, and the expense of the administration upon the State.

It is estimated that there are nearly 2,000 poor in poorhouses in the State.

Destitute children are kept in almshouses and boarded in institutions, etc. They number about 500. (There are also about 3,000 children in private institutions.)

The State maintains no hospitals. The counties maintain their sick poor in the almshouses when necessary. The city hospitals are supported mainly by voluntary subscriptions, with a small city appropriation in some cases.

The number of blind in the State institutions is 43; deaf-mutes, 141; feeble-minded women and children, 307; insane, 3,755. It is estimated by the managers of the Epileptic Village that there are about 2,000 epileptics in the State.

From the latest available detailed report of New Jersey State charities, it is learned that the following expenditures were made for State institutions during a recent year: Institution at Vineland for feeble-minded women and girls, \$20,000; feeble-minded children, placed in Pennsylv-

ties. Among the more important bills which passed both houses are the following:

A bill conferring upon the city of New York authority to make appropriations to private charitable institutions, and to increase or decrease the amounts which have been fixed by the Legislature in the past to be appropriated annually to specified institutions. This law confers practically unlimited "home rule" upon this city in this particular, and will put an end to the constant legislation authorizing the city to appropriate specific amounts to particular institutions.

A law repealing the special law under which Montgomery County has cared for its poor by the contract system. This plan had given rise to great abuses in that county, and was forbidden by law in all other portions of the State.

A bill providing that officers and employees of State charitable institutions shall be classified into grades, and their salaries and wages fixed by the president of the State Board of Charities and the Comptroller, subject to the approval in writing of the Governor.

A bill requiring plans for all new State institutions and all alterations and additions to ex-

isting State institutions to receive the approval of the State Board of Charities.

A bill authorizing cities of the first class to establish hospitals for consumptives outside of their corporate limits.

None of these measures were opposed by any of the prominent charitable societies or institutions of the State; and all of them are therefore presumably in line with the enlightened charitable sentiment of the community.

A bill for the establishment of a State hospital in the Adirondack mountains for the treatment of incipient pulmonary tuberculosis, which was championed by the medical societies of the State and by the leading charitable organizations in New York city, failed to pass.

Among the bills introduced which were opposed either by the State Board of Charities or by the leading charitable societies of New York city, or both, and which failed of passage, were the following:

A bill to re-establish the free distribution of coal to the poor by the city of New York. The defeat of this bill in two successive years may justly be regarded as a signal triumph for charity-organization principles.

A bill for the creation of a local board of public charities in the borough of Queens, New York city, and re-establishing a system of public outdoor relief in that borough. The purpose of this bill was to restore the borough of Queens, so far as the relief of the poor is concerned, to its position prior to consolidation with New York city.

The so-called destitute mothers' bill, authorizing the payment of public funds in New York city to widows for the support of their children instead of committing them to institutions. This was the third year in which this project had come before the Legislature, and on every occasion it has been defeated by the united efforts of the general charitable agencies of the city.

In New York city the system of caring for destitute children is through public support in private institutions. In the revised Constitution, taking effect Jan. 1, 1895, the State Board of Charities is directed to establish rules and regulations concerning the reception and retention of such inmates, and public money is to be

paid only for the support of inmates received and retained under such rules. The rules established by the State Board of Charities led to a decrease in the number of juvenile dependents throughout the State, but more particularly in New York city, where the number decreased from 16,858, Oct. 1, 1894, to 15,745, Oct. 1, 1897. During 1898, however, there was a considerable increase in the number of children who became public charges. A special committee of the State Board of Charities is now investigating the cause of this increase.

Several advances have been made in the care of destitute children. Perhaps the most important of these is the establishment of a system of co-operation between the Charity Organization Society and the Department of Public Charities as to the commitment of destitute children as public charges. An agent of the Charity Organization Society visits the office of the Charities Department twice daily, and considers all applications for the commitment of destitute children to institutions. Whenever it is found that the parents are of good character and should be enabled to keep their children at home, the Charity Organization Society takes the case under its charge and provides such material relief—groceries, rent, fuel, clothing, etc.—as may be needed. The Charity Organization Society is strongly supported in this work by the Society of St. Vincent de Paul and the United Hebrew Charities. From July 1, 1898, to May 1, 1899, of 1,126 children whose commitment had been applied for, 327 were taken under the charge of the Charity Organization Society.

In 156 cases the commitment had already been decided upon, and was prevented by the direct intervention and offer of assistance by the Charity Organization Society. It is certain that most of the remaining 171 cases would have been committed had it not been for the newly established system of co-operation. A similar plan is being put in operation in Brooklyn by the Brooklyn Children's Aid Society and the Bureau of Charities.

There has also been an increase in the efforts to place out children in families. Most significant is the establishment of the Catholic Home

STATE INSTITUTIONS AND INSTITUTIONS UNDER STATE CONTROL.

Bureau for Dependent Children, the object of which is to provide homes in families for destitute Catholic children. The State Charities Aid Association has also extended the work already carried on by several of its county committees in placing children in families, and now has two agents whose time is devoted almost wholly to this work. The Children's Aid Society has also undertaken the placing out of children in New York State to a larger extent than formerly.

The Training School in Practical Philanthropy, conducted by the Charity Organization Society during the summer of 1898, was extremely successful. An interesting account of the school is given in the Review of Reviews for February, 1899. A similar school will be conducted during the summer of 1899.

In Buffalo, through the active efforts of the Charity Organization Society, the city appropriation for outdoor relief has been reduced from \$118,585 to \$85,900.

There has been a steady and satisfactory development of the system of State care and maintenance of the insane. The appropriation for the support of the insane, as fixed by the Legislature of 1899, is \$4,795,100, as compared with \$4,902,201.37 in 1898. A second homœopathic hospital for the insane has been opened during the year, with accommodations for 300 patients. Additional accommodations for about 1,200 patients have been provided during the year, and buildings to accommodate 2,200 patients are now in course of erection at Central Islip. When all the buildings now in course of construction are finished, the overcrowding, which was extremely serious when the New York and Kings County asylums became a part of the State system, will be relieved.

The census of charitable institutions in the State of New York on Oct. 1, 1898, as detailed below, is given at the close of the report of Homer Folks, State corresponding secretary, from which the above statements are taken. As compared with Oct. 1, 1897, there is an increase of 2,357 inmates of charitable institutions, and of 703 in hospitals for the insane.

The number of aged and friendless persons cared for by the State is reported as 6,627; almshouse inmates, 11,788; blind, 723; deaf, 1,721; dependent children, 31,090; disabled soldiers and sailors, 1,354; epileptics in almshouses, 193; epileptics in Craig colony, 322; hospital patients, 9,622; idiotic and feeble-minded in State institutions, 1,288; insane in private asylums, 855; insane in State hospitals, 21,531.

The insane asylums and hospitals include: State Emigrant Insane Asylum, Ward's island: nominal capacity, —; daily average number, —; Binghamton State Hospital: nominal capacity, 1,300; daily average number, 1,249; Bloomingdale, White Plains: nominal capacity, 375; daily average number, 318; Buffalo State Hospital for the Insane: nominal capacity, 1,631; daily average number, 1,519; Hudson River State Hospital, Poughkeepsie: nominal capacity, 1,970; daily average number, 1,813; Long Island Home (Limited), Amityville: nominal capacity, 114; daily average number, 95; Long Island State Hospital: nominal capacity, 2,075; daily average number, —; Manhattan State Hospital: nominal capacity, 5,619; daily average number, 6,713; Matteawan State Hospital, Fishkill-on-the-Hudson: nominal capacity, 550; daily average number, 662; Middletown State Homœopathic Hospital: nominal capacity, 1,068; daily average number, 1,218; Rochester State Hospital: nominal capacity, 462; daily average number, 553; Sanford

Hall, Flushing: nominal capacity, 36; daily average number, 29; Utica State Hospital: nominal capacity, 1,133; daily average number, 1,014; Willard State Hospital: nominal capacity, 2,270; daily average number, 2,256.

Buffalo General Hospital reports as follows: Total receipts, \$56,401; total expenditures, \$61,713; number of beds, 154; daily average number of beds occupied, 127; number of in-patients, 2,087; number of out-patients, 0000; cost per in-patient per day, \$1.30.

Other general hospitals are: The Presbyterian Hospital, New York city. Total receipts, \$82,736; total expenditures, \$167,323; number of beds, 330; daily average number of beds occupied, 178; number of in-patients, 3,048; out-patients, 20,105; cost per in-patient per day, \$2.48.

Roosevelt Hospital, New York city. Total receipts, \$139,957; total expenditures, \$163,469; number of beds, 223; daily average number of beds occupied, 161; number of in-patients, 3,134; number of out-patients, 25,738; cost per in-patient per day, \$1.95.

St. Luke's Hospital, New York city. Total receipts, \$143,837; total expenditures, \$165,399; number of beds, 300; daily average number of beds occupied, 225; number of in-patients, 2,656; number of out-patients, 3,741; cost per in-patient per day, \$1.77.

North Carolina.—According to the State reports, the appropriation for two years, 1897-'98, under the heading of deaf, dumb, and blind was \$227,500. For two insane asylums the appropriation given was \$190,900.

The principal changes made by the General Assembly of 1899 pertain to the insane. The whole body of the statutes as passed and amended in various years was codified, rearranged, simplified in the direction of less publicity in cases of inquisition for insanity, and all the institutions for the insane given one law instead of operating, as heretofore, under different acts.

Provision was made for the first time in this State for the licensing of private institutions for the insane; also for private homes for the feeble-minded, epileptics, inebriates, etc. License is to be issued by the Board of Public Charities, such institutions to be operated under rules and regulations of said board; to render reports Jan. 1 and July 1 of each year to the Board of Public Charities; and to be subject to its frequent inspections. License revokable before the Superior Court of Wake County (in which the capital is situated), for willful violation or neglect of said rules.

The Board of Charities now has inspecting and supervising power over all county institutions for said classes or municipal asylums, and also retains former privileges in regard to all State charitable institutions.

The institutions for the insane, deaf, blind, orphans, and veterans are all providing for an increase in numbers, are doing better work, and are more fully appreciated than ever before. The percentage of cures upon admissions has reached about 60 per cent. in the asylums for the white race. New buildings for schoolroom purposes, costing \$25,000 each, have been erected for the deaf-mutes and the blind at Morganton and Raleigh, and large improvements have been made to the Colored Deaf-mute and Blind Institution.

For dormitories \$5,000 additional was voted to the Deaf-mute School at Raleigh, and \$5,000 additional for improvements to the Soldiers' Home, and an increase of its annual appropriation from \$8,500 to \$10,000.

The Oxford Orphan Asylum contains: White, 214; colored, 134 (separate institutions).

STATE HOSPITAL FOR THE INSANE, COLUMBUS, OHIO.

The deaf and dumb and blind are taken care of at Raleigh, where there are 316 pupils; deaf and dumb, Morganton, 200.

At the time of the last report the State was caring in their own institutions for insane: At the State Hospital, Raleigh, white, 413; State Hospital, Morganton, white, 906; Goldsboro, colored, 430; total, 1,749.

The above returns do not include several hundred insane and feeble-minded in county homes. Criminals deemed dangerously insane—i.e., persons committing or attempting to commit homicide, arson, and the like while insane and of previous good character—are now taken to special divisions in the State hospitals, instead of to the Penitentiary, as heretofore.

It is difficult to arrive at the correct number of persons living upon public alms, as all the counties are not provided with homes for the aged and infirm, some preferring to pay monthly sums to the poor or their friends. But, as far as can be ascertained from the returns made by the county visitors, the number in the homes may be estimated at 1,550; and those provided for wholly or in part outside of the homes, formerly "poorhouses," may be estimated at 3,625.

The State provides for 105 Confederate veterans in the Soldiers' Home, and expends over \$100,000 annually in pensions to her veterans in addition.

North Dakota.—The State appropriations for charitable institutions for fifteen months ending July, 1898, included the following: Deaf and dumb, \$19,250, with 50 pupils in one institution; insane, \$109,750, with 353 patients in one institution; Soldiers' Home, \$12,200, with 29 inmates.

There is no board of charities and corrections in this State. The buildings occupied by the School for the Deaf and the Hospital for Insane are inadequate in accommodation. Additional appropriations have been asked for.

Ohio.—The poor laws were codified by the Legislature at its last session. As at present arranged, they have met with general approval, and continue to grow in favor. The results, briefly stated, show a better care for the poor, indoor and outdoor, and a large reduction in the amount expended for outdoor relief. Two hundred thousand dollars is a conservative estimate of the annual saving under the new system in the State.

A united effort on the part of the Board of State Charities, infirmary officials, and boards of county visitors will be made to secure adequate and early appropriations for carrying into effect the requirement of the new law relating to the care of the insane and epileptic. On and after June 1, 1900, it becomes unlawful to receive or maintain these people in the county infirmaries.

The new State Hospital at Massillon was opened for the reception of inmates Sept. 6, 1898, and now has a population of about 400. New cottages are being built, and by the close of the present year (1899) accommodations will be ready for about 800 inmates.

The Board of State Charities has renewed its recommendation, frequently made heretofore, for some provision for crippled and deformed children. A census recently taken by the secretary of the board shows a large number of such children in county homes and infirmaries. A small number of these children have received treatment either in the children's hospitals or in the several homes. The general success attending their treatment has been sufficient to demonstrate the wisdom of providing in some way for the earliest and best treatment possible for this class of defectives.

Another matter that is crowding attention is the total lack of any provision for discharged prisoners. Nothing tangible has been accomplished up to this time; but a public sentiment is growing and forming on this question, and there are those who are not without hope that something will be done for these men in the near future.

The present condition of the State charitable institutions is highly satisfactory.

The following statement shows the distribution of destitutes and defectives:

The poor in poorhouses or county infirmaries (89 in number), 8,933 inmates.

Destitute children are provided for: In children's homes (42 homes reporting), 2,017 inmates; Ohio Soldiers' and Sailors' Orphans' Home, 922; House of Refuge, Cincinnati, 445.

Sick and injured are cared for in the Ohio Soldiers' and Sailors' Home, 1,202 inmates.

The blind are kept in the Institution for the Blind, 298 pupils; deaf-mutes in the Institution for the Deaf and Dumb, 470 pupils; feeble-minded

children in the Institution for Feeble-minded Youth, 1,050 inmates; insane in the institutions for insane (State hospitals,*7), 6,947 inmates; epileptics in the Ohio Hospital for Epileptics, 822 inmates.

The insane asylums and hospitals include the Athens State Hospital: nominal capacity, 813; daily average number, 819; Cincinnati Sanatorium, College Hill: nominal capacity, 80; daily average number, 78; Cleveland State Hospital: nominal capacity, 950; daily average number, 1,090; Columbus State Hospital: nominal capacity, 1,350; daily average number, 1,217; Dayton State Hospital: nominal capacity, 800; daily average number, 839; Longview Hospital, Carthage: nominal capacity, 1,000; daily average number, 1,059; Toledo State Hospital: nominal capacity, 1,190; daily average number, 1,276.

Oklahoma.—The Territory, outside of its colleges and university, has no public institutions proper, the insane, blind, and deaf-mutes being cared for by contract. The insane are sent to a private asylum at Norman, owned and managed by the Oklahoma Sanitarium Company. The deaf-mutes are sent to an institution located at Guthrie, and owned by private parties. There are 220 insane in the asylum. The owners of the asylum have added to their buildings and equipments during the past year. A new hospital has just been completed, and many cottages are under way. Owing to the small appropriation, only 25 deaf-mutes were cared for during the year; but the Legislature more than doubled the appropriation, and about 60 will be in the institute during the coming year. There are, all told, 90 deaf-mutes in the Territory. A special tax for the education of the blind was levied by the Legislature, and a contract has been made by the Governor for their care and education, but the institution is not yet opened. An orphan asylum has been established at Oklahoma City by private subscription, though the number of orphans in the Territory are comparatively few, and homes can readily be found for them. Hospitals are about to be established at Guthrie and Oklahoma City by Sisters of Mercy. The number of real paupers in the Territory is very small, and not a single county has as yet felt the need of a poorhouse.

Oregon.—The State appropriation for charitable institutions, according to the latest available State report, included the following items: Blind, \$7,625.58, with 28 pupils; deaf and dumb, \$25,000, with 54 pupils; insane, \$346,000; non-resident poor, \$8,000.

No legislation in the field of charities and corrections was enacted at the last session of the Legislature. A bill was introduced which would have been a great advance from the former method of control of the State Asylum for the Insane. By it the management was vested in a board of trustees, whose pay was not to exceed \$100 each per annum. Patients were protected by having the privilege of sending weekly a sealed letter to the trustees. The superintendent was required to report to the trustees an estimate for supplies for the succeeding six months, upon which bids were to be received after advertisement. The official title was to be hospital in place of asylum. The provisions of the proposed law were otherwise similar to the usual law for control of hospitals for the insane.

The aged and infirm (sane) poor are kept at county poor farms in 15 counties. Contracts for boarding paupers are let to individuals in 15 counties.

The majority of dependent children are cared

for by private charities. A few are in almshouses. Only one society receives State aid without being under State supervision, and this places its inmates in homes as soon as possible.

The sick and injured are cared for in hospitals, none of which receive State aid.

Blind dependents receive support and education at the Oregon Institute for the Blind; deaf-mutes are taken care of at the Oregon Deaf-mute School.

The insane are provided for at the Oregon Insane Hospital, Salem. Number of inmates, 1,100.

Pennsylvania.—There have been during the past year enlargements of the capacity of some of the hospitals for the insane, but no important new institutions have been established.

The almshouse population of the State (68 counties) aggregates 11,000, nearly three fourths of the inmates being the indigent aged. Other classes have been to a great extent segregated in special institutions.

Destitute children are cared for in asylums under private management or in families under the placing-out plan, having been removed from almshouses under the children's law of 1883. The State still supports a school for soldiers' orphans.

There are a few small State hospitals in the mining regions. The number of hospitals under private management, but receiving aid from the State treasury, is very great; and the appropriations toward these, uncertain in amount and depending on the temper of each successive Legislature, have become a heavy burden.

The hospitals in Philadelphia did a notable work last summer in providing for regular and volunteer soldiers brought from the various camps at the close of the Spanish-American War. Scores of hospital trains were sent to these camps to convey the patients to Philadelphia, and at one time nearly 1,500 were under treatment.

There are two educational institutions for blind children, and two industrial homes for the adult blind.

There are four schools for deaf-mutes supported by the State. Adults of this class are nearly all self-supporting.

Two State institutions provide for about 1,500 feeble-minded, and a number equally large remain under county or private care.

A conservative estimate places the number of insane in Pennsylvania at 9,000, giving a ratio of 1 insane person to 715 sane persons in the population. The six State hospitals being unable to provide for the increasing number of this class, the policy of removing all the insane from county institutions has been, at least temporarily, given up, and many harmless chronics are permitted to remain in county asylums.

The insane asylums and hospitals include the Cottage State Hospital, Blossburg; Lancaster County Hospital and Insane Asylum: capacity, 200; State Hospital for the Insane, Danville: nominal capacity, 800; daily average number, 1,051; State Hospital for the Insane of the Southeastern District of Pennsylvania, Norristown: nominal capacity, 650; daily average number, 1,014; State Hospital for the Insane, Warren: nominal capacity, 700; daily average number, 1,032; Western Pennsylvania Hospital for the Insane, Dixmont: nominal capacity, 600; daily average number, 768; insane department, Blockley Almshouse; insane department, Philadelphia Hospital: nominal capacity, 1,200; daily average number, 1,300; department for the insane of the Pennsylvania Hospital: nominal capacity, 500; daily average number, 411.

The Wilkesbarre City Hospital is a general hospital. Total receipts, \$25,461; total expendi-

tures, \$28,852; number of beds, 75; daily average number of beds occupied, 57; number of in-patients, 737; cost per in-patient per day, \$1.11.

The Western Pennsylvania Hospital is also a general hospital. Total receipts, \$107,402; total expenditures, \$95,470; number of beds, 218; daily average number of beds occupied, 150; number of in-patients, 2,689; cost per in-patient per day, \$1.77.

Rhode Island.—The State appropriations for charitable institutions for the year ending December, 1898, amounted to \$235,000. This amount was divided up as follows: Deaf and dumb, \$19,000; dependent children, \$20,000; workhouse, almshouse, and Hospital for Insane, \$169,029.31; Society for the Prevention of Cruelty to Children, \$2,500; Soldiers' Home, \$18,000.

An act of the Legislature recently provided that inmates of the State Hospital for the Insane or of the Butler Hospital may be paroled for sixty days.

The first workmen's loan association in this State began operations in Providence, Feb. 1, 1898, with a paid-up capital of \$25,000. On April 1, 1899, the association declared a dividend of 2 per cent. In October, 1898, the Rhode Island Penny Provident Society began work in Providence. In that city has just been completed an adequate and suitably equipped building, with wood yard attached, for the care of tramps. The city has also opened, in connection with the public-school system, two more schools for feeble-minded children, making four schools in all. These schools are intended to accommodate about 15 pupils each, and are not available for bad cases.

In Newport the Woman's Newport League House and Day Nursery has been started, which, in addition to the usual work of a day nursery, seeks to provide a temporary home for women and girls.

On April 25 of this year a conference of the representatives of the different charitable associations throughout the State was held. No permanent organization has yet been effected, but a committee was appointed to arrange for a conference next year. It is not improbable that a regular State conference will be the outcome.

The poor are provided for in the State Almshouse: men, 147; women, 160; boys, 31; girls, 23; total, 361. City and town almshouses, 312 (approximate); total for class, 673.

Destitute children are cared for in the State Home and School: in the school, 137; in families, 155 (approximate); total, 392 (approximate).

There is no special State institution for sick and injured. The figures for private hospitals are not at hand.

There is no institution in the State for the care of the blind. Dec. 31, 1898, the State was supporting 25 blind in institutions outside the State.

Deaf-mutes (58) are cared for in the Rhode Island Institute for the Deaf.

There is no institution in the State for the care of feeble-minded children. There are 23 feeble-minded children in the State Almshouse, included in the figures given above. On Dec. 31, 1898, the State was supporting 19 feeble-minded in institutions outside the State.

The insane are provided for in the State Hospital for Insane: men, 352; women, 363; total, 715. Butler Hospital: men, 90; women, 102; total, 292. Total for class, 1,007. There are also about 100 insane in the State Almshouse, included in the figures for that institution.

Rhode Island Hospital is a general hospital. Total receipts, \$81,772; total expenditures, \$81,772; number of beds, 200; daily average number

of beds occupied, 161; number of in-patients, 2,583; number of out-patients, 6,603; cost per in-patient per day, \$1.39.

South Carolina.—According to the latest available report, the South Carolina State Hospital for the Insane has over 900 inmates. A substantial three-story brick structure has been erected, and is now in use for colored male inmates. The South Carolina Institution for the Deaf and Blind, at Cedar Spring, has 120 deaf and 59 blind pupils, with an average attendance of 142. In this institution special attention is paid to the teaching of articulation and lip reading. The experiment of teaching deaf and blind children in the same class has been successfully made in this school. It is believed that up to the time of its introduction in this State it had never before been attempted in any part of the country.

In the city of Charleston there has been started a Hospital for Colored Persons and a Training School for Nurses. All the staff consists of colored persons. All of the church and benevolent societies co-operate with the Associated Charities in this State.

South Dakota.—The Legislature which convened last winter made an appropriation for the erection of a school for feeble-minded. As no provision was made for its maintenance, it will not be available for two years. It also made a small appropriation for an asylum for the blind. These are now cared for in Iowa. It rejected several bills framed in the interest of children, and also one intended to prevented chronic pauperism.

Twenty years ago only one railroad reached what is now the State, and the wave of emigration which settled the Territory and made the Commonwealth what it is to-day began in 1881. Yet the State has to-day a large modern brick hospital for the insane, costing more than half a million dollars, and a school for deaf-mutes housed in four granite buildings. Each of these institutions possesses a large and fertile farm, where the inmates not only are taught skill in agriculture and the raising of live stock, but produce their own food. Each is managed by a trained corps of managers, employing the most modern system which the thought and skill of the time have evolved.

There are now 300 men and 171 women in the insane asylum, and 48 children in the deaf-mute school. During the five years ending in 1898 28 per cent. of those received into the insane asylum were discharged cured. With the exception of the violent and the hopelessly demented, the inmates are all employed. The law is that the number of insane patients confined in the State outside of the hospital must not exceed 25.

The School for Deaf-mutes is at Sioux Falls. The work of the superintendent, himself a mute, has been highly successful. A farm of 60 acres, half belonging to the State, is connected with the institution, and the pupils are taught farming. The State has no school for the blind, but takes charge of the education of its blind citizens. At present there are only three, and they are being educated at the Iowa State School at the expense of South Dakota.

Tennessee.—The sums expended by the State in behalf of charitable institutions for the fiscal year 1899-1900 included the following items: Blind, \$175 for each student and \$15,000 for improvements; deaf and dumb, \$165 for each student and \$5,500 for improvements; insane, \$205,525, with 1,425 patients in three institutions; Ladies' Confederate Soldiers' Home, \$90 for each

inmate, \$500 for repairs, and \$150 for religious services.

Texas.—The State appropriations for charitable institutions for the year ending February, 1900, amounted to \$629,167. This amount included the following items: Blind, \$48,212; deaf and dumb, \$29,950; insane, \$422,980; orphans, \$60,300 (estimated).

Several bills are under consideration proposing liberal appropriations for the enlargement and better equipment of State institutions, which include three asylums for insane, two schools for deaf-mutes—one for colored persons—School for the Blind, Old Soldiers' Home, and Orphanage. At the last session an appropriation of \$50,000 was made for the building of an asylum for epileptics on a large tract of land already secured for the purpose. To this good beginning, doubtless, additional appropriations will be made from time to time, till the demands of necessity on this line shall be met.

Texas has no school for feeble-minded. The unfortunate of this class are kept with the indigent on county poor farms, but better things are hoped for in the near future. There is no State board of charities, but the larger cities have charity organizations that afford systematic relief to thousands of the very poor.

There are a number of rescue homes, hospitals, and homes for the aged and dependent in various parts of the State, under control of churches and societies, all doing a good work of relief and reformation.

There are 13 orphanages in Texas conducted by various churches and societies. Some of these find homes in families for many children, and agents of children's home-finding societies out of Texas also work on this line in this State. The Buckner Orphans' Home alone, near Dallas, has in families, and yet under its watch care, 800 children.

Poor in poorhouses are cared for in the Old Soldiers' Home, with 240 inmates; in homes for the aged (estimated), 50; on county farms, unknown; destitute children in State Orphans' Home, 400; Buckner Orphans' Home, 365; Buckner Home Annex (average), 13; Methodist Orphans' Home, 85; St. Mary's Orphanage, 100; Galveston (name not given), 53; Odd Fellows' Orphanage, 49; Masonic Widows and Orphans (not opened); Island City Protestant Orphanage, 40; San Antonio Protestant Orphanage, 53; Faith Home, 23; St. Matthew's Orphanage, 30; Bayland Orphanage, 35; Gainesville Orphans' Home, 10; Fort Worth Benevolent Home, 59; total orphans in institutions, 1,315.

The blind are taught in the State School, 177 pupils; deaf-mutes in the State School, 284 whites and 100 (estimated) colored. The insane are housed in the State asylums, 2,040.

Utah.—The sums expended by the State in behalf of charitable institutions for the fiscal year ending November, 1898, included \$26,961.99. Under the heading of insane, the cost for two years ending November, 1898, was \$79,831.78, with 263 patients.

There has been no legislation in the field of charities and reform. No important charitable organizations have been established.

The number of blind in the School for Deaf, Dumb, and Blind is 18.

The number of insane in State asylums is 273. The expenses during the past two years amounted to \$79,832.

Vermont.—Among the legislative provisions enacted in 1898 is included one whereby imbeciles who had been sent to the State Asylum shall

be remanded to town almshouses. This forbids the detention in hospitals for the insane of demented persons who are not dangerous.

The number of poor in poorhouses, etc. (all boarded out), is unknown; there are three homes for orphan and destitute children in the State, under private management, containing about 150. The sick and injured are cared for in five hospitals, under private management.

There are, according to the latest report, 8 blind, 19 deaf-mutes, and 9 feeble-minded children cared for in institutions in Massachusetts and Connecticut, the State appropriating \$11,000 annually for this purpose, the beneficiaries being designated by the Governor. In the State Hospital the number of insane is reported as 520; in the Brattleboro Retreat, at the charge of the State, 100.

Virginia.—There are no available statistics concerning poor and destitute children. Provision is, however, usually promptly made for all in these classes. Each county and each city maintains an almshouse. Here and there throughout the State are homes and asylums for orphans and destitute children. All these homes and asylums are supported by private charity organizations, churches, etc.

The sick and injured are always promptly cared for and treated in local hospitals, most of which are very well equipped.

The School for the Deaf and the Blind (exclusively for white pupils), at Staunton, is supported by and under supervision of the State. Nearly 200 pupils.

No State provision is made for feeble-minded children. Usually the indigent cases are provided for in almshouses, private charitable homes, etc.

The insane are cared for in four State hospitals, though at present their capacity is inadequate for all those needing hospital treatment. There are about 250 in various private families, in jails, etc., awaiting room in the State institutions. At present there are 1,700 insane in the hospitals for whites, and 860 insane negroes in Central Hospital, near Petersburg, Va.

Washington.—The amount expended by the State in behalf of charitable institutions for eighteen months ending September, 1898, was \$3,509.95. This included \$2,613.67 under the heading of insane, and \$896.28 for the Soldiers' Home, with 130 inmates.

A bill was passed at the meeting of the last Legislature appropriating \$14,000 to establish a home for adult blind. The Washington Children's Home Society, located at Seattle, is successfully aiding the homeless children of the State. The blind, deaf-mutes, and feeble-minded children are kept in the School for Defective Youth. Statistics are not forthcoming. The average daily attendance at three of the principal charitable institutions is as follows: Western Washington Hospital for the Insane, 532; Eastern Washington Hospital for the Insane, 279; Washington Soldiers' Home, 123.

West Virginia.—The sums expended by the State for charitable institutions for the year ending September, 1900, include the following items: Deaf and dumb, \$50,350, with 134 pupils; insane, \$219,750, with 1,346 patients; Home for Incurables, \$39,000.

The Legislature of 1899 was quite liberal in providing for State charitable institutions. The building to be used as the Home for Incurables, located at Huntington, was reported early in the year to be well under way, and likely to be ready for occupancy in a few months.

Three hospitals, to be known as miners' hospitals, were provided for, and \$22,000 given to each. One is to be located on the Monongahela, in the Fairmont coal region; one in the Kanawha valley; and the other on the Norfolk and Western Railroad, in the southern part of the State. Under certain conditions patients other than miners may be admitted to these hospitals, small fees being charged for treatment. The Children's Home Society, which has been doing such excellent work as a private institution, is now recognized by the State. A board of managers has been appointed by the Governor, and a small appropriation made to assist in its philanthropic work.

No statistics are available concerning poor in poorhouses, but it is believed this class will average 15 to each county in poorhouses.

The Children's Home Society, recently incorporated, finds homes for destitute children, and makes temporary provision for them.

The sick and injured in towns and cities are cared for by the municipal authorities, and in country districts the county court usually makes provision when those benevolently inclined fail in this duty.

The number of blind cared for by the State includes 32 males, 31 females; total, 63. Deaf and mute, 125; deaf or mute, 15; total, 140.

A home is now being erected for feeble-minded children at Huntingdon.

The insane of the State are in two hospitals, one at Weston and the other at Spencer. The total number of patients in these two institutions is 1,373.

Wisconsin.—Public sentiment, as expressed through the Legislature, continues favorable to liberal provision for the wards of the State. The estimate of the Board of Control for \$895,000 for the maintenance of the State charitable and penal institutions for two years was appropriated without any reduction and without a dissenting vote. Liberal special appropriations were also made for extensions and improvements, among which were \$161,000 to complete the Home for the Feeble-minded.

The Home for Feeble-minded at Chippewa Falls is full, and several hundred applications are on file. This institution, organized three years ago and opened two years since, has about 400 inmates, embracing all grades of mental deficiency. Room will be provided for 200 more at once in three dormitory buildings, and in addition an administration building and a schoolhouse will be built.

The poor remaining in poorhouse at the last report was 882, of whom 595 were males, 287 females. Of this number, 467 were over sixty years old.

Very few children are in poorhouses. Only 37 under sixteen years of age, none of whom were of sound mind and body, had been in almshouses during the year.

The State Public School, the Children's Home Society, and religious orphanages take care of every sound destitute child.

The State does not maintain hospitals, most of which are supported by churches, benevolent corporations, or mutual-aid societies.

The number of blind in the State School of the Blind during the year was 144.

At the State School for the Deaf the attendance was 232, while about 100 attended the day schools for the deaf, to the support of which the State pays \$150 for each pupil.

The number of feeble-minded children in the Home for Feeble-minded was 399. A large num-

ber of idiots are still in poorhouses and county asylums.

On Sept. 30, 1898, there were 1,314 insane in the two State hospitals and the Milwaukee County Hospital, and 3,236 in the 26 county asylums, which constitute what is called the "Wisconsin system."

Wyoming.—The expenses of the State in 1898 under the heading of deaf, dumb, and blind amounted to \$1,950. The amount estimated under the heading of insane for the year ending October, 1898, was \$42,000, with 77 patients. The estimated expenses for hospitals, 1898, is given as \$25,000, with 313 patients. An item of \$16,000 is shown as expended for the Soldiers' Home.

Almshouses. Cities.—In the Federal report prepared by the Commissioner of Labor in compliance with an act passed July 1, 1898, and published during September, 1899, appear valuable statistics concerning charitable institutions in 140 cities of the United States. Under the heading of almshouses, it is reported that these institutions exist in only 49 cities out of the whole number. New York and St. Louis possess 3 each. Boston, Charleston, S. C., and Newport, Ky., have 2 each, and the following cities are credited each with a single almshouse: Albany, N. Y.; Allegheny, Pa.; Baltimore, Md.; Bridgeport, Conn.; Brockton, Mass.; Cambridge, Mass.; Cincinnati, Ohio; Covington, Ky.; Dayton, Ohio; Duluth, Minn.; Elizabeth, N. J.; Fall River, Mass.; Gloucester, Mass.; Hartford, Conn.; Haverhill, Mass.; Holyoke, Mass.; Lawrence, Mass.; Louisville, Ky.; Lowell, Mass.; Lynn, Mass.; Malden, Mass.; Manchester, N. H.; Newark, N. J.; New Bedford, Mass.; New Haven, Conn.; Norfolk, Va.; Paterson, N. J.; Pawtucket, R. I.; Philadelphia, Pa.; Pittsburg, Pa.; Portland, Me.; Providence, R. I.; Richmond, Va.; St. Paul, Minn.; Salem, Mass.; San Francisco, Cal.; Scranton, Pa.; Springfield, Mass.; Springfield, Ohio; Taunton, Mass.; Trenton, N. J.; Washington, D. C.; Williamsport, Pa.; and Worcester, Mass.

Taking the cities by States, it will be seen from the above that there is an almshouse in every important municipality of Massachusetts, there being a total of 17 in 16 cities and towns. Next in order of numbers comes Pennsylvania, with 5 almshouses in the 5 leading cities. Kentucky, New Jersey, and New York have 4 almshouses each; Connecticut, Missouri, and Ohio have 3 each; Minnesota, Rhode Island, South Carolina, and Virginia, 2 each; and California, District of Columbia, Maine, Maryland, and New Hampshire, 1 each.

There are, according to the report above quoted, 4,247 paupers in the city almshouses of New York State; 2,701 in those of Massachusetts; 2,293 in those of Pennsylvania. In number of paupers in city almshouses, the other States rank as follow: Missouri, 2,101; Maryland, 1,250; California, 961; Connecticut, 807; Kentucky, 348; New Jersey, 344; Virginia, 317; District of Columbia, 211; Ohio, 210; South Carolina, 157; Maine, 146; Rhode Island, 125; Minnesota, 119; New Hampshire, 3.

Orphan Asylums. Cities.—The reports from the 140 cities referred to elsewhere show that in 7 only are there orphan asylums supported from municipal funds. These institutions are located at Charleston, S. C.; Columbus, Ohio; Lynn, Mass.; New York, N. Y.; Pittsburg, Pa.; Springfield, Ohio; and Washington, D. C. The largest is in New York city. It contains 1,181 inmates. The next largest is the asylum at Charleston, S. C., having 275 inmates. Then follow, in their order, Washington, D. C., 104 inmates; Spring-

field, Ohio, 60 inmates; Pittsburg, Pa., 48 inmates; Lynn, Mass., 24 inmates; and Columbus, Ohio, 20 inmates. From this it will be seen that the total number of orphans maintained in city asylums of 140 cities is 1,712.

Hospitals. *Cities.*—In the Federal report, 1899, above referred to, under the heading of hospitals, it is reported that these institutions—such as are supported by the city—are maintained in 44 out of 140 leading municipalities. New York and Pittsburg possess 8 each. There are 3 in Boston and San Francisco, and 2 in Augusta, Cambridge, Denver, Louisville, St. Louis, Washington, D. C., and Worcester, Mass. Each of the following cities and towns support 1 hospital each: Allentown, Pa.; Atlanta, Ga.; Baltimore, Md.; Binghamton, N. Y.; Charleston, S. C.; Chelsea, Mass.; Cincinnati, Ohio; Cleveland, Ohio; Dallas, Texas; Fall River, Mass.; Galveston, Texas; Holyoke, Mass.; Indianapolis, Ind.; Jersey City, N. J.; Knoxville, Tenn.; Kansas City, Mo.; Little Rock, Ark.; Memphis, Tenn.; Minneapolis, Minn.; Nashville, Tenn.; Newark, N. J.; Paterson, N. J.; Peoria, Ill.; Philadelphia, Pa.; Portland, Me.; Richmond, Va.; Sacramento, Cal.; St. Joseph, Mo.; St. Paul, Minn.; Seattle, Wash.; Spokane, Wash.; Springfield, Mass.; and Springfield, Ohio.

Taking the cities by States, it will be seen from the above that Massachusetts leads in the number of city hospitals, having a total of 11, located in 7 cities. Pennsylvania takes next highest rank in number, with 10 hospitals, 8 of these, however, being in Pittsburg. Third on the list is New York, with a total of 9 hospitals, of which 8 are in New York city. Missouri possesses 4 city hospitals; also California, 3 of the city hospitals in the latter State being supported by the municipality of San Francisco. Georgia, New Jersey, Ohio, and Tennessee have 3 city hospitals each. There are 2 in Colorado, District of Columbia, Kentucky, Minnesota, Texas, and Washington. The following States have 1 city hospital each, located respectively at Little Rock, Peoria, Indianapolis, Portland, Baltimore, Charleston, and Richmond: Arkansas, Illinois, Indiana, Maine, Maryland, South Carolina, and Virginia. The hospitals at Seattle and Spokane are for contagious diseases only.

Expenditures. *Cities* (hospitals, asylums, almshouses, and other charities).—The expenditures under these headings, as shown in the Federal report, cover one fiscal year, the latest available for purposes of the investigation. In 1 city only of the 140 concerning which accurate municipal statistics are available—Boston, Mass.—does the expenditure exceed \$1,000,000. The total given for that city for the last fiscal year is \$1,283,944. The next highest expenditure for a similar period is Philadelphia, \$655,369. Then follow, in the order given, ranked by amount expended: St. Louis, \$591,526; Baltimore, \$355,581; Washington, D. C., \$315,813; Cincinnati, \$206,458; Buffalo, N. Y., \$195,924; San Francisco, \$186,115; Pittsburg, \$155,763; Newark, N. J., \$142,481; Worcester, Mass., \$126,618; Cleveland, Ohio, \$116,343; Lowell, Mass., \$108,880; Fall River, Mass., \$107,847; Cambridge, Mass., \$103,984. The total number of cities expending more than \$100,000 for city hospital purposes is 15.

Three cities—Hartford, Conn., Rochester and Syracuse, N. Y.—expend between \$90,000 and \$100,000; 5 cities—Allegheny, Pa., Minneapolis, Minn., New Bedford, Mass., New Haven, Conn., and Scranton, Pa.—expend between \$80,000 and \$90,000. The cities in which charitable expenditures are between \$60,000 and \$70,000 are Albany, N. Y., Bridgeport, Conn., Detroit, Louisville, and

Springfield, Mass. The only others exceeding \$50,000 are Charleston, S. C., Lawrence, Mass., and Paterson, N. J.

Forty-one cities, or nearly 30 per cent. of the whole list included in the Federal report for 1899, expended during the last fiscal year under this heading amounts varying from \$10,000 to \$50,000. Twenty-seven cities, or 19 per cent., show expenditures for charitable institutions in amounts varying from \$1,000 to \$10,000.

Taking the cities by States, Massachusetts leads in number of cities and towns contributing to the support of local charitable institutions. The total amount expended under this heading in 18 Massachusetts municipalities during the last fiscal year was \$2,246,215. Of this total, Boston contributed \$1,283,944. Four other cities—Worcester, Lowell, Fall River, and Cambridge—exceeded \$100,000. Second in rank in the matter of number of cities is Pennsylvania. There are 14 cities on the list. Of these, 7 appear to have contributed. They include Allentown, Altoona, Erie, Johnstown, McKeesport, Reading, and Wilkesbarre. The amount contributed by the other 7 cities totaled \$1,004,529. Third in rank is New York, with 9 out of 12 cities contributing to charitable institutions, the total given being \$590,321. This does not include New York city, the figures for which could not be given, owing to the new charter readjustments. Of 9 cities in Ohio, 3 are reported as noncontributors. The other 6 give a total of \$383,985. Seven cities of New Jersey gave \$273,019.

Summary of Legislation. *North Atlantic States.*—A bill was passed in Connecticut to provide for a supervising agent to secure work and homes for boys released from the State Industrial School. Rhode Island has passed a law providing for separate trials and separate confinement of children awaiting trial, and a probation system and probation officers are provided. A law has been passed to regulate baby farms by a licensing system. Two more day schools for feeble-minded children have been established in connection with the public schools of Providence. In New York the destitute mothers' bill to compensate mothers for the care of their own children was defeated. Applications for admission of dependent children to institutions in New York city are now investigated by the Charity Organization Society. If the parents prove to be good people, assistance is provided, so that they can keep their children. The St. Vincent de Paul Society and the United Hebrew Charities co-operate.

In New Hampshire the State appropriates \$2,000 a year for teaching the deaf and dumb, blind, and feeble-minded in Massachusetts institutions. The Governor and Council appoint children to fill vacancies on nomination of the State Board of Charities. The truant law has been amended so as to require a certificate of the required school attendance of children seeking employment. Connecticut has passed a law imposing a penalty for keeping demented or idiotic children or those having incurable or contagious diseases in county homes for children. The Catholic Home Bureau for Dependent Children has been organized in New York city to provide family homes. The State Charities Aid Association is increasing its work in this direction. The Children's Aid Society of New York city is doing considerable work in the State at large. In New Jersey a State Board of Children's Guardians has been created, consisting of three men and two women. All children, public wards, come under its care for placement in families without payment of board.

In Vermont detention in hospitals of demented persons not dangerous is forbidden. A homœopathic hospital for the Connecticut insane is proposed. New York reports a satisfactory development of State care, and additional accommodations have been provided during the year for 1,200 patients.

The new Massachusetts State Hospital for Epileptics is full, and the Legislature has provided for its enlargement to a capacity of 350. The age limit for admission has been lowered to fourteen years.

In New York cities of the first class may establish hospitals for consumptives outside of the city limits. A bill for the State Hospital in the Adirondacks failed, though championed by medical societies and charitable organizations.

North Central States, etc.—The Iowa State Board of Control, established in 1898, is giving general satisfaction. It is composed of three conservative, experienced men. In Nebraska a bill for a State board of charities failed, but is expected to pass in 1901. The Minnesota State Board of Corrections has authority to deport nonresident insane persons and paupers. The Legislature increased the appropriation for this work.

A new law requires the State Board of Corrections and Charities to compile analyzed accounts of the expenditures of the State institutions.

The Indiana Legislature provided for about 550 additional patients in the State institutions. In Iowa there is lively discussion concerning the respective merits of State and county care for the chronic insane. The State Board of Corrections and Charities in Minnesota, after a special investigation, recommended the Wisconsin system of caring for the chronic insane; but the Legislature decided instead to establish two additional State hospitals (making five), and appropriated money to begin both. Missouri has established a fifth insane asylum.

Indiana passed a stringent law, regulating the introduction of dependent children from other States, and requiring a bond of \$10,000 from societies introducing such children. The Illinois Legislature passed a comprehensive law to regulate the care of dependent, neglected, and delinquent children. This law marks a great advance in the legislation of Illinois, which has hitherto been much behind that of other States. The principal features of the law are the recognition of the family home as the best place for the dependent child; the placing of child-saving associations under the supervision of the State Board of Charities; the direct commitment by the courts of children to the care of approved societies; the establishment of the probation system for juvenile delinquents; the establishment of a separate "children's court" in the city of Chicago; the prohibition of confining young children in jail, and the prohibition of confinement of young children in the same buildings or yards with adult convicts; the regulation of the placing of children in this State by foreign corporations. A law was passed providing for parental schools in Chicago; also a law permitting vacation schools. Michigan passed a law prohibiting unincorporated associations from receiving, maintaining, or placing children. All incorporated societies which care for dependent children are placed under the supervision of the State Board of Corrections and Charities. A law is pending providing State care for defective dependent children.

The next Ohio Legislature will be asked to provide for deformed and crippled children. The Wisconsin Home for Feeble-minded has 400 inmates, and is already full, with several hundred

applications on file. About 100 children attend day schools for the deaf, the State paying \$150 per year each. In South Dakota the Legislature of 1899 made an appropriation for a school for feeble-minded, also a small appropriation for a school for the blind. In Nebraska an important bill was passed to regulate child labor, also a truant law. The Home for the Friendless, a private institution, largely maintained by State appropriations, has been turned over to the State as a State institution. The Legislature of Minnesota passed a law to regulate the importation of dependent children from other States. The consent of the State Board of Correction and Charities must be obtained. The North Carolina insanity laws have been recodified, providing for licensing of private institutions, supervision of county and municipal asylums by the Board of Public Charities, etc.

A house and grounds, with \$10,000 in cash, have been given to the Baltimore Hospital for Consumptives.

The Texas Legislature appropriated \$50,000 for an asylum for epileptics.

The State Home for Incurables at Huntingdon, W. Va., will be ready for occupancy in a few months.

District poorhouses may be erected jointly by adjacent counties in Minnesota. The St. Louis Provident Association has laid the foundation of a \$70,000 building.

In California a bill for a State board of charities and correction passed both houses, but was refused by the Governor. The Washington State Board of Audit and Control, consisting of the Governor, *ex officio*, and five members, manages the two insane hospitals, Penitentiary, Reform School, and Soldiers' Home.

The Montana Legislature of 1899 established a home for feeble-minded. A law was passed permitting children to be taken from inhuman parents. A home for children has been established, to keep them until they can be adopted. In Indian Territory there is an orphan school in each tribe. The Choctaw nation has a school for orphan girls, another for boys, and contracts with the Atoka Baptist Academy to care for 50 more. A work for white orphans has been started at Pryor Creek.

A bill to reorganize the system of managing insane asylums in Oregon failed. Indian Territory has no insane hospital.

A bill to disestablish the State Home for the Blind was vetoed by the Governor of California. Fourteen thousand dollars was appropriated to establish a home for adult blind in the State of Washington. There are no poorhouses in the Indian Territory. Some tribes make provision for the poor.

Federal Census Results.—The latest complete statistics concerning paupers in almshouses and inmates of benevolent institutions were issued early in 1895, under date of Dec. 1, 1894, from the Census Office, Washington, D. C., and represent the results of an inquiry instituted by the Federal Government as part of the eleventh census investigation, which gave conditions as they existed on June 1, 1890. Until the results of the twelfth census are made known it will not be possible to give even fairly approximate figures concerning increases and decreases at any date (except in a few States) since 1890.

On June 1, 1890, there were in the almshouses of the United States 73,045 paupers (40,741 male and 32,304 female). Of this total, 44,626 were native born and 28,419 were foreign born. The number of whites is given as 66,578, and colored

6,467. The colored pauper element, relative to the total colored population, neither increased nor decreased between 1880 and 1890. The white element of the pauper population tended to decrease to such extent that, divided as native and foreign, male and female, the whole pauper population showed a decrease in ratios.

The principal cause assigned for pauperism is the want of any other home, this cause being given in 72,722 cases (40,563 male and 32,159 female). The next most common cause is age and infirmity, 20,121 (11,799 male and 8,322 female). Cripples come next, 10,373 (7,181 male and 3,192 female).

The foregoing deals exclusively with pauperism, but much interesting information is given in the eleventh census reports under the heading of "benevolent institutions." It is stated that on June 1, 1890, there were in the benevolent institutions of the United States 111,910 beneficiaries, including 55,245 males and 56,665 females.

An interesting showing is made concerning nationality of foreign-born whites. The total number of foreign-born inmates of benevolent institutions in the United States at the time of taking the eleventh census was 26,322. Of these, the nations most largely represented were Ireland, 11,148; Germany, 5,704; England, 2,424; Canada and Newfoundland, 1,211; Italy, 941.

The Annual Cyclopaedia is indebted to Mr. Hastings H. Hart, general secretary of the National Conference of Charities and Correction, for courtesy in furnishing early printed copies of the conference report. Thanks are due also to the following conference State and Territorial correspondents for 1899, from whose reports excerpts have been made for this article: Alabama, Julia S. Tutwiler; Alaska, Sheldon Jackson; California, Mrs. Agnes W. Flint; Colorado, Minnie C. T. Love, M.D.; Connecticut, Charles F. Kellogg; Delaware, Emalea P. Warner; District of Columbia, Henry B. F. Macfarland; Florida, L. B. Wombwell; Idaho, F. B. Gault; Illinois, Ephraim Banning (F. C. Dodds, 1898); Indiana, Amos W. Butler; Iowa, W. S. R. Burnett; Indian Territory, Edwin H. Rishel; Kentucky, Miss Emma A. Gallagher; Louisiana, Michel Heymann; Maine, Mrs. L. M. N. Stevens; Maryland, Kate McLane; Massachusetts, John D. Wells; Michigan, L. C. Storrs; Minnesota, James F. Jackson; Missouri, Miss Mary E. Perry; Montana, Mrs. Laura E. Howey; Nebraska, A. W. Clark; New Hampshire, Mrs. Melusina H. Varick; New Jersey, Hugh F. Fox; New Mexico, Rev. Mary J. Borden; New York, Homer Folks; North Carolina, C. B. Denson; North Dakota, T. N. Poole (W. J. Sisson, 1898); Ohio, Joseph B. Byers; Oklahoma, Frederick L. Wenner; Oregon, W. R. Walpole; Pennsylvania, James W. Walk, M.D.; Rhode Island, Henry B. Gardner; South Carolina, Mrs. M. A. Rhett; South Dakota, W. B. Sherrard; Texas, Rev. Robert C. Buckner, D.D.; Utah, Miss Grace M. Paddock; Vermont, Rev. J. Edward Wright; Virginia, Dr. William F. Drewry; Washington, Thomas P. Westendorf; West Virginia, Thomas C. Miller; Wisconsin, James E. Heg.

Among the books consulted were: Bulletin of the Department of Labor, No. 24, September, 1899, edited by Carroll D. Wright, commissioner, and Oren W. Weaver, chief clerk; Eleventh Census Report on Crime, Pauperism, and Benevolence, edited by Frederick H. Wines, special agent; American Charities, by Amos G. Warner; Charities Review, 1899; and Hospitals and Charities, 1899, by Sir Henry Burdett, K. C. B.

From the Bulletin of the Department of Labor many important facts and figures were obtained

concerning municipal charitable institutions in 140 cities. The Eleventh Census Report referred to is probably the most elaborate as well as the most complete ever published. From Sir Henry Burdett's work much valuable matter was obtained concerning the most important general hospitals in this country.

CHEMISTRY. Chemical Theory.—An explanation of the nature of valence, based upon the harmony of atomic motions, has been attempted by Prof. E. P. Venable. The extension of the atomic theory, he says, "teaches that the atoms are endowed with motion, and this motion probably varies in velocity and phases with the different elements. So, too, when the atoms unite the resulting molecule has a certain motion peculiar to it, while the atoms composing it have an intramolecular motion, in which their original motions are probably modified by their influence on one another. It is quite manifest, then, that a molecule in order to exist must maintain a certain equilibrium and harmony between these various motions, and that there can be all degrees of equilibrium from the very stable to that which may be upset by the least disturbing influence from the other. It seems to me that herein we have a full and satisfactory means of explaining the various problems connected with the conception of valence. The question as to whether the atoms of two elements will unite is decided by affinity, which is in some way connected with the electrical condition of these atoms. There is no apparent connection between this and valence. The number of atoms which enter into combination forming one molecule is purely a matter of equilibrium, and is dependent upon the nature of those atoms. Thus a phosphorus atom unites with chlorine atoms because of a certain affinity between them. The number of chlorine atoms with which it will unite depends upon the possibility of harmonizing the respective motions. As the temperature may affect these motions, and also impart a more rapid molecular motion, it is evident that the harmony or equilibrium will depend upon the temperature, and that a temperature may be reached at which no harmony is possible, and hence no compound can be formed. The phosphorus atom mentioned can, as we know, form a stable molecule with five atoms of chlorine. On increasing the temperature this becomes unstable, and only three atoms can be retained. Neither with four atoms nor with two is there harmony of motion. A sufficiently high temperature may prevent any harmony of motion whatever being attained, and hence union may become impossible. As to other influences than those of temperature, we can see that the equilibrium between the atom of phosphorus and the five atoms of chlorine may be upset by such a molecule coming within the influence, electrical or vibratory, of a molecule of water. The atoms must rearrange themselves for a new state of equilibrium, and so an atom of oxygen takes the place of two atoms of chlorine, giving again a condition of harmony. In other cases the motion of the molecule of water may be of such a character as to harmonize directly with that of the original molecule, and so to enter into equilibrium with it, a definite number of such molecules of water affording a condition of maximum stability. This we call water of crystallization. Such molecules would be more or less easily separated by an increase of temperature, and, where several molecules of water were attached, the highest temperature would be necessary for freeing the original molecule from the last water

molecule. This theory of valence makes it clear why it should vary toward the same element under different conditions. It is also clear that it might vary toward different elements, as these are very possibly possessed of different motions. It is further evident that it is in accord with the conclusion that valence is not an inherent property of the individual atom, but is the resultant of the influence upon each other of the combining atoms." In accounting for the elements of the same group in the periodical system having practically the same valence, the author supposes that they are all possessed of the same phase or kind of motion. These are, in large measure, independent of the atomic weights.

The chemical processes involved in the saccharification of starch by malt diastase were discussed in the British Association by Dr. A. Fernbach, of the Institut Pasteur, and Dr. G. H. Morris. Dr. Fernbach detailed his observations on the influence of acids and of some salts on saccharification, which had led him to the conclusion that the slightest trace of any free acid retards the action of diastase on gelatinized as well as on soluble starch, provided both the starch and the diastase are free from salts on which the added acid may act; but if the addition contains salts, such as secondary phosphates, which are distinctly unfavorable to diastatic action, the addition of acid is favorable as long as there is no excess of primary phosphates. The president of the chemical section (Dr. Horace T. Brown) regarded these results as opposed to his own observations on the subject, and considered further details of the experiments necessary to justify the conclusions. The paper of Dr. G. H. Morris bore more especially on the combined action of diastase and yeast on starch granules, and showed that ungelatinized intact starch granules, when submitted to the joint action of diastase and yeast, are fermented to a large extent, the maltose first formed being converted into alcohol. The addition of a small quantity of yeast to a cold-water malt extract more than doubles the percentage of starch that is changed. This increased action is not due to any greater activity of the diastase that might result from the removal of the soluble product formed (maltose). For the increased action to occur it appears necessary to have the diastase and the yeast present together in a condition capable of exercising their respective functions. Dr. Morris also discussed the action of acids on starch, and showed that maltose is always obtained as a product of hydrolysis, together with dextrine and dextrose. This is contrary to H. Johnson's statement that the two latter compounds are the sole products of the action.

In reference to the simultaneous occurrence of phenomena of oxidation and hydration at the expense of organic substances, experiments were carried out by M. Berthelot on the slow oxidation of ether in presence of water and air or of hydrogen peroxide. After five months' exposure to light in a sealed tube, the air remaining over the ether contained no trace of oxygen, but some aldehyde, acetic acid, and alcohol were found in the ether. A little methane is formed at the same time. Two chemical reactions were thus shown to be going on together—a hydration and an oxidation. The author considered that similar reactions are going on in Nature, such substances as the sugars, carbohydrates, glycerides, etc., undergoing the two processes simultaneously.

M. Gerber, of Marseilles, who has been studying the formation of the substances found in plants, communicated to the French Associa-

tion for the Advancement of Sciences in 1898 the results of his researches on the formation of olive oil and castor oil. He has since extended the investigation to a large number of other vegetable fats. From them he concludes that these substances are produced at the expense of carbohydrates and sugars, and that the phenomenon is accompanied by a respiratory quotient superior to unity. The biological chemistry of plants, therefore, seems to be identical with that of animals. M. Gerber has further undertaken new researches to determine whether the formation of fats is due to an alcoholic fermentation, by which he means one in which absorbed oxygen is derived from the combustion of a part of the sugar. The result of these experiments rather gives probability to the hypothesis that the hydrocarbons and the sugars in their transformation into fats take oxygen from the atmosphere, returning to it a considerably larger volume of carbonic-acid gas. As this gas contains its volume of oxygen, there seems to be a departure of more oxygen than is absorbed. The process is therefore one of deoxidation.

In speaking of the recent discovery by M. and Mme. Curie of the new radio-active substances polonium and radium, Sir William Crookes said that the radiant activity of those substances needs neither the excitation of light nor the stimulus of electricity, but, as in uranium, it draws its energy from some constantly regenerating and hitherto unsuspected store, exhaustless in amount. It can be conceived that uranium, polonium, and radium—bodies of densest atoms—have a structure that enables them to throw off the slow-moving molecules of the atmosphere, while the quick-moving molecules, smashing on the surface, have their energy much reduced, with a corresponding increase in the energy of the body. The energy thus gained seems to be employed partly in dissociating some of the molecules of the gas, and partly in originating an undulation through the ether, which, as it takes its rise in phenomena so disconnected as the impacts of the molecules of the air, must furnish a large contingent of light waves of short wave length. The shortness in the case of these Becquerel rays appears to approach, without attaining, the extreme shortness of ordinary Röntgen rays. The reduction of the speed of the quick-moving molecules would cool the layer of air to which they belong, but this cooling would be rapidly compensated by radiation and conduction from the surrounding atmosphere.

The subject of symbiosis, or the associated living of organisms, has recently been discussed by Prof. Marshall Ward from the physiological, and by Prof. H. E. Armstrong from the chemical, point of view. Prof. Armstrong regarded it as open to question whether symbiotic relationship involves more than a subdivision of labor. There is an absence of positive evidence tending to show that the one member of a pair of symbiotic organisms or agents does more than prepare the way for the other by effecting a change which the second is incapable of inducing, leaving it to the second to carry on changes in which the initiating organism plays no part. It may be a function of the one organism to remove from the sphere of action, as it arises, a product which would tend either to inhibit the change by which it is formed or to promote its reversal. Or the one organism may produce a change which, although minute, is sufficient to place the companion organism under the most favorable conditions; or, again, the one organism may become associated with the hydrolyte, and thus shield or

mask a particular center in it, thereby making it possible for the second organism actively to affect the molecules at other centers. This case corresponds to the removal of a ward from a lock, and the consequent possibility of using a simpler key. Fermentation being at bottom a process of hydrocatalysis, the function of the enzyme is to introduce water into the circuit of change, or to establish a circuit in which hydrolytic changes can occur. Hence we may speak of the substance fermented as the hydrolyte, of the ferment as the hydrolyst, and of the products of hydrolysis as the hydroschists. It is more than probable that the products ordinarily obtained are but end products of a series of changes, and that only some of these are enzymic, while others occur, as it were, naturally, and are partly analytic and partly synthetic in character. Symbiosis as distinguished from parasitism involves the conception not only of the concurrent existence of organisms, but of their useful concurrence.

Chemical Physics.—In his address on the Progress of Physical Chemistry before the chemical section of the American Association for the Advancement of Science Prof. Theodore W. Richards, after some general references to work continued during the year in stoichiometry, on solutions, on molecular compounds, in electrochemistry, and in the discovery of new elements by means of physical instruments and operations, spoke of some unpublished work on physico-chemical problems which had been done in the laboratory of Harvard University. Among them were a series of measurements of the potentials of galvanic cells composed of metallic plates immersed in fused salts at high temperatures, in which constant values, agreeing remarkably with Nernst's formula, have been reached by Dr. Gordon; an attempt to verify Faraday's law (more successful than had previously been done), by Mr. Edward Collins; a series of careful measurements of the potential of numerous reversible electrodes with the temperature and a comprehensive revision of Meyer's work on concentration cells, involving amalgams of different strengths, by Mr. G. N. Lewis; studies of the eccentricities of inversion temperatures and of transition intervals exhibited by the double sulphates of potassium and manganese, by Mr. F. R. Fraprie; determinations of the solubilities of argentic halides in solutions of sodic thiosulphate, by Mr. Faber; observations of some cases in which the dissolving of a solid in a solution caused a lowering instead of a rise of the boiling point, by Messrs. Harrington and Henderson; a careful determination of the melting point of crystallized Glauber's salt, made by Mr. Churchill for the purpose of securing a new fixed point for the standardizing of thermometers; and a study of the causes of the occlusion and the unequal release of gases by the oxides of metals formed from the nitrates, by the author. It became evident in the last research that the excess of oxygen usually present in the material under consideration has a tendency to work its way out by a process of dissociation and recombination which reminds one of the old-fashioned explanation of electrolysis. The nitrogen, not being able to escape in this fashion, is retained.

In the autumn of 1898 the production of liquid hydrogen in manageable quantities having become possible, its solidification under reduced pressure was undertaken by Prof. James Dewar. The first experiments were made with the apparatus devised by the author, consisting of a small vacuum test tube placed in a larger

vessel of the same kind, excess of hydrogen partly filling the space between the two vessels, and performing most of the evaporation relied upon to conduct the experiment. This attempt was not successful, partly on account of the need of a larger supply of the liquid, and other problems were attacked. Recurring subsequently to experiments with liquid hydrogen, Mr. Dewar noticed that there was almost invariably a slight leak of air, which became apparent by its being frozen into an air-snow in the interior of the vessel, where it met the cold vapor of the hydrogen coming off. The effect of this slight air leak on the liquid hydrogen when the pressure was reduced below 60 millimetres was to cause its solidification into a white frothlike mass, like frozen foam. To determine whether this mass was really solid hydrogen or a sponge of solid air containing the liquid hydrogen the author devised another apparatus, operating with which he observed, upon the required conditions of pressure, a gradual accumulation of perfectly pure liquid hydrogen in the inner tube, and eventually a sudden passage of the liquid hydrogen surrounding the outside of this tube into a solid foamlike mass, almost filling the whole space. The hydrogen in the inner tube not being visible through this mass, the apparatus was turned upside down, and no liquid flowed down the reversed tube. The hydrogen within it must therefore have been partly solidified. By the aid of a strong light and continuing the exhaustion the solid in the space between the tubes became less opaque, and the material in the inner tube was seen to be a transparent ice in the lower part, while the surface looked frothy. This fact prevented the solid density from being determined, but the maximum fluid density was approximately ascertained to be 0.086, the liquid at its boiling point having the density 0.07. The solid hydrogen melts when the pressure of the saturated vapor reaches about 55 millimetres. The mean temperature of the solid was found to be 16° absolute (-257° C.) under a pressure of 35 millimetres. Its indicated melting point is about 16° or 17° absolute (-257° or -256° C.). The foamlike appearance of the solid when produced in an ordinary vacuum is due to the small density of the liquid, and to the fact that rapid ebullition is substantially taking place in the whole mass of liquid. Prof. Dewar assumes that "the last doubt as to the possibility of solid hydrogen having a metallic character has been removed, and for the future hydrogen must be classed among the nonmetallic elements."

A mixture of marsh gas and air, in the most explosive proportions, was introduced by H. Couriot and J. Meunier into electric lamps during incandescence by a method described in the authors' paper. It was found that the incandescence of the filament was at once obscured except at one point, where, in about a minute, a rupture occurred with a faint spark. No explosion of the mixture of air and methane occurred; but that combustion had taken place was shown by the production of water and carbon dioxide and the disappearance of inflammable gas inside the lamp. Hence the spark which passed the moment the filament was ruptured remained without effect. It had previously been pointed out that incandescent metallic threads are powerless to cause the explosion of the most explosive mixtures; the same is the case with the lamp filaments.

An observation made by Henry J. H. Fenton in 1876 on the influence which iron exerts upon the oxidation of certain organic substances has

since been followed out to full investigation, and an extensive study has been made of the behavior of various other substances under similar conditions of oxidation and of the resulting products. The peculiar advantage of the method with iron consists in the fact that it is often possible to obtain by its products of limited oxidation which can not be prepared in any other way. Hydrogen peroxide is the most efficient oxidizing agent for the purpose, although others may sometimes be substituted. The iron which is essential to the process must in all cases be in the ferrous condition, but its proportion bears little, if any, relation to the yield. In regard to the general nature of the oxidation, it may be assumed that the initial result is the replacement of H by OH. The part played by the iron in these changes is still matter for discussion. The author's provisional theory is that the ferrous iron first replaces nonhydroxylic hydrogen, and is subsequently oxidized; and it is remarked that in the case of every substance found to be sensitive to this reaction nonhydroxylic hydrogen is present, associated in almost every case with alcoholic hydroxyl. The author is studying a variety of subjects of typical constitution, with the hope of throwing further light upon the general nature of this oxidation process, and publishes reports of progress concerning tartronic, lactic, glyceric, and malic acids.

In an account of aqueous solutions of metallic gold obtained by him through reduction of the chloride, Richard Zsigmondy has shown that metallic gold can be held in solution in water in different colored conditions. Although the great variety of colors obtained from the colloidal silver of Mr. Carey Lea can not be produced with gold, yet gold solutions are obtained which are deep red, blue, and black, as well as of shades lying between those colors, according to the conditions under which the gold is reduced. The blue or violet solutions seem to be the most easily obtained. The red solution is the one principally studied. It is obtained by treating very diluted, boiling hot, and slightly alkaline solutions of gold chloride with different reducing agents, such as formic aldehyde, acetic aldehyde, alcohol, and even hydroxylamine. Other colors are, however, liable to be produced by deviations in the process. The very dilute red solution can be evaporated to half its volume without change, but further boiling will cause it to turn to a dark violet color, with precipitation of gold as a black violet powder. The solution can be reduced to one twentieth of its volume in a few days. Solutions containing 0.12 per cent. of colloidal gold were obtained, but on further concentration metallic gold was precipitated. The red-gold solution passes through the closest filter paper without change. It is tasteless. On addition of neutral salts, acids, or fixed alkalies, the beautiful red color turns to blue; the liquid becomes turbid, gradually losing its color, and in eight or nine hours the gold falls to the bottom as a blue-black powder. Potassium ferrocyanide changes the color to green, and after twenty-eight hours to yellow; but gold is not precipitated. The metallic gold in aqueous solution acts like other dissolved colloidal substances when subjected to electrolysis.

A detailed study of the properties of liquid ammonia has been undertaken by E. C. Franklin and C. A. Kraus for the purpose of following out the manifest close relation that exists between that solvent and water. Water, the authors observe, occupies an essentially unique position among the known solvents. Its physical

properties, such as its capacity as a general solvent for salts and its power of electrolytic dissociation, its low molecular elevation constant, its high boiling point, and its heat of fusion, heat of volatilization, critical temperature and critical pressure, specific heat, association constant and dielectric constant, with values so much higher than the corresponding values for other substances, all combine to distinguish it from other solvents and give it a place by itself. As a result of their studies the authors conclude that of all known liquids ammonia most closely approaches water in all those properties which give that substance a conspicuous position among solvents. In its capacity as a general solvent for salts it is secondary to water, but superior to all other solvents. It closely approaches water in its power to dissociate electrolytes; some salts conduct electricity even better in ammonia solution than they do in aqueous solution. It plays a part in many compounds analogous to that of water in salts containing water of crystallization. Its heat of volatilization and probably its association constant are higher than those of any other liquid with the one exception of water. For a substance of such simple composition its critical temperature and critical pressure, and its boiling point at atmospheric pressure, are remarkably high, as is still conspicuously true of the corresponding constants in the case of water. Its specific heat is quite as great as that of water, while its molecular elevation constant is lower than that of any other substance for which measurements have yet been made. Ammonia differs from water in its inability to dissolve the sulphates and sulphites, the alkaline carbonates, phosphates, oxalates, the hydroxides of the alkali and alkaline-earth metals, and the facility with which it dissolves organic substances. The liquid does not exhibit a maximum density above the freezing point, and the solid ammonia is not specifically lighter than the liquid at its freezing point.

Major-Gen. J. Waterhouse, of the Royal Photographic Society, assumes, on the basis of Moser's thermographic observations, that metallic silver is sensitive to light. If cut-out masks be laid upon the surface of silver leaf or foil, silvered glass, or on a daguerreotype plate, and exposed to the sun's rays, a visible image ultimately becomes apparent on the metallic surface. The effect may, however, be got in a very much shorter space of time if the partly exposed metal be subjected to mercury vapor or developed by immersion in an acid solution of a ferrous salt mixed with nitrate of silver. Clear images, hardly as yet to be called pictures, can thus be obtained of a permanent character, so that it may be possible to work the daguerreotype process without iodizing the plate. In fact, the photographic phenomena of the invisible developable image, the visible image, reversal, and the effect of pressure marks can all be illustrated on the plain silver surface. Copper seems to be sensitive in the same way.

M. Becquerel has discovered that such substances as develop phosphorescence under the action of the ultra-violet rays are rendered luminous by the radiations of radium, while those which develop that property under the red rays are not so affected, and he remarks upon other analyses between the ultra-violet rays and those emitted by radium.

New Substances.—The emission of active rays from pitchblende has been found by M. and Mme. Curie not to proceed only from the uranium contained in the mineral, but from two other

new radio-active elements as well, which the authors have named polonium and radium. Polonium, they have observed, behaves like an element allied to bismuth, while radium exhibits chemical reactions like those of barium. The individuality of one of these active elements has been confirmed through the observation of a distinct spectrum by M. Demarçay. M. Debierne has been investigating at the Physical Laboratory of the Sorbonne whether pitchblende does not include other radio-active elements, and has reached some interesting results. The substance on which he experimented was the residual matter from a shop where uranium minerals were treated, from which that metal had been extracted. The quantity of radio-active elements left in it being extremely small, the first step was to take large quantities of it and remove the polonium and radium. The greater part of the product precipitated by ammonia consisted of the oxide of iron and aluminum. But, besides those substances, the author perceived a considerable number of others in very small proportions, he succeeded in separating zinc, manganese, chromium, vanadium, uranium, titanium, niobium, and tantalum. The rare earths were likewise represented, lanthanum, didymium, cerium, and the yttric earths being detected. The radio-activity, which existed to a very slight extent in the crude ammonia precipitate, was concentrated in particular parts as the separations were effected. The portions containing titanium and allied bodies manifested it in the most intense degree; and after a quite complicated treatment a substance was obtained the solutions of which exhibited the principal analytical properties of titanium, but emitted extremely active radiations. The radio-activity of one fraction of this matter was determined roughly as 100,000 times greater than that of uranium. Moreover, the matter had chemical properties entirely different from those of radium and polonium, while the radiations emitted from it were exactly comparable to those which had been observed by M. and Mme. Curie in the case of those substances. They rendered gases capable of discharging electrified bodies, provoked phosphorescence in platino-cyanide of barium, and impressed photographic plates. The new matter is further distinguished from radium in that it is not spontaneously luminous.

In a contribution to Wiedemann's *Annalen* M. E. Neovius describes his photographic studies of the spectra of nitrogen extracted from the air and prepared in the usual manner. Isolating the spectrum of nitrogen, the author remarked that, while he did not find the red spectrum of argon, most of the rays coincided with the blue spectrum of that substance. The rays obtained could be divided into three groups. In the first group, which contained the rays of argon, it was observed that the brighter rays of that substance coincided with much weaker rays of nitrogen. In the second group, which included the rays of nitrogen, the bright rays of the spectrum of that body coincided with much weaker rays of argon. The third group showed weak argon rays coincident with nitrogen rays, the latter being generally weaker. M. Neovius concludes that the rays of this group belong to a new body which occurs in the air in nearly the same proportions as argon. Only one of the characteristic rays of this substance coincides with a characteristic ray of krypton, but the only known ray of neon is outside of the limits of the author's research. The memoir ends with a comparison of the wave lengths of the bands of the spectrum of metargon

as measured by M. Baly with the numbers obtained by M. Kayser for the spectrum bands of carbon. The coincidence of the two series of numbers is complete.

A new silicic acid, called silicomesoxalic acid, is described by Prof. Gattermann, of Heidelberg, as obtained by leaving the chloride of silicon, Si_2Cl_6 , in a platinum dish exposed to the air. Hydrochloric acid is formed, and the octochloride is slowly evolved into a white amorphous mass of silicomesoxalic acid, to which the formula $\text{HO.OSi} - \text{Si}(\text{OH})_2 - \text{SiO.OH}$ is ascribed. This substance is very unstable, and on heating decomposes with a flash. When it is pure and dry a touch is sufficient to effect this change.

A new uraniferous mineral, discovered by M. Charles Poulot in Montrose County, Colorado, is described by MM. Friedel and Cumenge. It occurs in the form of a yellow powder or mass which is easily crumbled between the fingers and stains them yellow. It is principally composed of silica in the shape of sand, intimately mixed with a yellowish material consisting of very small grains the structure of which can not be identified, but which act on polarized light. The mineral gives a yellow solution with nitric acid, and a green one with hydrochloric acid. The matter dissolved in nitric acid was found to contain, besides a considerable quantity of uranium, vanadic acid, iron, aluminum, and traces of copper, lead, and potassium; also very small proportions of the radio-active elements discovered by M. and Mme. Curie. It has been named carnotite, after H. Adolphe Carnot, French Inspector General of Mines and author of books on mineral analysis. It appears to occur in considerable abundance, as the extraction of ten tons from one source is mentioned.

By treating the sodium derivative of ethylic oxalo-acetate with hydrocyanic acid and hydrolyzing the cyanhydrin thus produced Augustin Durand has obtained a new acid, homologous with citric acid, which has the composition $\text{COOH} \cdot \text{CH}_2\text{C}(\text{OH}) \cdot (\text{COOH})_2$. Experiments are now in progress for the preparation of other homologues of citric acid.

In 1877 the Russian chemist Sergius Kern described what seemed to be a new metal of the platinum group which he had met in treating native platinum ore, and which he proposed to name davyum, after Sir Humphry Davy. The atomic weight assigned to it (near 154) suggested the possible existence in the periodic classification of a hitherto unrecognized element, or possibly of a triad of elements, analogous to the triads ruthenium, rhodium, palladium, and osmium, iridium, platinum. Only one other observer of this supposed element is on record, and in such chemical works as mention it, it is usually placed among the hypothetical elements. A series of researches on platinum residues has been carried on recently by Prof. J. W. Mallet in order to determine, if possible, the sufficiency of the grounds on which the existence of this substance is predicated. The results, as described by the author, while they lend no support to the belief that there is such a metal, are not sufficient to disprove its existence; and he regards it as probable, in the absence of further evidence, that davyum should be looked upon as merely a mixture of iridium and rhodium with a little iron.

M. Guntz has succeeded in proving the existence of suboxide of silver, Ag_2O , preparing the compound by the decomposition of silver oxide, Ag_2O , by heat. Ag_2O begins to decompose slowly at about 250°C ; at the end of a sufficiently long time the decomposition is complete.

New Processes.—Six methods of producing graphite are recognized and described by M. M. P. Muir in Watts's Dictionary of Chemistry, edition of 1890, but none of them has yet been made commercially available. Cowles Brothers, of Cleveland, Ohio, observed a formation of graphite in or about the charge of their electric furnace, and regarded it as something to be removed. A formation of graphite was noticed by O. Rose in an experiment in heating a diamond imbedded in charcoal to the temperature of molten cast iron. Conversion of the diamond and amorphous carbon has also been remarked under the high temperature afforded by the galvanic battery. In experiments on the manufacture of carborundum Mr. E. G. Acheson found that graphite was occasionally formed in certain portions of his furnace charge—at one part by the decomposition of carborundum, and at another part probably by the decomposition of carbides. That formed by the decomposition of the carborundum was remarkable from the fact that it retained the form of the crystal from which it was derived; but it was only one third the weight of carborundum, and possessed the characteristic metallic gray color of pure graphite. Though there seemed to be here two distinct methods of producing graphite, they were, in fact, identical; and the author would define the method as consisting in heating carbon, in association with one or more oxides, to a temperature sufficiently high to cause a chemical reaction between the constituents, and then continuing the heating until the combined carbon separates in the free state. Other salts of the metals may, however, be substituted for the oxides. All the methods of manufacture thus far known contain the same underlying principle of the liberation of the carbon from a chemical association with one or more elements, under conditions unfavorable to or prohibitive of its reassociation with the same or other elements. The author concludes that the only commercial way to make graphite is through the breaking up of a carbide by the action of heat.

A new process for the estimation of nickel in steel, described by Mr. L. Archbutt before the Society of Chemical Industry, depends upon the property possessed by ether of dissolving ferric chloride. If ether be added to a solution containing the two salts, and the mixture be well shaken, after standing the ether will rise to the top, bringing with it the ferric chloride. The nickel will remain in the bottom solution, which will contain a trace of iron. By repeating the process the iron can be completely removed. The percentage of nickel present is most readily ascertained by electrolysis.

The metal palladium, by reason of its exceptional behavior with reference to hydrogen, would seem to be well fitted for the purpose of a reducing agent. In the application of it for this object by Dr. N. Zelinsky a zinc-palladium couple is prepared from zinc and palladium chloride much as the zinc-copper couple is prepared. This is placed in alcohol, and acid is added until hydrogen gas just begins to be evolved. At this stage the palladium black is saturated with hydrogen, and produces energetic reduction of the alkyl iodide or bromide, the acid and iodine being now added alternately. Hexamethylene and the ethyl and methyl hexamethylenes, which are obtained with great difficulty from their halogen derivatives by ordinary reducing agents, are produced in yields of from 70 to 75 per cent. of the theoretical yield when the corresponding oxides or bromides are treated in this way.

To maintain the reduction of ferrous solutions, or prevent their oxidation, William S. Myers adds 10 per cent. solution of ferrous sulphate. The acid under these conditions liberates hydrogen very slowly, and yet fast enough to nullify the oxidizing action of the air, even when the solution is exposed in an open beaker. The author has found that ferrous solutions thus made up will keep for more than a month in a practically unchanged condition, while solutions heated for protection by a number of other methods were very largely ferric at the end of that period.

A method based upon the color reaction given by the alkaline molybdates is recommended by A. Jalles and F. Neurath as affording a simple and rapid means for estimating silica in water, and as being applicable to very small quantities of liquid. These molybdate salts give with silica in the presence of free nitric acid complex yellow compounds, similar to those which they form with phosphoric and arsenic acids. Among the alkaline silico-molybdates the silico-molybdate of potassium is most soluble, and in aqueous solution has a pronounced yellow color, the intensity of which increases with the temperature, and attains its maximum toward 70° or 80° C.

Of two recent methods for the analysis of glue, that of Stelling looks to the estimation of the nongluey material, and that of Fels to the estimation of the viscosity of a solution of glue. In Stelling's process alcohol at 96° is added in small quantities at a time to a solution of glue (one part of glue to four parts of water) while constantly stirring, and the proportion of nongluey matter is determined by evaporating down an aliquot part of the alcoholic solution and weighing the residue. This process is found by Richard Kissling to have a certain very small value, especially when we have to deal with products of superior quality, products containing substances soluble in alcohol, in quantities much smaller than are present in ordinary glues. Fels's method of determining the viscosity—which is done with an Engler viscosimeter—can also give very useful indications, but here again certain reservations must be made. Mr. Kissling has found that solutions of glue undergo in time modifications in fluidity. A process described by the author, while somewhat more complicated than these, is claimed by him to merit more confidence in determining the value of a glue. It consists in measuring the consistency of the jelly formed by one part of glue and three parts of water.

The method of M. Goldschmidt for the production of high temperatures, and for preparing metals difficult of fusion free from carbon, depends mainly upon the high temperature (3,000° C.) developed in the combination of aluminum and oxygen. In explaining his method the author says that the principal difficulty in utilizing the temperature named lies in the regulation of the reaction by means of which the work is performed. He observes, further, that there is no need of heating the whole of the reacting mass up to the temperature of ignition; "it suffices to cause combustion at one particular point. But in this there is still a practical difficulty to be overcome," which in the preparation of metallic chromium, starting with a mixture of oxide of chromium and powdered aluminum, may be easily surmounted by placing at a convenient point a small quantity of a mixture of aluminum with a more easily reducible oxide, or, better still, with a peroxide. This method has the great

advantage of making possible the preparation of pure metals free from aluminum. The process can be applied simply as a source of heat for welding, soldering, etc., or, by utilizing the reducing power of aluminum, in the preparation of pure metals and of alloys. If only a moderate heat is desired, the reacting mass may be diluted by the addition of some inert mixture, as of aluminum and some cheap oxide, to which may be added lime, magnesia, etc. Nearly all the metals can be reduced by this method.

Ferrocyanide of potassium is recommended by M. Lucas as a test for the estimation of copper, with the solution of which it gives a reddish-brown coloration. If the solution is weak, the precipitate will cool very slowly, and the solution will be left clear but red. This coloration is represented to be ten times more sensitive than that given by ammonia, and it can be utilized for the estimation of small quantities of copper.

Atomic Weights.—The place of the newly discovered elements of the atmosphere in the periodic system has been studied by James Lewis Howe, of Washington and Lee University. Without coming to a positive conclusion, the author gives reasons for regarding the three elements argon, neon, and helium as transition elements between the halogens and the alkali metals, and finds that there is sufficient space for them, as well as for the other new elements, krypton, metargon, and xenon, in Group VIII—the group of iron, cobalt, and the platinum metals. An additional point in favor of the view that helium, neon, and argon are true elements, implicitly brought out by Ramsay in his address before the *Deutscher chemischen Gesellschaft*, is furnished by Döbereiner's law of triads. It was this idea that led Ramsay to his search for neon. "Like so many other groups of elements, the three elements helium, neon, and argon agree with the relations pointed out so long ago by Döbereiner, and this indicates that the elemental nature of these gases is not different from that of other elements."

T. W. Richards and A. S. Cushman, after a careful revision of the atomic weight of nickel as obtained in different determinations, and comparison particularly with values found by Winkler and Zimmermann, give the number as 58.706, and as the average of their own determinations and those of the two other authors 58.70.

From experiments with the carbide and sulphide, M. Henri Gautier had determined the equivalent of boron as very near 11. In subsequent experiments, using the bromide and chloride, which had been prepared in as perfect purity as possible, and treating them with nitrate of silver, he obtained the number 11.016.

Mr. Harry C. Jones has called attention to the agreement between the values of the atomic weight of praseodymium and neodymium found by three experimenters—Carl von Schele, Brauner, and himself—working simultaneously but independently, and to the difference between their results and those of Von Welsbach, which were the only determinations on record to 1897. Brauner and Jones used American material for their determinations, and Schele monazite furnished by Clève. The values obtained by Welsbach were 143.6 for the atomic weight of praseodymium and 140.8 for that of neodymium. Those obtained by Jones, with which those of Brauner and Von Schele very nearly agree, were 140.5 for praseodymium and 143.6 for neodymium. "The atomic weight of praseodymium found by Von Schele and myself," says Mr. Jones, "is a little lower than Von Welsbach's atomic weight of neo-

dymium, but the atomic weight of neodymium as found by Brauner and myself is identical with Welsbach's atomic weight of praseodymium. These three pieces of work, then, make it certain that the original determinations of Von Welsbach are not free from error; and, indeed, they were published as only tentative, and are not described in any detail."

Chemical Analysis.—Prof. J. Vertress calls attention to some difficulties attending lighting by acetylene, among which are the impurities in the calcium carbide from which it is derived, and the want of homogeneity of the substance, whereby it is necessary to test and examine several samples in order to get a mean value. Among these impurities are sulphur, phosphorus, and nitrogen, from which it results that the acetylene will be contaminated with sulphureted hydrogen, phosphureted hydrogen, and ammonia. It must therefore be purified to the same extent as coal gas, for fear that its use in closed places might lead to accidents. Another drawback to the use of acetylene is its liability, after burning a considerable number of hours, to give a smoky flame. This is caused by the burners attaining a temperature higher than that of the decomposition of acetylene, whereby the gas is decomposed into carbon and hydrogen. The author has also observed deposits of finely divided carbonlike soot in acetylene-gas pipes and a liquid condensation of carbides of hydrogen in the generators, which has to be removed by siphons. Still another inconvenience is the formation of a fog in closed places after a longer or shorter interval, which is the result of decomposition of the gas, with deposition of the carbon and the formation of watery and ether vapors. As the presence of hardly noticeable quantities of phosphureted hydrogen may make the acetylene spontaneously inflammable, a rapid and exact method of gas analysis is needed to estimate the quantity of that gas that may be present. For this purpose Walther Hempel and Leopold Kahl, after experimenting with a number of reagents, recommend sulphate of copper in sulphuric solution as the best. The gas is measured in a gas burette filled with mercury, and is transferred thence to another burette filled with mercury and 3 cubic centimetres of cupric reagent saturated with acetylene. After shaking for three minutes, the volume of unabsorbed gas is measured; a quarter of this volume represents the phosphureted hydrogen present.

The by-products obtained from the distillation of coal in retort coke ovens, as described by Mr. J. D. Pennock, are tar, ammonia, and gas, from which benzine and cyanides may be recovered. All the by-products vary in quality and quantity with the composition of the coal, and are also more or less affected by the temperature to which the oven is heated. Generally speaking, the quantity of tar and ammonia obtained is in direct proportion to the percentage of volatile matter in the coal. A bituminous coal containing 17 per cent. of volatile matter will yield 13½ pounds of ammonia, figured as sulphate, and 30 pounds of tar, whereas one containing 37 per cent. of volatile matter will yield 27 pounds of ammonium sulphate and 110 pounds of tar. From the large number of ultimate analyses which the author has made of coals experimented upon in ovens, he finds that coals having the highest percentage of hydrogen over and above that necessary to combine with the oxygen are the ones that make the best coke, and yield the best quantity of by-products; in other words, a coal containing a high percentage of oxygen will not

produce good coke, nor will it yield much tar and ammonia. If the analysis shows water of constitution 5 to 10 per cent., indicating the character of a lignite, the yield of by-products will be small and the coke of poor quality; or, having at hand the proximate analysis of a coal found in the bituminous regions, one may judge very clearly the yield of by-products per 2,000 pounds of coal by referring to a chart subjoined to the author's paper.

In a paper contributed to the Chemical Society of England, reporting progress in his investigations of Moorland waters and bearing upon their acidity, William Ackroyd spoke of the importance of that quality, which has been associated with plumbo-solvent action, inasmuch as moorland waters are consumed by more than 5,250,000 people in England. The author differentiated between organic and inorganic acidity, and described a method of ascertaining the ammonia in the water. This method consists of titration

with $\frac{N}{100}$ alkali, using phenolphthalein as indicator; and aspiration of air free from carbon dioxide through another portion, and a second titration for the residual acidity. Data were given showing the loss of acidity due to diffusion in observations extending over one hundred and eighty-one days. Comparisons were made proving that the differences in acidity in waters from various gathering grounds were due to differences of gradient. It was finally shown that the organic acid in solution, always assumed to be humic acid, is of lower equivalent than that of the lowest humic acid known. In the discussion of the paper Prof. Dewar said that the plumbo-solvent action of the water supplied to Sheffield, Bradford, and Huddersfield had been overcome by the addition of finely precipitated carbonate of lime to the reservoirs, with the result that the quality of the water was improved, both by the removal of the acidity and also indirectly by precipitation of the dissolved peaty matter.

From a long series of researches on specimens of air taken from high mountain regions and over the sea, M. Armand Gautier finds that free hydrogen is present in the proportion of about 1.5 volume to 10,000 volumes of air. The proportion of hydrogen is considerably greater in the specimens of pure air than in specimens taken from the neighborhood of towns, while the proportion of combustible carbon compounds is considerably less.

The incandescent mantles for gas burners are composed almost entirely of oxide of thorium, ThO_2 , to which has been added a small quantity of oxide of cerium, varying from 0.5 to 2 per cent. With the exception of small quantities of lime, they contain only traces of impurities, such as nitrate of thorium and oxides of zirconium, neodymium, lanthanum, and yttrium. By a series of experiments with photometric measurements, of which he gives the results in detail, E. Hintz has satisfied himself that these impurities have no appreciable influence on the luminous power of the mantle, and that, therefore, not much notice need be taken of them in the analysis of incandescent bodies.

Certain mineral waters exist, though they are very rare, which are relatively very rich in fluorine. The most interesting example is that of the waters of Gerez, in the north of Portugal, which are perhaps unique in Europe. An analysis by Charles Lepierre determines the proportion of alkaline fluorides (probably of sodium) as from 22 to 25 milligrammes per litre, which is

equivalent to from 10 to 12 milligrammes of combined fluorine. The existence of fluorides in the residue can be discovered positively by evaporating half a litre of Gerez water in a platinum dish. The analytical detection of fluorine can be made by the ordinary method of heating the residue from the water with sulphuric acid and showing the corrosion of glass; by Lannes's or Carnot's method; if silica is present, by the formation of SiF_4 ; or by the formation of crystals of fluosilicate of sodium, the little hexagonal prisms of which are characteristic. The last reaction is very sensitive.

The committee of the British Association on a uniform system of recording the results of the chemical and bacterial examination of water and sewage recommend in their report that results of analysis be expressed in units per 100,000 except in the case of dissolved gases, when these should be stated as cubic centimetres of gas at 0°C . and 760 millimetres in 1 litre of water. This is in accord with the determination of a former committee of conference with the American Association. The committee suggest that the results in the case of all nitrogen compounds be expressed as parts of nitrogen over 100,000, including the ammonia expelled on boiling with alkaline permanganate, which should be termed albuminoid nitrogen. The nitrogen will therefore be returned as ammoniacal nitrogen from free and saline ammonia; nitrous nitrogen from nitrites; nitric nitrogen from nitrates; organic nitrogen (either by Kjeldahl or by combustion, but the process used shall be stated); albuminoid nitrogen. The total nitrogen of all kinds will be the sum of the first four determinations. The committee are of opinion that the percentage of nitrogen oxidized—that is, the ratio of 2 and 3 to 1 and 4—gives sometimes a useful measure of the stage of purification of a particular sample. In raw sewage and in effluents containing suspended matter it is also desirable to determine how much of the organic nitrogen is present in the suspended matter. The report further gives suggestions concerning the manner of collecting samples.

M. Balland has communicated to the French Academy of Sciences the results of his investigations of the chemical composition and alimentary value of the principal fruits, including grapes, oranges, filberts, pomegranates, currants, walnuts, figs, bananas, olives, dates, apricots, almonds, cherries, quinces, strawberries, raspberries, medlars, peaches, pears, apples, and plums. All these fruits contain when ripe from 72 to 92 per cent. of water. In the dried or partly dried fruits of commerce the proportion of water rarely exceeds 35 per cent., and is frequently below 10 per cent. in almonds and nuts. In pulpy fruits the nitrogen represented by vegetable albumen ranges from 0.25 per cent. in the pear to 1.45 per cent. in the banana; in the seed fruits (almonds and nuts) it is higher, amounting to from 15 to 20 per cent. in the dried nut. The fatty matters, with all the products soluble in ether (essential oils, resinous and coloring substances), are generally in smaller proportion than the nitrogenous substances; the only exceptions are olives, almonds, and nuts, in which the oil predominates (58 to 68 per cent.) when they are dry. The ashes, some of which, as those of figs, pears, and plums, show traces of manganese, are in considerable in quantity. So also is the inert cellulose, which is in notable proportions only in quinces and medlars. Acidity reaches its maximum in currants and raspberries (1.25 per cent.). Sugar and the substances called extractive, such

as starch, dextrines, pectines, gums, saccharifiable cellulose, and organic acids, represent, with water, the larger part of the elements obtained in the pulpy fruits. The sugar, which is all assimilable, performs its part in alimentation. The fruits that contain most of it, like bananas, dates, and figs, constitute real hydrocarbon aliments. The extractive matters also act similarly to sugar, but in a less degree, their coefficient of digestibility being not quite so high. With a few exceptions, M. Balland finds the fruits not very nutritious, and suitable to be regarded rather as condiments.

M. F. Parmentier has shown that the effects produced upon glass, hitherto supposed to have been caused by fluorides, in certain mineral waters are due to a deposit of silica. No trace of fluorine has been detected in numerous analyses of mineral waters.

The adulteration of sumach was illustrated by Mr. S. J. Pentecost in the reading of a paper before the Nottingham section of the British Society of Chemical Industry. By means of strong nitric acid the true sumach leaf may be dissolved out of a mixture. By aid of the microscope the various constituents of the residue can be referred to their true origin. The appearance of the leaves of the adulterants generally used is very characteristic, they differing from one another and from the genuine plant by the shapes of the hairs attached to the leaves and by the shape and number of the stomata. The author pointed out that, notwithstanding the introduction of synthetic dyes, the subject is of interest to the dyer as well as to the tanner.

The examination of air and its dust has enabled M. A. Gautier to establish the fact that iodine is really found in the air. It is completely fixed in the organic state in the matter caught by plugs of glass wool. Sea air contains about thirteen times as much iodine as that found inland. Aërial iodine appears thus to come principally from the sea, which is continually giving up a portion of its iodized elements in the form of aqueous dust. M. Gautier claims to have proved the complete absence of alkaline or alkaline-earthly iodides in the air, even in several hundred litres collected on the surface of the ocean. So that not only the presence of iodine in appreciable quantities in sea water still remains uncertain, but even the existence of this iodine in the form of mineral iodides does not rest on any direct proof. M. Gautier concludes from his investigations that the water of the open sea, or at least of that at or near the surface, does not contain a trace of alkaline or earthy iodides; that iodine is always found in easily weighed quantities, but that it exists entirely in the organic or organized state—a circumstance which has been overlooked till now, and to which are due the contradictory opinions that have been expressed as to the quantity and even as to the appreciable presence of iodine in sea water. For the origin of this iodine the author looks below, whence it must come in the form of iodized springs or volcanic emanations, or by solution of submarine rocks. Numerous terrestrial iodized springs are known, and there is no reason why they should not be supposed to exist in the ocean. Submarine volcanic eruptions have been observed in every ocean, and their products have long been known to contain iodine; and iodine exists in granitic and calcareous rocks, which may become dissolved in the sea water. This mineral iodine dissolved in the deepest parts of the sea disappears in the upper layers, where the action of light permits organization and life.

M. Gautier has found iodine existing in appreciable quantities in terrestrial and fresh-water algæ, where it can only come from the water in which these algæ live. Analyses of the waters of the rivers Seine and Marne have revealed the presence of small quantities of iodine, partly soluble. This, the author assumes, is derived partly from the air, but principally from the earths and rocks over which the water flows. "The importance of the estimation of small quantities, both in air and water," M. Gautier says, "of an element so active as iodine admits of no doubt; this body is indispensable to organized life, but the smallest proportions suffice."

Prof. James Dewar affirms that liquid air can be of great service in the qualitative analysis of mixed gases. He further describes an apparatus which he has used for ascertaining the proportion of any gas in air which is not condensable at about -210° C. under atmospheric pressure or is not soluble in liquid air under the same conditions. With this apparatus he has found one part of hydrogen in a thousand of air just detectable in the form of an uncondensed residue. It is possible also to condense all the constituents of coal gas and to separate them after liquefaction by fractional distillation, except carbonic oxide and hydrogen; and ultimately the carbonic oxide is condensed, leaving the hydrogen alone in a gaseous state. Experiments with the gases of the spring at Bath proved it possible to separate helium from other gases when it is present to the extent of only one part in a thousand. Argon, which is present in the proportion of 1.4 per cent., condenses with the nitrogen. But if the liquid be allowed slowly to boil away a residuum may be obtained containing about 7 per cent. of argon. Argon when frozen solidifies to a perfectly clear ice. As to behavior toward the Röntgen rays, argon appeared relatively more opaque than either oxygen, nitrogen, or sodium, and on a level with potassium, chlorine, phosphorus, aluminum, and sulphur. By filling the annular spaces between the walls of several similar vacuum vessels, such as Prof. Dewar uses in his extremely low temperature investigations, and exhausting them all to the same low pressure, large differences in the thermal isolation were observed. Silica, charcoal, lampblack, and oxide of bismuth all increase the insulation to four, five, and six times that of the empty vacuum space; and generally the presence of certain finely divided solids in the high vacuum space improves the heat insulation, while in the presence of air the same bodies facilitate the transference of heat. But "in no case was the diminution of the influx of heat in the case of the use of finely divided solids ever so effective as a high vacuum in an empty tube, the glass surfaces being silvered." These experiments show that liquid air can be conveniently used to study many important problems of heat transmission. When cooled to the temperature of liquid air the photographic action of both the incandescent lamp and the Röntgen radiation was reduced to 17 per cent. of that exerted at the ordinary temperature, whereas the ultra-violet radiation was reduced to about 6 per cent.

Miscellaneous.—An instance of the occurrence of copper in the plant world is noticed by G. B. Frankforter in the case of an oak tree in Minneapolis, Minn., in which, on cutting up the trunk, a considerable quantity of bright copper-colored powder was noticed disseminated through the pores of the wood. A quantity of the powder was examined, and was found to be pure metallic copper. The different parts of the tree were examined preliminary to analysis, and certain of

them were found to be thoroughly impregnated with this granular copper powder, some of the granules being so large as to take on the form of flakes. The larger ones were partly rolled up, so as to fit in the irregular pores of the wood. An analysis of the powder showed that it consisted of 95.01 per cent. of copper. Microscopic examination showed that only the outer annual rings contained an appreciable quantity of the metal, while the earlier rings showed only a trace under the microscope, and those nearest the heart none on analysis. This distribution is unexplained. The origin of the copper is undetermined, but native copper occurs in the soil; yet if it was assimilated from the soil it should have been found in all the rings, and not chiefly in the outer ones. The fact that the copper was found in the metallic state raises the question of the form in which it is found in plants generally.

A case of poisoning reported upon by L. Barthe was said to be traced to an enameled saucepan of the familiar kind—white inside and deep blue outside. While some French enamels have been found to contain as much as 52.51 per cent. of oxide of lead and 3.74 per cent. of arsenic acid, the enameled utensil in question in this case did not contain either of these substances, but did contain large proportions of silica, tin, and aluminum, and small quantities of zinc, lime, and potash, with traces of iron and cobalt. The author was therefore of the opinion in this case that the enamel was not to blame.

At the meeting of the British Association Prof. Hanriot, president of the chemical section of the French Association, communicated a short account of the excretory products of plants, in which he discussed the mutations of nitrogen in the vegetable kingdom, as illustrated by his own observations of the occurrence of asparagine among the secretions of plant roots. When passed into the soil the product would in all probability be oxidized to nitrates, and thus become directly available for plant life.

The subject of the properties of soaps was brought up at a meeting of the Nottingham, England, section of the Society of Chemical Industry in a paper, by F. J. R. Carulla, on The Function of Boric Acid in Soap. The author found that boric acid was of great value to destroy alkalinity, but that it could not remain in the free state in the wash water when the soap is put to use. It can have no antiseptic effect, but is invaluable for the introduction into the soap of antiseptics that require freedom from alkali. The chairman of the meeting, Mr. James O'Sullivan, said that the matter was of some importance, as boric acid in 2-per-cent. solution was used for the eyes, and of course a boracic soap would not have the effect of this solution. Carbolic acid would similarly react in the soap, and be rendered inert. Mr. S. J. Pentecost did not find a moderate percentage of alkali—carbonated alkali, not caustic—in a soap injurious to the skin. In answer to questions, Mr. Carulla said that an addition of so much as 5 per cent. of boric acid would make the soap difficult to lather. Idiosyncrasy entered into the question of the use of soap as well as into other things. Some people could use a soap that would be very irritating to others. The object of using an antiseptic soap was to get rid of disease germs and prevent their transmission from one person to another. With the increasing use of superfatted soaps for toilet purposes, and the fact that disease germs can live and multiply in oils and fats, it is quite likely that much disease is

transmitted from one person to another by using the same tablet of soap. This could not happen with a genuine antiseptic soap. Then, again, disease germs are washed off the skin and carried into the water. They will remain there in long contact with the soap solution, which, if strong enough, will put an end to their future power for harm. Mr. Kipping, F. R. S., said that it was easy enough to render extensive surfaces of the skin, such as the hands, antiseptic even with plain water; but for such places as under the finger nails, which could not be readily dried, and might form nests for bacteria, the resulting prolonged contact with the solution of an antiseptic soap was obviously a great safeguard.

The disinfecting power of common soap having been demonstrated by the experiments of Koch and others, the investigation has been continued by M. Serafini, of the University of Padua, in experiments to determine the exact condition in which the solution of soap is effectively active. M. Serafini concludes that soap, whether of soda or potash, has a well-marked disinfecting power, which does not depend only on the action of the alkaline base, whether combined or not with fatty acids, but results from the saline combination which takes place. The free alkalinity of soaps is generally too weak to produce a disinfecting action. The activity resides in that part of the soap which is soluble in cold water. Substances that precipitate soap diminish proportionately the disinfecting power of the solution, and this power is likewise diminished when the solutions are in a medium rich in carbonic acid. Increase of temperature favors the disinfecting power of soap solutions, both through the direct effect of heat and by increasing the proportion of the soap dissolved. The disinfecting power of soap being related to its constitution as an alkaline salt of a fatty acid, that power is diminished in commercial soaps by whatever diminishes the proportion of those salts in them, as by the presence of water and foreign substances. This power is consequently reduced in resinous soaps. In laundries the disinfecting power of soap is neutralized to a considerable extent by the presence of albuminoid matters in the goods, which prevent its penetrating the pores. Hence it is necessary to take account of the solubility in soap of the soiling matters. Soft soaps are weaker in operation by the facility with which they absorb water, and in colored soaps the disinfecting power is weakened by the presence of the coloring matter. The author did not himself make any experiments with soaps which had been charged with disinfectants, but observers generally agree that the soaps called disinfecting are not more efficacious than common soaps. The disinfecting substances sometimes contribute by their action on the soap to decompose it and diminish its power. Above all things, the soap ought to be pure and to contain as little water as possible.

An apparatus for the industrial production of ozone has been devised by M. Otto, of Paris. It is claimed to be practical, and to avoid the difficulties heretofore encountered in preparing this substance on a large scale.

An inherent fault in all acetylene generators is the after-formation of gas which takes place when the direct contact between the carbide of calcium and the water has ceased. This generation is due to the action of the residual water contained in the pores of the carbide, to the condensation of water on the surface of this carbide, and to the absorption of aqueous vapor. Measurements of the quantities of gas liberated

by a definite quantity of carbide, made by F. Wolff, point to considerable risks of explosion as being incurred by the use of small generators, and of table lamps in particular—a danger which can be avoided in large apparatus by employing a reservoir of sufficient capacity to hold the excess of gas without undue compression. One of the most effective methods of obviating this danger of explosion is that of Münsterberg, in which a valve closes all communication between the carbide reservoir and the water after the former has been raised. The after-formation of gas is therefore no longer produced, except by the water contained in the pores of the carbide. Further, in Münsterberg's apparatus the gas reservoir is of large size, so that the proportion of air introduced at the same time with a fresh charge of carbide remains below the limit of explosive mixture.

CHILI, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate and a House of Deputies, each elected by the votes of adult male citizens able to read and write, the Senators by provinces and the Deputies in the proportion of 1 Senator to 3 Deputies and 1 Deputy to every 30,000 inhabitants or fraction thereof. The President is elected for five years by a college of electors. Federico Errazuriz was elected for the term ending Sept. 18, 1901. The Cabinet formed on April 25, 1898, was composed as follows: Prime Minister and Minister of the Interior, Carlos Walker Martinez; Minister of Foreign Affairs, Worship, and Colonization, Rear-Admiral Juan J. Latorre; Minister of Justice and Public Instruction, Carlos Palacios Zapata; Minister of Finance, Rafael Sotomayor; Minister of War and Marine, Ventura Blanco Viel; Minister of Industry and Public Works, Emilio Bello Codecido.

Area and Population.—The area of Chili is 293,970 square miles. The population in 1895 was 2,712,145, not including about 50,000 uncivilized Indians. The enumeration was far from complete, and at the end of 1897 the estimated population was 3,049,352. Santiago, the capital, had 256,413 inhabitants on Nov. 28, 1895; Valparaiso, the chief port, 122,447. The number of marriages in 1897 was 13,454; of births, 109,057; of deaths, 88,456. The number of immigrants in 1896 was 2,102, of whom 402 were French, 400 Germans, 365 Spaniards, 274 Italians, 261 British, 179 Dutch, and 106 Belgians. The total number in 1897 was 870. In 1898 the Congress appropriated 616,890 pesos for the encouragement of immigration.

Finances.—The revenue in 1897 was 85,439,021 pesos, and expenditure 84,614,284 pesos. The budget of expenditure for 1898 was 79,931,452 pesos. The revenue for 1899 was estimated at 84,398,357 pesos from ordinary and 9,446,442 pesos from extraordinary sources. The budget of expenditure amounted to 76,349,361 pesos, not including 4,444,444 pesos for the Tarapaca Bank. Of the receipts 22,000,000 pesos come from import duties, 42,000,000 pesos from export duties in nitrate, 317,500 pesos from export duties on iodine, 380,857 pesos from surcharges, 13,500,000 pesos from railroads, 1,200,000 pesos from posts and telegraphs, and 5,000,000 pesos from stamps. Of the expenditures 8,213,190 pesos were for the interior, 1,261,073 pesos for foreign affairs, 441,728 pesos for public worship, 515,790 pesos for colonization, 3,778,120 pesos for justice, 4,594,941 pesos for education, 17,634,197 pesos for finance, 13,800,791 pesos for war, 9,608,273 pesos for marine, and 15,906,075 pesos for public works. The expenditure actually voted by Congress was 94,

506,312 pesos, an increase of more than 15,000,000 pesos over the previous year, chiefly in the finance department.

The foreign debt at the end of 1897 amounted to £17,734,970, on which the interest charge was £965,680, or 12,158,733 pesos. For the bulk of it the rates were $4\frac{1}{2}$ and 5 per cent. The internal debt, national and municipal, amounted to 26,744,263 pesos.

The Army and Navy.—The law of Nov. 24, 1897, restricts the size of the regular army to 10 regiments of infantry, 8 of cavalry, 5 of artillery, and a corps of engineers, the total strength not to exceed 9,000 men. Under the reorganization of the National Guard accomplished in 1896, every Chilian is compelled to serve, from the age of twenty, one year in the active National Guard, from then until they are thirty in the passive guard, and from then until they are forty in the sedentary. Between 1896 and 1899 there were 512,700 men enrolled in the National Guard. In 1898 there were 16,309 enrolled in the active, 7,301 in the passive, and 5,672 in the sedentary division.

The Chilian navy comprises 5 armor clads, 2 second-class cruisers, 3 of the third class, 11 gunboats, 4 destroyers, and 15 first-class and 4 second-class torpedo boats. The armored cruiser Esmeralda, launched in 1896, of 7,020 tons displacement, carries 2 8-inch and 34 quick-firing guns, and with engines of 18,000 horse power has a nominal speed of 23 knots. The O'Higgins, a British-built belted cruiser, launched in the same year, displaces 8,500 tons, and carries 4 8-inch and 10 6-inch guns, with 34 quick-firing guns, and having engines of 14,500 horse power, is capable of steaming 22 knots. Of the same date is the Ministro Zenteno, a protected cruiser, of 3,600 tons, armed with 8 6-inch and 14 small quick firers, and engined for a speed of 20 knots. The training cruiser General Baquedano, of 2,350 tons, has been completed at Elswick more recently. It is said that the destroyers, launched at Birkenhead in 1896, can make more than 30 knots an hour.

Commerce and Production.—The wheat production of Chili is 28,500,000 bushels, and of other grains about 8,500,000 bushels are grown. Wine is made and exported and fruits and vegetables are prolific. More than 500,000 cattle and 2,000,000 sheep and goats are reared each year. The nitrate deposits, covering 89,177 hectares, are believed to contain over 250,000,000 tons of commercial nitrate. British capital is employed in this industry, the product of which in 1898 was 1,254,000 tons. The annual product of copper is about 45,000 tons; of silver, 160,000 kilogrammes; of gold, 500 kilogrammes; of coal, 11,250,000 tons.

The total value of imports in 1897 was 65,502,805 pesos, reckoning the peso at 76.8 cents; total value of exports, 64,754,133 pesos. The imports of sugar were 5,983,659 pesos; of coal, 4,122,918 pesos; of cattle, 2,756,600 pesos; of bags, 2,440,209 pesos; of Japanese kimono, 2,131,679 pesos; of bleached cottons, 1,805,417 pesos; of petroleum, 1,458,090 pesos; of galvanized iron, 1,292,176 pesos; of cashmeres, 1,221,918 pesos; of candles, 1,176,557 pesos; of tea, 1,046,256 pesos; of woollens, 835,153 pesos; of rice, 824,679 pesos; of timber, 719,247 pesos; of shirts, 610,887 pesos; of iron, 354,592 pesos. The exports of nitrate were 37,461,559 pesos in value; of copper bars, 5,226,199 pesos; of silver, 3,781,125 pesos; of wheat, 2,599,640 pesos; of coal, 1,869,310 pesos; of shoe leather, 1,344,005 pesos; of gold bars and ingots, 905,168 pesos; of barley, 887,573 pesos; of wool, 621,209 pesos; of silver ore, 434,231 pesos; of

copper ore and concentrate, 421,725 pesos; of hides, 218,493 pesos; of nuts, 195,625 pesos. Of the exports of nitrate, Germany takes 39 per cent., France 17.3 per cent., the United States 13.3 per cent., England 11.2 per cent., and Belgium 10.9 per cent.

Navigation.—The number of vessels entered from abroad at Chilean ports during 1896 was 2,193, of 3,315,426 tons; cleared, 2,346, of 3,961,996 tons. The coasting vessels entered had an aggregate tonnage of 6,656,603. The merchant navy on Jan. 1, 1897, numbered 48 steamers, of 25,521 tons burden, and 112 sailing vessels, of 54,754 tons.

Railroads, Posts, and Telegraphs.—The railroads open to traffic in 1897 had a total length of 2,661 miles, of which the Government owned 1,233 miles. The receipts of the state lines, which cost 82,269,660 pesos, were 13,259,607 pesos, and the expenses were 12,878,248 pesos. A railroad is being built over the Andes to bring Chili into communication with the Argentine Republic, and all but 46 miles were completed before 1898, the Chilean section which is already built being 18 miles and the Argentine section being 88 miles.

The post office forwarded 54,537,687 pieces of internal and 5,387,020 of international mail matter in 1896; the receipts were 951,816 pesos, and the expenses 890,658 pesos.

The state telegraph lines had a total length of 9,832 miles in 1898, with 11,200 miles of wire. The number of dispatches that were transmitted in 1897 was 1,255,806. In addition to these, the private and railroad telegraphs had a total length of 2,613 miles.

Political Affairs.—The ministerial crises that have resulted from the successive trials to solve the commercial and monetary difficulties of Chili and the strained relations with the Argentine Republic came faster in 1899 than in any previous year. On Dec. 20, 1898, there was a reconstruction of the Cabinet, Ventura Viel succeeding Admiral Latorre as Minister of Foreign Affairs, and being succeeded in the Ministry of War by Carlos Subercaseux, and Arturo Alessandri taking Señor Codecido's place as Minister of Public Works. A protracted extraordinary session of Congress came to an end on Jan. 31, 1899. The commercial community was relieved from the dread of further issues of paper money before summer, and the rise in the price of copper and other improvements in the economic situation helped to raise the rate of exchange and relieve the commercial depression. The Cabinet after a short time underwent a change, Eduardo Videla Concha becoming Minister of War and Señor Palacio Minister of Public Instruction. On May 24 a new coalition Cabinet was constituted, in which Julio Zegero became Premier and Minister of Foreign Affairs, Carlos Walker Martínez Minister of Finance, and Eduardo Matte Minister of Industry. On June 2 this Cabinet resigned, and on June 27 one composed entirely of Liberals was constituted as follows: Premier, Silva Cruz; Minister of Foreign Affairs, Federico Borne; Minister of Justice, Francisco Herboso; Minister of Finance, Federico Izarra; Minister of War, Javier Figueroa; Minister of Industry, Daniel Río Seco. This Cabinet lasted only till Sept. 3, when a new coalition ministry was formed as follows: Premier, Rafael Sotomayor; Minister of Foreign Affairs, Rafael Errazuriz Urmeneta; Minister of Justice, Francisco Herboso; Minister of Finance, Manuel Salinas; Minister of War, Carlos Concha; Minister of Industry, Gregorio Pinochet.

CHINA, an empire in eastern Asia. The Government, as defined in the collected regulations of the Tsing dynasty, is based on the government of the family, and in theory the Emperor exercises supreme paternal authority. The acts of Government are largely regulated by precedents running back thousands of years. The imperial administration is directed by a Cabinet composed of 2 Manchu and 2 Chinese members, advised by 2 delegates of the Hanlin College to watch against contraventions of the dynastic regulations or of Confucian precepts. The highest governing body is the Grand Council, which issues laws and regulations for the empire. Subordinate to the Cabinet are the boards of administration, presided over each by a Manchu and a Chinese. One board supervises the conduct and administration of the officials, another directs the finances, the third enforces the laws relating to the duties and ceremonies of the people, the fourth has charge of military affairs, the fifth of public works, the sixth is the high court of criminal jurisdiction, and the seventh directs naval affairs. The Board of Censors, presided over also by a Manchu and a Chinese, watches over all the other bodies, and reports to the Emperor shortcomings and delinquencies occurring in any branch of the public service. The Tsung-li-Yamen, or Foreign Office, is a modern body, which has conducted since 1861 all affairs with Western nations and with institutions directed by foreigners, such as the Maritime Customs and the Peking University.

The present Emperor reigns under the name of Kwangsu, signifying "continuation of glory." He is the son of Prince Chun, seventh son of the Emperor Taokwang, and was born on Aug. 2, 1872, succeeded his cousin Tsaichun, who reigned as Tung-Chi, on Jan. 12, 1875, under the regency of his aunt, the dowager Empress Tsu-Hsi, born Nov. 17, 1834, and assumed the Government on March 4, 1889. The Empress Tsu-Hsi was co-regent jointly with another dowager Empress till 1881, then sole regent until the young Emperor became of age and married. Even after that she had a large share in directing the policy of the Government. When the Emperor issued a series of edicts embodying radical and wide-reaching innovations and reforms she emerged from her retirement, and on Sept. 22, 1898, obtained from him an imperial edict whereby he resigned all power into her hands once more. The reform edicts were revoked, and since then she has retained the supreme direction of affairs.

Area and Population.—The 18 provinces constituting China proper have an area of 4,218,401 miles, according to a recent estimate, and a population of 386,000,000. The dependencies of China are Manchuria, with an area of 362,310 square miles, and about 7,500,000 population; Mongolia, area 1,288,000 square miles, with 2,000,000 population; Tibet, area 651,500 square miles, with 6,000,000 population; Jungaria, area 147,950 square miles, with 600,000 population; and Eastern Turkestan, area 431,800 square miles, with 580,000 population. The island of Formosa was ceded to Japan by the peace terms of 1895. Russia in March, 1897, obtained a lease of Port Arthur and Talienwan and adjacent territories on the peninsula of Liaotung for the term of twenty-five years, renewable on agreement. Germany occupied the port of Kiau-Chau, on the coast of Shantung, and obtained from China in January, 1898, a lease of the district for ninety-nine years. Great Britain occupied the naval port of Wei-Hai-Wei in June, 1898, to be held, by the terms of the lease, for as long a period as the Russians shall remain in possession of Port Arthur. The British ob-

tained also a lease for ninety-nine years of territory in Kwangtung, opposite Hong-Kong. France obtained in April, 1898, a lease of the Bay of Kwang-Chau-Wan, opposite the island of Hainan.

The number of foreigners residing in China on Jan. 1, 1897, was 11,667, of whom 4,929 were British, 1,564 Americans, 1,106 Japanese, 975 Portuguese, 950 Germans, 698 French, 439 Swedes and Norwegians, 362 Spaniards, 147 Danes, 120 Italians, 116 Russians, 106 Austrians, 81 Dutch, 68 Belgians, and 6 others. There are 28 ports open to foreigners. The most populous and important are Canton, with 2,500,000 inhabitants; Tientsin, with 950,000; Hankau, with 800,000; Hangchau, with 700,000; Fuchau, with 650,000; Suchau, with 500,000; and Shanghai, with 457,000. About half the foreigners live in Shanghai.

Finances.—The Chinese Government makes no public reports of revenue and expenditure. The Board of Revenue sends each year to each governor a requisition for the amounts to be furnished by his province for the expenses of the imperial administration. In cases of impoverished provinces the Peking Government sometimes, instead of demanding taxes, grants a subvention. Just before the Japanese war of 1894 the total public revenue of China was estimated at 88,979,000 haikwan taels, of which 25,088,000 taels came from the land taxes paid in silver, 6,562,000 taels from land taxes collected in kind, 13,659,000 taels from the likin and duty on salt, 12,989,000 taels from the foreign maritime customs, 1,000,000 taels from native customhouses, 2,229,000 taels from the duty and likin on native opium, and 5,550,000 taels from miscellaneous taxes. The cost of the imperial administration, including the Manchu garrisons and the Emperor's court, was then estimated at 19,478,000 taels; of the Peiyang squadron and the Board of Admiralty, 5,000,000 taels; of the southern naval squadrons, 5,000,000 taels; coast defenses, forts, and guns, 8,000,000 taels; of the defenses of Manchuria, 1,848,000 taels; of garrisons in Kansuh and the western dependencies, 4,800,000 taels; aids to Yunnan and Kweichau, 1,655,000 taels; interest and repayment of foreign loans, 2,500,000 taels; of construction of railroads, 500,000 taels; of public works, including river dikes, sea walls, etc., 1,500,000 taels; of customs administration and maintenance of lighthouses, 2,478,000 taels; of the administration of the 18 provinces, including cost of troops, 36,220,000 taels; total, 88,979,000 taels, balancing the estimated revenue. The present net revenue of China is estimated at 85,000,000 haikwan taels, equal to \$61,200,000. The system of collection is so imperfect and costly and corruption and speculation are so common that over \$300,000,000 are believed to be collected to produce this revenue. The Maritime Customs department alone is conducted efficiently and economically under the direction of Sir Robert Hart, a British subject. It makes regular reports of the sums collected, which amounted in 1897 to 22,742,104 haikwan taels, including 3,947,607 taels of commuted opium likin duties.

The debts of the Chinese Government amount to between \$250,000,000 and \$300,000,000, for which the revenue of the maritime customs is pledged. The Anglo-German loan of \$80,000,000 issued in 1898 is guaranteed furthermore on the likin taxes of seven provinces. In addition to the Government loans, \$20,000,000 borrowed in 1898 for the construction of the Lu-Han Railroad to connect Peking with Hankau and \$11,500,000 borrowed for the Niuchwang Railroad are guaranteed by the imperial treasury.

The Army and Navy.—The Chinese generally despise the military profession, and the Man-

chus, though a fighting race, adhere to antiquated weapons and tactics. The imperial Army of the Eight Banners, which still garrisons the Chinese provinces, being descended from the original Manchus conquerors and their Chinese and Mongolian allies, forms a military caste divided into three classes, representing the different races, intermarriage within the army being compulsory. The total number of these soldiers is believed to reach 300,000, of whom from 80,000 to 100,000 are kept under arms, including 37,000 in the garrisons of Manchuria and the Imperial Guard of 4,000 or 5,000 men at Peking. The rest of the Eight Banners are cantoned in 25 towns of the province of Pechili, in Turkestan and Mongolia, and in certain garrisons of the provinces. The national or Chinese army, called the Green Flags or the Five Camps, divided into 18 corps, under the command of the governors and viceroys of the provinces, is estimated variously between 540,000 and 660,000 men, though the effective strength can not be over 200,000. In case of war or rebellion troops are often raised by enlistment, but they never prove efficient. The irregular Mongolian cavalry and other local and special bodies are estimated to have a nominal strength of 200,000, of whom not over a tenth can be relied upon. The various independent and disjointed military organizations have a total strength of about 300,000 on the peace footing and 1,000,000 on the war footing, but training and discipline, unity of organization, effective and uniform weapons, transport, commissariat, and medical service are totally lacking as judged by modern standards. The trained troops, exclusive of the large body commanded by Gen. Tung-Fu-Sing and the Peking forces, have been reorganized into two armies, one of 4,750 foot, horse, and artillery, forming two divisions, one to man the Taku forts, the other the forts at Shanhaikwan and Peitang; and one of 11,250 infantry and cavalry, distributed through Pechili province. These troops are armed with Mauser rifles and Krupp mountain and quick-firing guns. The coast fortresses are supported by three armies of the first class, one, under Sung-King, occupying the country on both sides of Shanhaikwan; one, under Yuan-Shikai, behind Taku; and one, under Nieh-Shicheng, supporting Peitang. The force organized by Gen. Yuan, which has its camp at Hsiao-Chan, near Tientsin, consists of 7,000 infantry, 500 cavalry, 1,000 artillery, serving 40 field guns, 18 rapid-fire guns, and 12 mountain guns, and 500 engineers. It is the model corps of the Chinese army, and has been drilled to a high degree of efficiency by Chinese officers trained abroad or in Chinese military schools.

The only effective ships of the Chinese navy left after the war with Japan were the cruisers Chen-Hai and Kang-Chi. In 1897 and 1898 the Hai-Chi and Hai-Tien, of 4,300 tons, were added. English-built cruisers, protected with 6 inches of armor on the sides and 5 inches on the deck, carrying 2 8-inch, 10 4.7-inch, and 12 3-pounder quick-firing guns, and capable of making 24 knots an hour. In 1897 the cruisers Hai-Yung, Hai-Shen, and Hai-Shew, of 2,950 tons, were finished at Stettin, and the destroyers Hai-Lung, Hai-Niu, Hai-Ching, and Hai-Hoha at Elbing, the first of them showing at her trial a speed of 33.6 knots. The naval arsenal of Fuchau, under the direction of the French engineer Doyère, has torpedo boats and a torpedo gunboat of 817 tons under construction. The torpedo catcher Fei-Ying was purchased after the war. There are 34 torpedo boats in the various squadrons and 13 under construction.

Commerce and Production.—China is an agricultural country, in which cultivation in most places is highly intensive. All land is owned by families of cultivators, who pay an annual tax to the Government. No man may sell his farm to a stranger unless there is no member of the family who can purchase it, and when the transfer is made the seller pays 6 per cent. of the price to the Government. The farms are nearly all small, and are cultivated with primitive implements by the aid of oxen or buffaloes. In the south rice is the main crop; in the north wheat, millet, maize, barley, and other grains are grown, also beans and peas; in the western provinces opium is an important crop. The tea provinces are Fukien, Hupei, Hunan, Kiangsi, Chekiang, Anhui, Kwangtung, and Szechuen, in the west and south. The silkworm is raised in all parts of China, but the best silk, and the greatest quantity of it, comes from the province of Kwangtung. Silk-spinning mills have recently been established in Canton and Shanghai. Chinese capitalists started cotton mills at Shanghai in 1890, and since then four foreign companies have been founded. Under a clause in the Japanese treaty of peace it is permissible for foreigners to embark in industrial enterprises in the treaty ports. Coal is found in every province. In Shansi anthracite beds extend over an area of 13,500 square miles, and among them are abundant deposits of iron ore, which have been worked from early times. The bituminous coal fields in the same province are of vast extent. In the southeast of Hunan coal, both bituminous and anthracite, is found over an area of 21,700 square miles. In Szechuen there are enormous deposits which are worked by native methods. The coal in Manchuria is used for the smelting of iron. The coal mines of Kaiping, in the northern part of Pechili, are operated under European supervision by modern machinery, and are connected with the seaboard by a railroad. Anthracite coal is brought into Peking from the mines at Fang-Shanhsien. Coal is found in Kansuh, and in Shantung are several coal fields that the Germans hope to utilize, and one already productive at Poshan. Copper is mined in Yunnan, and has been from early times; also there are mines of tin and silver lead.

The total value of imports in 1897 was 212,235,000 taels. The re-exports amounted to 9,406,000 taels, making the imports for domestic consumption 202,829,000 taels. The total value of domestic exports was returned as 163,501,000 taels. These values include the costs of landing, storing, and selling the imports, and do not include the costs of packing, storing, and shipping the exports nor the export duty. The actual value of the imports for domestic consumption at the moment of landing was only 177,915,163 taels, while that of the exports, with the costs of selling, shipping, etc., added, was 181,769,995 taels. The imports of cotton cloth in 1897 were 44,233,000 taels as officially valued; of cotton yarns, 34,430,000 taels; of raw cotton, 2,260,000 taels; of opium, 27,901,000 taels; of petroleum, 13,299,000 taels; of sugar, 10,226,000 taels; of woollens, 4,558,000 taels; of rice, 4,011,000 taels; of coal, 3,693,000 taels; of fish, 3,445,000 taels; of machinery, 2,717,000 taels; of iron, 2,486,000 taels; of tin, 2,230,000 taels; of ginseng, 2,149,000 taels; of matches, 2,051,000 taels. The exports of raw silk were valued at 44,461,000 taels; of tea, 29,217,000 taels; of silks, 10,790,000 taels; of cotton, 7,393,000 taels; of straw braid, 6,659,000 taels; of hides, 6,154,000 taels; of beans, 5,945,000 taels; of matting, 2,970,000 taels; of wool, 2,390,000 taels; of coal, 2,212,000 taels; of shoes and garments,

2,178,000 taels; of paper, 2,122,000 taels; of tobacco, 1,944,000 taels; of sugar, 1,778,000 taels; of fireworks, 1,746,000 taels; of chinaware, 1,384,000 taels. The quantity of tea exported was 1,532,158 piculs of 133½ pounds, of which 813,494 piculs went to Russia, 244,480 piculs to Great Britain, 207,888 piculs to the United States, 119,723 piculs to Hong-Kong, and 33,327 piculs to Australia. Hong-Kong is the place where vessels from Europe and America discharge goods for China and load up with China goods, but the source and the destination of these goods can not be determined. The extent of the trade with the principal foreign countries and places in 1897 is shown in the following table, giving values in haikwan taels:

COUNTRIES.	Imports.	Exports.
Hong-Kong	90,126,000	60,402,000
Macao	3,515,000	5,894,000
Straits Settlements	2,856,000	1,858,000
East India	20,068,000	1,046,000
Japan	22,564,000	16,027,000
Siberia	208,000	12,483,000
Odessa	3,234,000	3,927,000
Great Britain	40,016,000	12,945,000
Rest of Europe	8,566,000	25,878,000
United States	12,440,000	17,828,000
British America	6,504,000	299,000
Other countries	2,138,000	4,314,000
Total	212,235,000	163,501,000

Customhouses have been established since 1887 in Macao and in the vicinity of Hong-Kong with the object of intercepting the contraband junk trade in opium and other commodities. The trade of Shanghai in 1897 was 132,219,000 taels of imports and 78,395,000 taels of exports; of Kowloon, 13,027,000 taels of imports and 23,024,000 taels of exports; of Canton, 13,730,000 taels of imports and 19,930,000 taels of exports; of Tientsin, 9,169,000 taels of imports and 10,192,000 taels of exports; of Amoy, 11,336,000 taels of imports and 1,712,000 taels of exports; of Swatow, 9,441,000 taels of imports and 3,322,000 taels of exports; of Lappa, 3,515,000 taels of imports and 5,894,000 taels of exports; of Fuchau, 4,342,000 taels of imports and 4,305,000 taels of exports; of Niu-chwang, 1,641,000 taels of imports and 5,548,000 taels of exports; of Chifu, 3,685,000 taels of imports and 1,389,000 taels of exports; of Hang-chau, 175,000 taels of imports and 3,421,000 taels of exports; of Pakhoi, 2,657,000 taels of imports and 1,502,000 taels of exports; of Kiungchau, 1,465,000 taels of imports and 1,779,000 taels of exports; of Mengtse, 2,394,000 taels of imports and 1,058,000 taels of exports; of the other ports, 2,138,000 taels of imports and 4,314,000 taels of exports. The imports of English gray and white cotton goods have fallen off from 11,037,745 piculs in 1887, valued at £3,767,700, to 9,517,098 piculs, valued at £3,470,200, while American imports have risen from 1,874,274 piculs, valued at £1,095,500, to 4,143,971 piculs, valued at £1,746,800. Half the yarns imported in 1887 came from England and half from India, but in 1897 only 51,298 piculs, valued at £189,400, came from England, while Japan furnished 283,817 piculs, valued at £948,000, and India 1,235,537 piculs, valued at £3,932,100.

The total value of imports into China in 1898 was 209,500,000 taels, and that of exports 159,000,000 taels. The export of tea was 1,538,600 piculs, compared with 2,167,552 piculs in 1888. The silk trade also is declining, but exports of hemp, hides and leather, oils, tobacco, feathers, beans, and other products are steadily growing. The totals given above are not corrected by adding port charges, etc., to exports and deducting

them from imports. The difference between exports and imports is therefore less than these figures show, and when account is taken of the land trade by the frontiers of Tibet and Mongolia, the expenditures of foreign vessels and travelers in China, the remittances of Chinese abroad, amounting to perhaps \$12,000,000 in gold from California alone, and the exports of gold from China, the balance is in China's favor, the net imports of silver in 1898 being 4,750,000 taels. The country does not suffer from scarcity of silver, but there has been an inconvenient dearth of copper cash since the intrinsic value of the copper they contain rose above that of the silver for which they are exchanged.

Navigation.—During 1897 the number of vessels entered and cleared at Chinese ports was 44,500, of 33,752,362 tons, of which 34,566, of 32,519,729 tons, were steamers, and 9,934, of 1,232,633 tons, sailing vessels. Of the total number 21,140, of 21,891,043 tons, were British; 18,889, of 7,819,980 tons, Chinese; 1,858, of 1,658,094 tons, German; 653, of 660,707 tons, Japanese; 464, of 423,122 tons, French; and 333, of 269,780 tons, American.

Railroads.—The railroad in operation for several years from the Kaiping mines to Petang has been built through to Taku, Tientsin, and Linsi, and is being continued to Shanhaikwan. The railroad from Tientsin to Peking, 73 miles long, was opened on June 30, 1897, and since August, 1898, a railroad, 12 miles long, connecting Shanghai with Woosung, has been in operation. A vast railroad system has been for years under discussion, and foreigners have been willing to provide capital on sufficient security, usually coupled with demands for commercial and political advantages. Concessions had already been granted before the beginning of 1899 for over 3,000 miles of railroads in the northern provinces and the valley of the Yangtse-Kiang, to be built at a cost of upward of \$120,000,000. The most important of the projected lines will connect Peking with Hankau, the center of the Yangtse trade, with the prospect of its being continued through to Canton.

Posts and Telegraphs.—The postal service has heretofore been carried on by means of special messengers and by relays of runners under the direction of the military department. On Feb. 2, 1897, an imperial post office was organized under the management of the director of maritime customs. China has since notified the Swiss Government of her adhesion to the regulations of the Universal Postal Union.

Telegraph lines, built primarily for military purposes, connect Peking with the posts on the Russian frontier of Manchuria, with Korea, with Niuchwang, Chifu, Shanghai, Canton, and all the other ports on the seaboard and on the Yangtse river, and by an extension from Canton with Yunnan, joining the Indian system at Manwyne, in Burmah. The line along the Yangtse has been carried through to Chungking, in Szechuen, and into Mongolia. By a connection with the Russian system in the Amur valley there is overland communication with Europe.

Internal Politics.—The reform projects of Kang-Yu-Wei, who obtained an influence over the Emperor in 1898, were crushed at the outset by the Empress dowager, who, fortified by the authority of the Board of Censors, which is independent of the throne, and with the aid of her relative Yung-Lu, afterward made generalissimo of the armies, and the support of all the old mandarins whose posts were to be abolished, practically deposed the Emperor, placed him in

confinement on pretense of his illness, had the most active reformers decapitated, with the exception of Kang-Yu-Wei, who escaped to Hong-Kong by the aid of the British consul at Shanghai, degraded most of the officials who had taken part in the reform movement, and kept the rest silent by the fear of a like fate. This palace revolution was carried out by the aid of the Manchus, and the great posts were consequently given to them rather than to Chinese statesmen, like Li-Hung-Chang. The reformers had received encouragement from the British representative, and hence their defeat and disgrace resulted in the ascendancy of Russian influence at Peking. The offices that the Emperor had abolished under the influence of the reformers were all restored. The provincial and local authorities resumed the powers that had been concentrated in special boards at Peking. The grain tribute was re-established. The right of memorializing the throne was again limited to high officials. The examinations were once more based entirely upon the Chinese classics, instead of partly on modern knowledge. All Chinese newspapers were ordered to be suppressed, and writing for them was made a punishable offense. The new Board of Trade, Manufactures, and Agriculture was abolished. Some reforms, declared to be necessary and beneficial, were promised in vague edicts, which did not define what they were. In the course of a few months it became apparent that the Empress was not in principle opposed to all progress and reform, but that she had checked the sweeping changes sanctioned by the young Emperor because they threatened to convulse the nation. Financial and military reforms had the sanction of the Empress so far as they were possible, nor was she opposed to the introduction of Western methods and science into the national system of education. The edict of the Emperor in favor of an imperial university at Peking was not countermanded by the Empress, who selected a member of the reform party as director of the new university, of which Dr. W. A. P. Martin was made chancellor. The university was started with 6 professors of different nationalities and 380 matriculated students. A Russian school was established at Peking under official Russian auspices. A rebellion in Nganwei, Kiangsu, and Honan in the early part of 1899 required the development of all the local military strength of those provinces. In May an imperial decree was issued requiring local officials to receive and treat with Roman Catholic missionaries on terms of equality, a bishop having the rank of a governor, a priest that of a prefect. In legal proceedings between Christian converts and other Chinese the missionaries are warned against interfering for the protection of their parishioners. Several proclamations against speculation, extortion, and other official abuses show the consciousness of the Empress of the defects of the political organization of China and her desire for a reformation.

The Struggle for Concessions.—The rivalry between the European powers, especially between Great Britain and Russia, which in the previous year was manifested in a struggle for naval stations and lease of territory, was continued in 1899 in a contest for concessions to build railroads, with incidental mining and other privileges. In Manchuria the Russians were actively engaged in constructing their railroad to Talienwan, and improving the harbor there and the military harbor of Port Arthur. Wherever they went forces of soldiers were taken with them. The Germans organized various companies to exploit mines and construct railroads in Shantung.

The German Government claimed exclusive rights in Shantung by virtue of the occupation of Kiaochau, but denied that Great Britain had any preferential rights in the basin of the Yangtse, nor could the British Government assert such rights and at the same time uphold the policy of the "open door," which was advanced when the British desired concessions in the German or Russian spheres. The railroads actually existing in China had a total length of 350 miles, but concessions had been granted before the beginning of 1899 to British investors alone for 2,800 miles. One was for an extension of the existing line connecting Peking with Tientsin and Shanhaikwan to Niuchwang. The length of the extension is 500 miles, 200 miles of which are north of the Great Wall. As the Russian Government objected to foreign control over this section, the loan of £2,300,000 which was raised to build the extension was secured on the existing railroad from Peking to Shanhaikwan and on the earnings of the part between Shanhaikwan and Shinminting. The British imperial authorities took the unusual course of recommending this loan to the investing public, thus giving the enterprise a political character. The interest shown by the British Government in the railroad penetrating the Russian sphere of interest roused the resentment of the Russians, who used their influence at Peking to thwart the English designs in this quarter and to promote the Belgian line of railroad from Peking into the heart of the Yangtse region. First the Chinese Government, in spite of the protest of the British minister, removed the Chinese administrator general of railroads, and appointed as his successor one suspected of partiality to the Russians. When the negotiations for a loan to build the extension to Niuchwang were about to be concluded with the Tsung-li-Yamen, the Russian minister protested against pledging any railroad in Manchuria to foreign creditors or subjecting it to any foreign control or management in case of default. The Chinese Government gave him the required assurance, and the British financiers agreed to accept as security a lien on the part of the line within the Great Wall and a first charge on the earnings of the rest of the road. The loan was concluded on these terms with the knowledge and assistance of the British Government, to which the Chinese Government gave an assurance that the railroad should never be alienated to any foreign power. In all the concessions the Chinese Government stipulated that after a fixed term the railroads and equipments should become its absolute property without compensation, and in most cases the concessionaires are obliged to surrender to the Government 40 per cent. of their profits from railroads and 25 per cent. of their profits from mines. The Government requires also that schools of instruction in the building, management, and working of railroads be established, and that a certain proportion of the employees shall be Chinese. In February, 1899, the Russian minister protested against the terms of the British loan contract for the Niuchwang extension, which require that the chief engineer shall be British and that a European accountant shall assist in supervising receipts and expenditure. These conditions he held to be inconsistent with the Russo-Chinese agreement with regard to the Siberian Railroad. Subsequently the Russians objected to the earnings of the 298 miles of railroad beyond the Great Wall being pledged to foreigners. Application was next made through the Russian minister for the privilege of constructing a Russian railroad under the same

conditions as in the case of the Manchurian line to connect the Siberian and Manchurian system with Peking, starting from Niuchwang, or some other point on the Manchurian line between Mukden and Port Arthur. Previous to this Great Britain and Russia, "animated by a sincere desire to avoid in China all cause of conflict on questions where their interests meet, and taking into consideration the economic and geographical gravitation of certain parts of that empire," had reached an agreement with regard to their respective railroad interests in China, its terms being defined in notes exchanged on April 28 between the British minister at St. Petersburg and Count Muravieff. Great Britain engaged not to seek for her own account, or in behalf of British subjects or of others, any railroad concessions to the north of the Great Wall of China, and not to obstruct, directly or indirectly, applications for railroad concessions in that region supported by the Russian Government. Russia, on her part, engaged not to seek for her own account, or in behalf of Russian subjects or others, any railroad concession in the basin of the Yangtse, and not to obstruct, directly or indirectly, applications for railroad concessions in that region supported by the British Government. The contracting parties, declaring that they had nowise in view to infringe in any way the sovereign rights of China or existing treaties, agreed to communicate to the Chinese Government the arrangement that they had concluded, which, by averting all cause of complications between them, was considered of a nature to consolidate peace in the far East and to serve the primordial interests of China herself. In a supplementary note in regard to the Anglo-Chinese extension of the Northern Railroad to Niuchwang, the Russian Government conceded the right of having a British engineer and a European accountant, but the line shall remain a Chinese line and may not be mortgaged or alienated to foreigners. A branch line from Siaoheichau to Shinminting was to be constructed by the Chinese Government, and the Russian Government might support, if it saw fit, applications of Russian subjects or establishments for concessions of railroads which, starting from the main Manchurian line in a southwesterly direction, would traverse the region in which the Chinese line terminating at Shinminting and Niuchwang was to be constructed. Lord Salisbury wished to include in the agreement a provision protecting British goods from differential rates on railroads under Russian control, but Count Muravieff preferred postponing negotiations on this subject. The agreement conceded to the Russians liberty to compete with the section of the British line extending beyond the Great Wall. Their new proposal, although put forward as a fulfillment of the agreement, was calculated to provoke a serious conflict with England, for such a short line from Shanhaikwan to Peking would not only render the British railroad unprofitable, but would enable Russia to place an armed force in Peking at any moment. Even after receiving the stereotyped reply that by the decree of Dec. 18, 1898, no more railroad concessions would be given for the present, the managers of the Manchurian Railroad, supported by M. de Giers, the new Russian minister, insisted on the granting of their application as necessary for them and beneficial to China, avoiding the circuitous Tientsin route and facilitating traffic with western Manchuria. The British raised strenuous objections not only in Peking, but in St. Petersburg, whereupon Count Muravieff decided not to press the matter, and explained that Russia had

only suggested to China that she should agree in principle to such a line being constructed should opportunity arise and Russian subjects petition for a concession. This assurance, when reported in a dispatch to the British minister at Peking, amused the Tsung-li-Yamen. The right of the Russians to construct railroads to Peking or south of Peking as far as the Yangtse basin is not precluded by the agreement. The Anglo-Russian agreement was first suggested by M. Lessar, the Russian *chargé d'affaires* at London, in August, 1898, after the British minister at St. Petersburg, Sir Charles Scott, had said to Count Muraviev that his Government would not possibly acquiesce in an arrangement that left all China open to the railroad enterprises of Russia while excluding England from her share in the railroad enterprises of Manchuria. Count Muraviev disclaimed any desire to block English enterprise anywhere, and denied that the prohibition to China to mortgage the Niuchwang Railroad to foreigners infringed the treaty rights of England, as all foreigners were debarred, even Russians. In discussing the delimitation of spheres for railroad concessions, Count Muraviev drew the distinction that Russia's interest in China was more political, and confined to the north of Peking, and especially to Manchuria, for the protection of the Siberian outlet, while that of England was chiefly commercial, and was more confined to central China and the basin of the Yangtse. As negotiations proceeded he suggested that the limits of the region called the Yangtse basin ought to be defined. Lord Salisbury, who understood it to embrace the provinces adjoining the Yangtse river and Honan and Chekiang, thought too that a precise definition was desirable, but none was given in the agreement.

An English syndicate, associated with Italians, acquired a right in the province of Shansi to construct railways to connect with main lines or with navigable water ways, in order to facilitate the transport of coal from the mines of Luhsien and Pingtingchow, which are about 250 miles distant from the Yangtse-Kiang. In the lower Yangtse valley an English syndicate obtained concessions for a railroad to connect Shanghai with Nankin, 180 miles, with the right of extension to Hsingyan in Honan, 270 miles, and a railroad between Suchau and Hangchow, 120 miles, with the right of extension to Ningpo, 80 miles. The Russo-Chinese Banking Corporation, which is the financial agency through which the Russian Government has carried out its schemes, constructed the railroad running 100 miles southwest of Peking to Paoting, and was pushing it on to Chengting, 160 miles farther, with the right of prolongation westward for 140 miles to Taiyuan. Negotiations were opened for its further continuation southward 330 miles to Si-Ngan-Fu, the capital of Shansi, situated on the edge of the Yangtse basin. The Russian Government gave notice that no concession could be granted without its consent for any railroad to join the Taiyuan section from the south. The British minister in June notified the Tsung-li-Yamen that the Peking syndicate intended to construct several railroads in the southwest of Shansi province, with the object of developing various mines and the petroleum wells in the district of Puchau. One line was to run from Yuh sien to Taiyuen-Fu, and thence to Pingyang-Fu, Puchau, and Tungkwan. The same syndicate announced the intention of making a railroad to connect the Honan mines, by way of Kaifong, with the Yangtse river opposite Nankin, the Siangyang route having been found impracticable. This last

railroad the Tsung-li-Yamen opposed on the ground that it would interfere with the traffic of the Luhan line. The Russians, in rivalry with the British, began to negotiate for a line to Si-Ngan-Fu, the capital of Shansi.

The right to connect Kaulung, the newly acquired British territory on the mainland opposite Hong-Kong, with Canton, 100 miles, was acquired by one of the largest British business houses in China. An American syndicate obtained the concession for an important line, 600 miles in length, to connect Hangkow with Canton, and afterward arrangements were made for the co-operation of this same British firm, which had projected a line from Canton to tap the rich and populous province of Szechuen by connecting its capital, Changtoo, with Wuchow, on the West river, whence traffic can reach Canton and Hong-Kong either by steamers or by a proposed railroad. A railroad connecting Changtoo with the projected American line will have a length of 600 miles. A concession for a line from Peking to Hangkow, 650 miles, was granted to a Belgian syndicate, which was believed by the British to be under Russian and French influence and control. The line, called the Luhan, from the first syllables of the terminal stations, will form an important link in the chain of railroads that will traverse China from north to south and connect with the Siberian line in the north. For its construction a loan of £4,500,000 was obtained from French banks. A railroad, 613 miles in length, running from Tientsin southeast to Shanghai was projected by British capitalists, who obtained a concession for the first section from Shanghai northward. A large part of this route passes through the province of Shantung, in which Germany asserts preferential railroad and mining rights in virtue of the Kiau-Chau concession. It is crossed at two points by projected German lines running from the port of Kiau-Chau to important coal and iron regions. The British concessionaires agreed to share the costs and profits of the entire enterprise with German capitalists, and to acknowledge German jurisdiction over the part of the line passing through Shantung. The Chinese Government, however, was unwilling to relinquish this jurisdiction to the German authorities. The attempts of the Germans to construct the railroads from Kiau-Chau into the interior under the protection of German military guards encountered resistance on the part of the authorities and the people. The arrangement with England in regard to the trunk line was that Germans should build and control not only the Shantung section, but the northern section up to Tientsin, while the British would construct the southern continuation from the southern border of Shantung to Chinkiang, where it meets the existing railroad from Shanghai. Germany came to an agreement with the Chinese Government with regard to the Shantung section, in accordance with which it is to be, like the other sections, a Chinese state railroad, but will be built and managed for China by Germans with a German loan guaranteed by the Chinese Government. A loan of £7,400,000 was raised at 5 per cent. to build the railroad in the course of five years. The German Shantung Railroad Company waived its right to build a line connecting Ichau-Fu with Tsinan-Fu in favor of the Anglo-German company. The Germans have planned a new commercial harbor at Kiau-Chau, which has been declared a free port. When the Manchurian Railroad is completed, the track having already been laid beyond Mukden, Talienwan will also be made a free port.

A project for a British line, 700 miles long, from British Burmah into Yunnan was sanctioned by the Chinese Government, but engineers who examined the ground reported that it could not be built profitably. An easier route was afterward discovered, but the project is not attractive to capitalists, although by extending the line northeastward to Chungking and the head of navigation on the Yangtse-Kiang it would accomplish the political object of connecting with British India the special sphere of interest reserved for Great Britain by the engagement of the Chinese Government that it shall never be alienated to any other power, embracing the provinces now the most productive and having the largest commerce with the outside world, and also those containing the greatest prospective wealth in coal and iron not yet utilized.

In the southern provinces the British come in competition with the French, who had obtained from the Chinese Government an assurance, similar in terms to that given to Great Britain relative to the basin of the Yangtse-Kiang, that no part of Kwangtung, Kwangsi, or Yunnan should ever be ceded or leased to any other power. By the same agreement China granted to the French the right to build a railroad from the frontier of Tonquin to Yunnan-Fu, and also gave to the French Government a lease for ninety-nine years of the Bay of Kwang-Tchao-Wan as a naval station. The French immediately set about the construction of the railroad from Laokai to Yunnan-Fu. In the Chinese province their engineers encountered riotous opposition, and their consulate at Mongtse was destroyed by a mob. Instead of asking exorbitant damages, the French minister simply demanded that the consulate be rebuilt. In contrast to this mild procedure a claim was presented for 1,200,000 taels and the concession of mining rights around Chungking as compensation for the destruction of mission property in Szechuen. The English minister made repeated demands for the removal of the Governor of Kweichau because he failed to punish the murderers of a missionary named Fleming.

The delimitation of the frontier between Yunnan and Burmah was completed by an Anglo-Chinese commission on April 24, with the exception of the Wa territory, which was left till 1900, as difficulties were expected requiring a previous understanding with the Viceroy of Yunnan. The line demarcated, running due east from the Namyang river, adds to the northern Shan States of Burmah several hundred square miles that were excluded by the line laid down in the agreement of 1897.

While the discussions over railroad and other concessions were going on marines were sent up to Peking from English, Russian, German, American, and French war ships to guard the legations on the ground that disturbances were feared. After the principal points in controversy were settled these guards were withdrawn.

At the beginning of the year, when the French representative was pressing the Chinese Government for an extension of the French settlement at Shanghai, having already come to an understanding with the British minister by waiving jurisdiction over British property owners in the area in question, the United States minister, supported by his British colleague, protested against the extension of the French concession, urging at the same time the desirability of extending the limits of the general European settlement. The Peking Government consequently withheld the concession that the French desired, and agreed to an enlargement of the cosmopolitan concession

as soon as the opposition of the French and Russian ministers could be overcome. The British Government could not consistently refuse to concur in the French extension, since it had agreed in 1896 to all that the French demanded, including the Chinese *band* of the native city, the suburb of Passejo, and roads leading some miles inland. Lord Salisbury held, however, that the situation was now essentially different, and that the cession of so much land would constitute an alienation of a part of the Yangtse basin. He finally agreed that the extension should be limited to the suburb of Passejo only, which should be strictly defined. On this understanding the Chinese Government agreed to both extensions. While negotiations over the Anglo-Russian agreement were in progress Sir Claude MacDonald exasperated the Russians and caused a hitch in the negotiations by securing without their knowledge an extension of the British settlement at Niuchwang, the Russians having some time before obtained an extension of their concession at Hankau.

Antiforeign disturbances near Ichau-Fu and at other points in Shantung province were followed by the German occupation of Ngan-Tung-Wei, near the frontier of Kiangsu, whence marines marched to the neighborhood of Ichau-Fu. The disturbances began with the imprisonment of a German priest within the neutral zone. A German naval patrol was afterward fired upon and compelled to retire by Chinese soldiery. The marines simply punished the villages where the patrol was attacked, and then returned to Kiau-Chau. The Chinese, stirred to action by the prompt move of the Germans, increased the military and kept better order in the province thereafter, but the precedent established by Germany gave her the future right to interfere in the interior of Shantung for the preservation of order independently of the Chinese authorities.

The British about the same time began to press for a revision of the treaty ceding the district of Kaulung, opposite Hong-Kong. They threatened to remove the Chinese customhouse from British territory if the demand for more territory were not acceded to. The area leased to Great Britain by the convention of June 9, 1898, was 376 square miles. The neck of land connecting it with Chinese territory is deeply indented by Mirs Bay on one side and Deep Bay on the other, and through the greater part of its breadth of 11 miles the Shan-Chun river forms a natural boundary. The British, however, desired to include the whole valley of the river and the range of hills inclosing it on the north, whose summit would afford a more strategic frontier. They objected also to the Chinese retaining and garrisoning the walled city of Kaulung within the leased territory. When they landed troops preparatory to taking formal possession on April 17, Chinese soldiers made a show of opposing them at Taipo-Fu. The populace had previously burned some sheds erected for the accommodation of the police. The Chinese troops took to flight when the British opened fire, but appeared again in the same place on April 17, the British flag having been raised a day before the time fixed on account of the resistance encountered. The Chinese were shelled when they showed themselves on the heights, and when they hastily retreated the Hong-Kong regiment pursued them. These encounters gave Sir Henry Blake, the new governor of Hong-Kong, ground for demanding the evacuation of the fortified post of Kaulung reserved to China by the treaty. The Viceroy of Canton, instead of complying, strength-

ened the garrison. The right that the Chinese Government had reserved of collecting customs in the leased territory was already repudiated by the British before they took possession. No further disturbance occurred in the annexed territory. Nevertheless, in the middle of May, a force of 2,000 infantry, artillery, and marines took forcible possession of the Chinese city of Kaulung and of Samchun, the principal town in the coveted district north of the river.

The Italian Government through its minister presented, on Feb. 28, a demand for a lease of Sammun Bay, on the coast of Chekiang, as a coaling station and naval base, on the same conditions as in the case of the German concession at Kiau-Chau, with a similar land radius, and including three islands off the coast; also the right to construct a railroad to Poyang Lake, with preferential railroad and mining rights throughout the southern two thirds of Chekiang province. The British minister supported this demand, as well as a request by the Belgian minister for the concession at Hankau of an area at the terminus of the Luhan Railroad. Although two Italian war vessels arrived for the purpose of impressing the Chinese, the Tsung-li-Yamen returned the Italian note with a statement that they refused to receive it, declaring to Sir Claude MacDonald, the British minister, in answer to his note supporting the Italian demand, that they declined to negotiate or to discuss the matter on any grounds. The return of the dispatch brought from Signor Martino, the Italian minister, a peremptory demand that the Tsung-li-Yamen receive the dispatch and enter into negotiations on the understanding that the request for a coaling station and sphere of influence be favorably considered. Four days were given for a reply, no notice being taken of the excuse given that the dispatch had been returned because it was impossible to grant the demands, and a refusal might endanger the relations between the two powers. The Tsung-li-Yamen requested the return of the dispatch, but made no statement regarding the demands that it contained. The Italian Government was persuaded that these would not be granted at present without coercion, and when it learned that its representative had presented an ultimatum demanding an agreement to the request for Sammun Bay it disavowed his action and recalled him from his post. His ignorance of diplomatic methods at Peking had betrayed him into making his demand in a rash and indiscreet manner. His successor, the Marquis Salvago Raggi, pursued the same object more insidiously. The Italian Chamber, which had been kept in ignorance of the design of the Government to secure a foothold in China, was not favorable to a new physical conflict or a demonstration that might lead to one after the Abyssinian failure. The Government in Italy changed at this time, and the Marquis Visconti Venosta was more inclined to caution than his predecessor. He first confined himself to a request for Sammun Bay as a coaling station, without suggesting a claim to the Hinterland. As the Tsung-li-Yamen was not yet ready to make any territorial concession to Italy, which was regarded as one of the less formidable powers, negotiations were continued on a general basis, the minister seeking to obtain opportunities of commercial expansion for Italy similar to the commercial concessions granted to other great powers. Meanwhile Italy kept a strong naval force in Chinese waters. The Tsung-li-Yamen offered to concede to Italians certain mining rights in Chekiang, but would not discuss other demands.

The treaty of Shimonoseki added Chungking, Shashi, Hanchau, and Suchau to the list of treaty ports. The West River Convention with England added Wuchau and Samchui, and the French Frontier Convention Szemao, making 28 in all. When the Russians took possession of Port Arthur one of the first demands of Great Britain was that two new treaty ports should be opened, one of which was Nanning, near the Tonquin frontier, on a tributary of the West river. The Chinese Government would not then agree on account of objections raised by France, but early in 1899 the Tsung-li-Yamen acceded to the proposal. The other was Wusung, which the Government, with the concurrence of the local authorities, made a treaty port in 1899. Yochau, in Hunan, the Chinese Government also opened to foreign trade in 1899. It has also promised voluntarily to open Santauo, in Fokien, and Ching-wantao, in Pechili. Funing and Nankin have also been promised after some pressure from outside. In these new treaty ports the Chinese claimed the right to fix the conditions of trade, since they had been opened voluntarily. Even in the older ports the *likin* barrier is often placed at the boundaries of the foreign concessions. In the new ones the exactions were made so onerous that there is little opportunity offered for trading, although from such trade as comes the local officials derive a heavy toll, and for the land desired by foreigners enormous prices and taxes. The opening of the inland waters of China to foreign steam vessels in 1898 has been hedged in by so many restrictions, especially for the protection of the customs revenue, that the concession is almost nullified. For example, no steamer trading with Hong-Kong or any of the treaty ports is allowed to call at any nontreaty port. The opening of the West river, which England secured after a long diplomatic struggle, is of very little benefit to merchants so far. For the development of domestic trade the free navigation of the inland waters has been of less value than in the case of foreign trade, because domestic produce is subjected more often to arbitrary *likin* exactions. The control by the Maritime Customs of the specific *likin* taxes pledged for the service of the Anglo-German loan of 1898 has, like all innovations in China, failed to produce the striking results that were expected. The taxes set apart were the general and salt *likin* of certain ports and districts in the Yangtse valley and the province of Chekiang. The duties in the hands of the customs inspectors have not yielded the amount expected, while the local authorities have imposed fresh taxes on internal trade to make up for their loss of revenue.

CHRISTIAN ENDEAVOR, SOCIETIES OF. The following statistical report of these societies was compiled on Christian Endeavor day, Feb. 2, 1899:

In the United States: Number of Young People's Societies, 28,261; of Junior Societies, 12,535; of Intermediate Societies, 801; of Mothers' Societies, 70; of Senior Societies, 30; Parents' Society, 1.

In Canada: Number of Young People's Societies, 2,921; of Junior Societies, 530; of Intermediate Societies, 13; of Parents' Societies, 2; Mothers' Society, 1.

In foreign lands: Number of Young People's Societies, 8,535; of Junior Societies, 1,078; of Senior Societies, 19; of Intermediate Societies, 11; of Mothers' Societies, 6. Number of floating societies, 120.

Whole number of societies, 54,934; total membership, 3,296,040.

The Christian Endeavor Yearbook, published a few weeks before this enumeration was made, gives somewhat smaller numbers, but the difference is not greater than might be allowed in consideration of the difference in dates of publication. In this work the progress of the Christian Endeavor movement in prisons is especially mentioned as a feature of the work of 1898. The first prison society was formed in the State prison at Waupun, Wis., where nearly a thousand prisoners had been enrolled. At the time of the compilation of the Yearbook there were about 20 such societies, chiefly in the United States.

International Convention.—The eighteenth annual International Convention of the United Societies of Christian Endeavor was held in Detroit, Mich., July 5 to 10, the Rev. Francis E. Clark presiding. The report of the secretary, John Willis Baer, showed that there had been a gain during the year of nearly 2,000 societies, with additions of more than 100,000 members. In America, Pennsylvania had, including the junior organizations, more than 5,000 societies; New York more than 4,000; Ohio and Illinois more than 3,000 each; Indiana and Ontario, 2,000; Iowa, Michigan, Kansas, and Massachusetts, more than 1,500; and California, Missouri, and New Jersey more than 1,000 each. The society had now been organized in Russia, the only considerable country in the world to which it had not been extended. Great Britain had more than 6,000 societies; Australia more than 2,000, being represented in the convention by 2 delegates; India, 454; China, 148; Africa, 156; Mexico, 108; the West Indies, 103; Germany, 101; Madagascar, 93; Japan, 73; Spain, 36; and other countries were represented in the organization by larger or smaller numbers of societies. There were 979 Intermediate Societies, 14,680 Junior Societies, 85 Mothers' Societies, and 49 Senior Societies. More than 100 societies were to be found on ships, including merchantmen and men-of-war; societies in soldiers' camps, prisons, schools of reform, workhouses, almshouses, asylums, institutions for the blind and for the deaf, schools, and colleges; among car drivers and motormen, policemen, traveling men, life savers on the coast, men employed in lighthouses, in large factories, etc., to the number of more than 200. The entire official enrollment of the societies was 55,813, with a total membership of 3,500,000. The report of President Clark represented that in many respects the last year had been the best in the history of the association as regarded advance and increase and the magnitude and character of the convention. The denominational drift had been more decidedly than ever toward the society's interdenominational movement; the growth in foreign lands had never been so encouraging; and the thought of the "quiet hour" of personal communion with God had taken a strong hold of the membership. The adoption of new plans and new methods of work, however, did not mean that the societies would take up every alluring scheme that enthusiasts would present, and many such had been declined. There were many denominational societies that would come into the fellowship of this movement if they only understood that it sought no control and demanded no money or allegiance, but only asked their brotherhood, that they "all be one." No business is transacted at the international conventions, or action taken. The meetings are religious and social, for the stimulation of the religious spirit and the promotion of acquaintance among young Christians of different regions. The headquarters of State, Territorial, and pro-

vincial delegations were so arranged that in each of them local representatives of distant and widely separated communities should be grouped together. Each day's sessions were opened with a "quiet hour," in which, after an address by the leader of the meeting, the rest of the hour was spent in meditation. In the sessions themselves the addresses were followed by ten minutes of "quiet meditation" and prayer. The addresses, constituting the principal feature of the sessions, were on subjects relating to religious life and work and the development of the Endeavor movement and its objects. Besides these daily features, there were occasional conferences—pastors' conferences, junior workers' conferences, officers' conferences, floating society conferences, travelers' union conferences, and other meetings—together with the special "denominational rallies," in which the members of each of the religious denominations whose societies were represented in the convention held separate meetings. Twenty-seven such denominational rallies were held during the present meeting of the convention. Under a change in the constitution of the body in 1898, the presidents of the State, Territorial, and provincial societies are *ex-officio* members of the Board of Trustees of the United Society. They assume no control over local societies or unions, but give counsel when asked, and furnish information and aid in local work. Instead of the passing of resolutions by the convention, it is the practice of this board to prepare upon occasion expressions upon subjects to which it is thought proper to direct attention, to be read in the convention for information. Such an expression, read at the present convention, declared that the admission of Brigham H. Roberts as a member of the House of Representatives of the United States from Utah "would be, and would be generally understood to be, a condonation of the crime of polygamy, a blow at the sanctity of the marriage relation, and a peril to the purity and integrity of the family, upon which our civil and religious institutions so largely rest," and urged his rejection as a measure "in defense of our reputation and character as a law-abiding people."

German (American) Society.—A national German (American) Christian Endeavor Society has been organized, and held its first meeting in Quincy, Ill., July 12 to 16. It consists of 250 societies, with 8,340 members. By denominational classification, 101 of the societies are of the German Evangelical Synod, 23 Presbyterian, 22 Congregational, 45 Reformed, 11 United Brethren, 30 of the United Evangelical Church, and 8 of denominations not specified.

Convention of British Societies.—The annual convention of the British Societies of Christian Endeavor was held in Belfast, Ireland, beginning May 19. Besides the Irish members, more than 200 delegates were present from Great Britain, and also visitors from America, New Zealand, Armenia, and the Congo. Nearly 200 meetings were held immediately in connection with the convention, as well as numerous special services and open-air meetings. The annual report of the union showed that 590 societies, with more than 21,000 members, had been added during the year in the British section—bringing the whole number of societies up to 6,195—and 40 new societies in Ireland. The greatest denominational increase was among the Congregationalists, who returned 138 new societies, and the next greatest among the Baptists. The financial report showed a balance in hand of £250. Schemes for extension work at home, and in India, Ceylon, and

Burmah, were considered at the meeting of the council, and a delegate was appointed to represent the union at the Swedish convention.

COLOMBIA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 27 members, 3 from each department, and a House of Representatives of 66 members, elected for four years by manhood suffrage in the departments in the proportion of 1 to 50,000 inhabitants. The President is elected by electoral colleges for six years. The President elected for the term beginning Aug. 7, 1898, is M. A. Sanclemente. J. M. Marroquín is Vice-President. The Cabinet at the beginning of 1899 was composed of the following members: Minister of the Interior, Aurelio Mutis; Minister of Foreign Affairs, Felipe Paul; Minister of Commerce and Communications, Pedro Antonio Molina; Minister of War, Olegario Rivera; Minister of Public Instruction, Tomas Herran; Minister of Finance, Luis M. Mejia Alvarez.

Area and Population.—The area of the republic is 513,938 square miles; the population is estimated at 4,000,000, including 150,000 uncivilized Indians. Bogotá, the capital, has about 120,000 inhabitants.

Finances.—The revenue for the biennial period 1899-1900 is estimated at 34,305,000 pesos, and expenditure at 34,000,000 pesos. The revenue from customs is about 24,000,000 pesos. The chief expenditures in the preceding two years were 9,129,500 pesos for war, 4,016,300 pesos for internal development, 4,683,600 pesos for justice, 3,659,300 pesos for interest on the debt, and 3,378,900 pesos for financial administration.

The internal consolidated debt on June 30, 1896, was 5,633,046 pesos. The floating debt amounted to 1,892,110 pesos, which was to be extinguished by a sinking fund of 604,000 pesos a year. The foreign debt, which amounted with arrears to £3,514,442 in 1896, was compromised by the issue of £2,700,000 of new bonds, paying $1\frac{1}{2}$ per cent. interest three years, then $\frac{1}{2}$ per cent. more every succeeding three years till the rate is 3 per cent. The paper currency amounted in 1896 to 30,862,352 pesos. The law of 1894 providing for its redemption in gold has not been carried out because there is no gold in the country available for coinage, but 3,000,000 pesos of token silver pieces have been put into circulation. At Panama and Colon the Colombian paper money is not accepted, but the Peruvian silver sol is legal tender.

Defense.—The strength of the standing military force was fixed in 1898 at 1,000 men. The President has authority to summon every able-bodied citizen into military service in case of war.

Commerce and Production.—Colombia is a country of great mineral wealth and of great agricultural resources also, but these are not yet developed, owing to the lack of transportation. The gold and silver production amounts to \$4,100,000 a year. In Antioquia are 3,398 gold mines, alluvial and quartz; in Tolima and Cauca are 1,365 gold and silver mines. There are 32 mines producing \$100,000 worth of emeralds per annum, 14 mines of cinnabar, 7 of manganese. Copper, lead, platinum, quicksilver, and iron are mined also. The Government salt mines at Zipaquirá almost supply the whole country. Coal and petroleum are also found.

The cultivation of coffee is profitable, as the berry grown in Colombia is of fine flavor. Cacao, tobacco, and sugar are staple products of longer standing. The export of rubber is decreasing because the forests are being exhausted by kill-

ing the trees and not replanting. Copaiba trees are also tapped, but not cultivated. Tolu balsam is a cultivated product. Vegetable ivory is exported. The forests produce various dyewoods. Cattle, horses, asses, mules, sheep, goats, and hogs are reared. The total value of the imports in 1895 was 11,528,365 pesos; of the exports, 15,088,406 pesos. Articles of food and drink, textiles, iron manufactures, and hardware constitute the bulk of the imports. The chief exports are coffee, gold, silver and silver ore, tobacco, cacao, live animals, hides, cotton, rubber, dyestuffs, and cabinet woods.

Navigation.—Colombian ports are visited regularly by 15 English, 9 American, 4 German, and 3 French steamers. The number of vessels entered at the port of Barranquilla in 1895 was 261, of 392,573 tons; cleared, 258, of 391,668 tons. The number entered at Panama, Colon, Santa Maria, and Cartagena was 923, of 1,203,110 tons; cleared, 919, of 1,210,629 tons. The ships owned in Colombia in 1896 were 1 steamer, of 457 tons, and 7 sailing vessels, of 1,770 tons.

Railroads and Telegraphs.—The length of railroads in operation in 1897 was 400 miles, while 270 miles were building and 85 miles under contract.

The telegraphs have a total length of 6,835 miles.

The Panama Canal.—The company founded by Ferdinand de Lesseps in 1881 for the purpose of constructing a tide-level ship canal, 46 miles long, across the isthmus of Panama went into liquidation in 1889, having expended 772,545,412 francs, and failed to obtain a loan of 600,000,000 francs for the completion of the work. A new company was finally organized in 1894, and about 3,000 laborers have since been employed on the canal, which it is hoped will be completed in about ten years. The work done so far is only provisional, intended mainly to keep the concession valid while fresh capital is being raised. The sum raised up to June 30, 1897, was 48,420,184 francs, of which 18,976,987 francs were deposited as a guarantee, 25,334,662 francs were expended on the canal, and 4,108,534 francs remained in bank.

The Cerruti Claim.—The Colombian Government finally paid over to the Italian Government £60,000, the sum awarded by President Cleveland to Signor Cerruti as an indemnity for loss and arbitrary imprisonment inflicted upon him by the Colombian authorities, and to compound with his business creditors. The creditors of the Cerruti firm, who demanded 6-per-cent. compound interest in addition to their original claims, were constrained to accept 20-per-cent. interest for the whole time.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,969 square miles. The population in 1880 was 194,327; in 1890 it was 412,198. Capital, Denver.

Government.—The following were the State officers in 1899: Governor, Charles S. Thomas; Lieutenant Governor, Francis Carney; Secretary of State, Elmer F. Beckwith; Treasurer, John F. Fesler; Auditor, George W. Temple; Attorney-General, D. M. Campbell; Superintendent of Education, Helen L. Grenfell. The above named were elected on a fusion ticket of Silver Republicans, Democrats, and Populists. State Engineer, John E. Field; Commissioner of Mines, Harry A. Lee; Regents of the University, W. E. Anderson, C. R. Dudley, O. J. Pfeiffer, William J. Orange, D. M. Richards, Harold Thompson; Chief Justice of the Supreme Court, John Campbell, Republican; Associate Justices, Luther M. Goddard and William

H. Gabbert, Democrats; President Judge of the Court of Appeals, Charles I. Thompson; Associate Justices, Julius B. Bissell and Adair Wilson.

Finances.—The chairman of the Finance Committee of the Senate announced in January, "Colorado is face to face with a deficit of \$200,000." The difficulty seems to be in the fact of a constitutional limit to the percentage of State taxation, together with the fact that there has been no limit to the percentage the counties may levy; hence the valuations are kept low by county assessors. In his inaugural message Gov. Thomas said: "Mulhall, the statistician, gives the total value of Colorado at \$1,100,000,000. I think these figures are too high. My own estimate of the value of the State is from \$600,000,000 to \$800,000,000. The total assessed valuation placed on the State by the county assessors, of a little more than \$190,000,000, is a libel on the State."

The educational and charitable institutions receive almost half of the revenue under these conditions.

In his report for the last biennium the Auditor says: "The State Constitution limits the amount that may be levied for State purposes in any one year to 4 mills on the dollar for the taxable property of the State. From these 4 mills the statutes have diverted into continuing appropriations the following amounts: Capitol building, $\frac{1}{10}$ of 1 mill; maintenance of the following State institutions—State University, Agricultural College, School of Mines, Asylum for the Insane, and the Mute and Blind Institute— $\frac{3}{10}$ of 1 mill each; Normal School, $\frac{2}{10}$ of 1 mill; stock inspection, $\frac{2}{10}$ of 1 mill; or a total of $1\frac{3}{10}$ mills, which leaves but $2\frac{1}{10}$ mills subject for appropriation by the General Assembly for general State purposes. From the date of the admission of Colorado as a State up to the year 1891 there was a limit fixed by the statutes on the amount that might be levied 'for ordinary county revenue.'"

By a statute of 1891, the Auditor says that, while the limit on State taxation remained, "the limit was removed as to ordinary county revenue, and the counties were allowed to raise an additional 3 mills for 'unforeseen contingencies and casualties.' It is evident that the framers of the Constitution intended that the General Assembly should have control of the finances of the State, but the result shows that when the statute of 1891 was passed the General Assembly abdicated its authority and delegated it to the county assessors. The full effect of the repeal of that clause of the General Statutes which affixed a limit on the amount that might be levied for ordinary county revenue does not seem to have been at first fully appreciated by the county assessors, or they may have been unwilling to evade the plain mandate of the law to assess property at its full cash value. But the enormous reductions in assessments made in some counties seem to have soon convinced the other counties that they must pursue the same course or pay an undue share of the State taxes, and from that time to the present there appears to have been a mad scramble to deprive the State and its educational and charitable institutions of their just proportion of the revenues. This has been accomplished by reducing the assessments throughout the State on an average to less than 30 per cent. of the cash value of property, according to my estimate, and increasing the levies for ordinary county revenue to an extent theretofore unheard of in the history of the State."

The law requires that all taxable property shall be listed at its full cash value—the amount at which it would be appraised if taken in payment

of a just debt due from a solvent debtor—yet with these provisions "as a plain guide to the faithful discharge of their duties, and notwithstanding the large increase in population and rapid accumulation of wealth in the last few years, which are the pride of every citizen of the State, the valuation of the taxable property of the State, as returned by the assessors, has fallen off from \$238,722,417.05 in 1893 to \$192,324,080 in 1898, a net reduction of \$46,398,337.05. Assuming that the value of the taxable property of the State is no greater than in 1893, this indicates a loss to the general revenue of \$104,793.16, and to each of the educational and charitable institutions of the State of over \$9,000 annually."

The amount required for two years for the salaries of officers and employees of the State and the interest on bonds, warrants, and other evidence of indebtedness, which are in the nature of fixed charges, and the payment of which must be provided for, is \$743,952. The total tax of the State, including the levy of 4 mills on the dollar and three tenths of a mill levied for interest on the insurrection bonds, was \$859,458.76 in 1898 and \$831,240.45 in 1899. The fees and other receipts bring the estimated revenue for the two years to \$1,125,346.

The appropriation bill called for \$87,200 for legislative expenses, and the estimates for State institutions amounted to about \$674,899, including deficits, repairs, and new buildings, for the coming biennium. To complete the State canal \$100,000 a year for four years is required, and State roads and bridges called for more than \$200,000 additional.

Revenue Reform.—A convention was held at Colorado Springs, Jan. 25, for the purpose of bringing about reform in the revenue laws. The convention was called by the Colorado Springs Chamber of Commerce; each chamber of commerce in the State was invited to send 10 delegates, and where no commercial body is organized the city councils were requested to appoint delegates. The following were adopted:

"Whereas, From the difference of individual opinion, localities, and for other reasons, wide diversities and inconsistencies exist between the valuation of the different counties and property of very similar kind, class and quality is assigned widely different values in the different counties, and the above condition gives rise to great confusion in collecting taxes, and to great inequality in the bearing of the burden of taxation by the people of the State; and,

"Whereas, The Board of Equalization of the State, as at present conducted and administered, exercises only a partial supervision and power of control over the acts of the various county commissioners and assessors, and a great and growing evil results therefrom; and,

"Whereas, From the decisions of the Board of Equalization, as it is at present constituted, there lies no appeal, and there is no power to revise, control, limit, or qualify the action of said Board of Equalization, all to the great injury and damage of the tax-paying public; now, therefore, be it

"Resolved, That it is the sense of this convention that such immediate action as may be constitutional should be taken by the Legislature of the State of Colorado at its present session which shall require of the State Board of Equalization the exercise of a supervisory function over the assessments of the several counties; shall further, if possible, provide some form of appeal by the several counties from the decisions of said board of the proper courts of the State of Colorado."

A resolution was adopted calling upon the Legislature to take some speedy action looking toward the payment of the excess warrants.

Other resolutions were adopted calling for the taxation of mining property on the same schedule as other real estate, instead of on a fifth of the gross output of the mine; providing for a collateral-inheritance tax; for the appointment by the Governor of a revenue commission, which shall report ways and means of revenue reform to the next meeting of the Legislature; a resolution providing that tax titles should not be issued under five years, and that the rate of interest on same should not exceed 15 per cent. per annum; and one calling for the removal of mortgage taxation.

Education.—By the latest school report at hand, it appears that the school population was 130,362, and the enrollment 100,882, while the State Normal School had 367 students.

The University of Colorado, according to a Denver newspaper, is inferior in equipment to that of any other State in the matter of buildings and library, has a smaller income, and pays lower salaries. Its income is \$66,000; the total value of its buildings is \$150,000; it has no special library building, and only 20,000 volumes in its library, and pays but \$2,500 annually for books. The enrollment this year showed a gain of 15 per cent. over that of 1897-'98.

Mining.—The report of the Commissioner of the General Land Office, made public in November, says of the State: "The localities showing the greatest activity in the mining industry are principally Cripple Creek mining district, in El Paso and Teller Counties (Pueblo land district); Boulder, Clear Creek, and Gilpin Counties (Denver land district); Lake and Park Counties (Leadville land district); and upper San Miguel County (Montrose land district), all in Colorado."

Many new strikes have been reported during the year in these districts, and increased activity in old mines. The daily product of ore from the mines of the Leadville district had reached 2,000 tons in the summer. Strikes in the Cripple Creek district have led to the prediction that the total yield of gold of 1899 will be increased to \$25,000,000. Gold was found in a tunnel that was driven through Pike's Peak to increase the water supply of Colorado City, and a camp called Dawson City has risen on the spot, five miles from Colorado City. New strikes of copper have been reported from the Paradox valley. Whitehorn is spoken of as likely to be one of the great gold camps of the State. That part of the Leadville district southwest and west of the city, across the Arkansas valley and tributary to the Carbonate camp, is said to be a large field of rich possibilities. It is in Lake, Chaffee, Gunnison, and Pitkin Counties.

The Commissioner of Mines recently made a report on the minerals of the State other than gold, silver, lead, and copper, in which he says that Colorado has large deposits of gypsum of great commercial importance.

The value of the product of the principal metals in 1898 was given as follows: Gold, \$27,501,460; silver, \$14,961,587; copper, \$1,204,514; lead, \$3,442,001. The smelters and other ore-reduction works produced \$60,622,415.

The coal product was placed at \$7,500,000, iron at \$5,000,000, and oil at \$1,750,000. Zinc is to be shipped from Leadville to Belgium.

The gold output of the Cripple Creek district in October, 1899, was given as a little more than \$2,000,000.

Other Products.—The following figures, giving the number and value of the live stock in

the State, are from the Denver Times-Sun of Jan. 4: Number of cattle, 766,224; sheep, 1,236,547; hogs, 50,000; horses and mules, 328,000. Value of cattle, \$15,324,480; sheep, \$4,946,178; hogs, \$350,000; horses and mules, \$9,840,000; total, \$30,460,658.

The secretary of the National Live Stock Association says that though the number of sheep in 1899 was but about 1,250,000 head, fewer than in previous years, the herds have been greatly improved, and are more profitable. He adds: "While the sheep and wool-growing branches of this industry are prosperous, the fattening of lambs and sheep in the feeding districts of the State has been all but ruined by the action of the railways constituting the Trans-Missouri Traffic Association in abrogating the feeding-in-transit rate of live stock and increasing the rate from the breeding grounds to market about \$30 per ear. This makes feeding in many sections prohibitive. In the famous Fort Collins district, whose lambs always top every market in the United States, over 300,000 lambs were fed last year. This coming season it is very doubtful if 100,000 will be fed simply because of high freight rates."

The lumber product was estimated at \$2,000,000, and the manufactures at \$50,000,000.

The cheese industry is estimated to produce the value of more than \$1,000,000 annually.

About 3,000 colonies of bees are kept in Otero County, producing about \$16,000 a year. A fine quality of honey is made from alfalfa, the favorite food of the bees.

According to the report of the Agricultural Department at Washington, the State produced in 1898 spring wheat to the amount of 6,729,565 bushels, ranking ninth among the States in this respect.

Great progress has been made in the beet-sugar industry during the eleven years in which the people of the State have been interested in it. Factories are assured at Grand Junction and Greeley, and other localities are working in that direction. The offer of \$2,000 in prizes by the Denver Chamber of Commerce and \$4,000 by the railroads has stimulated effort for the establishment of factories. The Business Men's Beet-sugar Association of Grand Junction made an appeal in March for 500 farmers to settle in the Grand Valley, where they could buy cheap homes and make a net income estimated at \$300 to \$700 by raising beets to supply the factory.

The wool clip of 1899 is estimated at 10,126,175 pounds, an average yield of 6.5 pounds a head.

Water Power.—The following data regarding the power of the streams of the State are taken from the Denver Times-Sun: "The water-power streams are scattered over an area of 3,000 square miles. Colorado's water power is available, in segregated blocks, from 10,000 miles of mountain streams. The fall of these streams ranges from a few hundred to over 7,000 feet. The power streams of the mountains annually waste over 5,000,000 horse power of energy, of which about 1,000,000 horse power is commercially available. Long-distance electric transmission has brought the remotest water powers within marketable range. The mountain topography affords many natural reservoir sites for the installation of large power units. The market for water power is rapidly enlarging. Over 70,000 horse power is projected for installation in the immediate future."

The Ute Reservation.—A proclamation opening to settlement the lands of the Southern Ute reservation was signed in April by the President,

and the reservation was thrown open at noon, May 4. Excepted were lands reserved or allotted to the Indians and the lands reserved for other purposes in pursuance of the provisions of the act of Congress as lands that have become a part of the public domain or become subject to entry under the desert homestead and town-site laws and the laws governing the disposal of coal, mineral, stone, and timber lands, providing that no homestead settlers should receive title to any portion of such lands at less than \$1.25 an acre, etc. A provision was also inserted in the proclamation recognizing the claims of settlers who now have undisputed rights to any of the included lands, but this covers only a small tract.

Land Surveys.—The report of the Commissioner of the General Land Office gives the following details of work of the bureau in Colorado: According to the latest surveys, Colorado covers 103,969 square miles, 300 miles of which is water surface. During the past year 892 mineral and mill-site patents were issued in the State and 10 coal-land patents, embracing 548 acres. But two grants of public lands were made to the State, and they were for school-land indemnity, embracing a total area of 7,486 acres in the Pueblo land district. The report shows 40,185,991 acres of vacant public lands in Colorado, of which but 5,469,853 acres are reserved. The greater portion of the unreserved lands are now surveyed. Fourteen hundred acres in Colorado were placed under military land warrants last year. The areas of the reservations are as follow: White river plateau timber-land reserve, 1,198,080 acres; Pike's Peak timber-land reserve, 184,320 acres; Plum creek timber-land reserve, 179,200 acres; the South Platte forest reserve, 683,520 acres; and the Battlement mesa forest reserve, 858,240 acres.

Boulder.—A bill passed Congress this year granting to the city of Boulder about 1,800 acres of public land to be used as a park and for preserving the native trees. The report of the Committee on Public Lands says: "The land consists of precipitous mountains, mostly all rock, and is totally unfit for agricultural purposes. The fact that this land is close to the city of Boulder, and has never been located upon for homestead, pre-emption, or mineral purposes, shows that it is of no commercial value whatever. Boulder has about 7,000 population. The State University of Colorado is there, and the Chautauqua brings from 1,000 to 1,500 persons from other States, who reside in the vicinity of that city from June until September each year. This land is of no value whatever to the United States, and can be made a great attraction to the city of Boulder. At the same time it will prevent, to a large extent, the contamination of the water supply of Boulder."

The land will revert to the Government unless the city puts it to the use designed within three years.

Victor.—In August the city of Victor lost its business portion by fire, the value being estimated at \$2,000,000. Help was summoned from Cripple Creek, but the town had been built in the early days of the camp, and was of pine timber for the most part, and burned like paper. The first house was built in Victor in October, 1893. In July of the following year the city was incorporated, and six years later it contained 10,000 persons.

Silver Plume.—A great snow avalanche occurred near this place Feb. 12, carrying with it trees and mining timbers, burying Italian miners and their families, and sweeping away buildings

connected with the mines. The town was not in the track of the slide.

Legislative Session.—The twelfth General Assembly, after a session extended to the limit set by law, adjourned the second week in April. William Smith was Speaker of the House, and D. H. Dickason chief clerk. The Governor, in his inaugural address, recommended "an inheritance tax, the abolition of four district courts and the Court of Appeals, increased appropriations for the State University and School, and radical changes in insurance and election laws including the abolition of emblems on tickets; the appointment of a State bank examiner, the abolition of the truck system in mining districts, the suppression of trusts 'peaceably if possible,' civil-service rules for minor State offices, employment of convict labor, and admission of ex-Confederate soldiers to the State Soldiers' Home."

The Cripple Creek mining district was separated from Colorado Springs and erected into a new county, named Teller, after strong opposition. The new county is about 6 miles square, and produces half the entire gold product of the State.

A bill abolishing party emblems on election tickets was passed; also one providing that "the period of employment of workmen in smelters and in all other institutions for the reduction or refining of ores or metals shall be eight hours per day, except in cases of emergency where life or property is in imminent danger." This law went into effect in June, and a corresponding reduction in wages led to a strike among employees. The Supreme Court had decided in 1895 that the Legislature could not single out the mining, manufacturing, and smelting industries of the State and impose upon them restrictions with reference to the hours of their employees from which other employers of labor are exempt.

The question of issuing bonds for an auditorium in Denver will be submitted to a vote of the people.

Several bills affecting irrigation were passed, the most important of which, in the opinion of the State Engineer, was one "in relation to the exchange and transfer of water from one ditch to another; hereafter, when the change of the point of diversion is sought, it will be necessary for the owners to petition the district court from which the original decree was issued, praying for such exchange, and the practice and procedure will be the same as for the original decree; should the court determine that such change does not injuriously affect other appropriators, he will issue a new decree allowing the change and without forfeiture of his original priority." It is believed that this "will tend to stop the indiscriminate transfer of water, and will prevent the using of the excessive decrees which were recently granted and never used except in part. A great deal of the trouble of recent years," he says, "has arisen from the fact that the amount of the older decrees were largely in excess of what they needed or that the ditch could carry."

The principal items of a bill in relation to reservoirs provide "that all reservoirs of a capacity of more than 75,000,000 cubic feet shall be constructed under the supervision of the State Engineer, and that he shall determine annually the amount of water which it is safe to impound in all reservoirs within the State; he may also cause to be withdrawn water from any reservoir which he deems unsafe. The examination and acceptance of a reservoir, however, does not relieve the owners from the payment of damages caused by the washing away of the dam."

Provision is made also for the turning over of all State reservoirs to the counties in which they are, the counties becoming responsible for any damage resulting from the breakage of dams and such repairs as are necessary.

The "public utilities" bill gives power to city councils to build waterworks, lighting plants, etc., and to buy those established.

The sum of \$20,000 was appropriated to pay bounties on wolves, coyotes, and mountain lions during the years 1899-1900. Another act for the benefit of the live-stock industry provides for the inspection of live stock before shipment or removal beyond the boundaries of the State, and makes it unlawful to remove any cattle or horses from the State before the brands or earmarks have been inspected and recorded as prescribed by the law, which is not to affect the existing statutes respecting the larceny of live stock or cattle.

A bill restoring the limit to the percentage of county taxation was passed (see under Finances, this article). An appropriation for finishing the State Capitol was made, with the understanding that the building shall be finished without further delay.

A retrenchment bill reduces the number and compensation of employees of the Legislature.

A House concurrent resolution recommended other States to try the experiment of woman suffrage.

Another concurrent resolution provided for the participation of the State in the world's fair to be held at St. Louis to celebrate the Louisiana purchase.

Other important measures were an antitrust bill, a bill providing for the submission of more than one constitutional amendment at any general election, a valued-policy bill, a prize-fight bill, and an anticripsy bill.

The columbine will be the State flower of Colorado.

The general appropriation bill—for the support of State offices and institutions—appropriated \$645,700, and special bills about \$242,000.

CONGO INDEPENDENT STATE, a sovereign, independent, monarchical state in Central Africa, created with the consent of the great powers, and declared perpetually neutral by the general act of the Congo, signed at Berlin on Feb. 26, 1885. Leopold II, King of the Belgians, who was declared to be sovereign of the Congo State, ceded to Belgium his sovereign rights in the event of his death by a testament executed on Aug. 2, 1889, and on July 3, 1890, Belgium acquired by a convention with the Independent State the right to annex the territories after a period of ten years. The Government, under King Leopold, is presided over by a Secretary of State at Brussels, Baron Edmond van Eetvelde, who is assisted by Chevalier A. de Cuvelier, Secretary of Foreign Affairs; H. Pochez, Treasurer; H. Drogmans, Secretary of Finance; and Charles Liebrechts, Secretary of the Interior, the Public Force, and Marine. Capt. E. Wangermee, Vice Governor General, commands at Boma, and Baron F. Dhanis and Capt. van Gèle, holding the same rank, have command in the interior.

Area and Population.—The territories of the Independent State, embracing the whole basin of the Congo south of the French sphere, which is bounded by the Ubangi and the Bomu, have an area estimated at 900,000 square miles, with a population of 30,000,000. The Europeans in 1898 numbered 1,678, of whom 1,060 were Belgians, 102 Portuguese, 91 Swedes and Norwegians, 87 British, 60 Dutch, 57 Americans, 34 Danes, 26 French,

17 Germans, 11 Swiss, 8 Austrians, and 6 Spaniards. There are 115 Catholic and 108 Protestant mission stations. The missionaries co-operate with the Government, which has established agricultural training schools. They use in teaching the Swahili language, introduced by the Arabs, instead of the innumerable Bantu dialects.

Finances.—The revenue for 1898 was estimated at 14,765,050 francs, including an annual subsidy of 1,000,000 francs from King Leopold's privy purse and 2,000,000 francs advanced annually from the Belgian treasury from 1890 till 1900. The rest of the revenue is derived from customs, postage, steamer and railroad transport, public lands and forests, etc. The expenditure for 1898 was estimated at 17,251,975 francs, of which 2,524,920 francs were for extraordinary purposes. For 1899 the revenue was estimated at 19,966,500 francs, and the expenditure at 19,672,965 francs. The principal expenses were 7,623,946 francs for the public force, 5,285,405 francs for Government administration, 4,020,720 francs for administering the forests and domains, 1,481,624 francs for marine, and 1,261,270 francs for public works.

Defense.—The public force consisted in 1898 of 15,580 armed and trained native soldiers, of whom 3,000 are recruited every year, divided into 23 companies, commanded by 234 European officers and 173 drill sergeants.

Commerce and Production.—Besides the lands reserved for native occupation, there are estates that have been acquired by Europeans for planting purposes. All land not occupied by natives or by European owners is state property. Thus the Government has a right to all the rubber produced. To increase the supply instead of allowing it to run short through the gradual destruction of the rubber forests, the Government has decreed that 150 vines shall be planted for every ton of rubber taken out. The control of the forests has been placed in the hands of a bureau, with instructions to enforce the regulations for carrying on the industry, especially the prohibition of any method of gathering rubber except by incisions in the bark of the tree. The chief exports, besides rubber, are ivory, palm nuts, and palm oil. The natives grow tobacco only for their own consumption, and lately the Government has made experiments in growing the Havana and the Sumatra leaf. The commerce of the state has expanded greatly, especially since the completion of the Congo Railroad. Exports of the produce of the state increased from 1,980,000 francs in 1887 to 5,487,633 francs in 1892, 6,206,135 francs in 1893, 8,761,622 francs in 1894, 10,943,019 francs in 1895, 12,389,600 francs in 1896, and 15,146,976 francs in 1897. The general commerce, which includes produce brought down from regions beyond the state boundaries, amounted to 17,457,090 francs in 1897. The special imports in 1897 were 22,181,462 francs in value, compared with 15,227,776 francs in 1896, 10,685,848 francs in 1895, 11,194,723 francs in 1894, and 9,175,103 francs in 1893. The special imports of most importance in 1897 were cloth and apparel for 5,898,700 francs, articles of food for 3,680,000 francs, machinery for 3,532,400 francs, metal goods for 3,213,700 francs, arms and ammunition for 1,754,500 francs, and articles of drink for 1,323,700 francs. The chief exports in the special trade were rubber for 8,311,900 francs, ivory for 4,916,480 francs, palm nuts for 1,098,880 francs, and palm oil for 650,210 francs. Of the special imports in 1897 the value of 16,272,000 francs came from Belgium, 2,593,250 francs from Great Britain, 1,174,860 francs from Germany, and 911,013 francs from the Netherlands. Of the

general exports in 1897 the value of 12,882,900 francs went to Belgium, 2,348,100 francs to the Netherlands, and 1,157,740 francs to the Portuguese possessions on the west coast of Africa. The total imports in 1898 were 25,185,138 francs in value, and exports 25,396,706 francs. The increase in the exports was fairly well distributed, except that in rubber there was the remarkable increase of 7,500,000 francs. In 1888 the export of rubber was only 250,000 francs, and in 1898 it was 15,800,000 francs. The increase in the total exports, which was 46 per cent. in 1898, has been 750 per cent. in ten years.

Navigation.—Steamers arrive at Boma every month from Antwerp and at frequent intervals from Liverpool, Hamburg, Rotterdam, and Lisbon. The number of vessels in the ocean trade entered at Boma and Banana during 1897 was 201, of 342,809 tons, of which 123,433 were British, 120,369 Belgian, and 67,618 German. The number cleared was 206, of 348,657 tons, of which 123,256 were British, 120,369 Belgian, and 71,231 German. The number of vessels entered coastwise was 434, of 16,877 tons; cleared, 453, of 17,194 tons.

Communications.—The Government has 6 steamboats making regular trips from the mouth of the Congo up to Matadi, where the rapids interrupt navigation. From Leopoldville, on Stanley Pool, 22 Government steamboats transport passengers and merchandise to the upper Congo, which is navigable for 1,000 miles to Stanley Falls, and to places on the navigable tributaries of the Congo. Between Matadi and Leopoldville the transport, formerly effected by porters, is now accomplished by means of the Congo Railroad, which runs parallel to the river for 250 miles, at an average distance of 20 miles from the south bank.

A route has been surveyed for a railroad from Stanley Falls eastward for 300 miles, then branching northward to Lake Albert and southward to Tanganyika.

The Congo State is a member of the Universal Postal Union. The number of pieces of mail matter carried in 1897 was in the internal service 82,182, and in the foreign service 261,264.

The Batetela Revolt.—When the Belgians at the end of 1896 made their arrangements to occupy the Lado district, the task was intrusted to two columns, one of which, 700 strong, under Commandant Chaltin, accomplished its mission by defeating the Mahdists and conquering the territory leased to the Congo State by an arrangement with Great Britain. The other column, commanded by Baron Dhanis, consisted of 3,200 Batetelas from Gandu, the country between the Lualaba and the Lomami. These men, who were formerly the most faithful and efficient soldiers in the Congo State, rebelled against being taken so far from their homes and beyond the confines of the Congo State. They had not been as tractable since their chief, Gongo Lutete, was shot on an unfounded charge of treason in 1893. The first mutiny occurred at Dirfi on Feb. 12, 1897, when the advance guard murdered the white officers. When Baron Dhanis came up on March 18 with the main body several hundred deserted to the mutineers. A battle ensued, in which several more Belgian officers lost their lives. The mutineers, who were abundantly supplied with ammunition, set off for their tribal home, 1,000 miles to the southwest, and Baron Dhanis, with the half of his force that remained faithful, returned to the upper Congo. The rebels were headed off by the Congo troops at Stanley Falls, and for nearly two years they wandered through the re-

gions west of Lakes Albert, Kivu, and Tanganyika. Other Batetelas garrisoned at Luluaburg also revolted, swearing to avenge the death of Lutete. Baron Dhanis strengthened his positions at Nyangwe and Kassongo, and then sent out small columns to attack the mutineers. After a series of victories won by these columns, the force of Lieut. Svensen, 150 strong, was attacked on Nov. 4, 1898, at Sungula, on Tanganyika, and, though joined the next day by re-enforcements brought up by Lieut. Alban Lemaire, was compelled to retreat to Kabambare, fighting all the way, and losing 6 white officers and 100 men. The rebels developed an unexpected strength, having probably obtained fresh munitions in German territory. Lieut. Svensen died soon after reaching Kabambare, and almost immediately this important station, the nearest to Gandu, was attacked by the rebels. The garrison, consisting of 800 native soldiers, went over to the enemy, killing 5 of the 14 white officers. After capturing 2 guns and all the baggage and ammunition, the mutineers evacuated the place. The forces of the Congo State were strengthened by recruits from the Manyema tribe, and as soon as his army could be got ready Baron Dhanis took the field. Meanwhile the rebels surprised, captured, and destroyed many small frontier stations between Tanganyika and the Congo. They were repelled from other stations which they attacked. Mongallas also revolted, and were augmented from neighboring tribes. The ferment extended down along the Congo to the mouth of the Ubangi, and the prestige of the whites was endangered until Baron Dhanis set in motion the large force that he had collected to overwhelm the Batetela mutineers. He had his headquarters at Kassongo. Major Lothaire pacified the Mongalla country, defeating the Budja cannibals and other rebellious tribes. The Batetela mutineers numbered fewer than 1,000 now, and the population of the country was not in sympathy with them. So long, however, as they possessed ammunition they could inflict losses on the state troops by ambuscading small detachments, while avoiding battle when pursued by a strong force by escaping into the forest. Baron Dhanis advanced to Kabambare and established his headquarters there in the middle of January, 1899. In the Lado district on the Nile the Belgians had about 800 black troops, commanded by 20 white officers, at the beginning of the year, with Krupp and Maxim guns mounted on the ramparts at Lado. They had an advanced post on the Loret, having abandoned Redjaf to the Mahdists, whose main body was at Bor, 100 miles north of Lado, the Loret, which forms the boundary of Belgian territory, being equidistant from both places. Soon afterward his troops inflicted a telling defeat on the mutineers. Following up his advantage, he drove them before him back to Tanganyika and into the German protectorate by the same route along which with their aid he once pursued the Arab slave raiders.

CONGREGATIONALISTS. The following is a summary of the statistics of the Congregational churches in the United States as given in the American Congregational Yearbook for 1899: Number of churches, 5,620, of which 4,242 are "supplied" (with pastors) and 1,375 are "vacant"; of ministers, 5,639, of whom 3,684 are in pastoral work and 1,955 are without charge; of members, 628,234; of members of Sunday schools, 682,613, with an average attendance on the schools of 408,357; of Young People's Societies of Christian Endeavor, 3,829, with 202,315 members; of families, 419,434; of additions by con-

fession during the year, 25,189; of baptisms, 11,202 of adults and 11,494 of infants. Amount of benevolent contributions (4,854 churches reporting): For foreign missions, \$379,452; for education, \$103,670; for church building, \$86,006; for home missions, \$477,690; for the American Missionary Associations, \$122,457; for Sunday schools, \$56,690; for ministers' aid, \$25,075; for other benevolences, \$591,879. Amount of legacies received during the year, \$431,650; amount of contributions for home expenditures (1,458 churches reporting), \$6,725,911.

The seven theological seminaries—Andover, Bangor, Chicago, Hartford, Oberlin, Pacific, and Yale—returned 64 professors, 25 instructors and lecturers, 10 members of advanced or graduate classes, 27 resident licentiates or fellows, and 371 undergraduate students.

Congregational Church Building Society.—The forty-seventh annual report of the Congregational Church Building Society shows that the year 1899 had with one exception been the best year in its life. The number of contributing churches was greater by 164 than in any previous year. The receipts from all sources had been \$247,307. The expenditures had included \$153,047 paid to 95 churches on houses of worship, and \$118,450 to 41 churches on parsonages. Seven hundred and two church-building accounts and 407 parsonage accounts had been closed. A considerable number of the aided churches had already returned all the money they had received from the society, and in some cases had contributed a large additional amount. The sum of \$121,649 had been voted to 125 churches, and \$29,745 to 65 parsonages. Six of the churches had received loans only, 15 loans and grants, and the rest grants only. Fourteen of the aided churches were east and 76 west of the eastern line of Ohio. The church-building loan fund stood at \$655,855, an amount including \$449,763 gifts to it and \$206,091 loans refunded. The parsonage loan fund stood at \$111,468, in addition to \$187,814 paid back on loans. During 1899 \$30,397 were paid back on church-building loans and \$19,161 on parsonage loans.

American Home Missionary Society.—The seventy-third annual meeting of the Congregational Home Missionary Society was held at Hartford, Conn., May 23 to 25. Gen. Oliver O. Howard, of Vermont, presided. The receipts of the society for the year from all sources had been \$294,670, while the auxiliaries had, in addition, raised and expended on their own fields \$221,575. The expenditures of the National Society for missionary labor and expenses had been \$313,462, and those of the auxiliaries \$221,575. The society had begun the year with a net debt of \$106,500; this had been increased by \$26,969, so that the net debt at the close of the fiscal year, March 31, 1899, was \$133,469. Eighteen hundred and twenty-four missionaries had been employed in 44 States and Territories, including 24, who, having labored in more than one State, were counted twice—viz., 466 in the New England States, 119 in the Middle States, 97 in the Southern States, 102 in the Southwestern States, 185 on the Pacific coast, and 879 in the Western States and Territories. Of the whole number of missionaries in commission, 956 had been pastors or stated supplies of single congregations, 549 had ministered to two or three congregations each, and 319 had extended their labors into still wider fields. The number of congregations and missionary districts supplied or where the Gospel had been preached at stated intervals was 2,875. Forty-six of the missionaries had preached to

German congregations, 102 to Scandinavian, 22 to Bohemian, 5 to Polish, 13 to French, 5 to Mexican, 3 to Italian, 2 to Spanish, 4 to Finnish, 2 to Danish, 5 to Armenian, 1 to Greek, and 2 to Welsh congregations. The number of pupils in Sunday schools and Bible classes was not far from 146,604. One hundred and ninety-nine new Sunday schools had been organized, and the whole number of Sunday schools under the special care of missionaries was 2,064. Thirty-four churches had been organized during the year in connection with labors of the missionaries, 44 churches had become self-supporting, and 5,030 members had been added on confession of faith. Sixty houses of worship had been completed, 220 repaired or improved, and 77 parsonages provided. The woman's department, which was now in its seventeenth year, had contributed \$42,341 to the treasury of the society and \$98,758 to the treasuries of the five "homeland" organizations. A resolution was passed at the meeting declaring that it appeared to be the duty of the society to preach the Gospel in Alaska and Cuba.

American Missionary Association.—The fifty-third annual meeting of the American Missionary Association was held in Binghamton, N. Y., beginning Oct. 17. The Rev. A. H. Stimson, D. D., of New York, a vice-president, presided in the absence of the Rev. F. A. Noble, D. D., of Chicago. The receipts for the year had been \$297,682 for current work, \$71,960 income from the Daniel Hand fund, and \$2,026 for the endowment fund of Straight University. The payments had been \$296,811, leaving the society free from debt and with a small balance in the treasury. The main sources of support were the contributions from churches, Sunday schools, missionary societies, and individuals, and receipts from legacies. The great fluctuations in receipts from legacies, sometimes amounting to \$95,000 in a single year, had been the chief cause of the debts which had so often burdened the association in the years past. It having proved impossible to make any satisfactory estimate of these receipts for the appropriations for the year, the Executive Committee had sought a plan which would aid in equalizing current receipts from legacies from year to year. The plan consisted in crediting to an account of "reserved legacies" all money in excess of \$3,000 received from an estate in one year for the general purposes of the association, such reserved legacies to be paid out only upon special appropriations by the Executive Committee. From the first day of January to Sept. 30, 1899, \$28,230 had been credited to the reserve-legacy account under this plan. Of this sum, \$19,500 had been specially appropriated to meet urgent demands, leaving \$8,730 in the account, of which \$5,000 had been appropriated for repairs greatly needed on buildings in the South. The amount of the Daniel Hand Educational fund was returned as \$95,000. The Women's Missionary Societies had contributed \$26,578 to the work of the association. The experience of the year in the Southern educational work had been "characteristic and happily uneventful." The 26 purely elementary schools were chiefly situated in places uncared for by public schools, and were associated for the most part with rural churches in the States of North Carolina, Georgia, Florida, Mississippi, Alabama, and Tennessee. The 45 normal and graded schools were located in different centers in 10 Southern States—1 in Virginia, 8 in North Carolina, 2 in South Carolina, 10 in Georgia, 2 in Florida, 8 in Alabama, 6 in Tennessee, 3 in Kentucky, 4 in Mississippi, and 1 in Arkansas. The 10 mountain schools were

in the same system, with similar courses of instruction, as those among the colored people; they returned 55 teachers and 1,587 enrolled pupils. All these schools in the South, together with the 5 chartered institutions—making 70 schools in all—had 414 instructors and 12,428 pupils. Of these pupils, 125 were theological, 85 collegiate, 307 college preparatory, and 1,465 normal students. Much attention was given to industrial training, with model farms and workshops connected with most of the larger schools. A committee of the association had visited Puerto Rico with reference to the establishment of schools there, and Santurce, near San Juan, and Utuado, in the center of the mountainous coffee region, had been selected as two of the sites. The Southern church work included 211 churches, 140 ministers and missionaries, 11,398 members, 14,806 pupils in church and mission Sunday schools, and 1,238 members added on profession of faith during the year. Fifteen new churches had been added to the roll, and 6 dropped. More than half the churches were in the three States of North Carolina, Georgia, and Alabama, including more than 5,000 members. Some of the city churches were actively engaged in city mission work among the poorer classes of the colored people, with much success. The mountain churches, included in the above enumeration, numbered 1,600 members. Three new churches had been organized. The Indian missions (including Alaska) comprised 19 churches, with 1,097 members and 2,438 pupils in Sunday schools, 6 schools with 368 pupils, 33 missionary out stations, and 49 white and 34 Indian missionaries and teachers. These churches and missions had contributed \$3,239 for benevolence and church support. Extensive missionary experience had led to the conclusion that in civilizing and Christianizing the Indian direct evangelistic work must be largely depended upon. The Alaskan work was entirely distinct and separate from other missions in the Territory, and had been established in a region where it trenched upon the field of no other Christian organization. The Chinese missions, in California and Utah, included 21 Chinese and Japanese schools, with 35 teachers, 10 of whom were Chinese, and 1,360 pupils, and reported 152 professions of faith during the year. Reviewing all the mission work among these people from the beginning, it was found that nearly 20,000 Chinese had been reached in the mission service of Christian churches on the Pacific coast, and nearly 2,000 of them had become Christians and were actively supporting the missionary service in the United States and in their native land.

The American Board.—The ninetieth annual meeting of the American Board of Commissioners for Foreign Missions was held in Providence, R. I., beginning Oct. 3, the Hon. D. Willis James, vice-president, presiding. Memorial addresses relative to the Rev. Dr. C. M. Lamson, late president of the board, deceased, were delivered by Mr. James and Prof. Williston Walker. The report of the home department showed that the receipts from donations (\$490,407) represented a gain of \$58,918, while the amount received from legacies was \$85,509 less than in 1898. Twelve new missionaries were under appointment, and 14 others were about to return to their fields. The report of the treasurer showed that the total receipts for the year had been \$644,200, and the expenditures \$692,446. The debt had been increased by \$48,245, and was now \$88,537. The annual survey of the mission work showed that there were connected with the 20 missions 529

missionaries, 3,155 native laborers, 1,417 preaching stations, 492 organized churches, 49,782 members, 5,047 of whom had been received on confession during the year; 1,021 Sunday schools, with 65,903 pupils; 133 colleges and high schools, with 9,088 young men and women pupils; and 1,137 common schools, with 43,920 pupils; hospitals and dispensaries at which 120,000 patients had obtained relief; and a number of mission presses. Throughout the mission fields the Gospel was preached in 26 different languages. The educational work had become so largely self-supporting that for 128 schools, with 336 teachers and nearly 10,000 pupils, less than \$500 had been paid during the past year by the American Board and the Woman's Board. In Japan 431 members had been added to the Kumaiai churches during the year, making the total membership of that body 10,046.

The Advisory Committee on the "Forward Movement" reported that they had secured Mr. Luther D. Wishard as a special agent to develop interest in foreign missions among the churches, and especially to secure the adoption of missionaries by particular churches, individuals, and families. Since Mr. Wishard had entered on this work, Feb. 1, 1899, 20 of the churches visited by him had undertaken the support of individual missionaries. The aggregate gifts of these churches for the past year had been \$4,871, and they had pledged \$15,561 for the coming year. Six other churches had increased their gifts from an aggregate of \$609 to \$1,953. The board voted to continue this special work for another year. It having been shown in an address by Mr. S. B. Capen, reviewing the report of the home department, that, while the membership of the Congregational churches had increased 17 per cent. in the last seven years, the gifts to the six missionary and educational societies of the denomination had decreased 24 per cent., the Rev. Francis E. Clark found cause for thanksgiving and encouragement in the fact that the gifts of the young people were steadily increasing. Mr. Samuel B. Capen, of Boston, Mass., was elected president of the board to succeed the Rev. Dr. C. M. Lamson, deceased, receiving on the first ballot 115 votes out of a total of 137 cast.

Women's Societies.—The Woman's Board of Missions met at Syracuse, N. Y., in October. The treasurer reported that the total amount of contributions for the year had been \$110,825, a gain of \$6,961 over the previous year. This gain had been made possible by two individual gifts, amounting to \$6,500, one of which was for a school building in Adabazar, Turkey. Of legacy funds, \$22,461 were available for the work of the year. One legacy of \$27,000 had been received, of which \$24,000 were available for expenditure to be distributed over three years, while \$3,000 were to be added to the permanent fund. The society was addressed by a number of returned missionaries from India, China, Turkey, Japan, and Austria, and by a pupil from the girls' school at Brusa, Turkey, and a Japanese young woman, a graduate of Mount Holyoke College, now a pupil in the school at Northfield, Mass.

The twenty-first annual meeting of the Woman's Board of Missions of the Interior was held at Madison, Wis., in October. The treasurer reported that the receipts for the year had been \$80,402, a gain over the previous year of \$16,872, or nearly 26½ per cent. The advance had been apparent in every one of the 15 States represented in the society. The debt was extinguished. Five new missionaries had been sent out to China

and Turkey, two had returned to their fields, and two women had been appointed teachers in Kobe College, Japan, for five years. The younger women of the churches and the Christian Endeavor Societies had together raised \$11,127 for the board; and the children's work and Junior Christian Endeavor Societies \$4,476, the contributions of the children's work showing a gain of \$263 over the previous year. Addresses were made at the meeting on subjects pertaining to the work of the board, and by returned missionaries.

Plan of the Committee of Fifteen.—The Committee of Fifteen on Missionary Work, including representatives of the Congregational missionary enterprises and of the Christian Endeavor Society, instituted by the National Congregational Council of 1898 to devise plans for promptly paying the debt of every society and for such increased gifts as shall make it possible to enlarge the Congregational work at home and abroad, assembled and organized on April 19, with Samuel B. Capen as chairman. Its conclusions were published about a month later, and were embodied in the recommendations that "committees on missionary work" be chosen, first, by each State convention, a committee composed of one from each conference; second, by each local conference, a committee of such number that each member shall be responsible for not more than five churches; third, by each church, a committee to make some plan, best suited to itself, for systematic giving. "The one purpose," the paper explained, "is to secure as far as possible, in each church, an interest in the whole missionary work to which as a denomination we are pledged, and without which co-operation we can not hope to succeed." The ultimate object of the plan is to secure a gift every year from every church for each of the six missionary societies.

Congregational Union of Ontario and Quebec.—The Congregational Union of Ontario and Quebec met in Brantford, Ontario, June 7, the Rev. J. W. Pedley presiding. Mr. Edmund Yeigh was elected chairman for the ensuing year. Resolutions were passed in favor of closer relations with the Congregational churches of the United States and of Great Britain, and approving the students' home missionary movement. Reports were received from the home and the foreign missionary societies, after which the union approved the principle of the amalgamation of the different societies, and a committee was appointed to formulate some definite scheme of action on the subject. Besides missions, various subjects were discussed, relating to the young people, Sunday schools, the civil order, education, and temperance reform.

Congregationalists in the British Isles.—In the English Congregational Yearbook for 1899 more comprehensive and detailed statistics are given than in any previous number, and consequently a more satisfactory view of the condition of the denomination is presented. Of the 5,000 churches, branch churches, and mission stations in the kingdom, about 500 failed to report. Omitting these, 4,569 churches, etc., in England and Wales returned 1,634,327 sittings, 377,339 church members, 614,742 pupils in Sunday schools, 54,135 teachers, and 4,981 lay preachers. There were also 246 churches in Scotland, Ireland, and the smaller islands, the return of members in which does not appear, making the whole number of churches in the British Isles 4,815. Lists are given of 3,122 ministers in the British Isles, 210 evangelists and pastors returned by

county associations, 16 colleges and institutions for ministerial training in England, Wales, Scotland, and the colonies, with 430 students, and 10 institutions belonging to the London Missionary Society, with about 300 native students.

The Yearbook for 1900, published just as this article goes to press, in which returns are included from 99 more churches than that for 1899, gives 4,592 churches, with 1,636,269 sittings, 388,009 church members, 61,524 teachers and 655,472 pupils in Sunday schools, and 5,369 lay preachers in England and Wales; and in all the British Isles 4,851 churches, 1,735,065 sittings, 415,664 church members, 64,334 teachers and 684,006 pupils in Sunday schools, 3,132 ministers, and 5,484 lay preachers.

At the forty-fifth annual meeting of the English Congregational Chapel Building Society, an income for 1898 was returned of £4,936, including £2,756 on account of repayment of loans. The loans for the year had been £2,520 to chapels and £285 for manses, while the society was under engagement to advance £9,760 to cases recently considered. Since its formation, forty-five years previously, 800 churches and 90 manses had been assisted, by grants or loans, to an aggregate amount of £176,472. The grant fund out of which the free gifts had been made was now exhausted. These gifts were made on an understanding that the churches assisted should take an annual collection for the fund, but more than two thirds of them (298 out of 430) sent nothing. A resolution of the annual meeting of the society affirmed the duty of maintaining Protestant evangelical truth in the rural districts, and urged the necessity of church extension in large populations.

A Congregational Home.—Medland Hall, the home for the homeless of the London Congregational Union, returned for 1898 109,779 admissions, representing more than 11,000 different men, who made use of the shelter on an average of ten nights in the year. The Sunday services had had an attendance of 20,921. Every county in England was represented among the lodgers, and 668 admissions were from foreign countries. Fifty men had been sent to Canada, at a cost, including outfit, of £400. This philanthropic work is carried on at an average cost of less than three halfpence per man per night, including bed, food, washing, cooking appliances, and all expenses of administration.

Congregational Union of England and Wales.—The sixty-seventh annual assembly of the Congregational Union of England and Wales was opened in London, May 8, the Rev. H. Arnold Thomas, of Bristol, presiding. Mr. J. Carvell Williams, M. P., was elected chairman for 1900. The annual balance sheet showed that the total receipts had been £17,143, and that a balance remained in the treasury of £524.

A scheme for a "twentieth century fund" was submitted by the Executive Committee, and was adopted, the assembly, however, empowering the council administering the scheme to make such modifications in it as might seem desirable, paying special attention to the needs of the weaker churches. The scheme as adopted, subject to this condition, contemplates the raising of 500,000 guineas, to be allocated: (a) For foreign and colonial missions a sum not exceeding £100,000; (b) for church extension, £150,000; (c) for the extinction of debts upon chapel and school buildings, £50,000; (d) first, toward the maintenance of the weaker churches and the augmentation of inadequate ministerial stipends, £25,000; second, toward the maintaining of an efficient ministry

during the early years of new churches in growing districts, £75,000; (e) for a pastors' retiring fund, £50,000; (f) for the extinction of the debt remaining on the Memorial Hall, £50,000; (g) for the colleges, schools, and settlements, and for other objects which in the judgment of the special committee may appear to be desirable to the interests of the denomination, £50,000. Provision was made for the admission as associate members of the union of such Congregational churches as for geographical causes, by reason of distance, etc., are unable to be affiliated with any local union. Resolutions were adopted opposing the maintenance of a sectarian university for Ireland, whether for Roman Catholics, Presbyterians, or any other religious denomination; denouncing the attempted publication of newspapers on Sunday "as a breach of the unwritten national compact which secures to our toilers one day's rest in seven, and as calculated to militate to a disastrous degree against the social, moral, and spiritual interests of the people"; expressing satisfaction at the attitude of the Government toward the peace propositions of the Czar, and urging it to do all in its power to secure the achievement of practical results, especially in promoting a system of international arbitration, from the conference convened by his Majesty; and declaring it the duty of all Christian citizens to endeavor to secure some honorable provision for the aged poor. Meetings were held in behalf of the young people and of foreign missions; colonial missions, the Sunday-school Union, etc.

The Congregational Total Abstinence Association held its twenty-fifth anniversary in connection with the meeting of the union, when it was shown that out of 2,900 Congregational pastors 2,444 were known to be abstainers. A statement of the need of increased contributions was made in behalf of the Church Aid Society, the object of which was to bring up the stipends of aided pastors to £90.

The autumnal meeting of the union was opened at Bristol, Oct. 17. The chairman, the Rev. Arnold Thomas, delivered an address on The Value of Religion. An account was given by the Rev. W. Pierce of the visit of himself and the Rev. G. Cousins, of the London Missionary Society, to the churches in British Guiana, which included every church and every mission station. He had come to the deliberate conclusion that the position of the churches in the colony was a distinctly hopeful one. The Sunday congregations numbered 10,000 persons, while the church membership was 5,300, with about as many pupils in the Sunday schools. Though very poor in consequence of the depression of the sugar industry, they raised about £3,000 annually. They constituted the only voluntary denomination in the colony. The Rev. William Dower, of South Africa, presented the case of the Congregationalists among the Boers, some of whose churches were closed in consequence of the war and many members were fugitives. The Congregational Union of South Africa, sitting at Port Elizabeth, was concerned with doing something to provide for them. The churches numbered 72, with 141 out stations, English, Dutch, and native. Seventeen of the native churches were entirely self-supporting, and 36 were helped by the others. The principle of the churches was equality for every man, black and white. A statement in behalf of the Church Aid Society showed that the grants to county unions in 1898 had amounted to £4,183, in aid of 377 churches and 158 missions, and in support of 223 pastors and 61 evangelists.

The grants voted for 1899 amounted to about £4,200, by means of which it was hoped to raise the minimum stipend for aided ministers to from £90 to £100, except in Wales. The grants exceeded the estimated income by nearly £600. A meeting was held for the organization of a Congregational historical society, when a provisional committee was appointed to report at the meeting of the union to be held in May, 1900. Resolutions were passed urging the study of the reports, particularly the minority report, of the Royal Commission on Licensing, with special reference to the details relating to hindering children from entering public houses or being served with alcoholic liquors, and protesting against the tithe rent charges act. An account was given by the Rev. Dr. Bruce of the meeting of the International Congregational Council at Boston. Papers were read on Congregationalism in the Nineteenth Century, by the Rev. H. E. Lewis; The Misuse of the Lord's Day, by the Rev. W. S. Houghton; The Degradation of Sport, by the Rev. J. Hirst Hallowell; The Place of Authority in Religious Faith, by the Rev. Prof. Adeney; The Place of the Free Churches in the National Life, by the Rev. J. Morgan Gibson; The Nonconformist Conscience, by the Rev. T. E. Daviess; and The Dangers which Menace our Faith from a Loud, Clamorous, and Ubiquitous Priestism. Meetings were held in behalf of the twentieth century fund, the Colonial Missionary Society, the young people, and the children, with a people's meeting, a women's meeting, and a conference on ministerial removals. Besides the usual greetings from the local free churches, an address of welcome was offered to the union by the Bishop of Bristol, the dean, the archdeacon, and the rural dean.

Irish Congregational Union.—The seventieth annual assembly of the Irish Congregational Union was held in Dublin in May. The Rev. James Wylie, of Belfast, presided, and spoke of the encouraging outlook of Congregationalism in Ireland. The report of the mission showed that it was carried on in 16 central churches, at 65 out stations, by 14 ministers, 4 evangelists, 3 lay preachers, 90 Sunday-school teachers, and other workers. With a membership of 2,050, the union had raised in the past few years more than £8,000 for church building and providing accommodation for church worshippers. The contributions of the churches and missions averaged £2 10s. per member.

International Congregational Council.—The International Congregational Council is an extension to a world-wide scale of the idea of voluntary fellowship, by which the Congregational churches are connected with one another. Beginning with the local associations, these churches have gradually enlarged their affiliations to form district, county, and State associations; national bodies, as exemplified in the American National Congregational Council and the Congregational Union of England and Wales; and now the International Congregational Council. These bodies meet for consultation, discussion, and advice, and do not pretend to exercise any authority. The idea of the International Council is said to have originated with the Australian Congregationalists, and was carried into effect by the Congregational Union of England and Wales, at whose suggestion the first world's meeting was held in London in 1891, with the Rev. R. W. Dale, D.D., as president. The second meeting was held in Boston, Mass., Sept. 20 to 28, 1899, being preceded by an informal reception given to the delegates on the afternoon of the

19th. James B. Angell, President of the University of Michigan, was chosen president of the present council. In his presidential address he spoke of the qualities of the fathers, who made the will of God the law of their lives, and appealed to the Church not to lose its interest in the extension of the Gospel throughout the world. The Rev. Dr. John Robson and the Rev. Dr. William Blair, Presbyterian ministers from Scotland on their way to attend the General Council of the Presbyterian Alliance at Washington, D. C., were invited to seats on the platform as honorary members. Dr. Robson spoke, insisting upon the close sympathy of Presbyterians and Congregationalists, who had been engaged together in contending for religious liberty and freedom from state interference. The first stated papers read were on Fundamental Principles in Theology, by President George Harris, D.D., of Amherst College, and on the Message of the New Testament for To-day, by the Rev. F. C. Porter, D.D., of Yale University. The Relation of Evolution and Theology was treated in a paper by the Rev. Alexander Gosman, of the Congregational College of Victoria, Hawthorne, Australia; The Historical Method in Theology, by Prof. George P. Fisher, of Yale University; The Evangelical Principle of Authority, by Peter T. Forsyth, D.D., of Cambridge, England. In a session devoted to the messages of peace which Christianity has for the world, the Rev. Lyman Abbott, D.D., editor of the Outlook, New York, spoke of the ideal international relations as being those which will exist when the Lord's Prayer is fully answered, and the Rev. Alexander MacKennal, D.D., of Bowton, England, of The Christian Attitude toward War in the Light of Recent Events. The subject of The Distinctive Characteristics of Christianity was discussed by the Rev. Charles R. Brown, D.D., of California, and the Rev. John D. Jones, of Bournemouth, England. These speakers were followed by the Rev. Andrew M. Fairbairn, D.D., of Mansfield College, Oxford, England, in an address on The Influence of the Study of Other Religions upon Christian Theology. The duty of the Church in the matter of social reform was considered in papers by Mr. Albert Spicer, of England, and Prof. Graham Taylor, of Chicago. Monday, Sept. 25, was devoted to subjects relating to education. The addresses were on Tendencies of Modern Education, by Prof. John Massie, of Mansfield College, Oxford, England, and the Rev. James Hirst Halliwell, of Rochdale, England, secretary of the Northern Counties Education League; The Influence of Our Public Schools on the Caste Spirit, by the Rev. F. A. Noble, D.D., of Chicago; The Democracy of Education, by the Rev. L. D. Bevan, D.D., of Melbourne, Australia; The Religious Motive in Education as illustrated in the History of American Colleges, by President William J. Tucker, of Dartmouth College; and general addresses in the evening by President W. D. Hyde, of Bowdoin College, President W. F. Slocum, of Colorado College, the Rev. Henry Hopkins, D.D., of Kansas City, Mo., and President C. W. Eliot, of Harvard University. Presidents Hyde and Slocum criticised the method of instruction in the theological schools of the denomination as unscientific and antiquated, and lacking in elements essential to the preparation of clergymen of the kind the age demands, and called for a consolidation of the seminaries. These addresses were replied to at succeeding sessions of the council by Principal Fairbairn, of Mansfield College, and President G. F. Moore, of Andover Theological Seminary, who defended the seminaries.

The addresses of Tuesday, Sept. 26, were on The Pastoral Function: Congregational and Civic, by the Rev. W. B. Selbie, of London, and Reuben Thomas, of Brookline, Mass.; The Spiritual Life in Our Churches, by the Rev. Joseph Robertson, of Adelaide, Australia; Woman's Work, by Mrs. Elkanah Armitage, of Leeds, England, and Prof. Miss Margaret J. Evans, of Carleton College, Northfield, Minn.; Woman's Work in Foreign Missions, by Grace N. Kimball, of Vassar College, Poughkeepsie, N. Y.; and The Young People, by the Rev. Dr. C. H. Patton, of St. Louis, Mo., the Rev. Dr. C. E. Jefferson, of New York, and the Rev. Dr. C. S. Horne, of London. The subject of The Obligations and Opportunities of Congregationalism in Great Britain, America, and Other Countries was treated by representative speakers of the several countries; after which, on Wednesday, Sept. 27, the subject of Independence and Fellowship was presented by the Rev. Dr. A. J. Lyman, of Brooklyn, N. Y., and the Rev. John Brown, D.D., of Bedford, England, and that of Duty of the Stronger to the Weaker Churches, by the Rev. H. A. Thomas, chairman of the Congregational Union of England and Wales. A reception and dinner, given in the evening by the Congregational Club to the council, was marked by addresses of greeting from other denominations, made by Bishop William Lawrence (Protestant Episcopal); President A. H. Strong, of Rochester Theological Seminary (Baptist); President C. C. Hall, of Union Theological Seminary (Presbyterian); and Prof. F. G. Peabody, of Harvard University (Unitarian). The last day's sessions were given to the consideration of the civic relations of Christians and to aspects of foreign-mission work. The addresses were on The Christian Ideal of the State, by J. C. Rickett, M. P.; Municipal Government as a Sphere for Christian Men, by William Crosfield, of Liverpool, England, and S. B. Capen, of Boston; Adaptation of Methods to New Conditions in Foreign Missions, by the Rev. R. Wardlaw Thompson, senior foreign secretary of the London Missionary Society; and The Permanent Motive in Missionary Work, by the Rev. Dr. R. S. Storrs, ex-President of the American Board; with addresses in the evening on The Living Christ, by the Rev. Alfred Cave, D.D., of Hackney College, London, and The Holy Spirit in the Churches, by the Rev. Dr. F. W. Gunsaulus, President of Armour Institute, Chicago, Ill. The council unanimously passed a resolution recognizing and seconding the desire repeatedly expressed and recorded of the five great brotherhoods of men employed on railroads in the United States, Canada, and Mexico, and the re-enforcement of the declarations of these men by the four great organizations representing their wives, daughters, and women, and "affectionately urging" members and ministers of Congregational churches, "by word and act, to create such a public sentiment as will secure for the railway operatives the minimum of labor on the Lord's Day." A report on the future of the council, unanimously approved by a committee appointed to consider the subject, and likewise so approved by the council, recommended that such meetings as had been held in London and Boston continue to be held periodically at intervals of from five to ten years, as may from time to time appear to be desirable; that each council before rising appoint a provisional committee of fifteen, having power to fill vacancies, to carry out the directions of the council, and make preparations for the next meeting, fixing the time and place of its meeting in case other provision has not been made.

CONGRESS. The third session of the Fifty-fifth Congress began Monday, Dec. 5, 1898, at noon, and at 1.27 o'clock the President's message was received. It was as follows:

To the Senate and House of Representatives:

Notwithstanding the added burdens rendered necessary by the war our people rejoice in a very satisfactory and steadily increasing degree of prosperity, evidenced by the largest volume of business ever recorded. Manufacture has been productive, agricultural pursuits have yielded abundant returns, labor in all fields of industry is better rewarded, revenue legislation passed by the present Congress has increased the Treasury's receipts to the amount estimated by its authors; the finances of the Government have been successfully administered and its credit advanced to the first rank, while its currency has been maintained at the world's highest standard. Military service under a common flag and for a righteous cause has strengthened the national spirit and served to cement more closely than ever the fraternal bonds between every section of the country.

A review of the relation of the United States to other powers, always appropriate, is this year of primary importance in view of the momentous issues which have arisen, demanding in one instance the ultimate determination by arms and involving far-reaching consequences which will require the earnest attention of the Congress.

In my last annual message very full consideration was given to the question of the duty of the Government of the United States toward Spain and the Cuban insurrection as being by far the most important problem with which we were then called upon to deal. The considerations then advanced, and the exposition of the views therein expressed, disclosed my sense of the extreme gravity of the situation. Setting aside, as logically unfounded or practically inadmissible, the recognition of the Cuban insurgents as belligerents, the recognition of the independence of Cuba, neutral intervention to end the war by imposing a rational compromise between the contestants, intervention in favor of one or the other party, and forcible annexation of the island, I concluded it was honestly due to our friendly relations with Spain that she should be given a reasonable chance to realize her expectations of reform to which she had become irrevocably committed. Within a few weeks previously she had announced comprehensive plans which it was confidently asserted would be efficacious to remedy the evils so deeply affecting our own country, so injurious to the true interests of the mother country as well as to those of Cuba, and so repugnant to the universal sentiment of humanity.

The ensuing month brought little sign of real progress toward the pacification of Cuba. The autonomous administrations set up in the capital and some of the principal cities appeared not to gain the favor of the inhabitants nor to be able to extend their influence to the large extent of territory held by the insurgents, while the military arm, obviously unable to cope with the still active rebellion, continued many of the most objectionable and offensive policies of the government that had preceded it. No tangible relief was afforded the vast numbers of unhappy reconcentrados despite the reiterated professions made in that regard and the amount appropriated by Spain to that end. The proffered expedient of zones of cultivation proved illusory; indeed, no less practical nor more delusive promises of succor could well have been tendered to the exhausted and destitute people, stripped of all that

made life and home dear, and herded in a strange region among unsympathetic strangers hardly less necessitous than themselves.

By the end of December the mortality among them had frightfully increased. Conservative estimates from Spanish sources placed the deaths among these distressed people at over 40 per cent. from the time Gen. Weyler's decree of reconcentration was enforced. With the acquiescence of the Spanish authorities a scheme was adopted for relief by charitable contributions raised in this country and distributed, under the direction of the consul general and the several consuls, by noble and earnest individual effort through the organized agencies of the American Red Cross. Thousands of lives were thus saved, but many thousands more were inaccessible to such forms of aid.

The war continued on the old footing without comprehensive plan, developing only the same spasmodic encounters, barren of strategic result, that had marked the course of the earlier ten years' rebellion as well as the present insurrection from its start. No alternative save physical exhaustion of either combatant, and therewithal the practical ruin of the island, lay in sight, but how far distant no one could venture to conjecture.

At this juncture, on the 15th of February last, occurred the destruction of the battle ship *Maine* while rightfully lying in the harbor of Havana on a mission of international courtesy and good will—a catastrophe the suspicious nature and horror of which stirred the nation's heart profoundly. It is a striking evidence of the poise and sturdy good sense distinguishing our national character that this shocking blow, falling upon a generous people, already deeply touched by preceding events in Cuba, did not move them to an instant, desperate resolve to tolerate no longer the existence of a condition of danger and disorder at our doors that made possible such a deed, by whomsoever wrought. Yet the instinct of justice prevailed, and the nation anxiously awaited the result of the searching investigation at once set on foot. The finding of the naval board of inquiry established that the origin of the explosion was external by a submarine mine, and only halted, through lack of positive testimony, to fix the responsibility of its authorship.

All these things carried conviction to the most thoughtful, even before the finding of the naval court, that a crisis in our relations with Spain and toward Cuba was at hand. So strong was this belief that it needed but a brief Executive suggestion to the Congress to receive immediate answer to the duty of making instant provision for the possible and perhaps speedily probable emergency of war, and the remarkable, almost unique, spectacle was presented of a unanimous vote of both houses, on the 9th of March, appropriating \$50,000,000 "for the national defense and for each and every purpose connected therewith, to be expended at the discretion of the President." That this act of prevision came none too soon was disclosed when the application of the fund was undertaken. Our coasts were practically undefended. Our navy needed large provision for increased ammunition and supplies, and even numbers, to cope with any sudden attack from the navy of Spain, which comprised modern vessels of the highest type of Continental perfection. Our army also required enlargement of men and munitions. The details of the hurried preparation for the dreaded contingency is told in the reports of the Secretaries of War and of the Navy, and need not be repeated here. It is suffi-

cient to say that the outbreak of war, when it did come, found our nation not unprepared to meet the conflict.

Nor was the apprehension of coming strife confined to our own country. It was felt by the Continental powers, which on April 6, through their ambassadors and envoys, addressed to the Executive an expression of hope that humanity and moderation might mark the course of this Government and people, and that further negotiations would lead to an agreement which, while securing the maintenance of peace, would afford all necessary guarantees for the re-establishment of order in Cuba. In responding to that representation, I said I shared the hope the envoys had expressed that peace might be preserved in a manner to terminate the chronic condition of disturbance in Cuba so injurious and menacing to our interests and tranquillity, as well as shocking to our sentiments of humanity; and, while appreciating the humanitarian and disinterested character of the communication they had made on behalf of the powers, I stated the confidence of this Government, for its part, that equal appreciation would be shown for its own earnest and unselfish endeavors to fulfill a duty to humanity by ending a situation the indefinite prolongation of which had become insufferable.

Still animated by the hope of a peaceful solution, and obeying the dictates of duty, no effort was relaxed to bring about a speedy ending of the Cuban struggle. Negotiations to this object continued actively with the Government of Spain, looking to the immediate conclusion of a six months' armistice in Cuba, with a view to effect the recognition of her people's right to independence. Besides this, the instant revocation of the order of reconcentration was asked, so that the sufferers, returning to their homes and aided by united American and Spanish effort, might be put in a way to support themselves, and, by orderly resumption of the well-nigh destroyed productive energies of the island, contribute to the restoration of its tranquillity and well-being. Negotiations continued for some little time at Madrid, resulting in offers by the Spanish Government which could not but be regarded as inadequate. It was proposed to confide the preparation of peace to the insular Parliament, yet to be convened under the autonomous decrees of November, 1897, but without impairment in any wise of the constitutional powers of the Madrid Government, which, to that end, would grant an armistice, if solicited by the insurgents, for such time as the general in chief might see fit to fix. How and with what scope of discretionary powers the insular Parliament was expected to set about the "preparation" of peace did not appear. If it were to be by negotiation with the insurgents, the issue seemed to rest on the one side with a body chosen by a fraction of the electors in the districts under Spanish control, and on the other with the insurgent population holding the interior country, unrepresented in the so-called Parliament, and defiant at the suggestion of suing for peace.

Grieved and disappointed at this barren outcome of my sincere endeavors to reach a practicable solution, I felt it my duty to remit the whole question to the Congress. In the message of April 11, 1898, I announced that with this last overture in the direction of immediate peace in Cuba, and its disappointing reception by Spain, the effort of the Executive was brought to an end. I again reviewed the alternative courses of action which had been proposed, concluding that the only one consonant with international policy

and compatible with our firm-set historical traditions was intervention as a neutral to stop the war and check the hopeless sacrifice of life, even though that resort involved "hostile constraint upon both the parties to the contest, as well to enforce a truce as to guide the eventual settlement." The grounds justifying that step were the interests of humanity; the duty to protect the life and property of our citizens in Cuba; the right to check injury to our commerce and people through the devastation of the island; and, most important, the need of removing at once and forever the constant menace and the burdens entailed upon our Government by the uncertainties and perils of the situation caused by the unendurable disturbance in Cuba. I said:

"The long trial has proved that the object for which Spain has waged the war can not be attained. The fire of insurrection may flame or may smolder with varying seasons, but it has not been, and it is plain that it can not be, extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and to act, the war in Cuba must stop."

In view of all this, the Congress was asked to authorize and empower the President to take measures to secure a full and final termination of hostilities between Spain and the people of Cuba, and to secure in the island the establishment of a stable government, capable of maintaining order and observing its international obligations, insuring peace and tranquillity, and the security of its citizens as well as our own, and for the accomplishment of those ends to use the military and naval forces of the United States as might be necessary, with added authority to continue generous relief to the starving people of Cuba.

The response of the Congress, after nine days of earnest deliberation, during which the almost unanimous sentiment of your body was developed on every point save as to the expediency of coupling the proposed action with a formal recognition of the republic of Cuba as the true and lawful government of that island—a proposition which failed of adoption—the Congress, after conference, on the 19th of April, by a vote of 42 to 35 in the Senate and 311 to 6 in the House of Representatives, passed the memorable joint resolution declaring—

"First. That the people of the island of Cuba are, and of right ought to be, free and independent.

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect.

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people."

This resolution was approved by the Executive on the next day, April 20. A copy was at once communicated to the Spanish minister at this capital, who forthwith announced that his continuance in Washington had thereby become impossible, and asked for his passports, which were given him. He thereupon withdrew from Washington, leaving the protection of Spanish interests in the United States to the French ambassador and the Austro-Hungarian minister. Simultaneously with its communication to the Spanish minister here, Gen. Woodford, the American minister at Madrid, was telegraphed confirmation of the text of the joint resolution, and directed to communicate it to the Government of Spain with the formal demand that it at once relinquish its authority and government in the island of Cuba and withdraw its forces therefrom, coupling this demand with announcement of the intentions of this Government as to the future of the island, in conformity with the fourth clause of the resolution, and giving Spain until noon of April 23 to reply.

That demand, although, as above shown, officially made known to the Spanish envoy here, was not delivered at Madrid. After the instruction reached Gen. Woodford, on the morning of April 21, but before he could present it, the Spanish Minister of State notified him that upon the President's approval of the joint resolution the Madrid Government, regarding the act as "equivalent to an evident declaration of war," had ordered its minister in Washington to withdraw, thereby breaking off diplomatic relations between the two countries and ceasing all official communication between their respective representatives. Gen. Woodford thereupon demanded his passports, and quitted Madrid the same day.

Spain having thus denied the demand of the United States and initiated that complete form of rupture of relations which attends a state of war, the executive powers authorized by the resolution were at once used by me to meet the enlarged contingency of actual war between sovereign states. On April 22 I proclaimed a blockade of the north coast of Cuba, including ports on said coast between Cardenas and Bahia Honda and the port of Cienfuegos on the south coast of Cuba; and on the 23d I called for volunteers to execute the purpose of the resolution. By my message of April 25 the Congress was informed of the situation, and I recommended formal declaration of the existence of a state of war between the United States and Spain. The Congress accordingly voted on the same day the act approved April 25, 1898, declaring the existence of such war from and including the 21st day of April, and re-enacted the provision of the resolution of April 20, directing the President to use all the armed forces of the nation to carry that act into effect. Due notification of the existence of war as aforesaid was given April 25 by telegraph to all the governments with which the United States maintain relations, in order that their neutrality might be assured during the war. The various governments responded with proclamations of neutrality, each after its own methods. It is not among the least gratifying incidents of the struggle that the obligations of neutrality were impartially discharged by all, often under delicate and difficult circumstances.

In further fulfillment of international duty I issued, April 26, 1898, a proclamation announcing the treatment proposed to be accorded to vessels and their cargoes as to blockade, contraband, the exercise of the right of search, and the immunity of neutral flags and neutral goods under the enemy's

flag. A similar proclamation was made by the Spanish Government. In the conduct of hostilities the rules of the Declaration of Paris, including abstention from resort to privateering, have accordingly been observed by both belligerents, although neither was a party to that declaration.

Our country thus, after an interval of half a century of peace with all nations, found itself engaged in deadly conflict with a foreign enemy. Every nerve was strained to meet the emergency. The response to the initial call for 125,000 volunteers was instant and complete, as was also the result of the second call of May 25 for 75,000 additional volunteers. The ranks of the regular army were increased to the limits provided by the act of April 26, 1898.

The enlisted force of the navy on the 15th day of August, when it reached its maximum, numbered 24,123 men and apprentices. One hundred and three vessels were added to the navy by purchase, 1 was presented to the Government, 1 leased, and the 4 vessels of the International Navigation Company—the St. Paul, St. Louis, New York, and Paris—were chartered. In addition to these the revenue cutters and lighthouse tenders were turned over to the Navy Department and became temporarily a part of the auxiliary navy.

The maximum effective fighting force of the navy during the war, separated into classes, was as follows:

Four battle ships of the first class; 1 battle ship of the second class; 2 armored cruisers; 6 coast-defense monitors; 1 armored ram; 12 protected cruisers; 3 unprotected cruisers; 18 gunboats; 1 dynamite cruiser; 11 torpedo boats; vessels of the old navy, including monitors, 14. Auxiliary navy: Eleven auxiliary cruisers; 28 converted yachts; 27 converted tugs; 19 converted colliers; 15 revenue cutters; 4 lighthouse tenders; and 19 miscellaneous vessels.

Much alarm was felt along our entire Atlantic seaboard lest some attack might be made by the enemy. Every precaution was taken to prevent possible injury to our great cities lying along the coast. Temporary garrisons were provided, drawn from the State militia; infantry and light batteries were drawn from the volunteer force. About 12,000 troops were thus employed. The coast-signal service was established for observing the approach of an enemy's ships to the coast of the United States, and the life-saving and lighthouse services co-operated, which enabled the Navy Department to have all portions of the Atlantic coast, from Maine to Texas, under observation.

The auxiliary navy was created under the authority of Congress, and was officered and manned by the naval militia of the several States. This organization patrolled the coast, and performed the duty of a second line of defense.

Under the direction of the chief of engineers submarine mines were placed at the most exposed points. Before the outbreak of the war permanent mining casemates and cable galleries had been constructed at nearly all important harbors. Most of the torpedo material was not to be found in the market, and had to be specially manufactured. Under date of April 19 district officers were directed to take all preliminary measures, short of the actual attaching of the loaded mines to the cables, and on April 22 telegraphic orders were issued to place the loaded mines in position.

The aggregate number of mines placed was 1,535, at the principal harbors from Maine to California. Preparations were also made for the

planting of mines at certain other harbors, but owing to the early destruction of the Spanish fleet these mines were not placed.

The Signal Corps was promptly organized, and performed service of the most difficult and important character. Its operations during the war covered the electrical connection of all coast fortifications, the establishment of telephonic and telegraphic facilities for the camps at Manila, Santiago, and in Puerto Rico. There were constructed 300 miles of line at 10 great camps, thus facilitating military movements from those points in a manner heretofore unknown in military administration. Field telegraph lines were established and maintained under the enemy's fire at Manila, and later the Manila-Hong-Kong cable was reopened.

In Puerto Rico cable communications were opened over a discontinued route, and on land the headquarters of the commanding officer was kept in telegraphic or telephonic communication with the division commanders on four different lines of operations.

There was placed in Cuban waters a completely outfitted cable ship, with war cables and cable gear, suitable both for the destruction of communications belonging to the enemy and the establishment of our own. Two ocean cables were destroyed under the enemy's batteries at Santiago. The day previous to the landing of Gen. Shafter's corps at Caimanera, within 20 miles of the landing place, cable communications were established and a cable station opened giving direct communication with the Government at Washington. This service was invaluable to the Executive in directing the operations of the army and navy. With a total force of over 1,300, the loss was by disease in camp and field, officers and men included, only 5.

The national defense fund of \$50,000,000 was expended in large part by the army and navy, and the objects for which it was used are fully shown in the reports of the several secretaries. It was a most timely appropriation, enabling the Government to strengthen its defenses and make preparations greatly needed in case of war.

This fund being inadequate to the requirements of equipment and for the conduct of the war, the patriotism of the Congress provided the means in the war-revenue act of June 13 by authorizing a 3-per-cent. popular loan not to exceed \$400,000,000 and by levying additional imposts and taxes. Of the authorized loan, \$200,000,000 were offered and promptly taken, the subscriptions so far exceeding the call as to cover it many times over, while, preference being given to the smaller bids, no single allotment exceeded \$5,000. This was a most encouraging and significant result, showing the vast resources of the nation and the determination of the people to uphold their country's honor.

It is not within the province of this message to narrate the history of the extraordinary war that followed the Spanish declaration of April 21, but a brief recital of its more salient features is appropriate.

The first encounter of the war in point of date took place April 27, when a detachment of the blockading squadron made a reconnaissance in force at Matanzas, shelled the harbor forts, and demolished several new works in construction.

The next engagement was destined to mark a memorable epoch in maritime warfare. The Pacific fleet, under Commodore George Dewey, had lain for some weeks at Hong-Kong. Upon the colonial proclamation of neutrality being issued, and the customary twenty-four hours' notice

being given, it repaired to Mirs Bay, near Hong-Kong, whence it proceeded to the Philippine Islands under telegraphed orders to capture or destroy the formidable Spanish fleet then assembled at Manila. At daybreak on the 1st of May the American force entered Manila Bay, and, after a few hours' engagement, effected the total destruction of the Spanish fleet, consisting of 10 war ships and a transport, besides capturing the naval station and forts at Cavité, thus annihilating the Spanish naval power in the Pacific Ocean and completely controlling the bay of Manila, with the ability to take the city at will. Not a life was lost on our ships, the wounded only numbering 7, while not a vessel was materially injured. For this gallant achievement the Congress, upon my recommendation, fitly bestowed upon the actors preferment and substantial reward.

The effect of this remarkable victory upon the spirit of our people and upon the fortunes of the war was instant. A prestige of invincibility thereby attached to our arms, which continued throughout the struggle. Re-enforcements were hurried to Manila, under the command of Major-Gen. Merritt, and firmly established within sight of the capital, which lay helpless before our guns.

On the 7th day of May the Government was advised officially of the victory at Manila, and at once inquired of the commander of our fleet what troops would be required. The information was received on the 15th day of May, and the first army expedition sailed May 25 and arrived off Manila June 30. Other expeditions soon followed, the total force consisting of 641 officers and 15,058 enlisted men.

Only reluctance to cause needless loss of life and property prevented the early storming and capture of the city, and therewith the absolute military occupancy of the whole group. The insurgents meanwhile had resumed the active hostilities suspended by the uncompleted truce of December, 1897. Their forces invested Manila from the northern and eastern side, but were constrained by Admiral Dewey and Gen. Merritt from attempting an assault. It was fitting that whatever was to be done in the way of decisive operations in that quarter should be accomplished by the strong arm of the United States alone. Obeying the stern precept of war, which enjoins the overcoming of the adversary and the extinction of his power wherever assailable as the speedy and sure means to win a peace, divided victory was not permissible, for no partition of the rights and responsibilities attending the enforcement of a just and advantageous peace could be thought of.

Following the comprehensive scheme of general attack, powerful forces were assembled at various points on our coast to invade Cuba and Puerto Rico. Meanwhile naval demonstrations were made at several exposed points. On May 11 the cruiser Wilmington and torpedo boat Winslow were unsuccessful in an attempt to silence the batteries at Cardenas, a gallant ensign, Worth Bagley, and 4 seamen falling. These grievous fatalities were strangely enough among the very few which occurred during our naval operations in this extraordinary conflict.

Meanwhile the Spanish naval preparations had been pushed with great vigor. A powerful squadron under Admiral Cervera, which had assembled at the Cape Verde Islands before the outbreak of hostilities, had crossed the ocean, and by its erratic movements in the Caribbean Sea delayed our military plans while baffling the pursuit of our fleets. For a time fears were felt

lest the Oregon and Marietta, then nearing home after their long voyage from San Francisco of over 15,000 miles, might be surprised by Admiral Cervera's fleet, but their fortunate arrival dispelled these apprehensions and lent much needed re-enforcement. Not until Admiral Cervera took refuge in the harbor of Santiago de Cuba, about May 19, was it practicable to plan a systematic naval and military attack upon the Antillean possessions of Spain.

Several demonstrations occurred on the coasts of Cuba and Puerto Rico in preparation for the larger event. On May 13 the North Atlantic squadron shelled San Juan de Puerto Rico. On May 30 Commodore Schley's squadron bombarded the forts guarding the mouth of Santiago harbor. Neither attack had any material result. It was evident that well-ordered land operations were indispensable to achieve a decisive advantage.

The next act in the war thrilled not alone the hearts of our countrymen but the world by its exceptional heroism. On the night of June 3 Lieut. Hobson, aided by seven devoted volunteers, blocked the narrow outlet from Santiago harbor by sinking the collier Merrimac in the channel, under a fierce fire from the shore batteries, escaping with their lives as by a miracle, but falling into the hands of the Spaniards. It is a most gratifying incident of the war that the bravery of this little band of heroes was cordially appreciated by the Spanish admiral, who sent a flag of truce to notify Admiral Sampson of their safety and to compliment them on their daring act. They were subsequently exchanged July 7.

By June 7 the cutting of the last Cuban cable isolated the island. Thereafter the invasion was vigorously prosecuted. On June 10, under a heavy protecting fire, a landing of 600 marines from the Oregon, Marblehead, and Yankee was effected in Guantanamo Bay, where it had been determined to establish a naval station.

This important and essential port was taken from the enemy after severe fighting by the marines, who were the first organized force of the United States to land in Cuba.

The position so won was held despite desperate attempts to dislodge our forces. By June 16 additional forces were landed and strongly intrenched. On June 22 the advance of the invading army under Major-Gen. Shafter landed at Daiquiri, about 15 miles east of Santiago. This was accomplished under great difficulties, but with marvelous dispatch. On June 23 the movement against Santiago was begun. On the 24th the first serious engagement took place, in which the First and Tenth Cavalry and the First United States Volunteer Cavalry, Gen. Young's brigade of Gen. Wheeler's division, participated, losing heavily. By nightfall, however, ground within 5 miles of Santiago was won. The advantage was steadily increased. On July 1 a severe battle took place, our forces gaining the outworks of Santiago; on the 2d El Caney and San Juan were taken after a desperate charge, and the investment of the city was completed. The navy co-operated by shelling the town and the coast forts.

On the day following this brilliant achievement of our land forces, the 3d of July, occurred the decisive naval combat of the war. The Spanish fleet, attempting to leave the harbor, was met by the American squadron under command of Commodore Sampson. In less than three hours all the Spanish ships were destroyed, the two torpedo boats being sunk, and the Maria Teresa, Almirante Oquendo, Vizcaya, and Cristobal Colon driven ashore. The Spanish admiral and over

1,300 men were taken prisoners, while the enemy's loss of life was deplorably large, some 600 perishing. On our side but one man was killed, on the Brooklyn, and one man seriously wounded. Although our ships were repeatedly struck, not one was seriously injured. Where all so conspicuously distinguished themselves, from the commanders to the gunners and the unnamed heroes in the boiler rooms, each and all contributing toward the achievement of this astounding victory, for which neither ancient nor modern history affords a parallel in the completeness of the event and the marvelous disproportion of casualties, it would be invidious to single out any for especial honor. Deserved promotion has rewarded the more conspicuous actors—the nation's profoundest gratitude is due to all of these brave men who by their skill and devotion in a few short hours crushed the sea power of Spain and wrought a triumph whose decisiveness and far-reaching consequences can scarcely be measured. Nor can we be unmindful of the achievements of our builders, mechanics, and artisans for their skill in the construction of our war ships.

With the catastrophe of Santiago Spain's effort upon the ocean virtually ceased. A spasmodic effort toward the end of June to send her Mediterranean fleet, under Admiral Camara, to relieve Manila was abandoned, the expedition being recalled after it had passed through the Suez Canal.

The capitulation of Santiago followed. The city was closely besieged by land, while the entrance of our ships into the harbor cut off all relief on that side. After a truce to allow of the removal of noncombatants protracted negotiations continued from July 3 until July 15, when, under menace of immediate assault, the preliminaries of surrender were agreed upon. On the 17th Gen. Shafter occupied the city. The capitulation embraced the entire eastern end of Cuba. The number of Spanish soldiers surrendering was 22,000, all of whom were subsequently conveyed to Spain at the charge of the United States. The story of this successful campaign is told in the report of the Secretary of War, which will be laid before you. The individual valor of officers and soldiers was never more strikingly shown than in the several engagements leading to the surrender of Santiago, while the prompt movements and successive victories won instant and universal applause. To those who gained this complete triumph, which established the ascendancy of the United States upon land as the fight off Santiago had fixed our supremacy on the seas, the earnest and lasting gratitude of the nation is unsparingly due. Nor should we alone remember the gallantry of the living; the dead claim our tears, and our losses by battle and disease must cloud any exultation at the result and teach us to weigh the awful cost of war, however rightful the cause or signal the victory.

With the fall of Santiago the occupation of Puerto Rico became the next strategic necessity. Gen. Miles had previously been assigned to organize an expedition for that purpose. Fortunately he was already at Santiago, where he had arrived on the 11th of July with re-enforcements for Gen. Shafter's army.

With these troops, consisting of 3,415 infantry and artillery, two companies of engineers, and one company of the Signal Corps, Gen. Miles left Guantanamo on July 21, having nine transports convoyed by the fleet under Capt. Higginson, with the Massachusetts (flagship), Dixie, Gloucester, Columbia, and Yale, the two latter carrying troops. The expedition landed at Guanica July 25, which port was entered with little opposition.

Here the fleet was joined by the Annapolis and the Wasp, while the Puritan and Amphitrite went to San Juan and joined the New Orleans, which was engaged in blockading that port. The major general commanding was subsequently reinforced by Gen. Schwan's brigade of the Third Army Corps, by Gen. Wilson with a part of his division, and also by Gen. Brooke with a part of his corps, numbering in all 16,973 officers and men.

On July 27 he entered Ponce, one of the most important ports in the island, from which he thereafter directed operations for the capture of the island.

With the exception of encounters with the enemy at Guayama, Hormigueros, Coamo, and Yauco, and an attack on a force landed at Cape San Juan, there was no serious resistance. The campaign was prosecuted with great vigor, and by the 12th of August much of the island was in our possession and the acquisition of the remainder was only a matter of a short time. At most of the points in the island our troops were enthusiastically welcomed. Protestations of loyalty to the flag and gratitude for delivery from Spanish rule met our commanders at every stage. As a potent influence toward peace the outcome of the Puerto Rican expedition was of great consequence, and generous commendation is due to those who participated in it.

The last scene of the war was enacted at Manila, its starting place. On Aug. 15, after a brief assault upon the works by the land forces, in which the squadron assisted, the capital surrendered unconditionally. The casualties were comparatively few. By this the conquest of the Philippine Islands, virtually accomplished when the Spanish capacity for resistance was destroyed by Admiral Dewey's victory on the 1st of May, was formally sealed. To Gen. Merritt, his officers and men, for their uncomplaining and devoted service and for their gallantry in action, the nation is sincerely grateful. Their long voyage was made with singular success, and the soldierly conduct of the men, most of whom were without previous experience in the military service, deserves unmeasured praise.

The total casualties in killed and wounded in the army during the war with Spain were: Officers killed, 23; enlisted men killed, 257; total, 280; officers wounded, 113; enlisted men wounded, 1,464; total, 1,577. Of the navy: Killed, 17; wounded, 67; died as result of wounds, 1; invalided from service, 6; total, 91.

It will be observed that while our navy was engaged in two great battles and in numerous perilous undertakings in blockade and bombardment, and more than 50,000 of our troops were transported to distant lands and were engaged in assault and siege and battle and many skirmishes in unfamiliar territory, we lost in both arms of the service a total of 1,668 killed and wounded; and in the entire campaign by land and sea we did not lose a gun or a flag or a transport or a ship, and with the exception of the crew of the Merrimac not a soldier or sailor was taken prisoner.

On Aug. 7, forty-six days from the date of the landing of Gen. Shafter's army in Cuba and twenty-one days from the surrender of Santiago, the United States troops commenced embarkation for home, and our entire force was returned to the United States as early as Aug. 24. They were absent from the United States only two months.

It is fitting that I should bear testimony to the patriotism and devotion of that large portion of

our army which, although eager to be ordered to the post of greatest exposure, fortunately was not required outside of the United States. They did their whole duty, and, like their comrades at the front, have earned the gratitude of the nation. In like manner the officers and men of the army and navy who remained in their departments and stations faithfully performing most important duties connected with the war, and whose requests for assignment in the field and at sea I was compelled to refuse because their services were indispensable here, are entitled to the highest commendation. It is my regret that there seems to be no provision for their suitable recognition.

In this connection it is a pleasure for me to mention in terms of cordial appreciation the timely and useful work of the American National Red Cross both in relief measures preparatory to the campaigns, in sanitary assistance at several of the camps of assemblage, and later, under the able and experienced leadership of the president of the society, Miss Clara Barton, on the fields of battle and in the hospitals at the front in Cuba. Working in conjunction with the governmental authorities and under their sanction and approval, and with the enthusiastic co-operation of many patriotic women and societies in the various States, the Red Cross has fully maintained its already high reputation for intense earnestness and ability to exercise the noble purposes of its international organization, thus justifying the confidence and support which it has received at the hands of the American people. To the members and officers of this society and all who aided them in their philanthropic work the sincere and lasting gratitude of the soldiers and the public is due and is freely accorded.

In tracing these events we are constantly reminded of our obligations to the divine Master for his watchful care over us and his safe guidance, for which the nation makes reverent acknowledgment and offers humble prayer for the continuance of his favor.

The annihilation of Admiral Cervera's fleet, followed by the capitulation of Santiago, having brought to the Spanish Government a realizing sense of the hopelessness of continuing a struggle now become wholly unequal, it made overtures of peace through the French ambassador, who with the assent of his Government had acted as the friendly representative of Spanish interests during the war. On the 26th of July M. Cambon presented a communication signed by the Duke of Almodóvar, the Spanish Minister of State, inviting the United States to state the terms upon which it would be willing to make peace. On the 30th of July, by a communication addressed to the Duke of Almodóvar and handed to M. Cambon, the terms of this Government were announced, substantially as in the protocol afterward signed. On the 10th of August the Spanish reply, dated Aug. 7, was handed by M. Cambon to the Secretary of State. It accepted unconditionally the terms imposed as to Cuba, Puerto Rico, and an island of the Ladrones group, but appeared to seek to introduce inadmissible reservations in regard to our demand as to the Philippine Islands. Conceiving that discussion on this point could neither be practical nor profitable, I directed that in order to avoid misunderstanding the matter should be forthwith closed by proposing the embodiment in a formal protocol of the terms upon which the negotiations for peace were to be undertaken. The vague and inexplicit suggestions of the Spanish note could not be ac-

cepted, the only reply being to present as a virtual ultimatum a draft of protocol embodying the precise terms tendered to Spain in our note of July 30, with added stipulations of detail as to the appointment of commissioners to arrange for the evacuation of the Spanish Antilles. On Aug. 12 M. Cambon announced his receipt of full powers to sign the protocol so submitted. Accordingly, on the afternoon of Aug. 12, M. Cambon, as the plenipotentiary of Spain, and the Secretary of State, as the plenipotentiary of the United States, signed a protocol providing—

“ARTICLE I.—Spain will relinquish all claim of sovereignty over and title to Cuba.

“ART. II.—Spain will cede to the United States the island of Puerto Rico and other islands now under Spanish sovereignty in the West Indies, and also an island in the Ladronez to be selected by the United States.

“ART. III.—The United States will occupy and hold the city, bay, and harbor of Manila pending the conclusion of a treaty of peace which shall determine the control, disposition, and government of the Philippines.”

The fourth article provided for the appointment of joint commissions on the part of the United States and Spain, to meet in Havana and San Juan respectively, for the purpose of arranging and carrying out the details of the stipulated evacuation of Cuba, Puerto Rico, and other Spanish islands in the West Indies.

The fifth article provided for the appointment of not more than five commissioners on each side, to meet at Paris not later than Oct. 1, and to proceed to the negotiation and conclusion of a treaty of peace, subject to ratification according to the respective constitutional forms of the two countries.

The sixth and last article provided that upon the signature of the protocol hostilities between the two countries should be suspended, and that notice to that effect should be given as soon as possible by each Government to the commanders of its military and naval forces.

Immediately upon the conclusion of the protocol I issued a proclamation of Aug. 12 suspending hostilities on the part of the United States. The necessary orders to that end were at once given by telegraph. The blockade of the ports of Cuba and San Juan de Puerto Rico was in like manner raised. On the 18th of August the muster out of 100,000 volunteers, or as near that number as was found to be practicable, was ordered.

On the 1st of December 101,165 officers and men had been mustered out and discharged from the service, and 9,002 more will be mustered out by the 10th of this month. Also a corresponding number of general and general staff officers have been honorably discharged the service.

The military commissions to superintend the evacuation of Cuba, Puerto Rico, and the adjacent islands were forthwith appointed: For Cuba, Major-Gen. James F. Wade, Rear-Admiral William T. Sampson, Major-Gen. Matthew C. Butler; for Puerto Rico, Major-Gen. John R. Brooke, Rear-Admiral Winfield S. Schley, Brig-Gen. William W. Gordon, who soon afterward met the Spanish commissioners at Havana and San Juan respectively. The Puerto Rican joint commission speedily accomplished its task, and by the 18th of October the evacuation of the island was completed. The United States flag was raised over the island at noon on that day. The administration of its affairs has been provisionally intrusted to a military governor until the Congress shall otherwise provide. The Cuban joint commission

has not yet terminated its labors. Owing to the difficulties in the way of removing the large numbers of Spanish troops still in Cuba, the evacuation can not be completed before the 1st of January next.

Pursuant to the fifth article of the protocol, I appointed William R. Day, lately Secretary of State, Cushman K. Davis, William P. Fyre, and George Gray, Senators of the United States, and Whitelaw Reid, to be the peace commissioners on the part of the United States. Proceeding in due season to Paris, they there met on the 1st of October five commissioners, similarly appointed on the part of Spain. Their negotiations have made hopeful progress, so that I trust soon to be able to lay a definitive treaty of peace before the Senate, with a review of the steps leading to its signature.

I do not discuss at this time the government or the future of the new possessions which will come to us as the result of the war with Spain. Such discussion will be appropriate after the treaty of peace shall be ratified. In the meantime and until the Congress has legislated otherwise it will be my duty to continue the military governments which have existed since our occupation, and give to the people security in life and property and encouragement under a just and beneficent rule.

As soon as we are in possession of Cuba and have pacified the island it will be necessary to give aid and direction to its people to form a government for themselves. This should be undertaken at the earliest moment consistent with safety and assured success. It is important that our relations with this people shall be of the most friendly character and our commercial relations close and reciprocal. It should be our duty to assist in every proper way to build up the waste places of the island, encourage the industry of the people, and assist them to form a government which shall be free and independent, thus realizing the best aspirations of the Cuban people.

Spanish rule must be replaced by a just, benevolent, and humane government, created by the people of Cuba, capable of performing all international obligations, and which shall encourage thrift, industry, and prosperity, and promote peace and good will among all of the inhabitants, whatever may have been their relations in the past. Neither revenge nor passion should have a place in the new government. Until there is complete tranquillity in the island and a stable government inaugurated military occupation will be continued.

With the one exception of the rupture with Spain the intercourse of the United States with the great family of nations has been marked with cordiality, and the close of the eventful year finds most of the issues that necessarily arise in the complex relations of sovereign states adjusted or presenting no serious obstacle to a just and honorable solution by amicable agreement.

A long unsettled dispute as to the extended boundary between the Argentine Republic and Chili, stretching along the Andean crests from the southern border of the Atacama Desert to Magellan Straits, nearly a third of the length of the South American continent, assumed an acute stage in the early part of the year, and afforded to this Government occasion to express the hope that the resort to arbitration, already contemplated by existing conventions between the parties, might prevail despite the grave difficulties arising in its application. I am happy to say that arrangements to this end have been perfected, the questions of fact upon which the re-

spective commissioners were unable to agree being in course of reference to her Britannic Majesty for determination. A residual difference touching the northern boundary line across the Atacama Desert, for which existing treaties provided no adequate adjustment, bids fair to be settled in like manner by a joint commission, upon which the United States minister at Buenos Ayres has been invited to serve as umpire in the last resort.

I have found occasion to approach the Argentine Government with a view to removing differences of rate charges imposed upon the cables of an American corporation in the transmission between Buenos Ayres and the cities of Uruguay and Brazil of through messages passing from and to the United States. Although the matter is complicated by exclusive concessions by Uruguay and Brazil to foreign companies, there is strong hope that a good understanding will be reached, and that the important channels of commercial communication between the United States and the Atlantic cities of South America may be freed from an almost prohibitory discrimination.

In this relation I may be permitted to express my sense of the fitness of an international agreement whereby the interchange of messages over connecting cables may be regulated on a fair basis of uniformity. The world has seen the postal system developed from a congeries of independent and exclusive services into a well-ordered union, of which all countries enjoy the manifold benefits. It would be strange were the nations not in time brought to realize that modern civilization, which owes so much of its progress to the annihilation of space by the electric force, demands that this all-important means of communication be a heritage of all peoples, to be administered and regulated in their common behoof. A step in this direction was taken when the international convention of 1884 for the protection of submarine cables was signed, and the day is, I trust, not far distant when this medium for the transmission of thought from land to land may be brought within the domain of international concert as completely as is the material carriage of commerce and correspondence upon the face of the waters that divide them.

The claim of Thomas Jefferson Page against Argentina, which has been pending many years, has been adjusted. The sum awarded by the Congress of Argentina was \$4,242.35.

The sympathy of the American people has justly been offered to the ruler and the people of Austria-Hungary by reason of the affliction that has lately befallen them in the assassination of the Empress-Queen of that historic realm.

On the 10th of September, 1897, a conflict took place at Latimer, Pa., between a body of striking miners and the sheriff of Luzerne County and his deputies, in which 22 miners were killed and 44 wounded, of whom 10 of the killed and 12 of the wounded were Austrian and Hungarian subjects. This deplorable event naturally aroused the solicitude of the Austro-Hungarian Government, which, on the assumption that the killing and wounding involved the unjustifiable misuse of authority, claimed reparation for the sufferers. Apart from the searching investigation and peremptory action of the authorities of Pennsylvania, the Federal Executive took appropriate steps to learn the merits of the case, in order to be in a position to meet the urgent complaint of a friendly power. The sheriff and his deputies, having been indicted for murder, were tried and acquitted, after protracted proceedings and the hearing of hundreds of witnesses, on the ground

that the killing was in the line of their official duty to uphold law and preserve public order in the State. A representative of the Department of Justice attended the trial and reported its course fully. With all the facts in its possession, this Government expects to reach a harmonious understanding on the subject with that of Austria-Hungary, notwithstanding the renewed claim of the latter, after learning the result of the trial, for indemnity for its injured subjects.

Despite the brief time allotted for preparation, the exhibits of this country at the Universal Exposition at Brussels in 1897 enjoyed the singular distinction of a larger proportion of awards, having regard to the number and classes of articles entered, than those of other countries. The worth of such a result in making known our national capacity to supply the world's markets is obvious.

Exhibitions of this international character are becoming more frequent as the exchanges of commercial countries grow more intimate and varied. Hardly a year passes that this Government is not invited to national participation at some important foreign center, but often on too short notice to permit of recourse to Congress for the power and means to do so. My predecessors have suggested the advisability of providing by a general enactment and a standing appropriation for accepting such invitations and for representation of this country by a commission. This plan has my cordial approval.

I trust that the Belgian restrictions on the importation of cattle from the United States, originally adopted as a sanitary precaution, will at an early day be relaxed as to their present features of hardship and discrimination, so as to admit live cattle under due regulation of their slaughter after landing. I am hopeful, too, of favorable change in the Belgian treatment of our preserved and salted meats. The growth of direct trade between the two countries, not alone for Belgian consumption and Belgian products, but by way of transit from and to other continental states, has been both encouraging and beneficial. No effort will be spared to enlarge its advantages by seeking the removal of needless impediments and by arrangements for increased commercial exchange.

The year's events in Central America deserve more than passing mention.

A menacing rupture between Costa Rica and Nicaragua was happily composed by the signature of a convention between the parties, with the concurrence of the Guatemalan representative as a mediator, the act being negotiated and signed on board the United States steamship *Alert*, then lying in Central American waters. It is believed that the good offices of our envoy and of the commander of that vessel contributed toward this gratifying outcome.

In my last annual message the situation was presented with respect to the diplomatic representation of this Government in Central America, created by the association of Nicaragua, Honduras, and Salvador, under the title of the Greater Republic of Central America, and the delegation of their international functions to the Diet thereof. While the representative character of the Diet was recognized by my predecessor, and has been confirmed during my administration by receiving its accredited envoy and granting exequaturs to consuls commissioned under its authority, that recognition was qualified by the distinct understanding that the responsibility of each of the component sovereign republics toward the United States remained wholly unaffected.

This proviso was needful inasmuch as the compact of the three republics was at the outset an association whereby certain representative functions were delegated to a tripartite commission rather than a federation possessing centralized powers of government and administration. In this view of their relation and of the relation of the United States to the several republics, a change in the representation of this country in Central America was neither recommended by the Executive nor initiated by Congress; thus leaving one of our envoys accredited as heretofore separately to two states of the Greater Republic, Nicaragua and Salvador, and to a third state, Costa Rica, which was not a party to the compact, while our other envoy was similarly accredited to a union state—Honduras—and a non-union state—Guatemala. The result has been that the one has presented credentials only to the President of Costa Rica, the other having been received only by the Government of Guatemala.

Subsequently the three associated republics entered into negotiations for taking the steps forecast in the original compact. A convention of their delegates framed for them a federal constitution under the name of the United States of Central America, and provided for a central federal government and legislature. Upon ratification by the constituent states, the 1st of November last was fixed for the new system to go into operation. Within a few weeks thereafter the plan was severely tested by revolutionary movements arising, with a consequent demand for unity of action on the part of the military power of the federal states to suppress them. Under this strain the new union seems to have been weakened through the withdrawal of its more important members. This Government was not officially advised of the installation of the federation, and has maintained an attitude of friendly expectancy, while in nowise relinquishing the position held from the outset that the responsibilities of the several states toward us remained unaltered by their tentative relations among themselves.

The Nicaragua Canal Commission, under the chairmanship of Rear-Admiral John G. Walker, appointed July 24, 1897, under the authority of a provision in the sundry civil act of June 4 of that year, has nearly completed its labors, and the results of its exhaustive inquiry into the proper route, the feasibility, and the cost of construction of an interoceanic canal by a Nicaraguan route will be laid before you. In the performance of its task the commission received all possible courtesy and assistance from the governments of Nicaragua and Costa Rica, which thus testified their appreciation of the importance of giving a speedy and practical outcome to the great project that has for so many years engrossed the attention of the respective countries.

As the scope of the recent inquiry embraced the whole subject with the aim of making plans and surveys for a canal by the most convenient route, it necessarily included a review of the results of previous surveys and plans, and in particular those adopted by the Maritime Canal Company under its existing concessions from Nicaragua and Costa Rica, so that to this extent those grants necessarily hold as essential a part in the deliberations and conclusions of the canal commission as they have held and must needs hold in the discussion of the matter by the Congress. Under these circumstances, and in view of overtures made to the governments of Nicaragua and Costa Rica by other parties for a new canal con-

cession predicated on the assumed approaching lapse of the contracts of the Maritime Canal Company with those states, I have not hesitated to express my conviction that considerations of expediency and international policy as between the several governments interested in the construction and control of an interoceanic canal by this route require the maintenance of the *status quo* until the canal commission shall have reported and the United States Congress shall have had the opportunity to pass finally upon the whole matter during the present session without prejudice by reason of any change in the existing conditions.

Nevertheless, it appears that the Government of Nicaragua, as one of its last sovereign acts before merging its powers in those of the newly formed United States of Central America, has granted an optional concession to another association, to become effective on the expiration of the present grant. It does not appear what surveys have been made or what route is proposed under this contingent grant, so that an examination of the feasibility of its plans is necessarily not embraced in the report of the canal commission. All these circumstances suggest the urgency of some definite action by the Congress at this session if the labors of the past are to be utilized and the linking of the Atlantic and Pacific Oceans by a practical water way is to be realized. That the construction of such a maritime highway is now more than ever indispensable to that intimate and ready intercommunication between our eastern and western seaboard demanded by the annexation of the Hawaiian Islands and the prospective expansion of our influence and commerce in the Pacific, and that our national policy now more imperatively than ever calls for its control by this Government, are propositions which I doubt not the Congress will duly appreciate and wisely act upon.

A convention providing for the revival of the late United States and Chilian Claims Commission and the consideration of claims which were duly presented to the late commission, but not considered because of the expiration of the time limited for the duration of the commission, was signed May 24, 1897, and has remained unacted upon by the Senate. The term therein fixed for effecting the exchange of ratifications having elapsed, the convention falls unless the time be extended by amendment, which I am endeavoring to bring about, with the friendly concurrence of the Chilian Government.

The United States has not been an indifferent spectator of the extraordinary events transpiring in the Chinese Empire, whereby portions of its maritime provinces are passing under the control of various European powers; but the prospect that the vast commerce which the energy of our citizens and the necessity of our staple productions for Chinese uses has built up in those regions may not be prejudiced through any exclusive treatment by the new occupants has obviated the need of our country becoming an actor in the scene. Our position among nations, having a large Pacific coast and a constantly expanding direct trade with the farther Orient, gives us the equitable claim to consideration and friendly treatment in this regard, and it will be my aim to subserve our large interests in that quarter by all means appropriate to the constant policy of our Government. The territories of Kiauchau, of Wei-Hai-Wei, and of Port Arthur and Talienwan, leased to Germany, Great Britain, and Russia respectively, for terms of years, will, it is announced, be open to international commerce

during such alien occupation; and if no discriminating treatment of American citizens and their trade be found to exist, or be hereafter developed, the desire of this Government would appear to be realized.

In this relation, as showing the volume and value of our exchanges with China and the peculiarly favorable conditions which exist for their expansion in the normal course of trade, I refer to the communication addressed to the Speaker of the House of Representatives by the Secretary of the Treasury on the 14th of last June, with its accompanying letter of the Secretary of State, recommending an appropriation for a commission to study the commercial and industrial conditions in the Chinese Empire and report as to the opportunities for and obstacles to the enlargement of markets in China for the raw products and manufactures of the United States. Action was not taken thereon during the late session. I cordially urge that the recommendation receive at your hands the consideration which its importance and timeliness merit.

Meanwhile there may be just ground for disquietude in view of the unrest and revival of the old sentiment of opposition and prejudice to alien people which pervades certain of the Chinese provinces. As in the case of the attacks upon our citizens in Szechuen and at Kutien in 1895, the United States minister has been instructed to secure the fullest measure of protection, both local and imperial, for any menaced American interests, and to demand, in case of lawless injury to person or property, instant reparation appropriate to the case. War ships have been stationed at Tientsin for more ready observation of the disorders which have invaded even the Chinese capital, so as to be in a position to act should need arise, while a guard of marines has been sent to Peking to afford the minister the same measure of authoritative protection as the representatives of other nations have been constrained to employ.

Following close upon the rendition of the award of my predecessor as arbitrator of the claim of the Italian subject Cerruti against the republic of Colombia, differences arose between the parties to the arbitration in regard to the scope and extension of the award, of which certain articles were contested by Colombia, while Italy claimed their literal fulfillment. The award having been made by the President of the United States, as an act of friendly consideration, and with the sole view to an impartial composition of the matter in dispute, I could not but feel deep concern at such a miscarriage, and, while unable to accept the Colombian theory that I, in my official capacity, possessed continuing functions as arbitrator, with power to interpret or revise the terms of the award, my best efforts were lent to bring the parties to a harmonious agreement as to the execution of its provisions.

A naval demonstration by Italy resulted in an engagement to pay the liabilities claimed upon their ascertainment; but this apparent disposition of the controversy was followed by a rupture of diplomatic intercourse between Colombia and Italy, which still continues, although fortunately without acute symptoms having supervened. Notwithstanding this, efforts are reported to be continuing for the ascertainment of Colombia's contingent liability on account of Cerruti's debts, under the fifth article of the award.

A claim of an American citizen against the Dominican Republic for a public bridge over the Ozama river, which has been in diplomatic controversy for several years, has been settled by

expert arbitration and an award in favor of the claimant amounting to about \$90,000. It, however, remains unpaid, despite urgent demands for its settlement according to the terms of the compact.

There is now every prospect that the participation of the United States in the Universal Exposition to be held in Paris in 1900 will be on a scale commensurate with the advanced position held by our products and industries in the world's chief marts.

The preliminary report of Mr. Moses P. Handy, who, under the act approved July 19, 1897, was appointed special commissioner, with a view to securing all attainable information necessary to a full and complete understanding by Congress in regard to the participation of this Government in the Paris Exposition, was laid before you by my message of Dec. 6, 1897, and showed the large opportunities opened to make known our national progress in arts, science, and manufactures, as well as the urgent need of immediate and adequate provision to enable due advantage thereof to be taken. Mr. Handy's death soon afterward rendered it necessary for another to take up and complete his unfinished work, and on Jan. 11 last Mr. Thomas W. Cridler, third Assistant Secretary of State, was designated to fulfill that task. His report was laid before you by my message of June 14, 1898, with the gratifying result of awakening renewed interest in the projected display. By a provision in the sundry civil appropriation act of July 1, 1898, a sum not to exceed \$650,000 was allotted for the organization of a commission to care for the proper preparation and installation of American exhibits, and for the display of suitable exhibits by the several executive departments, particularly by the Department of Agriculture, the Fish Commission, and the Smithsonian Institution, in representation of the Government of the United States.

Pursuant to that enactment, I appointed Mr. Ferdinand W. Peck, of Chicago, commissioner general, with an assistant commissioner general and a secretary. Mr. Peck at once proceeded to Paris, where his success in enlarging the scope and variety of the United States exhibit has been most gratifying. Notwithstanding the comparatively limited area of the exposition site—less than one half that of the World's Fair at Chicago—the space assigned to the United States has been increased from the absolute allotment of 157,403 square feet reported by Mr. Handy to some 202,000 square feet, with corresponding augmentation of the field for a truly characteristic representation of the various important branches of our country's development. Mr. Peck's report will be laid before you. In my judgment its recommendations will call for your early consideration, especially as regards an increase of the appropriation to at least \$1,000,000 in all, so that not only may the assigned space be fully taken up by the best possible exhibits in every class, but the preparation and installation be on so perfect a scale as to rank among the first in that unparalleled competition of artistic and inventive production, and thus counterbalance the disadvantage with which we start as compared with other countries whose appropriations are on a more generous scale and whose preparations are in a state of much greater forwardness than our own.

Where our artisans have the admitted capacity to excel, where our inventive genius has initiated many of the grandest discoveries of these later days of the century, and where the native resources of our land are as limitless as they are

valuable to supply the world's needs, it is our province, as it should be our earnest care, to lead in the march of human progress and not rest content with any secondary place. Moreover, if this be due to ourselves, it is no less due to the great French nation whose guests we become, and which has in so many ways testified its wish and hope that our participation shall befit the place the two peoples have won in the field of universal development.

The commercial arrangement made with France on the 28th of May, 1898, under the provisions of section 3 of the tariff act of 1897, went into effect on the 1st day of June following. It has relieved a portion of our export trade from serious embarrassment. Further negotiations are now pending under section 4 of the same act, with a view to the increase of trade between the two countries to their mutual advantage. Negotiations with other governments, in part interrupted by the war with Spain, are in progress under both sections of the tariff act. I hope to be able to announce some of the results of these negotiations during the present session of Congress.

Negotiations to the same end with Germany have been set on foot. Meanwhile no effort has been relaxed to convince the Imperial Government of the thoroughness of our inspection of pork products for exportation, and it is trusted that the efficient administration of this measure by the Department of Agriculture will be recognized as a guarantee of the healthfulness of the food staples we send abroad to countries where their use is large and necessary.

I transmitted to the Senate, on the 10th of February last, information touching the prohibition against the importation of fresh fruits from this country, which had then recently been decreed by Germany on the ground of danger of disseminating the San José scale insect. This precautionary measure was justified by Germany on the score of the drastic steps taken in several States of the Union against the spread of the pest, the elaborate reports of the Department of Agriculture being put in evidence to show the danger to German fruit-growing interests should the scale obtain a lodgment in that country. Temporary relief was afforded in the case of large consignments of fruit then on the way by inspection and admission when found noninfected. Later the prohibition was extended to dried fruits of every kind, but was relaxed so as to apply only to unpeeled fruit and fruit waste. As was to be expected, the alarm reached to other countries, and Switzerland has adopted a similar inhibition. Efforts are in progress to induce the German and Swiss governments to relax the prohibition in favor of dried fruits shown to have been cured under circumstances rendering the existence of animal life impossible.

Our relations with Great Britain have continued on the most friendly footing. Assenting to our request, the protection of Americans and their interests in Spanish jurisdiction was assumed by the diplomatic and consular representatives of Great Britain, who fulfilled their delicate and arduous trust with tact and zeal, eliciting high commendation. I may be allowed to make fitting allusion to the instance of Mr. Ramsden, her Majesty's consul at Santiago de Cuba, whose untimely death after distinguished service and untiring effort during the siege of that city was sincerely lamented.

In the early part of April last, pursuant to a request made at the instance of the Secretary of State by the British ambassador at this capital,

the Canadian Government granted facilities for the passage of four United States revenue cutters from the Great Lakes to the Atlantic coast by way of the Canadian canals and the St. Lawrence river. The vessels had reached Lake Ontario, and were there awaiting the opening of navigation when war was declared between the United States and Spain. Her Majesty's Government thereupon, by a communication of the latter part of April, stated that the permission granted before the outbreak of hostilities would not be withdrawn provided the United States Government gave assurance that the vessels in question would proceed direct to a United States port without engaging in any hostile operation. This Government promptly agreed to the stipulated condition, it being understood that the vessels would not be prohibited from resisting any hostile attack.

It will give me especial satisfaction if I shall be authorized to communicate to you a favorable conclusion of the pending negotiations with Great Britain in respect to the Dominion of Canada. It is the earnest wish of this Government to remove all sources of discord and irritation in our relations with the neighboring Dominion. The trade between the two countries is constantly increasing, and it is important to both countries that all reasonable facilities should be granted for its development.

The Government of Greece strongly urges the onerousness of the duty here imposed upon the currants of that country, amounting to 100 per cent. or more of their market value. This fruit is stated to be exclusively a Greek product, not coming into competition with any domestic product. The question of reciprocal commercial relations with Greece, including the restoration of currants to the free list, is under consideration.

The long-standing claim of Bernard Campbell for damages for injuries sustained from a violent assault committed against him by military authorities in the island of Hayti has been settled by the agreement of that republic to pay him \$10,000 in American gold. Of this sum \$5,000 has already been paid. It is hoped that other pending claims of American citizens against that republic may be amicably adjusted.

Pending the consideration by the Senate of the treaty signed June 16, 1897, by the plenipotentiaries of the United States and of the republic of Hawaii, providing for the annexation of the islands, a joint resolution to accomplish the same purpose by accepting the offered cession and incorporating the ceded territory into the Union was adopted by the Congress and approved July 7, 1898. I thereupon directed the United States steamship Philadelphia to convey Rear-Admiral Miller to Honolulu, and intrusted to his hands this important legislative act, to be delivered to the President of the republic of Hawaii, with whom the admiral and the United States minister were authorized to make appropriate arrangements for transferring the sovereignty of the islands to the United States. This was simply but impressively accomplished on the 12th of August last by the delivery of a certified copy of the resolution to President Dole, who thereupon yielded up to the representative of the Government of the United States the sovereignty and public property of the Hawaiian Islands.

Pursuant to the terms of the joint resolution and in exercise of the authority thereby conferred upon me, I directed that the civil, judicial, and military powers theretofore exercised by the officers of the Government of the republic of Hawaii should continue to be exercised by those

officers until Congress shall provide a government for the incorporated territory, subject to my power to remove such officers and to fill vacancies. The President, officers, and troops of the republic thereupon took the oath of allegiance to the United States, thus providing for the uninterrupted continuance of all the administrative and municipal functions of the annexed territory until Congress shall otherwise enact.

Following the further provision of the joint resolution, I appointed the Hons. Shelby M. Cullom, of Illinois, John T. Morgan, of Alabama, Robert R. Hitt, of Illinois, Sanford B. Dole, of Hawaii, and Walter F. Frear, of Hawaii, as commissioners to confer and recommend to Congress such legislation concerning the Hawaiian Islands as they should deem necessary or proper. The commissioners having fulfilled the mission confided to them, their report will be laid before you at an early day. It is believed that their recommendations will have the earnest consideration due to the magnitude of the responsibility resting upon you to give such shape to the relationship of those mid-Pacific lands to our home Union as will benefit both in the highest degree, realizing the aspirations of the community that has cast its lot with us and elected to share our political heritage, while at the same time justifying the foresight of those who for three quarters of a century have looked to the assimilation of Hawaii as a natural and inevitable consummation, in harmony with our needs and in fulfillment of our cherished traditions.

The questions heretofore pending between Hawaii and Japan, growing out of the alleged mistreatment of Japanese treaty immigrants, were, I am pleased to say, adjusted before the act of transfer by the payment of a reasonable indemnity to the Government of Japan.

Under the provisions of the joint resolution, the existing customs relations of the Hawaiian Islands with the United States and with other countries remain unchanged until legislation shall otherwise provide. The consuls of Hawaii, here and in foreign countries, continue to fulfill their commercial agencies, while the United States consulate at Honolulu is maintained for all appropriate services pertaining to trade and the revenue. It would be desirable that all foreign consuls in the Hawaiian Islands should receive new exequaturs from this Government.

The attention of Congress is called to the fact that our consular offices having ceased to exist in Hawaii, and being about to cease in other countries coming under the sovereignty of the United States, the provisions for the relief and transportation of destitute American seamen in these countries under our consular regulations will in consequence terminate. It is proper, therefore, that new legislation should be enacted upon this subject, in order to meet the changed conditions.

The interpretation of certain provisions of the extradition convention of Dec. 11, 1861, has been at various times the occasion of controversy with the Government of Mexico. An acute difference arose in the case of the Mexican demand for the delivery of Jesús Guerra, who, having led a marauding expedition near the border with the proclaimed purpose of initiating an insurrection against President Díaz, escaped into Texas. Extradition was refused on the ground that the alleged offense was political in its character, and therefore came within the treaty proviso of non-surrender. The Mexican contention was that the exception only related to purely political offenses, and that, as Guerra's acts were admixed with the

common crime of murder, arson, kidnaping, and robbery, the option of nondelivery became void, a position which this Government was unable to admit in view of the received international doctrine and practice in the matter. The Mexican Government, in view of this, gave notice Jan. 24, 1898, of the termination of the convention, to take effect twelve months from that date, at the same time inviting the conclusion of a new convention, toward which negotiations are on foot.

In this relation I may refer to the necessity of some amendment of our existing extradition statute. It is a common stipulation of such treaties that neither party shall be bound to give up its own citizens, with the added proviso in one of our treaties—that with Japan—that it may surrender if it see fit. It is held in this country by an almost uniform course of decisions that where a treaty negatives the obligation to surrender the President is not invested with legal authority to act. The conferment of such authority would be in the line of that sound morality which shrinks from affording secure asylum to the author of a heinous crime. Again, statutory provision might well be made for what is styled extradition by way of transit, whereby a fugitive surrendered by one foreign government to another may be conveyed across the territory of the United States to the jurisdiction of the demanding state. A recommendation in this behalf, made in the President's message of 1886, was not acted upon. The matter is presented for your consideration.

The problem of the Mexican free zone has been often discussed with regard to its inconvenience as a provocative of smuggling into the United States along an extensive and thinly guarded land border. The effort made by the joint resolution of March 1, 1895, to remedy the abuse charged by suspending the privilege of free transportation in bond across the territory of the United States to Mexico failed of good result, as is stated in Report No. 702 of the House of Representatives, submitted in the last session, March 11, 1898. As the question is one to be conveniently met by wise concurrent legislation of the two countries looking to the protection of the revenues by harmonious measures operating equally on either side of the boundary, rather than by conventional arrangements, I suggest that Congress consider the advisability of authorizing and inviting a conference of representatives of the Treasury Departments of the United States and Mexico to consider the subject in all its complex bearings and make report with pertinent recommendations to the respective governments for the information and consideration of their Congresses.

The Mexican Water Boundary Commission has adjusted all matters submitted to it to the satisfaction of both governments save in three important cases—that of the "Chamizal" at El Paso, Texas, where the two commissioners failed to agree, and wherein, for this case only, this Government has proposed to Mexico the addition of a third member; the proposed elimination of what are known as "Bancos," small isolated islands formed by the cutting off of bends in the Rio Grande, from the operation of the treaties of 1884 and 1889, recommended by the commissioners and approved by this Government, but still under consideration by Mexico; and the subject of the "equitable distribution of the waters of the Rio Grande," for which the commissioners recommended an international dam and reservoir, approved by Mexico, but still under consideration by this Government. Pending these ques-

tions it is necessary to extend the life of, the commission, which expires Dec. 23 next.

The coronation of the young Queen of the Netherlands was made the occasion of fitting congratulations.

The claim of Victor H. McCord against Peru, which for a number of years has been pressed by this Government, and has on several occasions attracted the attention of the Congress, has been satisfactorily adjusted. A protocol was signed May 17, 1898, whereby, the fact of liability being admitted, the question of the amount to be awarded was submitted to the Chief Justice of Canada as sole arbitrator. His award sets the indemnity due the claimant at \$40,000.

The Government of Peru has given the prescribed notification of its intention to abrogate the treaty of friendship, commerce, and navigation concluded with this country Aug. 31, 1887. As that treaty contains many important provisions necessary to the maintenance of commerce and good relations, which could with difficulty be replaced by the negotiation of renewed provisions within the brief twelve months intervening before the treaty terminates, I have invited suggestions by Peru as to the particular provisions it is desired to annul, in the hope of reaching an arrangement whereby the remaining articles may be provisionally saved.

His Majesty the Czar having announced his purpose to raise the imperial Russian mission at this capital to the rank of an embassy, I responded, under the authority conferred by the act of March 3, 1893, by commissioning and accrediting the actual representative at St. Petersburg in the capacity of ambassador extraordinary and plenipotentiary. The Russian ambassador to this country has since presented his credentials.

The proposal of the Czar for a general reduction of the vast military establishments that weigh so heavily upon many peoples in time of peace was communicated to this Government with an earnest invitation to be represented in the conference which it is contemplated to assemble with a view to discussing the means of accomplishing so desirable a result. His Majesty was at once informed of the cordial sympathy of this Government with the principle involved in his exalted proposal and of the readiness of the United States to take part in the conference. The active military force of the United States, as measured by our population, territorial area, and taxable wealth, is, and under any conceivable prospective conditions must continue to be, in time of peace so conspicuously less than that of the armed powers to whom the Czar's appeal is especially addressed that the question can have for us no practical importance save as marking an auspicious step toward the betterment of the condition of the modern peoples and the cultivation of peace and good will among them; but in this view it behooves us as a nation to lend countenance and aid to the beneficent project.

The claims of owners of American sealing vessels for seizure by Russian cruisers in Bering Sea are being pressed to a settlement. The equities of the cases justify the expectation that a measure of reparation will eventually be accorded in harmony with precedent and in the light of the proved facts.

The recommendation made in my special message of April 27 last is renewed, that appropriation be made to reimburse the master and owners of the Russian bark *Hans* for wrongful arrest of the master and detention of the vessel in February, 1896, by officers of the United States district court for the southern district of Missis-

sippi. The papers accompanying my said message make out a most meritorious claim, and justify the urgency with which it has been presented by the Government of Russia.

Malietoa Laupepa, King of Samoa, died on Aug. 22 last. According to Article I of the general act of Berlin, "his successor shall be duly elected according to the laws and customs of Samoa."

Arrangements having been agreed upon between the signatories of the general act for the return of Mataafa and the other exiled Samoan chiefs, they were brought from Jaluit by a German war vessel and landed at Apia on Sept. 18 last.

Whether the death of Malietoa and the return of his old-time rival Mataafa will add to the undesirable complications which the execution of the tripartite general act has heretofore developed remains to be seen. The efforts of this Government will, as heretofore, be addressed toward a harmonious and exact fulfillment of the terms of the international engagement to which the United States became a party in 1889.

The Cheek claim against Siam, after some five years of controversy, has been adjusted by arbitration, under an agreement signed July 6, 1897, an award of 706,721 teals (about \$187,987.78), with release of the Cheek estate from mortgage claims, having been rendered March 21, 1898, in favor of the claimant, by the arbitrator, Sir Nicholas John Hannen, British chief justice for China and Japan.

An envoy from Siam has been accredited to this Government and has presented his credentials.

Immediately upon the outbreak of the war with Spain the Swiss Government, fulfilling the high mission it has deservedly assumed as the patron of the International Red Cross, proposed to the United States and Spain that they should severally recognize and carry into execution, as a *modus vivendi*, during the continuance of hostilities, the additional articles proposed by the international conference of Geneva, Oct. 20, 1868, extending the effects of the existing Red Cross convention of 1864 to the conduct of naval war. Following the example set by France and Germany in 1870 in adopting such a *modus vivendi*, and in view of the accession of the United States to those additional articles in 1882, although the exchange of ratifications thereof still remained uneffected, the Swiss proposal was promptly and cordially accepted by us, and simultaneously by Spain.

This Government feels a keen satisfaction in having thus been enabled to testify its adherence to the broadest principles of humanity even amid the clash of war, and it is to be hoped that the extension of the Red Cross compact to hostilities by sea as well as on land may soon become an accomplished fact through the general promulgation of the additional naval Red Cross articles by the maritime powers now parties to the convention of 1864.

The important question of the claim of Switzerland to the perpetual cantonal allegiance of American citizens of Swiss origin has not made hopeful progress toward a solution, and controversies in this regard still continue.

The newly accredited envoy of the United States to the Ottoman Porte carries instructions looking to the disposal of matters in controversy with Turkey for a number of years. He is especially charged to press for a just settlement of our claims for indemnity by reason of the destruction of the property of American missionaries resident in that country during the Armenian troubles of 1895, as well as for the recognition of older claims of equal justness.

He is also instructed to seek an adjustment of the dispute growing out of the refusal of Turkey to recognize the acquired citizenship of Ottoman-born persons naturalized in the United States since 1869 without prior imperial consent; and in the same general relation he is directed to endeavor to bring about a solution of the question which has more or less acutely existed since 1869 concerning the jurisdictional rights of the United States in matters of criminal procedure and punishment under Article IV of the treaty of 1830. This latter difficulty grows out of a verbal difference, claimed by Turkey to be essential, between the original Turkish text and the promulgated translation.

After more than two years from the appointment of a consul of this country to Erzerum, he has received his exequatur.

The arbitral tribunal appointed under the treaty of Feb. 2, 1897, between Great Britain and Venezuela, to determine the boundary line between the latter and the colony of British Guiana, is to convene at Paris during the present month. It is a source of much gratification to this Government to see the friendly resort of arbitration applied to the settlement of this controversy, not alone because of the earnest part we have had in bringing about the result, but also because the two members named on behalf of Venezuela, Mr. Chief-Justice Fuller and Mr. Justice Brewer, chosen from our highest court, appropriately testify the continuing interest we feel in the definitive adjustment of the question according to the strictest rules of justice. The British members, Lord Herschell and Sir Richard Collins, are jurists of no less exalted repute, while the fifth member and president of the tribunal, M. F. de Martens, has earned a world-wide reputation as an authority upon international law.

The claim of Felipe Scandella against Venezuela for arbitrary expulsion and injury to his business has been adjusted by the revocation of the order of expulsion and by the payment of the sum of \$16,000.

I have the satisfaction of being able to state that the Bureau of the American Republics, created in 1890 as the organ for promoting commercial intercourse and fraternal relations among the countries of the Western Hemisphere, has become a more efficient instrument of the wise purposes of its founders, and is receiving the cordial support of the contributing members of the international union which are actually represented in its board of management. A commercial directory, in two volumes, containing a mass of statistical matter descriptive of the industrial and commercial interests of the various countries, has been printed in English, Spanish, Portuguese, and French, and a monthly bulletin published in these four languages and distributed in the Latin-American countries as well as in the United States, has proved to be a valuable medium for disseminating information and furthering the varied interests of the international union.

During the past year the important work of collecting information of practical benefit to American industries and trade through the agency of the diplomatic and consular officers has been steadily advanced, and in order to lay such data before the public with the least delay the practice was begun in January, 1898, of issuing the commercial reports from day to day as they are received by the Department of State. It is believed that for promptitude as well as fullness of information the service thus supplied to our merchants and manufacturers will be found

to show sensible improvement and to merit the liberal support of Congress.

The experiences of the last year bring forcibly home to us a sense of the burdens and the waste of war. We desire, in common with most civilized nations, to reduce to the lowest possible point the damage sustained in time of war by peaceable trade and commerce. It is true we may suffer in such cases less than other communities, but all nations are damaged more or less by the state of uneasiness and apprehension into which an outbreak of hostilities throws the entire commercial world. It should be our object, therefore, to minimize, so far as practicable, this inevitable loss and disturbance. This purpose can probably best be accomplished by an international agreement to regard all private property at sea as exempt from capture or destruction by the forces of belligerent powers. The United States Government has for many years advocated this humane and beneficent principle, and is now in position to recommend it to other powers without the imputation of selfish motives. I therefore suggest for your consideration that the Executive be authorized to correspond with the governments of the principal maritime powers with a view of incorporating into the permanent law of civilized nations the principle of the exemption of all private property at sea, not contraband of war, from capture or destruction by belligerent powers.

The Secretary of the Treasury reports that the receipts of the Government from all sources during the fiscal year ended June 30, 1898, including \$64,751,223 received from sale of Pacific railroads, amounted to \$405,321,335, and its expenditures to \$443,368,582. There was collected from customs \$149,575,062, and from internal revenue \$170,900,641. Our dutiable imports amounted to \$324,635,479, a decrease of \$58,156,690 over the preceding year, and importations free of duty amounted to \$291,414,175, a decrease from the preceding year of \$90,524,068. Internal-revenue receipts exceeded those of the preceding year by \$24,212,067.

The total tax collected on distilled spirits was \$92,546,999; on manufactured tobacco, \$36,230,522; and on fermented liquors, \$39,515,421. We exported merchandise during the year amounting to \$1,231,482,330, an increase of \$180,488,774 from the preceding year.

It is estimated upon the basis of present revenue laws that the receipts of the Government for the year ending June 30, 1899, will be \$577,874,647, and its expenditures \$689,874,647, resulting in a deficiency of \$112,000,000.

On the 1st of December, 1898, there was held in the Treasury gold coin amounting to \$138,441,547, gold bullion amounting to \$138,502,545, silver bullion amounting to \$93,359,250, and other forms of money amounting to \$451,963,981.

On the same date the amount of money of all kinds in circulation, or not included in Treasury holdings, was \$1,886,879,504, an increase for the year of \$165,794,966. Estimating our population at 75,194,000 at the time mentioned, the per capita circulation was \$25.09. On the same date there was in the Treasury gold bullion amounting to \$138,502,545.

The provisions made for strengthening the resources of the Treasury in connection with the war has given increased confidence in the purpose and power of the Government to maintain the present standard, and has established more firmly than ever the national credit at home and abroad. A marked evidence of this is found in the inflow of gold to the Treasury. Its net gold

holdings on Nov. 1, 1898, were \$239,885,162, as compared with \$153,573,147 on Nov. 1, 1897, and an increase of net cash of \$207,756,100 Nov. 1, 1897, to \$300,238,275 Nov. 1, 1898. The present ratio of net Treasury gold to outstanding Government liabilities, including United States notes, Treasury notes of 1890, silver certificates, currency certificates, standard silver dollars, and fractional silver coin, Nov. 1, 1898, was 25.35 per cent. as compared with 16.96 per cent. Nov. 1, 1897.

I renew so much of my recommendation of December, 1897, as follows:

"That when any of the United States notes are presented for redemption in gold and are redeemed in gold, such notes shall be kept and set apart and only paid out in exchange for gold. This is an obvious duty. If the holder of the United States note prefers the gold, and gets it from the Government, he should not receive back from the Government a United States note without paying gold in exchange for it. The reason for this is made all the more apparent when the Government issues an interest-bearing debt to provide gold for the redemption of United States notes—a noninterest-bearing debt. Surely it should not pay them out again except on demand and for gold. If they are put out in any other way, they may return again, to be followed by another bond issue to redeem them—another interest-bearing debt to redeem a noninterest-bearing debt."

This recommendation was made in the belief that such provisions of law would insure to a greater degree the safety of the present standard, and better protect our currency from the dangers to which it is subjected from a disturbance in the general business conditions of the country.

In my judgment the present condition of the Treasury amply justifies the immediate enactment of the legislation recommended one year ago, under which a portion of the gold holdings should be placed in a trust fund, from which greenbacks should be redeemed upon presentation, but when once redeemed should not thereafter be paid out except for gold.

It is not to be inferred that other legislation relating to our currency is not required; on the contrary, there is an obvious demand for it.

The importance of adequate provision which will insure to our future a money standard related as our money standard now is to that of our commercial rivals is generally recognized.

The companion proposition that our domestic paper currency shall be kept safe and yet be so related to the needs of our industries and internal commerce as to be adequate and responsive to such needs is a proposition scarcely less important. The subject, in all its parts, is commended to the wise consideration of the Congress.

The annexation of Hawaii and the changed relations of the United States to Cuba, Puerto Rico, and the Philippines resulting from the war, compel the prompt adoption of a maritime policy by the United States. There should be established regular and frequent steamship communication, encouraged by the United States, under the American flag, with the newly acquired islands. Spain furnished to its colonies, at an annual cost of about \$2,000,000, steamship lines communicating with a portion of the world's markets, as well as with trade centers of the home Government. The United States will not undertake to do less. It is our duty to furnish the people of Hawaii with facilities, under national control, for their export and import trade. It will be conceded that the present situation calls for legislation which shall be prompt, durable, and liberal.

The part which American merchant vessels and their seamen performed in the war with Spain demonstrates that this service, furnishing both pickets and the second line of defense, is a national necessity, and should be encouraged in every constitutional way.

Details and methods for the accomplishment of this purpose are discussed in the report of the Secretary of the Treasury, to which the attention of Congress is respectfully invited.

In my last annual message I recommended that Congress authorize the appointment of a commission for the purpose of making systematic investigations with reference to the cause and prevention of yellow fever. This matter has acquired an increased importance as a result of the military occupation of the island of Cuba and the commercial intercourse between this island and the United States which we have every reason to expect. The sanitary problems connected with our new relations with the island of Cuba and the acquisition of Puerto Rico are no less important than those relating to finance, commerce, and administration. It is my earnest desire that these problems may be considered by competent experts, and that everything may be done which the most recent advances in sanitary science can offer for the protection of the health of our soldiers in those islands and of our citizens who are exposed to the dangers of infection from the importation of yellow fever. I therefore renew my recommendation that the authority of Congress may be given and a suitable appropriation made to provide for a commission of experts to be appointed for the purpose indicated.

Under the act of Congress approved April 26, 1898, authorizing the President in his discretion, "upon a declaration of war by Congress, or a declaration by Congress that war exists," I directed the increase of the regular army to the maximum of 62,000, authorized in said act.

There are now in the regular army 57,862 officers and men. In said act it was provided that "at the end of any war in which the United States may become involved the army shall be reduced to a peace basis by the transfer in the same arm of the service or absorption by promotion or honorable discharge under such regulations as the Secretary of War may establish of supernumerary commissioned officers and the honorable discharge or transfer of supernumerary enlisted men; and nothing contained in this act shall be construed as authorizing the permanent increase of the commissioned or enlisted force of the regular army beyond that now provided by the law in force prior to the passage of this act, except as to the increase of 25 majors provided for in section 1 hereof."

The importance of legislation for the permanent increase of the army is therefore manifest, and the recommendation of the Secretary of War for that purpose has my unqualified approval. There can be no question that at this time, and probably for some time in the future, 100,000 men will be none too many to meet the necessities of the situation. At all events, whether that number shall be required permanently or not, the power should be given to the President to enlist that force if in his discretion it should be necessary; and the further discretion should be given him to recruit for the army within the above limit from the inhabitants of the islands with the government of which we are charged.

It is my purpose to muster out the entire volunteer army as soon as the Congress shall provide for the increase of the regular establishment. This will be only an act of justice, and will be

much appreciated by the brave men who left their homes and employments to help the country in its emergency.

In my last annual message I stated: "The Union Pacific Railway, main line, was sold under the decree of the United States court for the district of Nebraska on the 1st and 2d of November of this year. The amount due the Government consisted of the principal of the subsidy bonds, \$27,236,512, and the accrued interest thereon, \$31,211,711.75, making the total indebtedness \$58,448,223.75. The bid at the sale covered the first-mortgage lien and the entire mortgage claim of the Government, principal and interest."

This left the Kansas Pacific case unconcluded. By a decree of the court in that case an upset price for the property was fixed at a sum which would yield to the Government only \$2,500,000 upon its lien. The sale at the instance of the Government was postponed first to Dec. 15, 1897, and later, upon the application of the United States, was postponed to the 16th day of February, 1898.

Having satisfied myself that the interests of the Government required that an effort should be made to obtain a larger sum, I directed the Secretary of the Treasury, under the act passed March 3, 1887, to pay out of the Treasury to the persons entitled to receive the same the amounts due upon all prior mortgages upon the eastern and middle divisions of said railroad out of any money in the Treasury not otherwise appropriated. Whereupon the Attorney-General prepared a petition to be presented to the court offering to redeem said prior liens in such manner as the court might direct, and praying that thereupon the United States might be held to be subrogated to all the rights of said prior lien holders, and that a receiver might be appointed to take possession of the mortgaged premises and maintain and operate the same until the court or Congress otherwise directed. Thereupon the Reorganization Committee agreed that if said petition was withdrawn and the sale allowed to proceed on the 16th of February, 1898, they would bid a sum at the sale which would realize to the Government the entire principal of its debt, \$6,303,000.

Believing that no better price could be obtained, and appreciating the difficulties under which the Government would labor if it should become the purchaser of the road at the sale, in the absence of any authority by Congress to take charge of and operate the road, I directed that upon the guarantee of a minimum bid which should give the Government the principal of its debt the sale should proceed. By this transaction the Government secured an advance of \$3,803,000 over and above the sum which the court had fixed as the upset price, and which the reorganization committee had declared was the maximum which they would pay for the property.

It is a gratifying fact that the result of these proceedings against the Union Pacific system and the Kansas Pacific line is that the Government has received on account of its subsidy claim the sum of \$64,751,223.75, an increase of \$18,997,163.76 over the sum which the Reorganization Committee originally agreed to bid for the joint property, the Government receiving its whole claim, principal and interest, on the Union Pacific, and the principal of its debt on the Kansas Pacific Railroad.

Steps had been taken to foreclose the Government's lien upon the Central Pacific Railroad Company, but before action was commenced Congress passed an act, approved July 7, 1898, creating a commission, consisting of the Secretary

of the Treasury, the Attorney-General, and the Secretary of the Interior, and their successors in office, with full power to settle the indebtedness to the Government growing out of the issue of bonds in aid of the construction of the Central Pacific and Western Pacific bond-aided railroads, subject to the approval of the President.

No report has yet been made to me by the commission thus created. Whatever action is had looking to a settlement of the indebtedness in accordance with the act referred to will be duly submitted to the Congress.

I deem it my duty to call to the attention of Congress the condition of the present building occupied by the Department of Justice. The business of that department has increased very greatly since it was established in its present quarters. The building now occupied by it is neither large enough nor of suitable arrangement for the proper accommodation of the business of the department. The supervising architect has pronounced it unsafe and unsuited for the use to which it is put. The Attorney-General in his report states that the library of the department is upon the fourth floor, and that all the space allotted to it is so crowded with books as to dangerously overload the structure. The first floor is occupied by the Court of Claims. The building is of an old and dilapidated appearance, unsuited to the dignity which should attach to this important department.

A proper regard for the safety, comfort, and convenience of the officers and employees would justify the expenditure of a liberal sum of money in the erection of a new building of commodious proportions and handsome appearance upon the very advantageous site already secured for that purpose, including the ground occupied by the present structure and adjoining vacant lot, comprising in all a frontage of 201 feet on Pennsylvania Avenue and a depth of 136 feet.

In this connection I may likewise refer to the inadequate accommodations provided for the Supreme Court in the Capitol, and suggest the wisdom of making provision for the erection of a separate building for the court and its officers and library upon available ground near the Capitol.

The postal service of the country advances with extraordinary growth. Within twenty years both the revenues and the expenditures of the Post-Office Department have multiplied threefold. In the last ten years they have nearly doubled. Our postal business grows much more rapidly than our population. It now involves an expenditure of \$100,000,000 a year, numbers 73,000 post offices, and enrolls 200,000 employees. This remarkable extension of a service which is an accurate index of the public conditions presents gratifying evidence of the advancement of education, of the increase of communication and business activity, and of the improvement of mail facilities leading to their constantly augmenting use.

The war with Spain laid new and exceptional labors on the Post-Office Department. The mustering of the military and naval forces of the United States required special mail arrangements for every camp and every campaign. The communication between home and camp was naturally eager and expectant. In some of the larger places of rendezvous as many as 50,000 letters a day required handling. This necessity was met by the prompt detail and dispatch of experienced men from the established force, and by directing all the instrumentalities of the railway-mail and post-office service, so far as necessary, to this

new need. Congress passed an act empowering the Postmaster-General to establish offices or branches at every military camp or station, and under this authority the postal machinery was speedily put into effective operation.

Under the same authority, when our forces moved upon Cuba, Puerto Rico, and the Philippines they were attended and followed by the postal service. Though the act of Congress authorized the appointment of postmasters where necessary, it was early determined that the public interests would best be subserved not by new designations, but by the detail of experienced men familiar with every branch of the service, and this policy was steadily followed. When the territory which was the theater of conflict came into our possession, it became necessary to re-establish mail facilities for the resident population as well as to provide them for our forces of occupation, and the former requirement was met through the extension and application of the latter obligation. I gave the requisite authority, and the same general principle was applied to this as to other branches of civil administration under military occupation. The details are more particularly given in the report of the Postmaster-General, and, while the work is only just begun, it is pleasing to be able to say that the service in the territory which has come under our control is already materially improved.

The following recommendations of the Secretary of the Navy relative to the increase of the navy have my earnest approval:

1. Three seagoing sheathed and coppered battle ships of about 13,500 tons trial displacement, carrying the heaviest armor and most powerful ordnance for vessels of their class, and to have the highest practicable speed and great radius of action. Estimated cost, exclusive of armor and armament, \$3,600,000 each.

2. Three sheathed and coppered armored cruisers of about 12,000 tons trial displacement, carrying the heaviest armor and most powerful ordnance for vessels of their class, and to have the highest practicable speed and great radius of action. Estimated cost, exclusive of armor and armament, \$4,000,000 each.

3. Three sheathed and coppered protected cruisers of about 6,000 tons trial displacement; to have the highest practicable speed and great radius of action, and to carry the most powerful ordnance suitable for vessels of their class. Estimated cost, exclusive of armor and armament, \$2,150,000 each.

4. Six sheathed and coppered cruisers of about 2,500 tons trial displacement; to have the highest speed compatible with good cruising qualities, great radius of action, and to carry the most powerful ordnance suited to vessels of their class. Estimated cost, exclusive of armament, \$1,141,800 each.

I join with the Secretary of the Navy in recommending that the grades of admiral and vice-admiral be temporarily revived, to be filled by officers who have specially distinguished themselves in the war with Spain.

I earnestly urge upon Congress the importance of early legislation providing for the taking of the twelfth census. This is necessary in view of the large amount of work which must be performed in the preparation of the schedules preparatory to the enumeration of the population.

There were on the pension rolls on June 30, 1898, 993,714 names, an increase of nearly 18,000 over the number on the rolls on the same day of the preceding year. The amount appropriated by the act of Dec. 22, 1896, for the payment of

pensions for the fiscal year of 1898 was \$140,000,000. Eight million seventy thousand eight hundred and seventy-two dollars and forty-six cents was appropriated by the act of March 31, 1898, to cover deficiencies in army pensions, and repayments in the sum of \$12,020.33, making a total of \$148,082,892.79 available for the payment of pensions during the fiscal year 1898. The amount disbursed from that sum was \$144,651,879.80, leaving a balance of \$3,431,012.99 unexpended on the 30th of June, 1898, which was covered into the Treasury. There were 389 names added to the rolls during the year by special acts passed at the second session of the Fifty-fifth Congress, making a total of 6,486 pensioners by congressional enactments since 1861.

The total receipts of the Patent Office during the past year were \$1,253,948.44. The expenditures were \$1,081,633.79, leaving a surplus of \$172,314.65.

The public lands disposed of by the Government during the year reached 8,453,896.92 acres, an increase of 614,780.26 acres over the previous year. The total receipts from public lands during the fiscal year amounted to \$2,277,995.18, an increase of \$190,063.90 over the preceding year. The lands embraced in the 11 forest reservations, which were suspended by the act of June 4, 1897, again became subject to the operations of the proclamations of Feb. 22, 1897, creating them, which added an estimated amount of 19,951,360 acres to the area embraced in the reserves previously created. In addition thereto two new reserves were created during the year—the Pine Mountain and Zaca Lake Reserve in California, embracing 1,644,594 acres, and the Prescott Reserve in Arizona, embracing 10,240 acres; while the Pecos River Reserve in New Mexico has been changed and enlarged to include 120,000 additional acres.

At the close of the year 30 forest reservations, not including those of the Afognac Forest and the Fish-culture Reserve in Alaska, had been created by Executive proclamations under section 24 of the act of March 3, 1891, embracing an estimated area of 40,719,474 acres.

The Department of the Interior has inaugurated a forest system, made possible by the act of July, 1898, for a graded force of officers in control of the reserves. This system has only been in full operation since August, but good results have already been secured in many sections. The reports received indicate that the system of patrol has not only prevented destructive fires from gaining headway, but has diminished the number of fires.

The special attention of the Congress is called to that part of the report of the Secretary of the Interior in relation to the Five Civilized Tribes. It is noteworthy that the general condition of the Indians shows marked progress. But one outbreak of a serious character occurred during the year, and that among the Chippewa Indians of Minnesota, which happily has been suppressed.

While it has not yet been practicable to enforce all the provisions of the act of June 28, 1898, "for the protection of the people of the Indian Territory, and for other purposes," it is having a salutary effect upon the nations composing the Five Tribes. The Dawes Commission reports that the most gratifying results and greater advance toward the attainment of the objects of the Government have been secured in the past year than in any previous year. I can not too strongly indorse the recommendation of the commission and of the Secretary of the Interior for the necessity of providing for the edu-

cation of the 30,000 white children resident in the Indian Territory.

The Department of Agriculture has been active in the past year. Explorers have been sent to many of the countries of the Eastern and Western Hemispheres for seeds and plants that may be useful to the United States, and with the further view of opening up markets for our surplus products. The forestry division of the department is giving special attention to the treeless regions of our country, and is introducing species specially adapted to semiarid regions. Forest fires, which seriously interfere with production, especially in irrigated regions, are being studied that losses from this cause may be avoided. The department is inquiring into the use and abuse of water in many States of the West, and collating information regarding the laws of the States, the decisions of the courts, and the customs of the people in this regard, so that uniformity may be secured. Experiment stations are becoming more effective every year. The annual appropriation of \$720,000 by Congress is supplemented by \$400,000 from the States. Nation-wide experiments have been conducted to ascertain the suitableness as to soil and climate and States for growing sugar beets. The number of sugar factories has been doubled in the past two years, and the ability of the United States to produce its own sugar from this source has been clearly demonstrated.

The Weather Bureau forecast and observation stations have been extended around the Caribbean Sea, to give early warning of the approach of hurricanes from the south seas to our fleets and merchant marine.

In the year 1900 will occur the centennial anniversary of the founding of the city of Washington for the permanent capital of the Government of the United States by authority of an act of Congress approved July 16, 1790. In May, 1800, the archives and general offices of the Federal Government were removed to this place. On the 17th of November, 1800, the National Congress met here for the first time, and assumed exclusive control of the federal district and city. This interesting event assumes all the more significance when we recall the circumstances attending the choosing of the site, the naming of the capital in honor of the Father of his Country, and the interest taken by him in the adoption of plans for its future development on a magnificent scale.

These original plans have been wrought out with a constant progress and a signal success even beyond anything their framers could have foreseen. The people of the country are justly proud of the distinctive beauty and government of the capital, and of the rare instruments of science and education which here find their natural home.

A movement lately inaugurated by the citizens to have the anniversary celebrated with fitting ceremonies, including perhaps the establishment of a handsome permanent memorial to mark so historical an occasion, and to give it more than local recognition, has met with general favor on the part of the public.

I recommend to the Congress the granting of an appropriation for this purpose and the appointment of a committee from its respective bodies. It might also be advisable to authorize the President to appoint a committee from the country at large, which, acting with the congressional and District of Columbia committees, can complete the plans for an appropriate national celebration.

The alien-contract law is shown by experience

to need some amendment; a measure providing better protection for seamen is proposed; the rightful application of the eight-hour law for the benefit of labor and of the principle of arbitration are suggested for consideration; and I commend these subjects to the careful attention of the Congress.

The several departmental reports will be laid before you. They give in great detail the conduct of the affairs of the Government during the past year, and discuss many questions upon which the Congress may feel called upon to act.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, Dec. 5, 1898.

Acquisition of Territory.—The most important question brought up for action before Congress was the ratification of the treaty of peace with Spain, and the Senate approved of it by the requisite majority Feb. 6, 1899. The text of the treaty was given in the Annual for 1898.

Though the Senate discussion of the treaty is not given, various measures and resolutions touching on the policy that it embodies were introduced and debated. The bill appropriating \$20,000,000 to carry out the provisions of the treaty of Paris was introduced in the House of Representatives Feb. 17, reported back Feb. 20, and passed the same day. Mr. Dockery, of Missouri, proposed the following amendment to the act, which was a mere measure of appropriation:

"SEC. 2.—That by the ratification of the treaty of peace with Spain it is not intended to incorporate the inhabitants of the Philippine Islands into citizenship of the United States, and the United States hereby disclaims any disposition or intention to exercise permanent sovereignty, jurisdiction, or control over said islands, and asserts its determination, when a stable and independent government shall have been erected in said islands, entitled, in the judgment of the Government of the United States, to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and thereupon to leave the government and control of said islands to the people thereof."

But Mr. Cannon, of Illinois, objected, and the amendment was not considered. The discussion of the measure was brief, and it was mainly on the part of those who opposed the policy of the treaty, but recognized the necessity of voting the money to carry it out. Mr. Clayton, of Alabama, fairly represented the opinion of the opposition. He said:

"I did not intend to inflict upon the House any views on the Philippine question. I do not think that question now before the House, but I find that I differ from some of my associates on this side of the Chamber. In the judgment of many wise men there has been but one thing to do since the signing of the treaty of Paris that concluded hostilities between the United States and Spain, and that was the ratification of that treaty. I do not think it was either necessary or wise for the Peace Commission, at the President's suggestion or without it, to put into the treaty the obligation of the United States to pay this \$20,000,000.

"I did not think it was wise in the President and the commissioners to insist upon the cession of the Philippine Islands. It is to be regretted that we have the Philippine problem to deal with at all. Perhaps it would have been better for the people of the United States had Dewey sailed away from Manila after the destruction of the Spanish fleet. I have wished that he had done

so. And, Mr. Speaker, no man is more opposed than I am to a policy of imperialism, or to a scheme of colonization, or to the retention of the Philippine Islands.

"But the approval of the treaty has never been for this House to determine. The treaty has been negotiated and been ratified. The Executive possesses this law-making function. Treaties made by the United States are expressly declared to be the supreme law of the land. This power is given to the President, and it has but one limitation, and that is the treaty negotiated by him shall be ratified by two thirds of the Senate. The Government is constitutionally bound to pay this money. There is but one contingency, and that the improbable one that the Spanish Cortes will not ratify the treaty. In that event the money would not be paid.

"So that, Mr. Speaker, we find the supreme law of the land requires the payment of this money. The contract to pay it, the law to pay it, have been made pursuant to constitutional methods. And that law must be obeyed or defied. If the law is bad, let those who made it meet with the censure of the American people.

"It is to be regretted that the President has not had some definite policy toward the Philippines. What the President has not done in this regard furnishes much ground for just criticism. But he has correctly said in his speech at Boston that what shall be done hereafter with the Philippine Islands is now a legislative question, and not an executive one. I believe it ought to be made known that the United States does not intend permanently to hold those islands, and I believe it is the duty of Congress to tender assurance to the inhabitants of the Philippines that the United States will encourage such a government there as the people of those islands desire. I stand ready to aid in such declaration."

The rules were suspended and the measure passed by the requisite two-third vote—yeas, 219; nays, 33; not voting, 95; and answering "present," 4. It passed the Senate without a division, March 1, and was approved by the President.

Jan. 7 Senator Mason, of Illinois, introduced the following resolution:

"Whereas all just powers of government are derived from the consent of the governed, therefore be it

"Resolved by the Senate of the United States, That the Government of the United States of America will not attempt to govern the people of any other country in the world without the consent of the people themselves, or subject them by force to our dominion against their will."

It was taken up for discussion, Jan. 10, and Mr. Mason spoke in its favor. He said, among other things:

"I say respectfully that there is no more right or necessity of our governing the Philippine Islands than there is of governing Venezuela, Brazil, Nicaragua, or any other South American state without the consent of its people. Certainly we have no more right to govern them than we have to govern Cuba. Our Government is committed to the withdrawal of our troops from Cuba as soon as peace is restored and a government established.

"Will some one tell me, Mr. President, will some of the gentlemen who are to follow upon the other side of the case, who are to belittle the dangers of war with an innocent people, tell me why it is that we should apply a different rule to the Philippines from that we do to Cuba? Will my distinguished friend to-morrow tell this Chamber? I can not believe that he will take

the position; but if he does, will he give the rule in ethics and good morals that leads us to take a different stand toward the people of the Philippines, who are more enlightened and better educated, have more newspapers and better schools, from that we take toward Cuba?

"Tell me why we should adopt one plan for Cuba and another for the Philippines. Do you say, with the explosionists—I mean the expansionists—'We promised we would not steal Cuba, but we did not promise not to steal the Philippines'? Do you say, with Shylock, 'Is it so nominated in the bond'? You remember Jack in the Two Orphans was charged with stealing a coat. He said, 'You lie; it was a cloak.' Will you tell me, please, how grand larceny and criminal aggression in Cuba become high Christian civilization in the Philippines? Is there some place in the Pacific Ocean where we change the code of ethics and good morals as we change the calendar and the ship's clock in crossing?

"Mr. President, we can not teach them to govern themselves. There is only one road to self-government. That is through the gate of responsibility, along the rough and rugged road of experience. You can not teach liberty and self-government with a Mauser gun. Spain has tried it for centuries; at least, with guns similar if not of the same pattern. For centuries she has been for expansion, more land, more property, more poor people she could ride over with some cheap politician with a crown on his head. Are we going to keep the crown room there that Spain occupied? Is the throne room to be kept intact for Tammany Hall or the Republican party when we send our envoys there?

"Spain is an expansionist, and has been for centuries. And say, my friends, have you forgotten the first rule proved by all history, without exception, that every square inch of territory taken by force has to be held by force? Go to your children, who are in the first year of the high school, and they will tell you the rule, that in all history every square foot of ground taken by force from an alien nation has to be kept by force. There is Alsace-Lorraine, between Germany and France. A standing army is kept there on both sides, and there is a continuing threat of war. Are we to continue to imitate Spain? She has believed in the expansion of territory, expansion of commerce by force, without the consent of the governed, and her ships are lying at the bottom of the sea. Her men are rotting in the ocean and upon the land all over the world. Her flag has been dishonored, disgraced, defeated, and sent back to her peninsula, and the golden crown of imperialism that she has sought against the will of the people has turned to ashes in her palsied hands.

"But distinguished gentlemen who claim a monopoly of patriotism, who do not seem to observe the difference between expansion and explosion, say that we who believe in getting the consent of the governed before we govern them want to give back the Philippines to Spain. Every one who makes the statement knows that is not what we want. May I repeat the old story of Lincoln? Driving in his carriage one day, he alighted to turn a tumblebug to his legs. Replying to the Cabinet minister within the carriage, he said, 'I merely wanted to give him a show with all the other bugs of his class.' He did not want to annex the bug or to tell him how to run his business. He did not seek to tax him or to tell him that he did not know how to govern his bugship. He set him along the highroad, along the line of the survival of the fittest.

"Do you remember when Mexico was invaded by the French, and Uncle Sam said: 'Go; there is the Monroe doctrine; Mexico is covered by the shadow of its wing,' and the French soldiers left, and the brave little republic of Mexico is slowly but surely climbing the ladder to a better education, a better civilization. Ah, Mr. President, that is the expansion I believe in. That is the imperialism the fathers taught.

"Venezuela, within three years, was assaulted by England—sought to be despoiled of her port of entry. Grover Cleveland was President of the United States, and he said to the greatest naval power of the world, 'Stop!' You know the result. Venezuela, struggling along, improving in civil and religious liberty, is climbing higher and higher the scale of civilization. We did not want to annex her when we spoke for her. We did not seek to tax and govern her, but we set her on the highroad of imperialism within herself, and that is the imperialism the fathers taught, and that is the expansion I plead for."

Mr. Vest, of Missouri, introduced, Dec. 6, 1898, the following joint resolution:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That under the Constitution of the United States no power is given to the Federal Government to acquire territory to be held and governed permanently as colonies.

"The colonial system of European nations can not be established under our present Constitution, but all territory acquired by the Government, except such small amount as may be necessary for coaling stations, correction of boundaries, and similar governmental purposes, must be acquired and governed with the purpose of ultimately organizing such territory into States suitable for admission into the Union."

Mr. Vest based his argument in support of the resolution on certain Supreme Court decisions limiting apparently the authority of the Government. Mr. Platt, of Connecticut, said in opening the discussion against the resolution:

"I do not propose at this time to discuss the so-called policy of expansion nor the features of a government which we may authorize or establish in any territory which we may acquire. I will simply remark, in passing, that expansion has been the law of our national growth; more than that, it has been the great law of our racial development, and the United States has shown a capacity for government in all trying times and under all trying conditions, and has shown that it is equal to any circumstances which may arise.

"I propose to confine myself to the question of right denied in the resolution of the Senator from Missouri. I propose to maintain that the United States is a nation; that as a nation it possesses every sovereign power not reserved in its Constitution to the States or the people; that the right to acquire territory was not reserved, and is therefore an inherent sovereign right; that it is a right upon which there is no limitation, and with regard to which there is no qualification; that in certain instances the right may be inferred from specific clauses in the Constitution, but that it exists independent of these clauses; that in the right to acquire territory is found the right to govern it; and as the right to acquire is a sovereign and inherent right, the right to govern is a sovereign right not limited in the Constitution, and that these propositions are in accordance with the views of the framers of the Constitution, the decisions of the Supreme Court, and the legislation of Congress.

"Mr. President, this is a nation. It has been

called by various names. It has been called a confederated republic, a federal union, the union of States, a league of States, a rope of sand; but during all the time these names have been applied to it it has been a nation. It was so understood by the framers of the Constitution. It was so decided by the great judges of the Supreme Court in the early days of the Constitution.

"It is too late to deny it, and, Mr. President, it is also too late to admit it and not have faith in it. Intellectual assent to the doctrines of Christianity does not make a man a Christian. It is saving faith that makes the Christian. And a mere intellectual assent to the doctrine that we are a nation does not make the true patriot. It is high time that we come to believe without qualification, to believe in our hearts, in the exercise of patriotic faith, that the United States is a nation. When we come to believe that, Mr. President, many of the doubts and uncertainties which have troubled men will disappear.

"It is time to be heroic in our faith, and to assert all the power that belongs to the nation as a nation."

He went on to produce authorities to show the national power in this matter, and then asserted absolute right to govern:

"In the right to acquire territory is found the right to govern, and as the right to acquire is sovereign and unlimited, the right to govern is a sovereign right, and I maintain is not limited in the Constitution. If I am right in holding that the power to acquire is the sovereign power without limitation, I think it must be admitted that the right to govern is also sovereign and unlimited.

"But if it is sought to rest the right to govern upon that clause of the Constitution which gives Congress the power to dispose of or make 'all needful rules and regulations' for the government of the territory of the United States, I submit there is no limitation there. There is no qualification there. It is to make 'all needful rules' and regulations for the government of the 'territory' of the United States; not the 'Territories' of the United States. A great deal of confusion exists in the way in which this word is used, which I shall advert to later on.

"Now, if we may make 'all needful rules' and regulations, where is the limitation? Where is the qualification? Justice Taney says the limitation and the qualification are because there is no power to acquire the territory except under the clause for the admission of new States, and therefore it must be held that these rules and regulations must be made solely with reference to the admission of the territory as a new State. But if Justice Taney is wrong about that, if there is other power in the Constitution—and who now denies it?—if the power in the Constitution is full and ample, then his reasoning falls to the ground and there is absolutely no limit or qualification to be found in that clause of the Constitution.

"A Territory is not and can not be organized under the Constitution. It is organized under the power of Congress, which, as the cases have said over and over again, is absolute, full, and plenary. How far Congress in the exercise of that power may be bound by rights conferred by the Constitution upon the citizens I shall allude to farther on. But the Territories are not organized under the Constitution. The Territorial courts are not constitutional courts. If they were the 'inferior courts' mentioned in the Constitution, the judges thereof would have to be appointed with a life tenure. The judges are appointed for a limited term. Over and over

again the Supreme Court has held that those were not constitutional courts; that they were not organized under the Constitution; that they were not created under the Constitution; that they were created under and by the power of Congress."

In conclusion he said:

"I can not understand either the sentiment or the motive of those who are unwilling to concede that our Government is a nation, and who fear to see it clothed with every element of sovereignty which a nation should possess and does possess.

"Why should any man, why, especially, should any Senator, wish to detract from, to diminish or belittle the power of his Government? Why strive by subtle, metaphysical, and logic-chopping arguments to hamper its operations and circumscribe its province? Rather should we in our national love rejoice to see it invested with strength. Rather should we bid it godspeed in its mission to relieve the oppressed, to right every wrong, and to extend the institutions of free government. For this is the people's Government; the Government of a great people, a liberty-loving people, a people that can be trusted to do right, and to guarantee to all men who shall come under its beneficent sway and be subject to its jurisdiction the largest measure of liberty consistent with good order and their general well-being.

"Rather let us have faith in the Government, faith in its future. Stilled be the voice of timidity and distrust, stilled be the utterances of captious and carping criticism. Let us have faith that the powers of government will never be unrighteously exercised. Like Lincoln, when he met the contention that the Government had no power adequate to its self-preservation, let us turn from disputatious subtleties and 'have faith that right makes might, and in that faith dare to do our duty as we understand it.' In that faith the mountains of doubt will be removed and the way of duty become straight and plain.

"Little more than a century has passed since from the tower of Independence Hall in Philadelphia, when we severed our connection with Great Britain, the Liberty Bell rang out the message, 'Proclaim liberty throughout the land and to all the inhabitants thereof.' We were small and weak then. Timid doubters said there was a lion in the path, but the spirit of the Constitution was in that message. With that Constitution came nationality and sovereignty. Under that Constitution, in the name and by the power of the nation, liberty has been proclaimed to regions never dreamed of by the fathers. Is it for us now, when we have become great and strong, though timid doubters still say there are lions in the path, to declare that neither in the spirit of the Constitution nor by the exercise of national sovereignty can we proclaim liberty a rood or a foot beyond our present territorial limits? Oh, for the faith and the courage of the fathers!"

Mr. Teller, of Colorado, while maintaining the absolute authority of the nation over purchased or conquered territory, laid stress on the moral obligations that are implied in such power:

"Now, Mr. President, we are coming to deal with the greatest question, in my opinion, that the American people have dealt with since the contest of 1861. I am not one of those who would be understood as feeling satisfied that this question is not a troublesome one. I anticipate much difficulty and embarrassment to us in the handling of this question. From the very beginning I have felt that this was a question that would seriously embarrass the American people;

and yet I have not felt that distrust and that fear which seem to prevail in some sections of the country and among some of our countrymen. I have more confidence in the good sense of the American people than to believe we are about to adopt a policy in dealing with these countries that threatens the death of the republic or even greater danger to it.

"In the first place, I believe to-day that we are hardly prepared to pass upon what ought to be the character of government that we establish over these countries. I do not think I am sufficiently advised as to what should be the details of the administration of public affairs as applied to them—the form of government best adapted to their condition. Mr. President, I believe in the principle which was enunciated in the fourth clause of the joint resolution approved April 20, 1898:

"That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination, when that is accomplished, to leave the government and control of the island to its people."

"That is a declaration solemnly made by the people of the United States when it was apparent to us all that we were going to war. We said to the world: 'We are not going to war for conquest; we are going to war in the interest of freedom; we are going to war to relieve a people laboring under the plague of bad government; and when we have relieved them from this great burden and have secured peace in their borders, we are going to leave to them the management and control of their own affairs. But not until we have secured the pacification thereof are we to abandon them to their own efforts.'

"That in terms only applied to Cuba, but in principle it applied to every possession of ours acquired during this war. If any Senator had suggested that in addition to Cuba there should be added the words 'or any other possession we may acquire during this war,' it would have met, as this joint resolution met, I believe, the unanimous support of this body and of the other, and also of the President of the United States, as is suggested to me by the Senator from Massachusetts. These words would have been added to the joint resolution with the approbation of all.

"But are we any less bound to-day because we did not mention this to treat these new possessions in the Asiatic seas under the same principles that we are to treat Cuba? If we are to take that position, and if the American people will say to these islands, 'We intend, if you are capable of self-government, to treat you as entitled to it,' we will not need 50,000 men for the Philippine Islands nor 50,000 men for the island of Cuba. That is the only way, in my judgment, Mr. President, that we can maintain peace and order in these new possessions; it is the only way we can escape the great embarrassment of maintaining a large army on what heretofore has been foreign soil, at great expense and at a great distance from our own land, absolutely in contravention to the great fundamental principles of a republic, that the fighting force of the nation should not be a standing army, but should be the militia of the country, the people themselves.

"I am not one of those who would turn these islands back to Spain; I am not one who would give them up to any other nation in the world; nor would I give them up to the people of those countries under present conditions. I believe we went into this war in the interest of human free-

dom, in the interest of good government; that we went into it as no other people in the history of the world ever went into a war. We have stood before the world presenting a spectacle and an example unheard of in history, ready to pour out our money and sacrifice life in the interest of those strangers.

"We can not stop. We commenced this great work of humanity, and we are bound to carry it on until we have accomplished the great object for which we began. We can not do it by turning over to those people the government of these various countries, in my judgment, in the present disorganized condition of affairs there; but we ought to keep in view all the time that some day these people are to be self-reliant and self-governing, as we are, or they are to become a part and parcel of this republic, entitled to all the rights and subject to all the duties of citizenship of States."

Mr. Caffery, of Louisiana, supported the resolution, and contended for the following propositions:

"First. That the Government of the United States being 'of the people, by the people, and for the people,' is inhibited from acquiring territory for the purpose of incorporating it and its people into the Union against their will or without their consent.

"Second. That if a territory is acquired by the United States and its condition, character, soil, climate, and population fit it for statehood, Congress can only govern it, under the limitations of the Constitution, with a view to its becoming a State as early as possible.

"Third. That if the people of a territory proposed to be annexed are incapable of self-government, we can not incorporate them into the Union nor hold them as dependencies to be governed despotically by Congress.

"Fourth. That even if capable of self-government and they give their consent, but are inhabitants of a distant country beyond the sea and of a dissimilar race, with different laws, religions, customs, manners, traditions, and habits, it is impolitic, unwise, and dangerous to incorporate them into the Union.

"Fifth. That wherever any territory is acquired by the United States in full sovereignty the citizens thereof become citizens of the United States, with the privilege of removal if they object to the sway of the United States, and that taxes, duties, and imposts shall be uniform throughout the United States, including all its Territories.

"Mr. President, in support of the proposition that we can not acquire territory for the purpose of incorporating it and its people into the Union against their will and consent, I can only argue upon general principles. We have announced to the world that this is a Government based upon the free consent of the American people. We have held up this example of a free government as one to be copied by all the nations of the earth. We have by that act estopped ourselves from setting up any kind of government anywhere, under any circumstances, other than a free government based upon the consent of the governed.

"There is no room in any line or word or implication from the Constitution to justify despotic government, but if the principle announced upon this floor is to obtain we can introduce into the very core of our institutions, in the very citadel of our liberty, the principle of unlimited despotic sway. If the principle is to obtain that we can annex foreign territory and govern that territory and its inhabitants indefinitely under the

sole jurisdiction and dominion of the Congress of the United States, we will have made of Congress the hugest despotism in the world.

"Mr. President, if I am correct in the proposition that the inhabitants of a territory acquired by the United States—that territory coming under the jurisdiction and full sovereignty of the United States—are citizens of the United States, then I contend that those citizens have a constitutional right to free government, and that means a government by their consent.

"Of course it follows that if, in the acquisition of territory or the project of the acquisition of territory, the inhabitants of that country do not consent, but are opposed and become hostile to the United States, there is no warrant under the Constitution, under the spirit of the Constitution, to bring those people under the jurisdiction of the flag as aliens and hostile to the institutions of our Government. We must have a free people, governed according to their own volition and choice, and not subjects ground beneath the heel of despotism, even if it be the despotism of such a free republic as the United States."

He argued against tropical dependencies as unfit for American settlement, and the natural home of people not qualified for American institutions, and consequently to be held in subjection, if held at all.

"I desire to draw attention to the difference between extending nationality and extending empire. You can extend your power, but if you want to extend your nationality, extend your institutions, extend your liberty, you must do it with people of your own kind. They are the ones to be governed by your law. Every other extension is a weakness. Every extension of the sort that is contemplated in this case is a crime. You can not obliterate the nationality of 10,000,000 Malays.

"There are 287,000,000 East Indians in the peninsula of India. Great Britain has held that country for two hundred and fifty years, and yet there are there but six hundred and odd thousand Englishmen all told. The same of Algeria; the same of the British West Indies; the same of Spanish America; the same of every country in the equatorial belt unsuited to settlement by white men. Wherever there has been a strong nationality in the tropics adapted to the soil and to the climate, no other nationality has ever been able to exterminate or govern them except by physical force. Our nationality can not extend to this Pacific group of islands. Our power can go there; our flag can float there; but the genius of American liberty will remain upon our shores. It can not be implanted there. The material is not there for it to flourish and grow upon.

"Is that the sort of 'expansion' we want? Is that the sort of empire we are derided as old fogies and little Americans for not desiring to establish? Mr. President, we are told that duty and destiny and some undefinable power are pushing us on to a splendid and magnificent future that the fathers never dreamed of. This evil thing we are called on to do can not be painted in such bright, dazzling colors as to deceive the American eye. It is nothing but a wanton stretch of power. It is lust for power and greed for land, veneered with the tawdriness of false humanity. You can not hide its hideousness with the clothing of high-sounding phrases. You can not prostitute the flag made to float over freemen by driving under its folds millions of slaves.

"I want no despotism, sir. I do not want our country to be poisoned at the core. I do not want our people to be accustomed to the exercise

of unlimited authority by Congress. That is a poison which has sapped the life of all republics, and it will sap the life of our republic. If you destroy the germ of our institution you destroy the government built on the germ.

"They tell us that the accident of war has made it our duty to embrace this dangerous opportunity and to take within our folds these people not fit to be incorporated in our midst. What duty? Do we owe any other duty to mankind than to alleviate his condition of hardship, to inspire him with a love of free institutions, and by our example to teach him to follow those institutions? When we get into war, and happen as a result of war to acquire a foothold in the enemy's territory, must we take it, whether or not it will be an element of danger and destruction in our midst? Is that the principle which is advocated to-day? It appears to me so, sir.

"Do we want this territory as a means of power? It is a source of weakness. Do we want it as an avenue of trade? Sir, the idea is absurd. We are capturing the markets of civilized man. Five sixths of the enormous exports of the United States go to Great Britain. The statistics show that not one tenth of the exports of the United States go to Asia, Africa, and South America combined. Nine tenths of our exports go to our neighbors in western Europe, and, sir, it is manifest that if we want markets for our surplus manufactures, our surplus cereals, all that we can not consume, we must send them to people who will consume them.

"What do the dwellers near the equator consume? A half-civilized man wants but little. Such people always export more than they import. Their wants are very few. It requires but little to clothe them. They feed at home, and the balance of trade is always in their favor. If anybody will take the list of our exports and imports, he will find that there is not a single one of these tropical countries which does not import more into the United States than it imports from the United States; and if you look to see where the bulk of our trade is, you will find that it is with people of our kind—enlightened people, consuming people, intelligent people, people who have wants to be supplied and who have something to exchange as against the products we exchange with them.

"Sir, those distant possessions would cost more in ten years for garrisons than they would yield profit to the United States in a century. They would be the graveyard of our youth; and what an avenue they would open for the exploiter, the promoter, and the soldiers of fortune! What an opening for piling up taxes to keep up garrisons, standing armies, and war vessels!"

Mr. Bacon, of Georgia, on Jan. 11, 1899, introduced in the Senate the following joint resolution:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First. That the Government and people of the United States have not waged the recent war with Spain for conquest and for the acquisition of foreign territory, but solely for the purposes set forth in the resolution of Congress making the declaration of said war, the acquisition of such small tracts of land or harbors as may be necessary for governmental purposes being not deemed inconsistent with the same.

"Second. That in demanding and in receiving the cession of the Philippine Islands it is not the purpose of the Government of the United States to secure and maintain dominion over the same

as a part of the territory of the United States, or to incorporate the inhabitants thereof as citizens of the United States, or to hold said inhabitants as vassals or subjects of this Government.

"Third. That whereas at the time of the declaration of war by the United States against Spain, and prior thereto, the inhabitants of the Philippine Islands were actively engaged in a war with Spain to achieve their independence, and whereas said purpose and the military operations thereunder have not been abandoned, but are still being actively prosecuted thereunder, therefore, in recognition of and in obedience to the vital principle announced in the great declaration that governments derive 'their just powers from the consent of the governed,' the Government of the United States recognizes that the people of the Philippine Islands of a right ought to be free and independent; that, with this view and to give effect to the same, the Government of the United States has required the Government of Spain to relinquish its authority and government in the Philippine Islands, and to withdraw its land and naval forces from the Philippine Islands and from the waters thereof.

"Fourth. That the United States hereby disclaim any disposition or intention to exercise sovereignty, jurisdiction, or control over said islands, and assert their determination, when a stable and independent government shall have been duly erected therein entitled to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people."

Mr. White, of California, in discussing this resolution opposed the acquisition of tropical territory mainly on the ground of policy. He said:

"Whatever may be asserted in enthusiastic moments, I do not hesitate to say that it is not the mission or place of the American people to assume responsibility for such a population or to educate, otherwise than by example, and certainly not under the influence of the sword, the protesting occupants of tropical climes. I deny our duty to civilize such an aggregation. Clearly these alien races who, as far as history has furnished evidence, have not been found adapted for the highest civilization, ought not to be introduced here, as they are not competent to participate intelligently and profitably in the affairs of this Government. They should be allowed to pursue their own course, that we may not suffer by their contamination or be diverted from those pursuits which are more profitable to us and to mankind, not only in a financial sense, but morally as well.

"Mr. President, upon another occasion I had an opportunity to examine, and I attempted to explain, why it was and is that a remote nation or people of habits varying from ours in almost every direction can not be a valuable acquisition, and can not constitute a desirable addition to the American republic.

"We know that it is difficult to harmonize all of our interests at home. We know that from the Atlantic to the Pacific there are divergent and inconsistent demands requiring determination at the hands of Congress, and that it is nothing but the intelligent and universally prevailing patriotism of this land which enables us to come together and act as one for the common good. This indicates our capacity for self-rule, but suggests dangers arising from a want of homogeneity. These perils we should not increase.

"Assume that we import an alien and novel people numbering 10,000,000. Whether they are to be citizens or are not to be such—dropping that branch of the inquiry—they are at least brought within the United States. We are responsible for them to the world, and they are to some extent supposed to be burdens to us. What advantage can they be to this republic? Can they furnish us anything that will tend to make us more stable, more civilized, more enlightened? Clearly not. Do we offer them a government of their choice? Do they petition us asking that we receive them? Do they seek for themselves and their posterity the benefits of our civilization? No; they repudiate our attempt to govern them; they demand that they shall be permitted to follow their own way; they insist they should solve domestic and governmental issues for themselves, and that they ought to be allowed to at least experiment as to whether they are or are not competent to sustain a government adapted to their wants. They even intimate that we are to join in international land grabbing, and that the Spanish war was for conquest—not for humanity's sake.

"Mr. President, ought we to grant the Filipino an opportunity? If we say that he is not fitted to govern himself, by what process of reasoning can we reach the conclusion that therefore, and on that account, we ought to absorb him, especially when we announce in advance that we are not acquiring possessions for the purpose of dominion or statehood?

"When the Senator from Missouri [Mr. Vest] and other Senators ask whether these people are competent for admission into the family of States, a negative response is at once heard. It is intimated that perhaps they will be fitted 'some day.' It is averred that if we can hold them at all there is no limit capable of exact measurement, and that therefore we may retain them in our discretion—even forever. We may never determine, it is said, that they are of the elect—worthy of emancipation. Herein lurks the danger of any assumption of responsibility."

Mr. Carter, of Montana, argued against the good policy of discussing such resolutions or voting on them while the treaty of peace was still to be adopted:

"Mr. President, I take direct issue with the proposition that public interest, sound public policy, or any aspect of the existing situation requires or justifies a vote on any of these resolutions at this session of Congress. We have here presented a series of resolutions. That of the Senator from Missouri brings up a question of constitutional limitation upon the power of the Federal Government to do or not to do certain things set forth in the resolution. It is neither useful nor is it at present necessary for the Senate of the United States or the Congress of the country, if you please, to indulge in constitutional interpretations. The theory of the Senator from Missouri was evidently present in the mind of every Senator who prepared a resolution touching this general question. The theory of those who seek a vote on these resolutions is that before peace can be concluded with the Kingdom of Spain under the terms of the pending treaty the United States Senate must vote a want of confidence in the judgment, the discretion, the honor, and the integrity of the American people.

"It is apprehended by those who seek the present consideration of these resolutions that a Congress to assemble hereafter to deal with the territorial acquisitions that may fall to us under and by virtue of the treaty under consideration may

depart from the traditions of our country, the traditions of our race, the letter and spirit of our written Constitution, and launch the people of the United States upon a wild and shoreless sea of universal expansion, attended with tyranny and oppression wherever the flag may go. Mr. President, if such disposition should unhappily be developed in this country, written constitutions will not long restrain it, and resolutions of Congress or of either branch will be but as ropes of sand to stay the mighty tide.

"The treaty under consideration requires no interpretation of the purpose of the Government of the United States or the people with reference to the future of the Philippine Islands. Our forefathers were compelled to meet the question of the future disposition of populations at the time of the ratification of the treaty of 1803, whereby Louisiana was ceded to the United States. By an article in that treaty it was expressly provided that the people of the territory annexed should ultimately become entitled to and participate in all the privileges, benefits, and rights of American citizens.

"The same is true in reference to a clause in the treaty of cession by Mexico, adopted in 1848. By Article IX of that treaty it was provided that any citizen of the republic of Mexico residing within the territory ceded might within the period of one year elect to retain his citizenship in the republic of Mexico or become a citizen of the United States. After the lapse of the year, according to the terms of the treaty, the individuals residing within the ceded territory, now known as New Mexico, Arizona, and California, became entitled to full participation in and enjoyment of the rights and privileges of citizens of the United States. In the pending treaty no such provision occurs. Under its terms the mere sovereignty of Spain is ceded to the republic of the United States. There is no promise in the treaty to Spain, there is no obligation existing to any power whatever to dispose of the Philippine territory or the people residing therein save and except as the enlightened judgment and acute conscience of the people of the United States may in the future direct.

"Mr. President, the people of this country will be as good a class of people twelve months hence as they are to-day, and, according to our general theories of progression, they may be a better class of people. The Congress of the country will probably be as safe a body, all things considered, as the present Congress. By what right or authority, for what useful purpose, is this Congress now sitting, soon to expire, to undertake to tie the arms of the Government or to mortgage the privileges of the future, to undertake to limit the sphere of usefulness or the field of legitimate action for a Congress that is to follow? There is nothing in this treaty that requires it. By virtue of the ratification of the treaty the Government of the United States will be left without restraint of any kind, character, or description with reference to the Philippine Islands and the people who inhabit that archipelago. For what needful purpose then, Mr. President, does the present Congress insist upon the determination of a policy to be pursued in those islands?"

Mr. McNery, of Louisiana, presented Feb. 6, in the Senate, the following joint resolution:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That by the ratification of the treaty of peace with Spain, it is not intended to incorporate the inhabitants of the Philippine

Islands into citizenship of the United States, nor is it intended to permanently annex said islands as an integral part of the territory of the United States; but it is the intention of the United States to establish on said islands a government suitable to the wants and conditions of the inhabitants of said islands to prepare them for local self-government, and in due time to make such disposition of said islands as will best promote the interests of the citizens of the United States and the inhabitants of said islands."

This resolution was fully discussed, as were the other declaratory resolutions, and by a special agreement with those who had united in favor of the ratification of the treaty of Paris it was brought to a vote Feb. 14. Mr. Bacon moved as an amendment the following clause, taken from his own resolution:

"Resolved further, That the United States hereby disclaim any disposition or intention to exercise permanent sovereignty, jurisdiction, or control over said islands, and assert their determination, when a stable and independent government shall have been erected therein, entitled in the judgment of the Government of the United States to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people."

The vote on the amendment was as follows:

YEAS—Bacon, Bate, Berry, Caffery, Chilton, Clay, Cockrell, Faulkner, Gorman, Gray, Hale, Harris, Heitfeld, Hoar, Jones of Arkansas, Jones of Nevada, Lindsay, McLaurin, Martin, Money, Murphy, Perkins, Pettigrew, Pettus, Quay, Rawlins, Smith, Tillman, Turner—29.

NAYS—Allison, Burrows, Carter, Chandler, Deboe, Fairbanks, Frye, Gear, Hanna, Hawley, Kyle, Lodge, McBride, McEnery, McMillan, Mantle, Morgan, Nelson, Penrose, Platt of Connecticut, Platt of New York, Pritchard, Ross, Shoup, Simon, Stewart, Teller, Warren, Wolcott—29.

NOT VOTING—Aldrich, Allen, Baker, Butler, Cannon, Clark, Cullom, Daniel, Davis, Elkins, Foraker, Gallinger, Hansbrough, Kenney, Mallory, Mason, Mills, Mitchell, Pasco, Proctor, Roach, Sewell, Spooner, Sullivan, Thurston, Turley, Turpie, Vest, Wellington, Wetmore, White, Wilson—32.

The Vice-President cast the deciding vote against the amendment, and it was lost. The McEnery resolution was then adopted by the following vote:

YEAS—Allison, Burrows, Chandler, Deboe, Fairbanks, Faulkner, Frye, Gear, Gray, Hale, Hanna, Harris, Kyle, Lodge, McEnery, McLaurin, McMillan, Mantle, Mason, Nelson, Perkins, Pettus, Platt of New York, Quay, Sullivan, Teller—26.

NAYS—Bacon, Bate, Caffery, Carter, Clay, Cockrell, Hawley, Hoar, Lindsay, McBride, Martin, Money, Morgan, Murphy, Pettigrew, Platt of Connecticut, Rawlins, Ross, Simon, Smith, Stewart, Warren—22.

NOT VOTING—Aldrich, Allen, Baker, Berry, Butler, Cannon, Chilton, Clark, Cullom, Daniel, Davis, Elkins, Foraker, Gallinger, Gorman, Hansbrough, Heitfeld, Jones of Arkansas, Jones of Nevada, Kenney, Mallory, Mills, Mitchell, Pasco, Penrose, Pritchard, Proctor, Roach, Sewell, Shoup, Spooner, Thurston, Tillman, Turley, Turner, Turpie, Vest, Wellington, Wetmore, White, Wilson, Wolcott—42.

Feb. 6, 1899, the House of Representatives suspended the rules and passed an act extending to the Hawaiian Islands the act approved Feb. 25,

1885, "to prohibit the importation and migration of foreigners and aliens under contract or agreement to perform labor in the United States, its Territories, and the District of Columbia, and the acts amendatory and supplemental thereto." In the Senate the measure was referred to the Committee on Territories, then to the Committee on Education and Labor, and finally to the Committee on Immigration. It was reported back with amendments, but never brought to a vote, though it came close to an issue on the last day of the session, and was long enough before the Senate for a strong statement to be made in explanation of it. Mr. Pettigrew, of South Dakota, said:

"Mr. President, we annexed the Hawaiian Islands on the 12th of last August, and made them a part of the United States. In the debate which then occurred the opponents of annexation stated that the climate was a tropical climate, and therefore that it would not be peopled by Americans or races of our blood; that the population would remain a tropical population; that the population would be such as to be incapable of maintaining self-government under our Constitution.

"I do not now wish to discuss the question, but I wish to put in the Record certain facts with regard to the immigration to Hawaii since annexation. On the 23d of December, 1898, there were 14,397 Japanese and Chinese contract laborers or slave laborers employed upon the Hawaiian sugar plantations, and there were 7,601 day laborers so employed.

"Since our flag went up in Hawaii, from Aug. 12, 1898, to the 6th day of January, 1899, there have been imported 7,630 contract laborers. Since the 6th of January and up to the 2d of February of this year there have been 2,782 contract laborers brought to the Hawaiian Islands, or a total to Feb. 2, 1899, of 10,412. This labor is slave labor. The laborers are under contract for a term of service. They are liable to be whipped and imprisoned. To-day Europeans, shipped there under contract since our flag went up, are working on the streets with all sorts of criminals because they refuse to subject themselves to the punishment of their taskmasters.

"I offered an amendment to the resolution annexing Hawaii embodying the repeal of the contract-labor law. That amendment was voted down in this Senate. We have waited eight months, and here is the first effort to repeal the contract-labor law. We have tried to pass this bill for days, but its consideration has been objected to by one of the commissioners who went to Hawaii to frame laws for the government of that unfortunate and unhappy country.

"We find, then, this situation: The contract laborer is filling the place of the day laborer; the sugar planters are bringing in their help at the rate of 3,000 a month; and now it is proposed that they shall be permitted to continue to import slaves until Congress meets again.

"No American free laborers have gone there since annexation, and those who had gone there before have been unable to find employment, while 10,400 Asiatics have been brought in, and yet the Administration, representing the Republican party, the party that owes its being to its protest against slavery, is responsible for this condition of affairs, and has refused to furnish legislation for the government of that Territory.

"They have refused to repeal the slave-labor laws of Hawaii. What would Abraham Lincoln, Lloyd Garrison, Wendell Phillips, or Charles Sumner say if they were asked to indorse this

policy? Yet this is the Republicanism of to-day. If living, would they be Republicans? And the commissioners sent there have blocked this legislation in the interest of the sugar planters, who want to secure slave labor to work their plantations, while they are selling their sugar to the American people and paying no duty upon it, resulting in a profit to them in remitted duties alone of \$10,000,000 a year."

Mr. Perkins, of California, said:

"Mr. President, early in January I introduced a bill similar to the one now pending. It was referred to the Committee on Immigration, who took it up and duly considered it. A short time subsequently a like bill was introduced into the House of Representatives, passed that body, came to the Senate, and was referred to the Committee on Education and Labor, of which I have the honor to be a member. It was duly considered by that committee, and referred to the Committee on Immigration. That committee took the House bill, amended it, and it has been upon our calendar for several weeks.

"I really feel greatly disappointed, and I believe it will be against the best interests of the people of this country if this bill should fail to become a law. There is no reason why the people of any Territory of the United States or any State in the Union should be exempt from the provisions of the law which provides that no contract labor can come into the United States. As a matter of fact, the people of Hawaii are to-day importing into those islands thousands and thousands of Japanese peons and other servile laborers, for whose labor they are contracting for one half—aye, for one third—of what the beet-sugar raisers of California and Nebraska and the cane-sugar raisers of Louisiana are paying for their labor."

The Nicaragua Canal.—This project came up for consideration early in the session, and a bill was discussed at some length, and passed the Senate Jan. 21, 1899, to amend the act incorporating the Maritime Canal Company of Nicaragua and to aid in the construction of the water way. The House of Representatives failed to act on it. The subject is an old one in Congress. The act of Feb. 20, 1889, simply incorporated a company for the purpose of building a ship canal from ocean to ocean through Nicaragua, and that company secured concessions and began the work. Jan. 10, 1891, Mr. Sherman, of Ohio, introduced a bill to amend this act, providing for an issue of bonds by the company to the amount of \$100,000,000, with a guarantee by the United States covering principal and interest. Dec. 23, 1891, Mr. Sherman introduced a bill to aid the Maritime Canal Company of Nicaragua, embodying the same scheme. Feb. 14, 1893, Mr. Pepper, of Kansas, introduced a bill to amend the act incorporating the company by striking out several sections and providing for the issue of \$100,000,000 in Treasury notes, full legal tender, to meet the expenses of the construction of the canal. Among the amendments to this bill proposed was one authorizing the President to make arrangements with Nicaragua and Costa Rica to secure the rights of the Maritime Canal Company and construct the water way, issuing \$100,000,000 in bonds to procure funds for the work. Aug. 15, 1893, Mr. Frye, of Maine, introduced a bill to amend the act of incorporation, Feb. 20, 1889, by authorizing the issue of \$100,000,000 in company bonds, with a guarantee by the United States. Jan. 22, 1894, an amendatory bill was introduced, in behalf of Mr. Morgan, of Alabama, containing the same

provision, and providing for the assignment of stock to the United States, Nicaragua, and Costa Rica. Dec. 30, 1895, Mr. Perkins, of California, introduced an amendatory bill, providing for the issuance of United States bonds to the amount of \$150,000,000 to cover the cost of construction, and safeguarding the Government interest in the enterprise by the ownership of nearly all the capital stock. June 1, 1896, March 16, 1897, and May 5, 1898, Mr. Morgan introduced bills on this subject embodying the same policy—the issuance of 700,000 shares of stock to the United States and a guarantee of bonds issued by the Maritime Canal Company of Nicaragua. May 25, 1898, Mr. Stewart, of Nevada, introduced a bill authorizing the President to take steps to secure the right of way, and purchase, at the cost of actual expenditures, the privileges of the Maritime Canal Company of Nicaragua, and so prepare the way for the United States to construct, own, and control the interoceanic canal and its terminal harbors. June 20, 1898, Mr. Morgan introduced another bill, in which it was provided that the Secretary of the Treasury be empowered to take 925,000 of the million shares of the canal company stock, and that in payment Treasury warrants to the amount of \$115,000,000 be issued to cover expenditure for canal construction. The measure, as reported in the Senate at the final session of Congress, reverted to the bond scheme, and Mr. Morgan, of Alabama, in the course of the discussion made the following explanation of the scheme for Government and corporate co-operation when the failure of the Maritime Canal Company to carry out the project seemed probable:

"It will be remembered that when the Senate of the United States first engaged in this work—and it was the first to engage in it—it was upon the motion of the Senator from Vermont, Mr. Edmunds, in executive session, who suggested that it was the duty of the Senate to inquire, through its Committee on Foreign Relations, into the condition and situation and prospects of the Nicaragua Canal.

"I need not go back to state to the Senate the reasons which actuated that venerable and splendid Senator in this movement, for they have been stated in letters here, in arguments, and in statements, explaining the whole situation, over Mr. Edmunds's signature and those of various other gentlemen, including myself, and are in the records of Congress. But a proposition was brought forward in that committee to unload the coastwise commerce and other commerce of the United States of what was then conceived to be a heavy burden, in consequence of the fact that the Maritime Canal Company of Nicaragua had to make a contract, as they insisted, not being able, as they asserted, to make a better one, to build the canal with the proceeds of the sale of \$100,000,000 of bonds backed by \$150,000,000 of their stock, which would amount of course to \$250,000,000 out of the active resources of the company, and would make a debt of that amount upon the corporation, which it was supposed and believed would necessitate the raising of the freight upon vessels passing through the canal to such a figure as would make it unjust to the producers and manufacturers and commercial men of the United States.

"The company protested that they could not raise the money on better conditions. They have said: 'We were required by the concession to put \$2,000,000 of money into this canal the first year after we began work, and we have done it. We have now spent more than \$2,000,000, and we are

in progress of spending more money.' They went on until they spent over \$4,000,000 in that way. They said: 'We can not get money on better terms than these.' The times were not quite so flush as they are even now, and it was difficult to raise money.

"Then the proposition was put to them in a secret session of the committee—the secrecy has all been removed—'On what terms will you consent that the Government of the United States shall raise this money for you—you say it will require only \$83,000,000?' They said: 'We are not able to state what terms, but we will say this to you, that when we are reimbursed for the money we have expended, when we have a fair price for our concessions, as was stipulated in the body of the concessions themselves' (6 per cent. is what they are entitled to out of the capital stock of the concern), 'when we are reimbursed for these things, we will be willing to let the United States Government take it.'

"The matter went on and was considered for some time, but it was not the proposition of the Maritime Canal Company at all. It was the proposition of the Committee on Foreign Relations. 'What would you say if the United States should guarantee your bonds for \$100,000,000 at 3 per cent.?' It was asserted then by Mr. Sherman, a great financier, that they could get the money on bonds at par. 'What would you say to a proposition of that kind?' They said: 'Of course we have told you we would accept it. Reimburse us for what we have had to expend, and you may take the stock in pledge or you can take the stock in purchase.' That committee preferred to take the stock in pledge under an actual mortgage to be recorded in Costa Rica, Nicaragua, and the United States, with powers of foreclosure on breach of condition, and so on.

"It was in that way that the proposition to get money upon the bonds came forward. They were not the kind of bonds that were objected to by the gentlemen who belong to the Silver party, of which I am a member, and I hope an honest one. They were not the kind of bonds that the bankers could take and operate upon and secure money on, and it was therefore supposed that they would be preferable. They were bonds of a kind that the people would like to invest in, and the sums were made small. The object was to raise the money by popular loan, as we did here in the beginning of the Spanish war. It was thought that the bonds would be valuable in that regard, and would induce the people to take a general interest in the canal.

"Now, the bond feature got into the legislation at that time, and it went on naturally and without objection, and nobody hitherto has ever put this question until the Senator from Texas raised it on the floor to-day. Why is it that we would prefer to indorse or guarantee bonds to the issue of straight bonds or an appropriation of money? The matter has gone on, and of course some of us, including myself, would prefer very much a direct appropriation of money to the issue of any bonds at all, for I have a sort of repulsion in my heart or judgment against the issue of bonds. Why should we not appropriate the money out of the Treasury instead of issuing bonds?

"The opportunity of making that appropriation without raising the cry of direct taxation on the people was never presented until during the last session of Congress. At the last session of Congress it turned out that by judicial decision and by legislative action \$68,000,000 in money for the Union Pacific Railroad Company

indebtedness found its way into the Treasury of the United States after a hard fight, as we all know, and a provision was put upon one of the appropriation acts which authorized the settlement of the Central Pacific Company indebtedness on the same basis precisely as that of the Union Pacific, which would yield \$59,000,000; so that the two together amounted to \$127,000,000, which I believed, in my own judgment, was fully sufficient to build the canal under anybody's estimate.

"Thereupon the committee incorporated into the bill the alternative provision that the President of the United States might resort to this fund, appropriated for the purpose, whenever in his judgment he thought it was better to do so than to guarantee bonds or to sell stock; and these three methods are now in the bill. We can guarantee the bonds of the company and issue them, sell them for not less than par, or we can sell \$22,500,000 of stock, of course at not less than par, or we can resort to this fund now in the Treasury or which may hereafter come into the Treasury, which is tantamount to \$127,000,000, for the purpose of raising the money to build the canal.

"I thought, and the committee thought, that leaving this sum optional, to be resorted to by the President in either of these three forms, would perhaps be the wisest legislation we could adopt, and the bill has exactly that shape. But my preference is still that indicated by the Senator from Texas—a direct appropriation of the money, to be taken out of that fund or any other fund."

Mr. Harris, of Kansas, said on the same theme:

"My idea has always been that this was a work of too great magnitude to be intrusted to any private individuals, even if it was possible for them to complete it. It involves relations which are too vast in many respects, I believe, for the control of it by private individuals.

"I have been absolutely in favor of Government ownership of the canal. The committee, I think, shared in that idea, and wanted, if possible, to get at the most intimate connection on the part of the Government with this subject. The door of direct negotiation seemed to be closed, and there was but the one thing which is suggested by the letter of the former Secretary of State, and which has practically been suggested by the President in his message, it seems to me, that the only door open to us is through concessions still existing and belonging to a company which had received a direct charter from this Government, and in whose behalf it may be said these surveys have been authorized and made by the Government of the United States, or at least in connection with and under and by virtue of their concessions.

"There was no desire on the part of the committee to have the Maritime Canal Company, in their individual character in any way, shape, or form, connected with this enterprise, but the idea was to get rid of them, to treat them fairly and justly, to secure the advantages of their concessions as an open door through which we might enter upon this arena, a way by which we could get our feet upon the ground, and then that we should be enabled in the subsequent carrying on of the work to negotiate directly with these people.

"The bill as it now stands provides in section 3 for a commission which shall ascertain the value of whatever these people have. It uses language that I think is fair, that can not be objected to by any one. No matter what may have been the sins of omission or commission on

the part of the Maritime Canal Company, no matter how utterly dead and worthless the carcass may seem to be, we propose to get rid of it; and while the Senator from Indiana criticised very severely the Maritime Canal Company, certainly it seems to me he might admit that in the manner of their taking off they have at least acted in a becoming and proper manner.

"As I understand, the Maritime Canal Company are willing to submit to anything that we determine with regard to this matter. They are not interposing any objection. They are not interposing any plea for special consideration. They have not in any way broached or suggested anything to the committee on this subject other than what is contained in their letter to the Secretary of the Interior. The committee have thought that by the appointment of three commissioners who will determine these amounts on principles of justice and equity, so as to provide a fair compensation for the property, rights, privileges, and franchises now owned by the said company, etc., they could be treated fairly, and finally and permanently disposed of.

"They disappear from the scene, and the Government steps in in its capacity as the great stockholder. It is, of course, to be handled under the forms provided for in the concession. The Government of the United States becomes the great stockholder, Nicaragua and Costa Rica retaining the stock to which they are entitled under the concession. So far as the manner in which it shall be handled is concerned, I have heard no particular criticism. There shall be directors appointed, and they shall proceed practically, with the assistance of the War Department and the army engineers, with this great work.

"Under the amendments which have been offered by the Senator from Arkansas, which I favor very strongly myself, and which I understand are not objected to by the chairman of the committee, the whole bond question is eliminated, and it becomes a fair, plain cash transaction. There was no particular necessity for bonds in the matter. It makes no particular difference to anybody, except that there is the difficulty of transferring and selling the bonds imposed upon the directors who are to handle the matter. Consequently, I would much rather see the cash put into the treasury of the company or subject to their order as it may be required in the construction of the work, and the entire amount of stock transferred to the Treasury of the United States, with a lien which will absolutely secure the Government in a complete forfeiture in the course of time and reversal to them of all the rights and privileges and property which are nominally in the name of the company."

Army Reorganization.—There were several measures introduced for increasing the efficiency of the army of the United States, and finally one passed by the House of Representatives was set aside in the Senate, and a more moderate bill was introduced, Feb. 25, 1899, amended, and passed by that body, Feb. 27. The House reluctantly accepted the Senate measure, and passed it March 1, and it was approved March 2. The debate on the subject involved the old issue as to the good policy of standing armies.

In the Senate Mr. Cockrell, of Missouri, explained the bill as follows:

"Mr. President, I desire to make a few remarks in regard to this bill, the manner of its preparation, and its effect, and my indorsement of it. As every Senator knows, efforts have been made in Congress for the last twenty years—twenty-four years, I will say—for a reorganization of

the army. In almost every Congress some project has been brought up. In the beginning of this Congress multitudinous measures were presented for the increase of the regular standing army to 100,000 men, and it was claimed that the proposition had the indorsement of the executive branch of the Government. That kind of a measure was introduced. It passed the House. It authorized the President to organize an army of 100,000 men, a regular permanent standing army, and then gave him permission to reduce the number of the men in the company, leaving the officer organization intact.

"That matter was considered in the Committee on Military Affairs for a long time. A measure was reported by part of the committee, and certain propositions were made by the remaining half of the committee, the committee being equally divided. The matter was discussed here and statements were made upon the floor of the Senate in regard to the measure.

"Now, this measure which comes here has been examined very carefully, and I want to say I indorse it. I indorse it because I believe it is right and just and proper and necessary; and in addition to that it will settle for years to come the question of the reorganization of the regular standing army. When 1901 comes the army will revert to what it is provided for in the pending bill, without debate or contention, and it will remain at that figure; and I think that is amply sufficient.

"Now, what does this bill do? We all know that the organization of the infantry of the United States has been 10 companies to a regiment, and the inefficiency of that organization induced Congress to make a provision that two of those companies might be skeletonized and that the officers could be put upon detached duty. So our regiments practically consist of 8 companies, 2 battalions. In the beginning of the war with Spain we authorized an increase of our infantry regiments to 12 companies, just as the cavalry has been for years, 3 battalions, with 3 majors, 1 colonel, 1 lieutenant colonel, and a complement of officers. Every one recognizes that that is the only efficient infantry organization known to-day and practiced to-day anywhere in the world by intelligent and progressive armies.

"Then this bill simply authorizes the infantry arm of the service to be increased to 12 companies and hereafter to remain a 12-company organization, and that carries with it the men and the officers. In the cavalry there has been practically no increase by this bill over what it was prior to April, 1898.

"Now we come to the artillery. We have made an increase there of 14 batteries, 2 batteries to every one of the 7 regiments. You may say there is no necessity for it. Then there is no necessity for your fortifications. There is no necessity for your siege guns. There is no necessity for your disappearing artillery. There is no necessity for the hundred million dollars which you have expended in fortifications and in the armament of those fortifications all around our coasts.

"You have the fortifications, you have the improved machinery, you have the guns there. You must have intelligent men there who understand machinery and can use and protect it or it becomes a total loss. The artillery increase that we have given here, in my judgment, will not last until July 1, 1901. If the additional fortifications that are proposed all around our coasts, upon the Atlantic and the Pacific, are completed,

and the guns are manufactured and put into them, you will have to have an additional increase of artillery. You can not get around it. If you have forts, if you have guns, if you have machinery, you must have men to take care of them. That is all there is about it. That is the increase we have made.

"Then we have organized bands for each regiment. Heretofore a number of the members of the band have been detailed from the force. We have made the bands to consist of a given number, and they are to be enlisted for the bands and not to be taken out of the ranks, and they become soldiers in the band under military discipline. That necessarily increases the number of men nominally in the regiment.

"With the infantry we give an increase of 1 major, because we create one new battalion practically. That gives 3 majors—the regular organization, the permanent organization. Then you have to give to the regiments of cavalry, infantry, and artillery a quartermaster, an adjutant, and a commissary. They get the pay of a captain. That is not really an increase in fact, but an increase in appearance. And then we make the lieutenants the adjutants of the battalions. There is an apparent increase, but practically it is not, because the same officers will serve. In the artillery we have given these increases; and necessarily with the 14 batteries must go 14 officers. This increase, I think, is perfectly justifiable, is absolutely essential.

"When 1901 comes the army drops back to what? To the organization prescribed in this bill. That is the organization. It is described in the first part of the bill down to section 13. All the prior sections relate to the permanent organization of the army as it will exist on July 1, 1901, if no additional legislation is enacted, and that gives exactly the organization.

"That makes an increase of a little over 2,200 in the artillery and something like between 6,000 and 7,000 in the infantry by the filling up of the companies, a total increase up to about 10,000 or a little over, including these regimental bands and the cooks.

"What have we done in regard to the staff? We find that there was a law passed during the last session increasing the ordnance staff by a certain number of officers, and there are other increases made. We made an increase in the adjutant general's office and in the inspector general's office at the last session, but it was provided as a temporary force. After an examination of this matter and the number of officers and the duties that will be devolved upon them, we thought that the increase which had been made in the adjutant general's office and the inspector general's office ought to be retained in the permanent organization; and therefore there is an increase. That is the only increase in the staff. We have left the quartermasters and the commissaries and the other officers when peace comes just as they were before. I can see no harm to come from this. When 1901 comes without any further legislation the law brings the army back to exactly what is provided for here—about 38,000 men, artillery, infantry, cavalry, heavy artillery, batteries, and everything combined.

"As to the additional 35,000 men who have been provided for here the provision speaks for itself. We have authorized the permanent standing army to be maintained at 65,000 enlisted men until July 1, 1901. There will be 65,000 enlisted men in the regular army up to July 1, 1901. How are they to be organized? The organiza-

tion is already provided for; the whole organization is provided for. Some of the troops now in the service, some fifty odd thousand in number, will be discharged, because they volunteered for and during the war, and when peace is proclaimed they will be discharged. In fact, they are being discharged very rapidly now all over the country. There is a general order to muster out the volunteers who were in the regular army, volunteers there for and during the war, as rapidly as possible, and enlist men only for three years unless sooner discharged. This will enable the President to maintain the regular standing army, as it is called, at 65,000 up to July 1, 1901, if their services are so long needed. It authorizes him to organize a volunteer force of 35,000 and to officer it, and that force must go out of existence on July 1, 1901, or sooner if there is no necessity for their continuing in the service.

"This necessarily demands an increase of the staff department during this period, because the 35,000 volunteers are not from the States, are not officered by the States with quartermasters, commissaries, and surgeons. They come in as United States volunteers, and the United States has to furnish them with quartermasters and commissaries and surgeons and all the staff officers. We have here made provision for an increase in the different staff departments or corps; and I wish to say to the Senate that I reduced these down just as low as I thought the service would permit. Almost every reduction was made to the number I specified myself, and I am responsible for that part of it absolutely. I cut down the staff in the rank of the officers, and I cut them down in the number just as low as I thought the service would permit.

"You will observe that in the adjutant general's office there are 3 assistant adjutants general with the rank of lieutenant colonel and 6 assistant adjutants general with the rank of major. In the inspector's office they are lieutenant colonels and majors. In all the other departments they are only majors—nobody above a major. I thought the most efficient officers in the army would be the majors, and therefore we will have an excess of them—an honorable title, very good pay, and I think the most efficient ones will be among them.

"When it came to the organization of the general officers, I apprehend every Senator knows the pressure that has been brought upon the Senate for the purpose of increasing the number of general officers in the regular army. We have 3 major generals and 6 brigadier generals. This man wants an increase in the major generals, and the other one wants an increase of the brigadier generals. They want it in order that this man and that man and the other man may secure appointments in the regular army. I am totally opposed to an increase of the general officers of the regular army, and this bill makes no increase whatever in the brigadier generals or in the major generals of the army.

"Now what did we do for the volunteers? Were we to turn them over to the President without any officers—35,000 men without a brigade commander and without a division commander? We discussed the question, and we fixed upon 4,000 men as a unit for a brigadier general. We fixed upon 12,000 as a unit for a major general. Then we counted the brigadier generals in the regular army, and we added the volunteers to the regular army—about 100,000—and we made provision for one brigadier general of volunteers and regulars combined, united, to every 4,000 men.

That would give about 25 brigadier generals—6 in regular and 19 in volunteer army. Then it comes to the major generals. We assign 1 major general to every 12,000 enlisted men. There are 3 major generals in the regular army, and we increase the number so that there will be 1 to every 12,000 men, an increase of about 5. Now I submit that this is not a bad arrangement. It is not extravagant; it is not prodigal of the people's money. It is just as small a force as can efficiently and effectively manage the enlisted force provided by the bill.

"Mr. President, under all these circumstances, after this long discussion and this effort year after year and Congress after Congress to reorganize the army, if we have a bill here which promises to settle the question for Congresses to come, promises no heavy burden upon the people, gives no extra force that can be used for any improper purpose or elsewhere, I think it ought to be accepted. I have been on several commissions to reorganize the army; I have been connected with several efforts to reorganize the army. We have never been able to get anything that could meet with approval, and I believe honestly and conscientiously that this is the best measure that has been presented to the Congress of the United States for settling the regular army of the United States since I entered this Chamber, on the 4th day of March, 1875. I do not believe that you will ever get a better one. On the contrary, if this bill fails, my judgment is that what will come hereafter will be very different from this measure, not as good for the interests of the country as this will prove to be."

Mr. Gorman, of Maryland, opposed the measure, and succeeded in having it amended by a provision restoring the organization after 1901 in all grades except the artillery to the strength authorized by law prior to April 1, 1898.

"Mr. President, I have but little interest in the pending amendment, which has engaged the attention of the Senate. It is a mere matter of detail, fixing the age limit at which the officers may enter the service. But I do desire to say a few words upon the general frame of the bill.

"Mr. President, for the first time in the history of the country has a serious and urgent amendment been made by the executive branch of the Government to largely and permanently increase the standing army at the close of a war, and after peace has been practically declared.

"The conditions which confront us have been brought about in part by the action of Congress, which committed the Government to regulate the affairs of the people of Cuba and to use the great power of this Government to free that people. But the serious trouble—the one that gives us the greatest concern—has been forced upon us by the executive branch of the Government and the treaty-making power.

"The acquisition of the Philippine Islands has brought upon us obligations and conditions most extraordinary and alarming. I shall not discuss that question further than to say that with the Executive primarily must remain the responsibility for involving us in the serious complications with which we are now confronted. But for the questions involved in that acquisition, I do not believe there would be many advocates of a proposition to create a large standing army in this country.

"While disclaiming any part of the responsibility for these conditions, I agree that we shall make ample provision to uphold the honor and dignity of the country.

"Mr. President, I would not in any way hamper the administration in the adjustment of the affairs that unfortunately confront us. I desire to act toward the administration in the same manner that I did when the declaration of war against Spain was made. We then voted, with great unanimity, all the money and all the men the Executive desired or could use, the only condition being that when peace should be declared the officers and enlisted men of the army and navy should be reduced to a peace footing.

"Now that the war has closed, recognizing there is an insurrection in the Philippine Islands and that a small military force is necessary in Cuba and Puerto Rico, we say we are prepared to vote all the money and make provision for all the men that the President of the United States may require to pacify those islands. But in doing so there must be a limit as to the time for which the army shall be so increased; that it shall be temporary and only for the purpose indicated.

"The attempt to force through Congress, in the closing hours of a busy session, a measure for the partial reorganization of the standing army and a measure which provides for a large increase in that army, is unwise, for the reason that it can not be fairly or accurately framed, and there is no time to consider the details of such an important matter. Mr. President, the executive branch of the Government ought not to ask Congress to grant him greater power than was given him when the declaration of war with Spain was made, and Congress ought not to grant, no matter how insistent the Executive may be, a large increase of the regular army in time of peace.

"Mr. President, the pending bill providing for a large increase of the standing army and a temporary force amounting altogether to 100,000 men can not be defended. It is no answer to say that we have a revolution in the Philippine Islands; that there is some threatened disorder in Cuba, and unrest, if you please, in Puerto Rico. That does not justify the demand for a standing army when we say to you that we will give you all the men that the commander in chief of the army may think necessary to suppress the rebellion in the Philippine Islands or to maintain peace in Cuba and Puerto Rico, and that when those cases shall have been adjusted the army must resume its normal condition.

"That, Mr. President, is what we have always done in the case of war. We gave to the President of the United States, the commander in chief of the army, in the war with Spain, for temporary use in that war, and to last until the end of that war and until peace was declared, all the men and money he required. There was no permanent increase of the standing army, except possibly two regiments of artillery, which increase was said to be necessary on account of the additions to our fortifications.

"This, Mr. President, is all we did in the war of 1812-'14 and in the war with Mexico. Immediately upon the conclusion of peace following those wars the regular army was reduced to a peace footing. What possible reason can be given for departing from this well-settled policy of the Government at this time? There is none, absolutely none."

The measure as passed is as follows:

"Be it enacted, etc., That from and after the date of the approval of this act the army of the United States shall consist of 3 major generals, 6 brigadier generals, 10 regiments of cavalry, 7 regiments of artillery, 25 regiments of

infantry, an adjutant general's department, an inspector general's department, a judge-advocate general's department, a quartermaster's department, a subsistence department, a medical department, a pay department, a corps of engineers, an ordnance department, a signal corps, 30 chaplains, to be assigned to regiments or posts in the discretion of the Secretary of War, the officers of the Record and Pension Office, the officers and enlisted men of the army on the retired list, the professors' corps of cadets, an army-service detachment and band at the United States Military Academy, and such other officers and enlisted men as may hereinafter be provided for: *Provided*, That when a vacancy shall occur through death, retirement, or other separation from active service in the office of storekeeper in the quartermaster's department and ordnance department respectively, now provided for by law, said offices shall cease to exist.

"SEC. 2. That each regiment of cavalry shall consist of 1 colonel, 1 lieutenant colonel, 3 majors, 14 captains, 2 of whom shall be available for detail as adjutant and quartermaster; 16 first lieutenants, of whom 1 shall be available for detail as commissary and 3 for detail as squadron adjutants; 12 second lieutenants, 2 veterinarians, 1 sergeant major, 1 quartermaster sergeant, 1 commissary sergeant, who shall have the rank, pay, and allowances of a regimental quartermaster sergeant of cavalry; 3 squadron sergeant majors, who shall be senior to and have the pay and allowances of first sergeants of cavalry; 1 band, and 12 troops organized into 3 squadrons of 4 troops each: *Provided*, That nothing herein contained shall be construed as abolishing the office of chaplain in each regiment of colored cavalry. Each cavalry band shall consist of 1 chief musician, 1 chief trumpeter, 1 principal musician, 1 drum major, who shall have the rank, pay, and allowances of a first sergeant; 4 sergeants, 8 corporals, 1 cook, and 11 privates. Each troop of cavalry shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 quartermaster sergeant, who shall have the rank, pay, and allowances of a sergeant; 6 sergeants, 6 corporals, 2 cooks, 2 farriers and blacksmiths, 1 saddler, 1 wagoner, 2 trumpeters, and 43 privates. Of the veterinarians provided for in this act, 1 shall have the pay and allowances of a second lieutenant of cavalry, and 1 shall have the pay of \$75 per month and the allowances of a sergeant major: *Provided*, That the veterinarian appointed to the first grade shall not be so appointed until he shall have passed an examination, to be prescribed by the Secretary of War, as to his physical, moral, and professional qualifications: *Provided further*, That the veterinarians now in the service who do not pass such competitive examination shall be eligible to the positions of the second class under such rules as are now prescribed by the regulations. The regimental sergeant major and the regimental quartermaster sergeant provided for in this section shall have the pay and allowances of ordnance sergeants.

"SEC. 3. That each regiment of artillery shall consist of 1 colonel, 1 lieutenant colonel, 3 majors, 16 captains, 2 of whom shall be available for detail as adjutant and quartermaster; 16 first lieutenants, 14 second lieutenants, 1 sergeant major, 1 quartermaster sergeant, 1 band, and 14 batteries, of which 2 may be organized as field artillery.

"Each artillery band shall consist of 1 chief musician, 1 chief trumpeter, 1 principal musician, 1 drum major, who shall have the rank, pay,

and allowances of a first sergeant; 4 sergeants, 8 corporals, 1 cook, and 11 privates.

"Each battery of heavy artillery shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 quartermaster sergeant, who shall have the pay and allowances of a sergeant; 8 sergeants, 12 corporals, 2 musicians, 2 mechanics, who shall have the pay and allowances of sergeants of artillery; 2 cooks, and 52 privates.

"Each battery of field artillery shall consist of 1 captain, 2 first lieutenants, 1 second lieutenant, 1 first sergeant, 1 stable sergeant, 1 quartermaster sergeant, 6 sergeants, 12 corporals, 4 artificers, 2 musicians, 2 cooks, and 51 privates.

"In addition to the enlisted men specified there shall be 1 electrician sergeant to each post garrisoned by coast artillery having electrical appliances, who shall have the pay and allowances of an ordnance sergeant.

"SEC. 4. That each regiment of infantry shall consist of 1 colonel, 1 lieutenant colonel, 3 majors, 14 captains, 2 of whom shall be available for detail as adjutant and quartermaster; 16 first lieutenants, of whom 1 shall be available for detail as commissary and 3 for detail as battalion adjutants; 12 second lieutenants, 1 sergeant major, 1 quartermaster sergeant, 1 commissary sergeant, who shall have the rank, pay, and allowances of a regimental quartermaster sergeant of infantry; 3 battalion sergeant majors, who shall be senior to and have the pay and allowances of a first sergeant; 1 band, and 12 companies, organized into 3 battalions of 4 companies each: *Provided*, That nothing herein contained shall be construed as abolishing the office of chaplain in each regiment of colored infantry.

"Each infantry band shall consist of 1 chief musician, 1 principal musician, 1 drum major, who shall have the rank, pay, and allowances of a first sergeant; 4 sergeants, 8 corporals, 1 cook, and 12 privates.

"Each infantry company shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 quartermaster sergeant, who shall have the pay and allowances of a sergeant; 4 sergeants, 6 corporals, 2 cooks, 2 musicians, 1 artificer, and 48 privates: *Provided*, That the limits of age for original enlistments in the army shall be eighteen and thirty-five years.

"SEC. 5. That all vacancies created or caused by the provisions of this act above the grade of second lieutenant in the line of the army shall be filled by promotion according to seniority in the several arms, subject to the examinations now prescribed by law: *Provided*, That the additional second lieutenants now attached to each regiment of artillery shall be absorbed in the artillery or transferred to other arms where vacancies exist without loss of relative rank, leaving but 1 second lieutenant in each battery.

"Vacancies in the grade of second lieutenant shall be filled as now provided by law, except that no person shall be appointed from civil life before he shall have reached the age of twenty-one years nor after he shall have reached the age of twenty-seven years, nor until he shall have passed a satisfactory examination as to his moral, physical, and educational qualifications.

"SEC. 6. That the adjutant general's and inspector general's departments shall consist of the number of officers now in those departments, respectively: *Provided*, That vacancies in the grade of major occurring in either department shall hereafter be filled from captains in the line of the army: *And provided further*, That all such captains who have evinced marked aptitude in

the command of troops shall be reported by their regimental commanders to the War Department, and shall be entitled to compete for any such vacancy under such system of examination as the President shall prescribe.

"SEC. 7. That the judge-advocate general's department, quartermaster's department, subsistence department, medical department, pay department, Corps of Engineers, ordnance department, and Signal Corps shall consist of the officers and enlisted men now provided by law: *Provided*, That the battalion of engineers, and the officers serving therewith, shall constitute a part of the line of the army: *Provided further*, That in time of war retired officers of the army may, in the discretion of the President, be employed on active duty, other than in the command of troops, and when so employed they shall receive the full pay and allowances of their grades: *And provided also*, That no person in civil life shall hereafter be appointed a judge advocate, paymaster, or chaplain until he shall have passed satisfactorily such examination as to his moral, mental, and physical qualifications as may be prescribed by the President; and no such person shall be appointed who is more than forty-four years of age: *Provided further*, That in case of the appointment of an officer who has served in a similar capacity during the war with Spain and has demonstrated his moral, mental, and physical qualifications for the position, then such examination shall not be required.

"SEC. 8. That the chief of the Record and Pension Office of the War Department shall hereafter have the rank, pay, and allowances of a brigadier general, and there shall be an assistant chief of said office, who shall have the rank, pay, and allowances of a major and who may be appointed from civil life: *Provided*, That whenever a vacancy shall occur in the office of chief of the Record and Pension Office subsequent to the passage of this act said grade shall cease and determine, and thereafter the chief of said office shall have the rank, pay, and allowances of a colonel.

"SEC. 9. That the cooks authorized by this act shall have the pay and allowances of sergeants of infantry.

"SEC. 10. That the corps of cadets shall consist of 1 from each congressional district, 1 from each Territory, 1 from the District of Columbia, and 20 from the United States at large. They shall be appointed by the President, and shall, with the exception of the 20 cadets appointed at large, be actual residents of the congressional or Territorial districts, or of the District of Columbia, or of the States, respectively, from which they purport to be appointed.

"SEC. 11. That so much of the acts approved July 7, 1898, as authorizes the assignment of certain officers of the quartermaster's and subsistence departments with increased rank, and the continuance in service of certain volunteer officers of those departments for a period of one year after the close of the present war is repealed.

"SEC. 12. That to meet the present exigencies of the military service the President is hereby authorized to maintain the regular army at a strength of not exceeding 65,000 enlisted men, to be distributed among the several branches of the service, including the Signal Corps, according to the needs of each, and raise a force of not more than 35,000 volunteers to be recruited as he may determine from the country at large, or from the localities where their services are needed, without restriction as to citizenship or educational qualifications, and to organize the same into not more

than 27 regiments organized as are infantry regiments of war strength in the regular army, and 3 regiments to be composed of men of special qualifications in horsemanship and marksmanship, to be organized as cavalry for service mounted or dismounted: *Provided*, That each regiment shall have 1 surgeon, with the rank of major; 2 assistant surgeons, 1 of whom shall have the rank of captain and 1 that of first lieutenant; and 3 hospital stewards: *Provided further*, That such increased regular and volunteer force shall continue in service only during the necessity therefor, and not later than July 1, 1901.

"All enlistments for the volunteer force herein authorized shall be for the term of two years and four months, unless sooner discharged.

"SEC. 13. That the President shall have power to continue in service or to appoint, by and with the advice and consent of the Senate, brigadier generals of volunteers, who, including the brigadier generals of the regular army, shall not exceed 1 for every 4,000 enlisted men actually in service, and major generals of volunteers, who, including the major generals of the regular army, shall not exceed 1 for every 12,000 enlisted men: *Provided*, That regular army officers continued or appointed as general officers or as field or staff officers of volunteers, under the provisions of this act shall not vacate their regular army commissions: *And provided further*, That no general officers appointed under the provisions of this section shall be continued in service as such beyond July 1, 1901: *And provided also*, That any officer now in the army, who was graduated at the head of his class at the United States Military Academy and who is not now in the Corps of Engineers, may be appointed to the Corps of Engineers with the same grade and date of commission that he would have if he had been appointed to the Corps of Engineers on graduation; but said commission shall not entitle an officer to any back pay or allowance.

"SEC. 14. That the President is hereby authorized to continue in service, or to appoint by and with the advice and consent of the Senate, officers of the volunteer staff as follows:

"Three assistant adjutant generals with the rank of lieutenant colonel, and 6 assistant adjutant generals with the rank of major.

"Three inspectors general with the rank of lieutenant colonel, and 6 inspectors general with the rank of major.

"Five judge advocates with the rank of major.

"Thirty quartermasters with the rank of major, and 40 assistant quartermasters with the rank of captain.

"Six commissaries of subsistence with the rank of major, and 12 assistant commissaries of subsistence with the rank of captain.

"Thirty-four surgeons with the rank of major.

"Thirty additional paymasters with the rank of major.

"Four signal officers with the rank of major, 9 signal officers with the rank of captain, 9 signal officers with the rank of first lieutenant, and 9 signal officers with the rank of second lieutenant.

"*Provided*, That for each regular army officer of a staff corps or department who may be retained in or appointed to a higher volunteer rank in said staff corps or department than that actually held by him in the regular establishment, there may be appointed 1 officer of volunteers of the lowest grade mentioned in this section for such staff corps or department, but no appointment shall be made which will increase the total number of officers, regular and volunteer, serving in any grade, above the number authorized

by this act: *And provided also*, That all the volunteer staff officers herein authorized to be appointed or retained in the service shall be honorably discharged on July 1, 1901, or sooner if their services are no longer required: *And provided further*, That the officers herein authorized shall be appointed by the President, by and with the advice and consent of the Senate.

"SEC. 15. That the officers and enlisted men of the volunteer army shall be mustered out of the military service of the United States and discharged as provided in the act of April 22, 1898: *Provided*, That enlisted men of volunteers who desire to remain in the military service, either in the regular army or the temporary force authorized by this act, may, if found qualified therefor, be transferred to and enlisted in such batteries, troops, or companies as may be below the maximum authorized strength, and when so transferred and enlisted shall be credited on their new enlistment with the periods of service rendered by them, respectively, as volunteers: *And provided further*, That the President is authorized to enlist temporarily in service for absolutely necessary purposes in the Philippine Islands volunteers, officers and men, individually or by organization, now in those islands and about to be discharged, provided their retention shall not extend beyond the time necessary to replace them by troops authorized to be maintained under the provisions of this act and not beyond a period of six months: *Provided, also*, That each and every provision of this act shall continue in force until July 1, 1901; and on and after that date all the general, staff, and line officers appointed to the army under this act shall be discharged and the numbers restored in each grade to those existing at the passage of this act, and the enlisted force of the line of the army shall be reduced to the number as provided for by a law prior to April 1, 1898, exclusive of such additions as have been, or may be, made under this act to the artillery, and except the cadets provided for by this act, who may be appointed prior to July 1, 1901: *And provided further*, That no officer who has been, or may be, promoted under existing law, or under the rules of seniority, shall be disturbed in his rank.

"SEC. 16. That the Secretary of War be, and he is hereby, authorized to permit enlisted men of the United States army to make allotments of their pay, under such regulations as he may prescribe, for the support of their families or relatives, for their own savings, or for other purposes, during such time as they may be absent on distant duty, or under other circumstances warranting such action.

"SEC. 17. That no officer or private soldier shall be detailed to sell intoxicating drinks, as a bartender or otherwise, in any post exchange or canteen, nor shall any other person be required or allowed to sell such liquors in any encampment or fort or on any premises used for military purposes by the United States; and the Secretary of War is hereby directed to issue such general order as may be necessary to carry the provisions of this section into full force and effect.

"SEC. 18. That all laws or parts of laws which conflict with the provisions of this act are hereby repealed."

NAVY PERSONNEL.—A measure to reorganize and increase the efficiency of the personnel of the navy and the Marine Corps of the United States was passed, after some disagreement between the two house of Congress on points of detail. It embodied the deliberate opinion of naval authorities and the policy of the department, and the

President approved the act, March 3, 1899. The following is the text of the act:

"*Be it enacted, etc.*, That the officers constituting the Engineer Corps of the navy be and are hereby transferred to the line of the navy, and shall be commissioned accordingly.

"SEC. 2. That engineer officers holding the relative rank of captain, commander, and lieutenant commander shall take rank in the line of the navy according to the dates at which they attained such relative rank. Engineer officers graduated from the Naval Academy from 1868 to 1876, both years inclusive, shall take rank in the line next after officers in the line who graduated from the Naval Academy in the same year with them: *Provided*, That when the date of a line officer's commission as captain, commander, or lieutenant commander and the date when the engineer officer attained the same relative rank of captain, commander, or lieutenant commander are the same, the engineer officer shall take rank after such line officer.

"SEC. 3. That engineer officers who completed their Naval Academy course of four years from 1878 to 1880, both inclusive, shall take rank in the line as determined by the Academic Board under the department's instructions of Dec. 1, 1897; and engineer officers who completed their Naval Academy course of four years in 1881 and 1882 shall take rank in the line as determined by the merit roll of graduating classes at the conclusion of the six years' course, June, 1883 and 1884: *Provided*, That those engineer officers who were appointed from civil life, and whose status is not fixed by section 2 of this act, shall take rank with other line officers according to the dates of their first commissions, respectively: *And provided further*, That the engineer officers who completed their Naval Academy course of four years in 1881 and 1882 shall retain among themselves the same relative standing as shown on the Navy Register at the date of the passage of this act.

"SEC. 4. That engineer officers transferred to the line who are below the rank of commander, and extending down to, but not including, the first engineer who entered the Naval Academy as cadet midshipman, shall perform sea or shore duty, and such duty shall be such as is performed by engineers in the navy: *Provided*, That any officer described in this section may, upon his own application, made within six months after the passage of this act, be assigned to the general duties of the line, if he pass the examination now provided by law as preliminary to promotion to the grade he then holds, failure to pass not to displace such officer from the list of officers for sea or shore duty such as is performed by engineers in the navy.

"SEC. 5. That engineer officers transferred to the line to perform engineer duty only who rank as, or above, commander, or who subsequently attain such rank, shall perform shore duty only.

"SEC. 6. That all engineer officers not provided for in sections 4 and 5 transferred to the line shall perform the duties now performed by line officers of the same grade: *Provided*, That after a period of two years subsequent to the passage of this act they shall be required to pass the examinations now provided by law as preliminary to promotion to the grade they then hold, and subject to existing law governing examinations for promotion.

"SEC. 7. That the active list of the line of the navy, as constituted by section 1 of this act, shall be composed of 18 rear admirals, 70 captains, 112 commanders, 170 lieutenant commanders, 300 lieutenants, and not more than a total of 350

lieutenants (junior grade) and ensigns: *Provided*, That each rear admiral embraced in the 9 lower numbers of that grade shall receive the same pay and allowance as are now allowed a brigadier general in the army. Officers, after performing three years' service in the grade of ensign, shall, after passing the examinations now required by law, be eligible to promotion to the grade of lieutenant (junior grade): *Provided*, That when the office of chief of bureau is filled by an officer below the rank of rear admiral, said officer shall, while holding said office, have the rank of rear admiral and receive the same pay and allowance as are now allowed a brigadier general in the army: *And provided further*, That nothing contained in this section shall be construed to prevent the retirement of officers who now have the rank or relative rank of commodore with the rank and pay of that grade: *And provided further*, That all sections of the Revised Statutes which, in defining the rank of officers or positions in the navy, contain the words 'the relative rank of' are hereby amended so as to read 'the rank of,' but officers whose rank is so defined shall not be entitled, in virtue of their rank, to command in the line or in other staff corps. Neither shall this act be construed as changing the titles of officers in the staff corps of the navy. No appointments shall be made of civil engineers in the navy on the active list under section 1413 of the Revised Statutes in excess of the present number—21.

"SEC. 8. That officers of the line in the grades of captain, commander, and lieutenant commander may, by official application to the Secretary of the Navy, have their names placed on a list which shall be known as the list of 'applicants for voluntary retirement,' and when at the end of any fiscal year the average vacancies for the fiscal years subsequent to the passage of this act above the grade of commander have been less than 13, above the grade of lieutenant commander less than 20, above the grade of lieutenant less than 29, and above the grade of lieutenant (junior grade) less than 40, the President may, in the order of the rank of the applicants, place a sufficient number on the retired list with the rank and three fourths the sea pay of the next higher grade, as now existing, including the grade of commodore, to cause the aforesaid vacancies for the fiscal year then being considered.

"SEC. 9. That should it be found at the end of any fiscal year that the retirements pursuant to the provisions of law now in force, the voluntary retirements provided for in this act, and casualties are not sufficient to cause the average vacancies enumerated in section 8 of this act, the Secretary of the Navy shall, on or about the first day of June, convene a board of 5 rear admirals, and shall place at its disposal the service and medical records on file in the Navy Department of all the officers in the grades of captain, commander, lieutenant commander, and lieutenant. The board shall then select, as soon as practicable after the first day of July, a sufficient number of officers from the before-mentioned grades, as constituted on the thirtieth day of June of that year, to cause the average vacancies enumerated in section 8 of this act. Each member of said board shall swear, or affirm, that he will, without prejudice or partiality, and having in view solely the special fitness of officers and the efficiency of the naval service, perform the duties imposed upon him by this act. Its finding, which shall be in writing, signed by all the members, not less than four governing, shall be transmitted to the President, who shall thereupon, by order, make the transfers of such officers to the retired list as are

selected by the board: *Provided*, That not more than 5 captains, 4 commanders, 4 lieutenant commanders, and 2 lieutenants are so retired in any one year. The promotions to fill the vacancies thus created shall date from the thirtieth day of June of the current year: *And provided further*, That any officer retired under the provisions of this section shall be retired with the rank and three fourths the sea pay of the next higher grade, including the grade of commodore, which is retained on the retired list for this purpose.

"SEC. 10. That of the naval constructors 5 shall have the rank of captain, 5 of commander, and all others that of lieutenant commander or lieutenant. Assistant naval constructors shall have the rank of lieutenant or lieutenant (junior grade). Assistant naval constructors shall be promoted to the grade of naval constructor after not less than eight or more than fourteen years' service as assistant naval constructor: *Provided*, That the whole number of naval constructors and assistant naval constructors on the active list shall not exceed 40 in all.

"SEC. 11. That any officer of the navy, with a creditable record, who served during the civil war, shall, when retired, be retired with the rank and three fourths the sea pay of the next higher grade.

"SEC. 12. That boatswains, gunners, carpenters, and sailmakers shall after ten years from date of warrant be commissioned chief boatswains, chief gunners, chief carpenters, and chief sailmakers, to rank with but after ensign: *Provided*, That the chief boatswains, chief gunners, chief carpenters, and chief sailmakers shall on promotion have the same pay and allowances as are now allowed a second lieutenant in the Marine Corps: *Provided*, That the pay of boatswains, gunners, carpenters, and sailmakers shall be the same as that now allowed by law: *Provided further*, That nothing in this act shall give additional rights to quarters on board ship or to command, and that immediately after the passage of this act boatswains, gunners, carpenters, and sailmakers, who have served in the navy as such for fifteen years, shall be commissioned in accordance with the provisions of this section, and thereafter no warrant officer shall be promoted until he shall have passed an examination before a board of chief boatswains, chief gunners, chief carpenters, and chief sailmakers, in accordance with regulations prescribed by the Secretary of the Navy.

"SEC. 13. That, after June 30, 1899, commissioned officers of the line of the navy and of the Medical and Pay Corps shall receive the same pay and allowances, except forage, as are or may be provided by or in pursuance of law for the officers of corresponding rank in the army: *Provided*, That such officers when on shore shall receive the allowances, but 15 per cent. less pay than when on sea duty; but this provision shall not apply to warrant officers commissioned under section 12 of this act: *Provided further*, That when naval officers are detailed for shore duty beyond seas they shall receive the same pay and allowances as are or may be provided by or in pursuance of law for officers of the army detailed for duty in similar places: *Provided further*, That naval chaplains, who do not possess relative rank, shall have the rank of lieutenant in the navy; and that all officers, including warrant officers, who have been or may be appointed to the navy from civil life shall, on the date of appointment, be credited, for computing their pay, with five years' service. And all provisions of law authorizing the distribution among captors of the whole or any portion of the proceeds of ves-

sels, or any property hereafter captured, condemned as prize, or providing for the payment of bounty for the sinking or destruction of vessels of the enemy hereafter occurring in time of war, are hereby repealed: *And provided further*, That no provision of this act shall operate to reduce the present pay of any commissioned officer now in the navy; and in any case in which the pay of such an officer would otherwise be reduced he shall continue to receive pay according to existing law: *And provided further*, That nothing in this act shall operate to increase or reduce the pay of any officer now on the retired list of the navy.

"SEC. 14. That upon the passage of this act the Secretary of the Navy shall appoint a board for the examination of men for the position of warrant machinists, 100 of whom are hereby authorized. The said examination shall be open, first, to all machinists by trade, of good record in the naval service, and if a sufficient number of machinists from the navy are not found duly qualified, then any machinist of good character, not above thirty years of age, in civil life shall be eligible for such examination and appointment to fill the remaining vacancies. All subsequent vacancies in the list of warrant machinists shall be filled by competitive examination before a board ordered by the Secretary of the Navy, and open to all machinists by trade who are in the navy, and machinists of good character, not above thirty years of age, in civil life authorized by the Secretary of the Navy to appear before said board, and, where candidates from civil life and from the naval service possess equal qualifications, the preference shall be given to those from the naval service.

"SEC. 15. That the pay of warrant machinists shall be the same as that of warrant officers, and they shall be retired under the provisions of existing law for warrant officers. Warrant machinists shall receive at first an acting appointment, which may be made permanent under regulations established by the Navy Department for other warrant officers. They shall take rank with other warrant officers according to date of appointment, and shall wear such uniform as may be prescribed by the Navy Department.

"SEC. 16. That hereafter the term of enlistment of all enlisted men of the navy shall be four years: *Provided*, That section 1573, Revised Statutes, be amended to read: 'If any enlisted man or apprentice, being honorably discharged, shall re-enlist for four years within four months thereafter, he shall, on presenting his honorable discharge or on accounting in a satisfactory manner for its loss, be entitled to pay during the said four months equal to that to which he would have been entitled if he had been employed in actual service; and that any man who has received an honorable discharge from his last term of enlistment, or who has received a recommendation for re-enlistment upon the expiration of his last term of service of not less than three years, who re-enlists for a term of four years within four months from the date of his discharge, shall receive an increase of \$1.36 per month to the pay prescribed for the rating in which he serves for each consecutive re-enlistment.'

"SEC. 17. That when an enlisted man or appointed petty officer has served as such thirty years in the United States navy, either as an enlisted man or petty officer, or both, he shall, by making application to the President, be placed on the retired list hereby created, with the rank held by him at the date of retirement; and he shall thereafter receive 75 per cent. of the pay and

allowances of the rank or rating upon which he was retired: *Provided*, That if said enlisted man or appointed petty officer had active service in the navy or in the army or Marine Corps, either as volunteer or regular, during the civil or Spanish-American War, such war service shall be computed as double time in computing the thirty years necessary to entitle him to be retired: *And provided further*, That applicants for retirement under this section shall, unless physically disqualified for service, be at least fifty years of age.

"SEC. 18. That from and after the date of the approval of this act the active list of the line officers of the United States Marine Corps shall consist of 1 brigadier general commandant, 5 colonels, 5 lieutenant colonels, 10 majors, 60 captains, 60 first lieutenants, and 60 second lieutenants: *Provided*, That vacancies in all grades in the line created by this section shall be filled as far as possible by promotion by seniority from the line officers on the active list of said corps: *And provided further*, That the commissions of officers now in the Marine Corps shall not be vacated by this act: *And provided further*, That vacancies in the grade of brigadier general shall be filled by selection from officers on the active list of the Marine Corps not below the grade of field officer.

"SEC. 19. That the vacancies existing in said corps after the promotions and appointments herein provided for shall be filled by the President from time to time, whenever the actual needs of the naval service require it, first, from the graduates of the Naval Academy in the manner now provided by law; or, second, from those who are serving or who have served as second lieutenants in the Marine Corps during the war with Spain; or, third, from meritorious noncommissioned officers of the Marine Corps; or, fourth, from civil life: *Provided*, That after said vacancies are once filled there shall be no further appointments from civil life.

"SEC. 20. That no person except such officers or former graduates of the Naval Academy as have served in the war with Spain, as hereinbefore provided for, shall be appointed a commissioned officer in the Marine Corps who is under twenty or over thirty years of age; and that no person shall be appointed a commissioned officer in said corps until he shall have passed such examination as may be prescribed by the President of the United States, except graduates of the Naval Academy, as above provided. That the officers of the Marine Corps above the grade of captain, except brigadier general, shall, before being promoted, be subject to such physical, mental, and moral examination as is now, or may hereafter be, prescribed by law for other officers of the Marine Corps.

"SEC. 21. That upon the passage of this act not more than 45 of the captains, 45 first lieutenants, and 45 second lieutenants herein provided for shall be appointed; 15 captains, 15 first lieutenants, and 15 second lieutenants to be appointed subsequently to Jan. 1, 1900.

"SEC. 22. That the staff of the Marine Corps shall consist of 1 adjutant and inspector, 1 quartermaster and 1 paymaster, each with the rank of colonel; 1 assistant adjutant and inspector, 2 assistant quartermasters and 1 assistant paymaster, each with the rank of major; and 3 assistant quartermasters with the rank of captain. That the vacancies created by this act in the departments of the adjutant and inspector and paymaster shall be filled first by promotion according to seniority of the officers in each of these

departments respectively, and then by selection from the line officers on the active list of the Marine Corps not below the grade of captain, and who shall have seen not less than ten years' service in the Marine Corps. That the vacancies created by this act in the quartermaster's department of said corps shall be filled, first, by promotion according to seniority of the officers in this department, and then by selection from the line officers on the active list of said corps not below the grade of first lieutenant: *Provided*, That all vacancies hereafter occurring in the staff of the Marine Corps shall be filled first by promotion according to seniority of the officers in their respective departments, and then by selection from officers of the line on the active list, as hereinbefore provided for.

"SEC. 23. That the enlisted force of the Marine Corps shall consist of 5 sergeant majors, 1 drum major, 20 quartermaster sergeants, 72 gunnery sergeants, with the rank and allowance of the first sergeant, and whose pay shall be \$35 per month; 60 first sergeants, 240 sergeants, 480 corporals, 80 drummers, 80 trumpeters, and 4,962 privates.

"SEC. 24. That the band of the United States Marine Corps shall consist of 1 leader, with the pay and allowances of a first lieutenant; 1 second leader, whose pay shall be \$75 per month, and who shall have the allowances of a sergeant major; 30 first-class musicians, whose pay shall be \$60 per month; and 30 second-class musicians, whose pay shall be \$50 per month and the allowances of a sergeant; such musicians of the band to have no increased pay for length of service.

"SEC. 25. That the oath of allegiance now provided for the officers and men of the army and Marine Corps shall be administered hereafter to the officers and men of the navy.

"SEC. 26. That all acts and parts of acts, so far as they conflict with the provisions of this act, are hereby repealed."

The Census.—An act to provide for taking the twelfth and subsequent censuses was passed by the Congress, and approved by the President, March 3, 1899. There was little difference in the bills prepared and passed by each house, except in matters of detail, and a conference report resulted in a compromise. The House of Representatives provided for an independent census bureau; the act makes it a bureau in the Interior Department. The House bill provided for the direct appointment of 300 enumerators; the act required the advice and consent of the Senate. The text of the measure is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a census of the population, of deaths, and of the manufacturing, mechanical, and agricultural products of the United States shall be taken in the year 1900, and once every ten years thereafter.

"SEC. 2. That there shall be established in the Department of the Interior a Census Office, the chief officer of which shall be denominated the director of the census. It shall be his duty to superintend and direct the taking of the twelfth census of the United States, in accordance with the laws relating thereto, and to perform such other duties as may be required of him by law. The director of the census shall be appointed, as soon as practicable after the passage of this act, by the President, by and with the advice and consent of the Senate, and shall receive an annual salary of \$6,000; and there shall also be an assistant director of the census, to be appointed in like manner, who shall be an experienced practical

statistician, and shall receive an annual salary of \$4,000: *Provided*, That nothing herein contained shall be construed to establish a census bureau permanent beyond the twelfth census.

"SEC. 3. That during the absence of the director of the census, or when the office of director shall become vacant, the assistant director shall perform the duties of the director.

"SEC. 4. That there shall also be in the Census Office, to be appointed by the director thereof in the manner hereinafter specified, 5 chief statisticians, who shall be persons of known and tried experience in statistical work, at an annual salary of \$3,000 each; a chief clerk, 1 disbursing clerk, and 1 geographer, at an annual salary of \$2,500 each; 5 expert chiefs of division and 2 stenographers, at an annual salary of \$2,000 each; 10 clerks of class four, 15 clerks of class three, 20 clerks of class two, and such number of clerks of class one, and of clerks, copyists, computers, and skilled laborers, with salaries at the rate of not less than \$600 nor more than \$1,000 per annum, to be appointed from time to time, as may be found necessary for the proper and prompt performance of the duties herein required to be undertaken. The disbursing clerk herein provided for shall, before entering upon his duties, give bond to the Secretary of the Treasury in the sum of \$50,000, which bond shall be conditioned that the said officer shall render a true and faithful account to the proper accounting officers of the Treasury, quarterly, of all moneys and properties which shall be received by him by virtue of his office, with sureties to be approved by the solicitor of the Treasury. Such bond shall be filed in the office of the Secretary of the Treasury, to be by him put in suit upon any breach of the conditions thereof.

"The director of the census may also appoint 1 captain of the watch, at a salary of \$840 per annum; 2 messengers, and such number of watchmen, assistant messengers, and laborers, at salaries of \$600 each per annum; messenger boys, at salaries of \$400 each per annum; and charwomen, at salaries of \$240 each per annum, as may be necessary to carry out the provisions of this act.

"SEC. 5. That the chief clerk and the chief statisticians provided for in section 4 of this act, and all other employees authorized by this act below the assistant director of the census, shall be appointed by the director of the census, subject to such examination as said director may prescribe: *Provided*, That no examination shall be required in the case of enumerators or special agents, nor of employees below the grade of skilled laborers at \$600 per annum: *And provided further*, That employees in existing branches of the departmental service, whose services may be specially desired by the director of the census, not exceeding 6 in all, may be transferred without examination, and at the end of such service the employees so transferred shall be eligible to appointment in any department without additional examination, when vacancies exist.

"SEC. 6. That the collection of the information required by this act shall be made, under the direction of the director of the census, by supervisors, enumerators, and special agents, as hereinafter provided.

"SEC. 7. That the twelfth census shall be restricted to inquiries relating to the population, to mortality, to the products of agriculture and of manufacturing and mechanical establishments. The schedules relating to the population shall comprehend for each inhabitant the name, age, color, sex, conjugal condition, place of birth, and

place of birth of parents, whether alien or naturalized, number of years in the United States, occupation, months unemployed, literacy, school attendance, and ownership of farms and homes; and the director of the census may use his discretion as to the construction and form and number of inquiries necessary to secure information under the topics aforesaid. The mortality schedules shall comprehend for each decedent the name, sex, color, age, conjugal condition, place of birth, and birthplace of parents, occupation, cause and date of death, and, if born within the census year, the date of birth. The form and arrangement of the schedule and the specific questions necessary to secure the information required shall be in the discretion of the director. The schedules relating to agriculture shall comprehend the following topics: Name of occupant of each farm, color of occupant, tenure, acreage, value of farm and improvements, acreage of different products, quantity and value of products, and number and value of live stock. All questions as to quantity and value of crops shall relate to the year ending Dec. 31 next preceding the enumeration. The specific form and division of inquiries necessary to secure information under the foregoing topics shall be in the discretion of the director of the census. The schedules of inquiries relating to the products of manufacturing and mechanical establishments shall embrace the name and location of each establishment; character of organization, whether individual, co-operative, or other form; date of commencement of operations; character of business or kind of goods manufactured; amount of capital invested; number of proprietors, firm members, copartners, or officers, and the amount of their salaries; number of employees, and the amount of their wages; quantity and cost of materials used in manufactures; amount of miscellaneous expenses; quantity and value of products; time in operation during the census year; character and quantity of power used, and character and number of machines employed. The form and subdivision of inquiries necessary to secure the information under the foregoing topics relating to manufacturing and mechanical industries shall be in the discretion of the director of the census. The information collected shall be of and for the fiscal year of such corporations or establishments having its termination nearest to and preceding the 1st of June, 1900. Whenever he shall deem it expedient, the director of the census may withhold the schedules for said manufacturing and mechanical statistics from the enumerators of the several subdivisions in any or all cases, and may charge the collection of these statistics upon special agents, to be employed without respect to locality. In cities or States where an official registration of deaths is maintained the director of the census may, in his discretion, withhold the mortality schedule from the several enumerators within such cities or States, and may obtain the information required by this act through official records, paying therefor such sum of money as may be found necessary, not exceeding two cents for each death thus returned. The director of the census is also authorized and directed to make suitable provisions for the enumeration of the population and products of Alaska and the Hawaiian Islands, for which purpose he may employ supervisors and enumerators or special agents as he may deem necessary. The only volumes that shall be prepared and published in connection with the twelfth census, except the special reports hereinafter provided for, shall relate to population, mortality and vital statistics, the

products of agriculture, and of manufacturing and mechanical establishments, as above mentioned, and shall be designated as and constitute the census reports, which said reports shall be published not later than the first day of July, 1902. The report upon population shall include a series of separate tables for each State, giving by counties the number of male persons below and above the age of twenty-one years, their color, whether native or foreign born, whether naturalized or not, and their literacy or illiteracy. All terms expressing weight, measure, distance, or value shall be expressed in the terms of the English language as spoken in this country.

"SEC. 8. That after the completion and return of the enumeration and of the work upon the schedules relating to the products of agriculture and to manufacturing and mechanical establishments provided for in section 7 of this act, the director of the census is hereby authorized to collect statistics relating to special classes, including the insane, feeble-minded, deaf, dumb, and blind; to crime, pauperism, and benevolence, including prisoners, paupers, juvenile delinquents, and inmates of benevolent and reformatory institutions; to deaths and births in registration areas; to social statistics of cities; to public indebtedness, valuation, taxation, and expenditures; to religious bodies; to electric light and power, telephone and telegraph business; to transportation by water, express business, and street railways; to mines, mining and minerals, and the production and value thereof, including gold, in divisions of placer and vein, and silver mines, and the number of men employed, the average daily wage, average working time, and aggregate earnings in the various branches and aforesaid divisions of the mining industry: *Provided*, That the reports herein authorized relating to mines, mining, and minerals shall be published on or before July 1, 1903 A.D. And the director of the census shall prepare schedules containing such interrogatories as shall in his judgment be best adapted to elicit the information required under these subjects, with such specifications, divisions, and particulars under each head as he shall deem necessary to that end. For the purpose of securing the statistics required by this section, the director of the census may appoint special agents when necessary, and such special agents shall receive compensation as hereinafter provided. The statistics of deaths and births provided for in this section shall be obtained from, and restricted to, the registration records of such States and municipalities as possess records affording satisfactory data in necessary detail, in the discretion of the director, the compensation for the transcription of which shall not exceed two cents for each birth or death reported. The statistics of special classes, and of crime, pauperism, and benevolence specified in this section shall be restricted to institutions containing such classes: *Provided*, That at the time of the census enumeration the data relating to these classes may, in the discretion of the director of the census, be collected by the enumerators of such institutions, who shall receive compensation therefor at rates not exceeding, in per capita districts, five cents for each name enumerated and returned. The collection of statistics authorized by this section shall be made at such time or times and in such manner as will not interfere with nor delay the rapid completion of the census reports provided for in section 7 of this act, and all reports prepared under the provisions of this section shall be designated as 'special reports of the Census Office.'

"SEC. 9. That the director of the census shall, at least six months prior to the date fixed for commencing the enumeration at the twelfth and each succeeding decennial census, designate the number, whether one or more, of supervisors of census to be appointed within each State and Territory, the District of Columbia, Alaska, and the Hawaiian Islands, who shall be appointed by the President, by and with the advice and consent of the Senate: *Provided*, That the whole number of such supervisors shall not exceed 300: *And provided further*, That wherever practicable and desirable the boundaries of the supervisors' districts shall conform to the boundaries of congressional districts.

"SEC. 10. That each supervisor of census shall be charged with the performance, within his own district, of the following duties: To consult with the director of the census in regard to the division of his district into subdivisions most convenient for the purpose of the enumeration, which subdivisions shall be declared and the boundaries thereof fixed by the director of the census; to designate to the director suitable persons, and, with the consent of said director, to employ such persons as enumerators within his district, one or more for each subdivision and resident therein; but in case it shall occur in any enumeration district that no person qualified to perform and willing to undertake the duties of enumerator resides in that subdivision the supervisor may employ any fit person to be the enumerator of that subdivision; to communicate to enumerators the necessary instructions and directions relating to their duties; to examine and scrutinize the returns of the enumerators, and in event of discrepancies or deficiencies appearing in the returns for his district, to use all diligence in causing the same to be corrected and supplied; to forward to the director of the census the completed returns for his district in such time and manner as shall be prescribed by the said director, and to make up and forward to the director the accounts required for ascertaining the amount of compensation due to each enumerator in his district, which accounts shall be duly sworn to by the enumerator, and the same shall be certified as true and correct, if so found, by the supervisor, and said accounts so sworn to and certified shall be accepted by the said director, and payment shall be made thereon by draft in favor of each enumerator. The duties imposed upon the supervisor by this act shall be performed, in any and all particulars, in accordance with the instructions and directions of the director of the census: *Provided*, That if the supervisor of any district has not been appointed and qualified on the ninetieth day preceding the date fixed for the commencement of the enumeration, the director of the census may appoint a special agent, who shall be a resident of the same district, to perform the work of subdivision into enumeration districts: *And provided*, That any supervisor who may abandon, neglect, or improperly perform the duties required of him by this act may be removed by the director of the census, and any vacancy thus caused or otherwise occurring during the progress of the enumeration may be filled by the director of the census.

"SEC. 11. That each supervisor of census shall, upon the completion of his duties to the satisfaction of the director of the census, receive the sum of \$125, and in addition thereto, in thickly settled districts, \$1 for each thousand or majority fraction of a thousand of the population enumerated in such district, and in sparsely settled districts \$1.40 for each thousand or majority

fraction of a thousand of the population enumerated in such district; such sums to be in full compensation for all services rendered and expenses incurred by him, except that in serious emergencies arising during the progress of the enumeration in his district, or in connection with the re-enumeration of any subdivision, he may, in the discretion of the director of the census, be allowed actual and necessary traveling expenses and an allowance in lieu of subsistence not exceeding \$3 per day during his necessary absence from his usual place of residence, and that an appropriate allowance for clerk hire may be made when deemed necessary by the director of the census: *Provided*, That in the aggregate no supervisor shall be paid less than the sum of \$1,000. The designation of the compensation per thousand, as provided in this section, shall be made by the director of the census at least one month in advance of the date fixed for the commencement of the enumeration.

"SEC. 12. That each enumerator shall be charged with the collection, in his subdivision, of facts and statistics required by the population schedule, and such other schedules as the director of the census may determine shall be used by him in connection with the census, as provided in section 7 of this act. It shall be the duty of each enumerator to visit personally each dwelling house in his subdivision, and each family therein, and each individual living out of a family in any place of abode, and by inquiry made of the head of each family, or of the member thereof deemed most credible and worthy of trust, or of such individual living out of a family, to obtain each and every item of information and all particulars required by this act as of date June 1 of the year in which the enumeration shall be made. And in case no person shall be found at the usual place of abode of such family, or individual living out of a family, competent to answer the inquiries made in compliance with the requirements of this act, then it shall be lawful for the enumerator to obtain the required information, as nearly as may be practicable, from the family or families or person or persons living nearest to such place of abode; and it shall be the duty of each enumerator to forward the original schedules, duly certified, to the supervisor of census of his district as his returns under the provisions of this act; and in the event of discrepancies or deficiencies being discovered in his said returns he shall use all diligence in correcting or supplying the same. In case the subdivision assigned to any enumerator embraces all or any part of any incorporated borough, village, town, or city, and also other territory not included within the limits of such incorporated borough, village, town, or city, or either, it shall be the duty of the enumerator of such subdivision to clearly and plainly distinguish and separate, upon the population schedules, the inhabitants of all or any part of such borough, village, town, or city, as may be embraced in the subdivision assigned to such enumerator, from the inhabitants of the territory not included therein. No enumerator shall be deemed qualified to enter upon his duties until he has received from the supervisor of census of the district to which he belongs a commission, under his hand, authorizing him to perform the duties of an enumerator, and setting forth the boundaries of the subdivision within which such duties are to be performed by him.

"SEC. 13. That the subdivision assigned to any enumerator shall not exceed 4,000 inhabitants as near as may be, according to estimates based on the preceding census or other reliable informa-

tion, and the boundaries of all subdivisions shall be clearly described by civil divisions, rivers, roads, public surveys, or other easily distinguished lines: *Provided*, That enumerators may be assigned for the special enumeration of institutions, when desirable, without reference to the number of inmates.

"SEC. 14. That any supervisor of census may, with the approval of the director of the census, remove any enumerator in his district and fill the vacancy thus caused or otherwise occurring. Whenever it shall appear that any portion of the enumeration and census provided for in this act has been negligently or improperly taken, and is by reason thereof incomplete or erroneous, the director of the census may cause such incomplete and unsatisfactory enumeration and census to be amended or made anew under such methods as may, in his discretion, be practicable.

"SEC. 15. That the director of the census may authorize and direct supervisors of census to employ interpreters to assist the enumerators of their respective districts in the enumeration of persons not speaking the English language. The compensation of such interpreters shall be fixed by the director of the census in advance, and shall not exceed \$4 per day for each day actually and necessarily employed.

"SEC. 16. That the compensation of the enumerators shall be ascertained and fixed by the director of the census as follows: In subdivisions where he shall deem such allowance sufficient, an allowance of not less than 2 nor more than 3 cents for each living inhabitant and for each death reported; not less than 15 nor more than 20 cents for each farm; and not less than 20 nor more than 30 cents for each establishment of productive industry enumerated and returned may be given in full compensation for all services. For all other subdivisions per diem rates shall be fixed by the director of the census according to the difficulty of enumeration, having reference to the nature of the region to be canvassed and the density or sparseness of settlement, or other considerations pertinent thereto; but the compensation allowed to any enumerator in any such district shall not be less than \$3 nor more than \$6 per day of ten hours' actual field work each. The subdivisions to which the several rates of compensation shall apply shall be designated by the director of the census at least two weeks in advance of the enumeration. No claim for mileage or traveling expenses shall be allowed any enumerator in either class of subdivisions, except in extreme cases, and then only when authority has been previously granted by the director of the census, and the decision of the director as to the amount due any enumerator shall be final.

"SEC. 17. That the special agents appointed under the provisions of this act shall have equal authority with the enumerators in respect to the subjects committed to them under this act, and shall receive compensation at rates to be fixed by the director of the census: *Provided*, That the same shall in no case exceed \$6 per day and actual necessary traveling expenses and an allowance in lieu of subsistence not exceeding \$3 per day during their necessary absence from their usual place of residence: *And provided further*, That no pay or allowance in lieu of subsistence shall be allowed special agents when employed in the Census Office on other than the special work committed to them, and no appointments of special agents shall be made for clerical work.

"SEC. 18. That no supervisor, supervisor's clerk, enumerator, interpreter, or special agent shall

enter upon his duties until he has taken and subscribed to an oath or affirmation, to be prescribed by the director of the census; and no supervisor, supervisor's clerk, enumerator, or special agent shall be accompanied by or assisted in the performance of his duties by any person not duly appointed as an officer or employee of the Census Office, and to whom an oath or affirmation has not been duly administered. All appointees and employees provided for in this act shall be appointed or employed, and if examined, so examined, as the case may be, solely with reference to their fitness to perform the duties herein provided to be by such employee or appointee performed, and without reference to their political party affiliations.

"SEC. 19. That the enumeration of the population required by this act shall commence on the first day of June, 1900, and on the first day of June of the year in which each succeeding enumeration shall be made, and be taken as of that date. And it shall be the duty of each enumerator to complete the enumeration of his district and to prepare the returns hereinbefore required to be made, and to forward the same to the supervisor of census of his district, on or before the first day of July in such year: *Provided*, That in any city having 8,000 inhabitants or more under the preceding census the enumeration of the population shall be taken and completed within two weeks from the first day of June as aforesaid.

"SEC. 20. That if any person shall receive or secure to himself any fee, reward, or compensation as a consideration for the appointment or employment of any person as enumerator or clerk or other employee, or shall in any way receive or secure to himself any part of the compensation provided in this act for the services of any enumerator or clerk or other employee, he shall be deemed guilty of a misdemeanor, and on conviction thereof shall be fined not more than \$3,000, or be imprisoned not more than one year, or both, in the discretion of the court.

"SEC. 21. That any supervisor, supervisor's clerk, enumerator, interpreter, special agent, or other employee, who, having taken and subscribed the oath of office required by this act, shall, without justifiable cause, neglect or refuse to perform the duties enjoined on him by this act, or shall, without the authority of the director of the census, communicate to any person not authorized to receive the same any information gained by him in the performance of his duties, shall be deemed guilty of a misdemeanor, and upon conviction shall be fined not exceeding \$500; or if he shall willfully and knowingly swear or affirm falsely, he shall be deemed guilty of perjury, and upon conviction thereof shall be imprisoned not exceeding three years and be fined not exceeding \$800; or if he shall willfully and knowingly make a false certificate or a fictitious return, he shall be guilty of a misdemeanor, and upon conviction of either of the last-named offenses he shall be fined not exceeding \$5,000 and be imprisoned not exceeding two years.

"SEC. 22. That each and every person more than twenty years of age belonging to any family residing in any enumeration district or subdivision, and in case of the absence of the heads and other members of any such family, then any representative of such family, shall be, and each of them hereby is, required, if thereto requested by the director, supervisor, or enumerator, to render a true account, to the best of his or her knowledge, of every person belonging to such family in the various particulars required, and

whoever shall willfully fail or refuse to render such true account shall be guilty of a misdemeanor, and upon conviction thereof shall be fined in a sum not exceeding \$100. And every president, treasurer, secretary, director, agent, or other officer of every corporation, and every establishment of productive industry, whether conducted as a corporate body, limited liability company, or by private individuals, from which answers to any of the schedules, inquiries, or statistical interrogatories provided for by this act are herein required, who shall, if thereto requested by the director, supervisor, enumerator, or special agent, willfully neglect or refuse to give true and complete answers to any inquiries authorized by this act, or shall willfully give false information, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not exceeding \$10,000, to which may be added imprisonment for a period not exceeding one year.

"SEC. 23. That all fines and penalties imposed by this act may be enforced by indictment or information in any court of competent jurisdiction.

"SEC. 24. That the director of the census may authorize the expenditure of necessary sums for the traveling expenses of the officers and employees of the Census Office and the incidental expenses essential to the carrying out of this act, as herein provided for, and not otherwise, including the rental of sufficient quarters in the District of Columbia and the furnishing thereof and the maintenance of the printing outfit in the Census Office.

"SEC. 25. That the director of the census is hereby authorized to print and bind in the Census Office such blanks, circulars, envelopes, and other items as may be necessary; and to print, publish, and distribute from time to time bulletins and reports of the preliminary and other results of the various investigations required by this act.

"SEC. 26. That in case the director of the census deems it expedient he may contract for the use of electrical or mechanical devices for tabulating purposes: *Provided*, That in such case due notice shall be given to the public, and no system of tabulation shall be adopted until after a practical test of its merits in competition with other systems which may be offered.

"SEC. 27. That all mail matter, of whatever class, relative to the census and addressed to the Census Office, the director of the census, assistant director, chief clerk, supervisors, enumerators, or special agents, and indorsed 'Official business, Department of the Interior, Census Office,' shall be transmitted free of postage, and by registered mail if necessary, and so marked: *Provided*, That if any person shall make use of such indorsement to avoid the payment of postage or registry fee on his or her private letter, package, or other matter in the mail, the person so offending shall be guilty of a misdemeanor and subject to a fine of \$300, to be prosecuted in any court of competent jurisdiction.

"SEC. 28. That the Secretary of the Interior, on request of the director of the census, is hereby authorized to call upon any other department or office of the Government for information pertinent to the work herein provided for.

"SEC. 29. That such records, books, and files as relate to preceding censuses, and the printing-office outfit used in the eleventh census, and such furniture and property of whatever nature used at the eleventh census as may be necessary in conducting the work of the Census Office and can be spared from present uses, shall be transferred to the custody and control of the Census Office

created by this act. The said furniture and property shall be inventoried by the proper officers of the Department of the Interior when such transfer is made, and a copy of the inventory filed and preserved in the office of the Secretary of the Interior and of the director of the census.

"SEC. 30. That upon the request of the governor of any State or Territory, or the chief officer of any municipal government, the director of the census shall furnish such governor or municipal officer with a copy of so much of the population returns as will show the names, with the age, sex, color, or race, and birthplace only of all persons enumerated within the territory in the jurisdiction of such government, upon payment of the actual cost of making such copies; and the amounts so received shall be covered into the Treasury of the United States, to be placed to the credit of, and in addition to, the appropriations made for taking the census.

"SEC. 31. That the director of the census shall provide the Census Office with a seal containing such device as he may select, and he shall file a description of such seal with an impression thereof in the office of the Secretary of State. Such seal shall remain in the custody of the director of the census, and shall be affixed to all certificates and attestations that may be required from the Census Office.

"SEC. 32. That for the organization and equipment of the Census Office to perform the preparatory work necessary to carry out the provisions of this act the sum of \$1,000,000, to be available on the passage of this act, is hereby appropriated, out of any money in the Treasury not otherwise appropriated, and to continue available until exhausted. Of said appropriation such amount as may be considered by the director of the census to be necessary for immediate preliminary printing may be expended under the direction of the public printer. And the Secretary of the Interior shall submit to the Secretary of the Treasury, on or before Oct. 1, 1899, further estimates for the work herein provided for.

"SEC. 33. That the act entitled 'An Act to provide for the taking of the eleventh and subsequent censuses,' approved March 1, 1889, and all laws and parts of laws inconsistent with the provisions of this act are hereby repealed."

Expositions.—An act was passed by Congress, and approved by the President, March 3, 1899, to encourage the holding of a pan-American exposition on the Niagara frontier, within the county of Erie or Niagara, in the State of New York, in the year 1901. In the House of Representatives Mr. Alexander, of New York, said in explanation of the measure:

"Mr. Speaker, it is proposed by the people of Buffalo and western New York to hold a pan-American exposition in 1901. It is to be international in its character, but confined to the countries of North, South, and Central America. At the last session of Congress Senate concurrent resolution No. 141, approved by the President on July 8, 1898, gave encouragement to this enterprise; and based upon that encouragement and recognition by Congress the people of Buffalo and of western New York took up the matter with great energy.

"They have practically secured recognition from at least three countries of Central and South America; they have received assurances from a large number of exhibitors from Central and South America that their exhibits will be transferred after the close of the Paris Exposition to the Pan-American Exposition at Buffalo; they have received substantial assurances that

State exhibits of a most generous character will be made by Mexico and Brazil; they have received satisfactory assurances that Canada will come in force, making an exhibit representative of the wonderful resources of the large domain which lies upon the north. Upon these assurances our people have taken up the matter with so much energy that within thirty days the sum of a million and a half of dollars was raised to carry it on, a sum to be supplemented by one million more. The General Assembly of the State of New York, with the approval of Gov. Roosevelt, has added three hundred thousand more, so that there is to-day the equivalent of \$1,800,000 ready to be devoted to the purposes of this exposition.

"And now, Mr. Speaker, we come here not asking Congress for one dollar for an appropriation to carry on or to pay the expenses of this exposition. We propose to pay for that ourselves. We simply want Congress to make it possible for the United States to put up an exhibit of its own, as Brazil and Mexico have practically promised to do. We ask only that Congress shall treat us as she treated Chicago, Atlanta, New Orleans, Nashville, Omaha, and other cities in which expositions have been held; that the Government may send us a splendid exhibit, showing the magnificent growth and progress of the world's great republic during the nineteenth century.

"Mr. Speaker, the idea of this exposition had its inception when the great cataract of Niagara was successfully harnessed so that its tremendous water power could be converted into electric power. Our purpose is to demonstrate to the world, and especially to the Western Hemisphere, that Niagara Falls is not only capable of, but now is developing, a power greater than is known elsewhere in the whole world, and we desire to make this exposition a celebration of that event, surely one of the greatest that has happened in the history of the world. In such an endeavor Congress ought cheerfully and gladly to have this country participate, and by a generous appropriation to aid us in fittingly illustrating the marvelous development of the Western Hemisphere during the present century by a complete and satisfactory display of the arts, industries, and manufactures and the products of the soil, of the mines, and of the sea."

The text of the act is as follows:

"Whereas, It is desirable to encourage the holding of a pan-American exposition on the Niagara frontier, within the county of Erie or Niagara, in the State of New York, in the year 1901, to fittingly illustrate the marvelous development of the Western Hemisphere during the nineteenth century, by a display of the arts, industries, manufactures, and products of the soil, mines, and sea; and

"Whereas, The proposed pan-American exposition, being confined to the Western Hemisphere, and being held in the near vicinity of the great Niagara cataract, within a day's journey of which reside 40,000,000 people, would unquestionably be of vast benefit to the commercial interests not only of this country but of the entire hemisphere, and should therefore have the sanction of the Congress of the United States; and

"Whereas, Satisfactory assurances have already been given by the diplomatic representatives of Canada, Mexico, the Central and South American republics, and most of the States of the United States that these countries and States will make unique, interesting, and instructive exhibits peculiarly illustrative of their material progress during the century about to close; and

"Whereas, No exposition of a similar character as that proposed has ever been held in the great State of New York; and

"Whereas, The Pan-American Exposition Company has undertaken to hold such exposition, beginning on the first day of May, 1901, and closing on the first day of November, 1901; therefore,

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all articles that shall be imported from foreign countries for the sole purpose of exhibition at said exposition upon which there shall be a tariff or customs duty shall be admitted free of payment of duty, customs fees, or charges, under such regulation as the Secretary of the Treasury shall prescribe; but it shall be lawful at any time during the exposition to sell for delivery at the close thereof any goods or property imported for or actually on exhibition in the exposition buildings, or on the grounds, subject to such regulation for the security of the revenue and for the collection of import duties as the Secretary of the Treasury shall prescribe: *Provided*, That all such articles when sold or withdrawn for consumption in the United States shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of importation, and all penalties prescribed by law shall be applied and enforced against the persons who may be guilty of any illegal sale or withdrawal: *And provided further*, That all necessary expenses incurred in carrying out the provisions of this section, including salaries of customs officials in charge of imported articles, shall be paid to the Treasury of the United States by the Pan-American Exposition Company, under regulations to be prescribed by the Secretary of the Treasury.

"SEC. 2. That there shall be exhibited at said exposition by the Government of the United States, from its executive departments, the Smithsonian Institution and National Museum, the United States Commission of Fish and Fisheries, the Department of Labor, and the Bureau of the American Republics, such articles and material as illustrate the function and administrative faculty of the Government in time of peace, and its resources as a war power, and its relations to other American republics, tending to demonstrate the nature of our institutions and their adaption to the wants of the people. And to secure a complete and harmonious arrangement of such Government exhibit, a board of management shall be created, to be charged with the selection, purchase, preparation, transportation, arrangement, safe-keeping, exhibition, and return of such articles and materials as the heads of the several departments and the secretary of the Smithsonian Institution, the Commissioner of Fish and Fisheries, the Commissioner of Labor, and the director of the Bureau of the American Republics may respectively decide shall be embraced in said Government exhibit.

"The President may also designate additional articles for exhibition. Such board shall be composed of one person to be named by the head of each executive department, one by the head of the Smithsonian Institution and National Museum, one by the head of the United States Commission of Fish and Fisheries, one by the Commissioner of Labor, and one by the director of the Bureau of the American Republics. The President shall name one of said persons so detailed as chairman, and the board itself shall appoint its secretary, disbursing officer, and such other officers as it may deem necessary. The members

of said board of management, with other officers and employees of the Government who may be detailed to assist them, including officers of the army and navy, shall receive no compensation in addition to their regular salaries, but they shall be allowed their actual and necessary traveling expenses, together with a per diem in lieu of subsistence, to be fixed by the Secretary of the Treasury, while necessarily absent from their homes engaged upon the business of the board.

Officers of the army and navy shall receive this allowance in lieu of the transportation and mileage now allowed by law. Any provision of law which may prohibit the detail of persons in the employ of the United States to other service than that which they customarily perform shall not apply to persons detailed for duty in connection with the Pan-American Exposition. Employees of the board not otherwise employed by the Government shall be entitled to such compensation as the board may determine. The disbursing officer shall give bond in the sum of \$20,000 for the faithful performance of his duties, said bond to be approved by the Secretary of the Treasury. The Secretary of the Treasury shall advance to said officer from time to time, under such regulations as the Secretary of the Treasury may prescribe, a sum of money from the appropriation for the Government exhibit, not exceeding at any one time three fourths of the penalty of his bond, to enable him to pay the expenses of said exhibit as authorized by the board of management herein created.

"SEC. 3. That the Secretary of the Treasury shall cause a suitable building or buildings to be erected on the site selected for the Pan-American Exposition for the Government exhibits, from plans to be approved by the board, and he is hereby authorized and directed to contract therefor in the same manner and under the same regulations as for other public buildings of the United States; but the contract for said building or buildings shall not exceed the sum of \$200,000, said sum being hereby appropriated for said purpose, out of any money in the Treasury not otherwise appropriated. The Secretary of the Treasury is authorized and required to dispose of such building or buildings, or the material composing the same, at the close of the exposition, giving preference to the city of Buffalo or to the said Pan-American Exposition Company to purchase the same at an appraised value, to be ascertained in such manner as may be determined by the Secretary of the Treasury.

"SEC. 4. That the United States shall not be liable on account of said exposition for any expense incident to or growing out of same, except for the construction of the building or buildings hereinbefore provided for, and for the purpose of paying the expense of selection, preparation, purchase, installation, transportation, care, custody, and safe return of exhibits by the Government, for the employment of proper persons as officers and assistants by the board of management created by this act and for their expenses, and for the maintenance of the said building or buildings and other contingent expenses, to be approved by the chairman of the board of management, or, in the event of his absence or disability, by such other officer as the board may designate, and the Secretary of the Treasury upon itemized accounts and vouchers; and the total cost of said building or buildings shall not exceed the sum of \$200,000; nor shall the expenses of said Government exhibit for each and every purpose connected therewith, including transportation, exceed the sum of \$300,000, amounting in all to not

exceeding the sum of \$500,000, which sum is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$500,000, or so much thereof as may be necessary, to be disbursed by the board of management hereinbefore created, of which not exceeding the sum of \$10,000 shall be expended for clerical service: *Provided*, That no liability against the Government shall be incurred, and no expenditure of money under this act shall be made, until the officers of said exposition shall have furnished the Secretary of the Treasury proofs to his satisfaction that there has been obtained by said exposition corporation subscriptions of stock in good faith, contributions, donations, or appropriations from all sources for the purposes of said exposition a sum aggregating not less than \$500,000.

"SEC. 5. That medals, with appropriate devices, emblems, and inscriptions commemorative of said Pan-American Exposition, and of the awards to be made to the exhibitors thereat, shall be prepared at some mint of the United States for the board of directors thereof, subject to the provisions of the fifty-second section of the coinage act of 1893, upon the payment of a sum not less than the cost thereof; and all the provisions, whether penal or otherwise, of said coinage act against the counterfeiting or imitation of coins of the United States shall apply to the medals struck and issued under this act.

"SEC. 6. That the United States shall not in any manner nor under any circumstances be liable for any of the acts, doings, proceedings, or representations of said Pan-American Exposition Association, its officers, agents, servants, or employees, or any of them, or for service, salaries, labor, or wages of said officers, agents, servants, or employees, or any of them, or for any subscriptions to the capital stock, or for any certificates of stock, bonds, mortgages, or obligations of any kind issued by said corporation, or for any debts, liabilities, or expenses of any kind whatever attending such corporation, or accruing by reason of the same.

"SEC. 7. That nothing in this act shall be so construed as to create any liability of the United States, direct or indirect, for any debt or obligation incurred, nor for any claim for aid or pecuniary assistance from Congress or the Treasury of the United States in support or liquidation of any debts or obligations created by said commission in excess of appropriations made by Congress therefor.

"SEC. 8. That the appropriation herein made of \$500,000 in all shall take effect and become available immediately upon the passage of this act."

A similar act was passed and approved to encourage the holding of the Ohio Centennial and Northwest Territory Exposition at Toledo. Mr. Southard, of Ohio, said in explanation of it in the House of Representatives:

"Mr. Speaker, the idea of holding an Ohio centennial and Northwest exposition did not originate in the city of Toledo, and I do not know that it originated in the State of Ohio. For a good many years the people of the State of Ohio have been talking about some appropriate celebration of the one hundredth anniversary of its admission into the Union as a State.

"In 1802 Ohio was admitted as a State. It was the first State to be carved out of what was known as the old Northwest, or the Northwest Territory, which was, in a sense, the first public domain of the United States. When Ohio was admitted into the Union as a State she had 48,000

inhabitants. One hundred years later she will have a population one hundred times as great.

"That which may be said of the growth and development of Ohio as a State—and we all agree that a good deal may be said—can be said of each one of the other States carved out of this Northwest Territory. There are five of them—Ohio, Michigan, Indiana, Illinois, and Wisconsin—and a part of the State of Minnesota was originally included in this Northwest Territory.

"As I say, the people of Ohio have been talking about this for a good many years, and last winter the project took shape in an act of the Legislature providing for the holding of an Ohio centennial and Northwest Territory exposition in the year 1902. The Legislature determined the place at which it should be held. They selected Toledo for a number of good reasons. One is that it is located most conveniently for the people of the old Northwest. Another is that it is located upon the lakes, and has the best possible site for the holding of a great national exposition.

"The city of Toledo has already appropriated \$150,000 for the preparation of the grounds, and will be obliged to appropriate \$150,000 more, making \$300,000 for the fitting up of the grounds on which to hold this centennial exposition.

"Some of the other States, following the initiative taken by Ohio, have appointed commissions similar to that which was appointed in the State of Ohio. Indiana and, I understand, Michigan have appointed commissions similar to that appointed in Ohio, who are charged with the duty of promoting the Northwest Territory Exposition on the part of those States.

"A company known as the Ohio Centennial Company has been organized, with a capital of \$500,000, for the purpose of promoting this project. Within a very few days after this company was organized a few persons desired and offered to take all the stock. I am informed a large part of this stock has already been subscribed in small amounts, for it was thought desirable to have this stock subscribed for in small amounts rather than in large amounts, because of the greater interest which would thereby be created in the centennial. This is the course which will be pursued with reference to the stock which remains unsubscribed, as well as to any increase of the capital stock which may be made hereafter. Invitations already have been extended to all States of the Union to take part in this exposition, and many of them have responded in such a way as to lead to the belief that there is not a State in the Union that will not give some active support to this project.

"It is proposed to make this exposition international in its character, and not confine it to the United States. It will be international as well as national. It is one of the most meritorious projects which have ever been started. It will be one of the greatest expositions ever given in this country, not excepting that at Chicago, as I verily believe. The amount asked for is a very modest one, the same as that asked for in the Buffalo bill."

The following act to provide for an appropriate celebration of the establishment of the seat of government in the District of Columbia was passed and approved:

"Be it enacted, etc., The President is authorized to appoint a committee from the country at large, of such number as he shall think proper, to act with any committees that may be appointed by the two houses of Congress or either of them, and with any committee that may be appointed from the citizens of the District of Columbia, who

may prepare plans for an appropriate national celebration, in the year 1900, of the first session of Congress in the District and the establishment of the seat of Government therein. Said committee shall report their proceedings to the President, to be by him communicated to Congress.

"Sec. 2. The actual expenses of the members of said committee so appointed by the President shall be paid by the Secretary of the Treasury on vouchers to be approved by the Secretary of the Interior.

"Sec. 3. The sum of \$10,000, or so much thereof as may be necessary, is hereby appropriated, from any money in the Treasury not otherwise appropriated, to carry into effect the second section of this act."

An act was passed also providing for a national exposition of American products and manufactures, at the city of Philadelphia, for the encouragement of the export trade.

Protection of American Seamen.—In settlement of a long controversy Congress passed a code for the regulation of the merchant marine service, entitled "An Act to amend the laws relating to American seamen, for the protection of such seamen, and to promote commerce." Mr. Payne, of New York, said in explanation of the measure:

"I will state that it is designed to settle in some respects a controversy that has been going on between the owners of vessels and seamen for a number of years, and to amend the antiquated laws in reference to the government of vessels and the government of sailors at sea. Many bills have been introduced and many attempts made for years by Congress to adjust these differences. Three years ago we passed a bill which covered all the points of this bill, and I think it was a little better bill than the Senate has sent us—certainly in two or three particulars—but that bill failed because the Senate did not consider it, although they had a year in which to do so. In this Congress we asked the seamen and shipowners to go to the Senate committee and give them the benefit of their experience as they gave it to us in the last Congress, and the result is this bill, which has passed the Senate.

"I am assured by some of the Senators that this bill is the result of a compromise on the part of the vessel owners and the seamen, and that, inasmuch as they have agreed to its provisions, we have been anxious that the bill should pass the House as it came from the Senate. The bill went before the Committee on Merchant Marine and Fisheries at the last session, and that committee unanimously directed me to report the bill without amendment to the House. The bill does away in a great measure with what was called the allotment system, which allowed the sailor when he shipped to make an agreement allotting or setting aside and transferring all his wages for the payment of any debt which he might owe. The sailor, being an improvident person, will quite likely be in debt for various things which furnish no equivalent for the amount of his indebtedness; so they might set aside the whole of the wages for that voyage by reason of the allotment system.

"This bill does not do away with the system entirely, but it does away with all allotments over one month's wages. It allows an allotment of one month's wages for the payment of any valid debt for board or clothing which the sailor may have incurred not beyond the amount of one month's wages, and it is only upon such recommendations or rules as the Secretary of the Treas-

ury and Commissioner of Navigation may adopt. It allows the allotment of a sailor's wages, however, to be paid to his family, father, mother, brother, sister, or wife, as the sailor may designate, for any purpose whatever for the support of those who are dependent upon him while absent upon the voyage. These are, briefly, the provisions in regard to allotment.

"The present law allows imprisonment of the sailor who may desert, where he has shipped on a vessel; and if he does not render himself upon the vessel before the vessel sails, he is liable to imprisonment, and so on in every place where the vessel calls he is liable to imprisonment for a violation of his contract. This bill does away with all imprisonment for desertion except in one case, and that is where a vessel is in a foreign port and the sailor deserts. In that case, in the discretion of the court, he may be imprisoned not to exceed one month. I should have liked the bill better if that provision had been stricken out entirely, but hesitated to ask an amendment of the statute for fear the bill might meet the same fate that the bill met in a former Congress, because I was informed on all hands that the sailors and the vessel owners had agreed upon that, in view of some other concession. I am told that practically a seaman is seldom imprisoned because of desertion. The vessel owners claim that they want this clause retained, in order to discourage desertion in foreign ports, and the reason for that is because when a sailor deserts a vessel in a foreign port it would cause great delay in the prosecution of the voyage and great damage and disappointment to the people who are to receive the cargo, and perhaps endanger the lives of those who had shipped upon the voyage.

"Another provision has been made in the bill that compels the master, whenever there is a desertion or loss of seamen by desertion or by casualty, to ship the full complement of seamen, and seamen of the same class as those whose places he employs them to fill. So that the vessel shall never be without the full complement of sailors as was originally arranged by the shipping commissioner, an officer of the United States. The present law provides a scale of provisions which is perhaps adequate, if it is always lived up to. But the law provides that the sailor may agree in his contract of shipping to waive certain portions of the scale of provisions, or any portion of it, and accept a substitute. It is claimed, and without doubt is true, that this provision gives rise to many abuses, because the sailor, being anxious for a job and perhaps unable longer to pay his board, is often forced to make a contract which gives him an insufficient scale of provisions for the voyage, and results often in disease and sometimes in the death of the sailor.

"This bill not only provides a full scale of provisions, but it was a scale adopted after careful study and examination, on the recommendation of the surgeon general of the Navy Department and the surgeon general of the Marine Hospital, and, I believe, one other expert, and they said, after they had arranged this scale, that if it was provided for the sailors it would virtually abolish scurvy and kindred diseases.

"The bill also provides that the master shall take provisions and supply this scale for the entire voyage when he starts out. It does not leave it to the contract with the sailor; he can not be cheated out of it. It does provide that a few items may be dispensed with; but if they are, certain others must be provided equally good,

and which may be arranged by agreement, but they must have the provisions in this scale. If any member desires to examine this scale he will find a large bill of fare on page 21 of the bill. It seems to me ample and liberal. So that that abuse will be entirely abolished if this bill is passed.

"Years ago Congress passed a law saying substantially that flogging on board vessels is abolished. This bill goes farther than that. It not only abolishes flogging, but it provides a very severe and suitable punishment for the violation of the law if any master of a vessel, or the mate of a vessel, seeks to indulge in the pastime of flogging the sailor on his voyage. The law now is without penalty. This bill provides an adequate penalty for the violation of that law. There are other minor provisions in the bill, all of which go to improve the condition of the sailor and to provide for the safety of the vessel. I think that the bill as it now stands is an immense advance over the present law, and is in the direction of all the reforms that have been advocated in the last dozen years in the House.

"I am only anxious that it shall speedily become a law, and I should regret very much if the House should amend the bill, not because I am not in sympathy with some of the amendments, and not that I would not like to see it made exactly like the bill that went from the House at the last Congress, but because the fear that if amendments go into the bill, and it goes to the Senate, it will meet the fate of the bill in the last Congress, and thus these immense advantages be lost to our sailors."

Mr. Handy, of Delaware, opposed certain features of the measure, and submitted amendments which were not adopted. He said:

"Mr. Speaker, unquestionably, as the gentleman from New York has informed the House, this bill, even as it stands, would, if passed, be a vast improvement over the present law; yet there are at least two features of it which are so far from what is just and right that the House should amend the bill and send it back to the Senate for concurrence.

"One of these features the gentleman [Mr. Payne] has referred to. It is the feature that provides imprisonment of a seaman for the violation of a civil contract. The seaman enters into a contract with the master of a ship to render personal service on a voyage at sea, and then at a foreign port for some reason sufficient to the seaman, perchance because of ill treatment on the voyage, he wishes to leave.

"If he does leave he has, of course, violated his civil contract, and yet who shall say that he has committed any crime? He has simply given up his job. He has refused to continue his labor. He has quit work. If you force him to continue by fines and penalties the work he desires to leave, you reduce him to a condition of involuntary servitude. He becomes more slave than freeman. Surely such a violation of a contract for personal service in the case of any man not a seaman would be a violation to be made right by money damages. Yet this bill provides for the imprisonment of the seaman.

"The master of the ship can, as a matter of practice, get rid of his seamen at any port. He can make life so unbearable for the seamen aboard ship that they will for the sake of comfort and decency of life be only too glad to leave the ship. When the master of a ship in a foreign port wants to get rid of his crew, and thereby terminate the contract from his side, he does not as a usual thing hesitate to do it. He makes

the ship too hot to hold the crew. But if the crew want to get rid of the master, they may be arrested as deserters and put in jail.

"If the master, by evil treatment, forces the crew to desert, the law does not bring imprisonment nigh to him. He can first force them by evil treatment to desert, and then he can put them in jail because they have deserted. That is an injustice, and there is no real reason for it. It has not even the poor excuse that the crew must be held to their ship by fear of prison walls, lest if they leave their places may not be filled by shipping a new crew. In any foreign port, or in almost any foreign port, an American vessel can get a new crew just as easily as in one of our own ports.

"The sailor is a citizen of the world, and a crew can be enlisted in any port. He is a laboring man, and should be a free laboring man, not subject to imprisonment when he leaves his work. Let him do his work freely, not held to it by criminal penalties enforced by law. There may be some who would abridge the freedom of laborers and whip them to their tasks by penal statutes, but I do not fancy that any member of this House shares or tolerates such sentiments. We, I take it, prefer even sailors to be free to give or to withhold their labor, unawed by threat or fear of imprisonment.

"Mr. Speaker, I have prepared an amendment striking out of this bill those few lines which would continue in our law that old relic of the barbarism of the fore-castle, imprisoning seamen for the violation of a civil contract.

"Now, Mr. Speaker, there is another provision in this bill which should be wiped out by amendment. It is the provision for allotment, by which, under what is known as the 'crimping' system, the boarding-house keeper of the port manages to get into his hands before the sailor leaves the greater part of the wages which should come to the sailor for his labor on the voyage. Poor Jack Tar comes ashore on pleasure bent. He gets it in his own time-honored way, and is soon in a condition in which he is far from fit to transact business. The boarding-house keeper, who makes a specialty of entertaining and robbing sailors, gets after him before Jack gets sober and delivers him perchance on board a ship bound for another voyage, and Jack Tar wakes to a sober second thought after he is once more afloat on the rolling blue. He wakes to discover that for no real value received he has signed away one month of his pay.

"Perhaps he has been only one night with the boarding-house keeper; but when he awakes he is far away on the sea, and has signed away his wages for a month. The boarding-house keeper has Jack Tar's wages for a month in his pocket; Jack Tar has a month of hard and dangerous work ahead of him. The system of allotments has had its sweet way.

"This bill does, of course, limit that matter and keep it in more narrow bounds than hitherto, but it still leaves the opportunity which I have stated to the boarding-house keeper and the 'crimper' and the men whose business it is to get what they call 'blood money' from the seamen. It still says to men of this class: 'You shall be protected to the extent of one month of Jack Tar's pay.' But I suppose this is a bill of compromises, and we are asked to compromise in this bill even with those people who carry on the nefarious business of 'crimping' one month from the pay of the sailor before he leaves port."

The full text of the measure as approved, Dec. 21, 1898, is as follows:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4516 of the Revised Statutes be, and is hereby, amended so as to read as follows:

"SEC. 4516. In case of desertion or casualty resulting in the loss of one or more seamen, the master must ship, if obtainable, a number equal to the number of those whose services he has been deprived of by desertion or casualty, who must be of the same grade or rating and equally expert with those whose place or position they refill, and report the same to the United States consul at the first port at which he shall arrive, without incurring the penalty prescribed by the two preceding sections.

"SEC. 2. That section 4522 of the Revised Statutes be, and is hereby, amended so as to read as follows:

"SEC. 4522. At the foot of every such contract to ship upon such a vessel of the burden of 50 tons or upward there shall be a memorandum in writing of the day and the hour when such seaman who shipped and subscribed shall render himself on board to begin the voyage agreed upon. If any seaman shall neglect to render himself on board the vessel for which he has shipped at the time mentioned in such memorandum without giving twenty-four hours' notice of his inability to do so, and if the master of the vessel shall, on the day in which such neglect happened, make an entry in the log book of such vessel of the name of such seaman, and shall in like manner note the time that he so neglected to render himself after the time appointed, then every such seaman shall forfeit for every hour which he shall so neglect to render himself one half of one day's pay, according to the rate of wages agreed upon, to be deducted out of the wages. If any such seaman shall wholly neglect to render himself on board of such vessel, or having rendered himself on board shall afterward desert, he shall forfeit all of his wages or emoluments which he has then earned."

"SEC. 3. That section 4526 of the Revised Statutes be, and is hereby, amended so as to read as follows:

"SEC. 4526. In cases where the service of any seaman terminates before the period contemplated in the agreement, by reason of the loss or wreck of the vessel, such seaman shall be entitled to wages for the time of service prior to such termination, but not for any further period. Such seaman shall be considered as a destitute seaman, and shall be treated and transported to port of shipment as provided in sections 4577, 4578, and 4579 of the Revised Statutes of the United States."

"SEC. 4. That section 4529 of the Revised Statutes be, and is hereby, amended so as to read as follows:

"SEC. 4529. The master or owner of any vessel making coasting voyages shall pay to every seaman his wages within two days after the termination of the agreement under which he shipped, or at the time such seaman is discharged, whichever first happens; and in the case of vessels making foreign voyages, or from a port on the Atlantic to a port on the Pacific, or *vice versa*, within twenty-four hours after the cargo has been discharged, or within four days after the seaman has been discharged, whichever first happens; and in all cases the seaman shall, at the time of his discharge, be entitled to be paid, on account of wages, a sum equal to one third part of the balance due him. Every master or owner who refuses or neglects to make payment in man-

ner hereinbefore mentioned without sufficient cause shall pay to the seaman a sum equal to one day's pay for each and every day during which payment is delayed beyond the respective periods, which sum shall be recoverable as wages in any claim made before the court; but this section shall not apply to the masters or owners of any vessel the seamen on which are entitled to share in the profits of the cruise or voyage.'

"SEC. 5. That section 4530 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4530. Every seaman on a vessel of the United States shall be entitled to receive from the master of the vessel to which he belongs one half part of the wages which shall be due him at every port where such vessel, after the voyage has commenced, shall load or deliver cargo before the voyage is ended unless the contrary be expressly stipulated in the contract; and when the voyage is ended every such seaman shall be entitled to the remainder of the wages which shall then be due him as provided in section 4529 of the Revised Statutes.'

"SEC. 6. That section 4547 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4547. If the master against whom such summons is issued neglects to appear, or, appearing, does not show that the wages are paid or otherwise satisfied or forfeited, and if the matter in dispute is not forthwith settled, the judge or justice or commissioner shall certify to the clerk of the district court that there is sufficient cause of complaint whereon to found admiralty process; and thereupon the clerk of such court shall issue process against the vessel. In all cases where the matter in demand does not exceed \$100 the return day of the monition or citation shall be the first day of a stated or special session of court next succeeding the third day after the service of the monition or citation, and on the return of process in open court, duly served, either party may proceed therein to proofs and hearing without other notice, and final judgment shall be given according to the usual course of admiralty courts in such cases. In such suits all the seamen having cause of complaint of the like kind against the same vessel may be joined as complainants, and it shall be incumbent on the master to produce the contract and log book, if required to ascertain any matter in dispute; otherwise the complainants shall be permitted to state the contents thereof, and the burden of proof of the contrary shall be on the master. But nothing herein contained shall prevent any seaman from maintaining any action at common law for the recovery of his wages, or having immediate process out of any court having admiralty jurisdiction wherever any vessel may be found, in case she shall have left the port of delivery where her voyage ended before payment of the wages, or in case she shall be about to proceed to sea before the end of the ten days next after the day when such wages are due, in accordance with section 4529 of the Revised Statutes.'

"SEC. 7. That section 4556 of the Revised Statutes be, and hereby is, amended so as to read as follows:

"SEC. 4556. If the first and second officers under the master or a majority of the crew of any vessel bound on any voyage shall, before the vessel shall have left the harbor, discover that the vessel is too leaky or is otherwise unfit in her crew, body, tackle, apparel, furniture, provisions, or stores to proceed on the intended voyage, and shall require such unfitness to be in-

quired into, the master shall, upon the request of the first and second officers under the master or such majority of the crew, forthwith apply to the judge of the district court of that judicial district, if he shall there reside, or if not, to some justice of the peace of the city, town, or place for the appointment of surveyors, as in section 4557 provided, taking with him two or more of the crew who shall have made such request; and any master refusing or neglecting to comply with these provisions shall be liable to a penalty of \$500.'

"SEC. 8. That section 4557 of the Revised Statutes be, and hereby is, amended to read as follows:

"SEC. 4557. The judge, or justice, in a domestic port, shall, upon such application of the master or commander, issue his precept, directed to three persons in the neighborhood, the most experienced and skillful in maritime affairs that can be procured; and whenever such complaint is about the provisions one of such surveyors shall be a physician or a surgeon of the Marine-Hospital Service, if such service is established at the place where the complaint is made. It shall be the duty of such surveyors to repair on board such vessel and to examine the same in respect to the defects and insufficiencies complained of, and make reports to the judge, or justice, as the case may be, in writing, under their hands or the hands of two of them, whether in any or in what respect the vessel is unfit to proceed on the intended voyage, and what addition of men, provisions, or stores, or what repairs or alterations in the body, tackle, or apparel will be necessary; and upon such report the judge or justice shall adjudge and shall indorse on his report his judgment whether the vessel is fit to proceed on the intended voyage, and, if not, whether such repairs can be made or deficiencies supplied where the vessel then lies, or whether it is necessary for her to proceed to the nearest or most convenient place where such supplies can be made or deficiencies supplied; and the master and the crew shall, in all things, conform to the judgment. The master or commander shall, in the first instance, pay all the costs of such review, report, or judgment, to be taxed and allowed on a fair copy thereof, certified by the judge or justice. But if the complaint of the crew shall appear upon the report and judgment to have been without foundation, the master or commander, or the owner or consignee of such vessel, shall deduct the amount thereof, and of reasonable damages for the detention, to be ascertained by the judge or justice, out of the wages of the complaining seamen.'

"SEC. 9. That section 4558 of the Revised Statutes be, and hereby is, amended to read as follows:

"SEC. 4558. If, after judgment that such vessel is fit to proceed on her intended voyage, or after procuring such men, provisions, stores, repairs, or alterations as may be directed, the seamen, or either of them, shall refuse to proceed on the voyage, he shall forfeit any wages that may be due him.'

"SEC. 10. That section 4559 of the Revised Statutes be, and hereby is, amended to read as follows:

"SEC. 4559. Upon a complaint in writing, signed by the first or second officer and a majority of the crew of any vessel while in a foreign port, that such vessel is in an unsuitable condition to go to sea because she is leaky or insufficiently supplied with sails, rigging, anchors, or any other equipment, or that the crew

is insufficient to man her, or that her provisions, stores, and supplies are not, or have not been during the voyage, sufficient and wholesome; thereupon, in any of these or like cases, the consul, or a commercial agent who may discharge any duties of a consul, shall cause to be appointed three persons, of like qualifications with those described in section 4557, who shall proceed to examine into the causes of complaint, and they shall be governed in all their proceedings and proceed as provided in section 4557.

"SEC. 11. That section 4561 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4561. The inspectors in their report shall also state whether in their opinion the vessel was sent to sea unsuitably provided in any important or essential particular, by neglect or design, or through mistake or accident; and in case it was by neglect or design, and the consular officer approves of such finding, he shall discharge such of the crew as request it, and shall require the payment by the master of one month's wages for each seaman over and above the wages then due, or sufficient money for the return of such of the crew as desire to be discharged to the nearest and most convenient port of the United States, or by furnishing the seamen who so desire to be discharged with employment on a ship agreed to by them. But if in the opinion of the inspectors the defects or deficiencies found to exist have been the result of mistake or accident, and could not, in the exercise of ordinary care, have been known and provided against before the sailing of the vessel, and the master shall in a reasonable time remove or remedy the causes of complaint, then the crew shall remain and discharge their duty. If any person knowingly sends or attempts to send or is party to the sending or attempting to send an American ship to sea, in the foreign or coastwise trade, in such an unseaworthy state that the life of any person is likely to be thereby endangered, he shall, in respect of each offense, be guilty of a misdemeanor, and shall be punished by a fine not to exceed \$1,000 or by imprisonment not to exceed five years, or both, at the discretion of the court, unless he proves that either he used all reasonable means to insure her being sent to sea in a seaworthy state, or that her going to sea in an unseaworthy state was, under the circumstances, reasonable and justifiable, and for the purposes of giving that proof he may give evidence in the same manner as any other witness.

"SEC. 12. That section 4564 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4564. Should any master or owner of any merchant vessel of the United States neglect to provide a sufficient quantity of stores to last for a voyage of ordinary duration to the port of destination, and in consequence of such neglect the crew are compelled to accept a reduced scale, such master or owner shall be liable to a penalty as provided in section 4568 of the Revised Statutes.

"SEC. 13. That section 4566 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4566. If the officer to whom any such complaint in regard to the provisions or the water is made certifies in such statement that there was no reasonable ground for such complaint, each of the parties so complaining shall forfeit to the master or owner his share of the expense, if any, of the survey.

"SEC. 14. That section 4568 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4568. If, during a voyage, the allowance of any of the provisions which any seaman is entitled to under section 4612 of the Revised Statutes is reduced except for any time during which such seaman willfully and without sufficient cause refuses or neglects to perform his duty, or is lawfully under confinement for misconduct either on board or on shore; or if it shall be shown that any of such provisions are, or have been during the voyage, bad in quality or unfit for use, the seaman shall receive, by way of compensation for such reduction or bad quality, according to the time of its continuance, the following sums, to be paid to him in addition to and to be recoverable as wages:

"First. If his allowance is reduced by any quantity not exceeding one third of the quantity specified by law, a sum not exceeding 50 cents a day.

"Second. If his allowance is reduced by more than one third of such quantity, a sum not exceeding \$1 a day.

"Third. In respect of bad quality, a sum not exceeding \$1 a day.

"But if it is shown to the satisfaction of the court before which the case is tried that any provisions, the allowance of which has been reduced, could not be procured or supplied in sufficient quantities, or were unavoidably injured or lost, or if by reason of its innate qualities any article becomes unfit for use, and that proper and equivalent substitutes were supplied in lieu thereof, the court shall take such circumstances into consideration, and shall modify or refuse compensation, as the justice of the case may require.

"SEC. 15. That section 4572 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4572. Every vessel bound on any foreign voyage exceeding in length fourteen days shall also be provided with at least one suit of woolen clothing for each seaman, and every vessel in the foreign or domestic trade shall provide a safe and warm room for the use of seamen in cold weather. Failure to make such provision shall subject the owner or master to a penalty of not less than \$100.

"SEC. 16. That section 4581 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4581. If any consular officer, when discharging any seaman, shall neglect to require the payment of and collect the arrears of wages and extra wages required to be paid in the case of the discharge of any seaman, he shall be accountable to the United States for the full amount thereof. The master shall provide any seaman so discharged with employment on a vessel agreed to by the seaman, or shall provide him with one month's extra wages, if it shall be shown to the satisfaction of the consul that such seaman was not discharged for neglect of duty, incompetency, or injury incurred on the vessel. If the seaman is discharged by voluntary consent before the consul, he shall be entitled to his wages up to the time of his discharge, but not for any further period. If the seaman is discharged on account of injury or illness, incapacitating him for service, the expenses of his maintenance and return to the United States shall be paid from the fund for the maintenance and transportation of destitute American seamen.

"SEC. 17. That section 4582 of the Revised

Statutes be, and is hereby, amended to read as follows:

"SEC. 4582. Whenever a vessel of the United States is sold in a foreign country and her company discharged, it shall be the duty of the master to produce to the consular officer a certified list of the ship's company, and also the shipping articles, and besides paying to each seaman or apprentice the wages due him, he shall either provide him with adequate employment on board some other vessel bound to the port at which he was originally shipped, or to such other port as may be agreed upon by him, or furnish the means of sending him to such port, or provide him with a passage home, or deposit with the consular officer such a sum of money as is by the officer deemed sufficient to defray the expenses of his maintenance and passage home; and the consular officer shall indorse upon the agreement with the crew of the ship which the seaman or apprentice is leaving the particulars of any payment, provision, or deposit made under this section. A failure to comply with the provisions of this section shall render the owner liable to a fine of not exceeding \$50."

"SEC. 18. That section 4583 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4583. Whenever on the discharge of a seaman in a foreign country by a consular officer on his complaint that the voyage is continued contrary to agreement, or that the vessel is badly provisioned or unseaworthy, or against the officers for cruel treatment, it shall be the duty of the consul or consular agent to institute a proper inquiry into the matter, and, upon his being satisfied of the truth and justice of such complaint, he shall require the master to pay to such seaman one month's wages over and above the wages due at the time of discharge, and to provide him with adequate employment on board some other vessel, or provide him with a passage on board some other vessel bound to the port from which he was originally shipped, or to the most convenient port of entry in the United States, or to a port agreed to by the seaman."

"SEC. 19. That section 4596 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4596. The words "domestic trade" in this section shall include trade between ports of the United States and trade between ports of the United States and the Dominion of Canada, Newfoundland, the West Indies, and Mexico. The words "foreign trade" shall include trade between ports of the United States and foreign ports, except as above specified, and trade between Atlantic and Pacific ports of the United States. Whenever any seaman who has been lawfully engaged or any apprentice to the sea service commits any of the following offenses he shall be punishable as follows:

"First. For desertion, if the offense occur at a port of the United States, or a foreign port in the domestic trade, by forfeiture of all or any part of the clothes or effects he leaves on board and of all or any part of the wages or emoluments which he has then earned. If the offense occur at a foreign port in the foreign trade, by forfeiture of all or any part of the clothes or effects he leaves on board and of all or any part of the wages or emoluments which he has then earned; and also, at the discretion of the court, by imprisonment for not more than one month."

"Second. For neglecting or refusing, without reasonable cause, to join his vessel or to proceed to sea in his vessel, or for absence without

leave at any time within twenty-four hours of the vessel's sailing from any port, either at the commencement or during the progress of any voyage, or for absence at any time without leave and without sufficient reason from his vessel or from his duty, not amounting to desertion or not treated as such by the master, if the offense occur at a port of the United States or a foreign port in the domestic trade, by a forfeiture from his wages of not more than two days' pay, or sufficient to defray any expenses which have been properly incurred in hiring a substitute; or if the offense occur at a foreign port, in the foreign trade, by a forfeiture from his wages of not more than two days' pay, or, at the discretion of the court, by imprisonment for not more than one month."

"Third. For quitting the vessel, in whatever trade engaged, at a foreign or domestic port, without leave after her arrival at her port of delivery and before she is placed in security, by forfeiture from his wages of not more than one month's pay."

"Fourth. For willful disobedience to any lawful command at sea, by being, at the option of the master, placed in irons until such disobedience shall cease, and upon arrival in port, if of the United States, by forfeiture from his wages of not more than four days' pay, or upon arrival in a foreign port by forfeiture from his wages of not more than four days' pay, or, at the discretion of the court, by imprisonment for not more than one month."

"Fifth. For continued willful disobedience to lawful command or continued willful neglect of duty at sea by being, at the option of the master, placed in irons, on bread and water, with full rations every fifth day, until such disobedience shall cease, and upon arrival in port, if of the United States, by forfeiture, for every twenty-four hours' continuance of such disobedience or neglect, of either a sum of not more than twelve days' pay or sufficient to defray any expenses which have been properly incurred in hiring a substitute, or upon arrival in a foreign port, in addition to the above penalty, by imprisonment for not more than three months, at the discretion of the court."

"Sixth. For assaulting any master or mate, in whatever trade engaged, by imprisonment for not more than two years."

"Seventh. For willfully damaging the vessel, or embezzling or willfully damaging any of the stores or cargo, in whatever trade engaged, by forfeiture out of his wages of a sum equal in amount to the loss thereby sustained, and also, at the discretion of the court, by imprisonment for not more than twelve months."

"Eighth. For any act of smuggling for which he is convicted, and whereby loss or damage is occasioned to the master or owner, in whatever trade engaged, he shall be liable to pay such master or owner such a sum as is sufficient to reimburse the master or owner for such loss or damage; and the whole or any part of his wages may be retained in satisfaction or on account of such liability; and he shall be liable to imprisonment for a period of not more than twelve months."

"SEC. 20. That section 4597 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4597. Upon the commission of any of the offenses enumerated in the preceding section an entry thereof shall be made in the official log book on the day on which the offense was committed, and shall be signed by the master and

by the mate or one of the crew; and the offender, if still in the vessel, shall, before her next arrival at any port, or, if she is at the time in port, before her departure therefrom, be furnished with a copy of such entry, and have the same read over distinctly and audibly to him, and may thereupon make such a reply thereto as he thinks fit; and a statement that a copy of the entry has been so furnished, or the same has been so read over, together with his reply, if any, made by the offender, shall likewise be entered and signed in the same manner. In any subsequent legal proceedings the entries hereinbefore required shall, if practicable, be produced or proved, and in default of such production or proof the court hearing the case may, at its discretion, refuse to receive evidence of the offense.

"SEC. 21. That section 4600 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4600. It shall be the duty of all consular officers to reclaim deserters, discountenance insubordination by every means in their power, and, where the local authorities can be usefully employed for that purpose, to lend their aid and use their exertions to that end in the most effectual manner. In all cases where seamen or officers are accused the consular officer shall inquire into the facts and proceed as provided in section 4583 of the Revised Statutes; and the officer discharging such seamen shall enter upon the crew list and shipping articles and official log the cause of discharge and the particulars in which the cruel or unusual treatment consisted, and subscribe his name thereto officially. He shall read the entry made in the official log to the master, and his reply thereto, if any, shall likewise be entered and subscribed in the same manner."

"SEC. 22. That section 4611 of the Revised Statutes be, and is hereby, amended to read as follows:

"SEC. 4611. Flogging and all other forms of corporal punishment are hereby prohibited on board any vessel, and no form of corporal punishment on board any vessel shall be deemed justifiable, and any master or other officer thereof who shall violate the aforesaid provisions of this section or either thereof shall be deemed guilty of a misdemeanor, punishable by imprisonment not less than three months or more than two years. Whenever any officer other than the master of such vessel shall violate any provision

of this section, it shall be the duty of such master to surrender such officer to the proper authorities as soon as practicable. Any failure upon the part of such master to comply herewith, which failure shall result in the escape of such officer, shall render said master liable in damages to the person illegally punished by such officer."

"SEC. 23. That section 4612 of the Revised Statutes is hereby amended by striking out the scale of provisions and substitutes in the table [above], and in place thereof inserting the following scale of provisions and substitutes to be allowed and served out to the crew during the voyage:

"SUBSTITUTES.

"One pound of flour daily may be substituted for the daily ration of biscuit or fresh bread; 2 ounces of desiccated vegetables for 1 pound of potatoes or yams; 6 ounces of hominy, oatmeal, or cracked wheat, or 2 ounces of tapioca, for 6 ounces of rice; 6 ounces of canned vegetables for $\frac{1}{2}$ pound of canned tomatoes; $\frac{1}{2}$ ounce of tea for $\frac{1}{2}$ ounce of coffee; $\frac{1}{2}$ ounce of coffee for $\frac{1}{2}$ ounce of tea; 6 ounces of canned fruit for 3 ounces of dried fruit; $\frac{1}{2}$ ounce of lime juice for the daily ration of vinegar; 4 ounces of oatmeal or cracked wheat for $\frac{1}{2}$ pint of corn meal; 2 ounces of pickled onions for 4 ounces of fresh onions.

"When the vessel is in port and it is possible to obtain the same, 1 $\frac{1}{2}$ pound of fresh meat shall be substituted for the daily rations of salt and canned meat; $\frac{1}{2}$ pound of green cabbage for one ration of canned tomatoes; $\frac{1}{2}$ pound of fresh fruit for one ration of dried fruit. Fresh fruit and vegetables shall be served while in port if obtainable. The seamen shall have the option of accepting the fare the master may provide, but the right at any time to demand the foregoing scale of provisions.

"The foregoing scale of provisions shall be inserted in every article of agreement, and shall not be reduced by any contract, except as above, and a copy of the same shall be posted in a conspicuous place in the galley and in the fore-castle of each vessel."

"SEC. 24. That section 10 of chapter 121 of the laws of 1884, as amended by section 3 of chapter 421 of the laws of 1886 be, and is hereby, amended to read as follows:

"SEC. 10. (a) That it shall be, and is hereby, made unlawful in any case to pay any seaman wages in advance of the time when he has actual-

ly earned the same, or to pay such advance wages to any other person. Any person paying such advance wages shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine not less than four times the amount of the wages so advanced, and may also be imprisoned for a period not exceeding six months, at the discretion of the court. The payment of such advance wages shall in no case, excepting as herein provided, absolve the vessel or the master or owner thereof from full payment of wages after the same shall have been actually earned, and shall be no defense to a libel, suit, or action for the recovery of such wages. If any person shall demand or receive, either directly or indirectly, from any seaman or other person seeking employment as seaman, or from any person on his behalf, any remuneration whatever for providing him with employment, he shall for every such offense be liable to a penalty of not more than \$100.

“(b) That it shall be lawful for any seaman to stipulate in his shipping agreement for an allotment of any portion of the wages which he may earn to his grandparents, parents, wife, sister, or children. But no allotment whatever shall be allowed in the trade between the ports of the United States (except as provided in subdivision c of this section) or in trade between ports of the United States and the Dominion of Canada, Newfoundland, the West Indies, and Mexico.

“(c) That it shall be lawful for any seaman engaged in a vessel bound from a port on the Atlantic to a port on the Pacific, or *vice versa*, or in a vessel engaged in foreign trade, except trade between the United States and the Dominion of Canada or Newfoundland or the West Indies or the republic of Mexico, to stipulate in his shipping agreement for an allotment of an amount, to be fixed by regulation of the commissioner of navigation, with the approval of the Secretary of the Treasury, not exceeding one month's wages, to an original creditor in liquidation of any just debt for board or clothing which he may have contracted prior to engagement.

“(d) That no allotment note shall be valid unless signed by and approved by the shipping commissioner. It shall be the duty of said commissioner to examine such allotments and the parties to them and enforce compliance with the law. All stipulations for the allotment of any part of the wages of a seaman during his absence which are made at the commencement of the voyage shall be inserted in the agreement, and shall state the amounts and times of the payments to be made and the persons to whom the payments are to be made.

“(e) That no allotment except as provided for in this section shall be lawful. Any person who shall falsely claim to be such relation as above described of a seaman under this section or shall make a false statement of the nature or amount of any debt claimed to be due from any seaman under this section shall for every such offense be punishable by a fine not exceeding \$500 or imprisonment not exceeding six months, at the discretion of the court.

“(f) That this section shall apply as well to foreign vessels as to vessels of the United States; and any master, owner, consignee, or agent of any foreign vessel who has violated its provisions shall be liable to the same penalty that the master, owner, or agent of a vessel of the United States would be for a similar violation: *Provided*, That treaties in force between the United States and foreign nations do not conflict.

“(g) That under the direction of the Secretary of the Treasury the Commissioner of Navigation shall make regulations to carry out this section.”

“SEC. 25. That section 3 of chapter 421 of the laws of 1886, approved June 19, 1886; sections 4531, 4532, 4533, 4534, 4598, 4599, 4601, and 4609, of the Revised Statutes, and so much of chapter 97 of the laws of 1895 as relates to allotment, and subdivision 8 of section 4511 of the Revised Statutes, in so far as the same relates to the domestic trade as defined in section 19 of this act, and that section 3 of an act entitled ‘An Act to amend the laws relating to navigation, and for other purposes,’ approved April 4, 1888, chapter 61, page 80, Statutes Fiftieth Congress, first session, are hereby repealed.

“SEC. 26. That this act shall take effect sixty days after its approval, and shall apply to all vessels not herein specifically exempted; but sections 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13, 14, 15, 23, and 24 shall not apply to fishing or whaling vessels or yachts.”

Reimbursement of States.—The following act was passed and approved March 3, 1899, amending the act of July 8, 1898, to reimburse governors of States and Territories for expenses incurred by them in aiding the United States to raise, organize, and equip the volunteer army in the war with Spain:

“*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the act entitled ‘An Act to reimburse the governors of States and Territories for expenses incurred by them in aiding the United States to raise and organize and supply and equip the volunteer army of the United States in the existing war with Spain,’ approved July 8, 1898, be so amended that the Secretary of the Treasury shall be, and is hereby, authorized to allow, in the settlement of the claims of the governors of States and Territories for reimbursement under the provisions of the said act, expenses incurred after as well as before July 8, 1898: *Provided*, That no reimbursement shall be made for service of members of the National Guard, or organized militia, or naval reserves of any State or Territory who were not accepted into the volunteer army of the United States, and no reimbursement shall be allowed for payments made to any person in excess of the pay and allowances authorized by the laws of the State or Territory for the grade in which he was accepted into the volunteer army of the United States. That the compensation allowed by the laws of the States and Territories to officers and men of the National Guard, or militia, or naval reserves of said States and Territories shall be allowed to the States and Territories, or the governors of the States and Territories, as pay for such officers and men of said National Guard, or militia, or naval reserves as appeared and remained at the place of muster, and who were afterward received into the service of the United States for the period between the date of assembly at the rendezvous and the date they were mustered into the United States service: *Provided, however*, That in all States and Territories where no laws exist for the payment of the officers and men of the National Guard, or militia, or naval reserves, there shall be allowed to said States and Territories, or the governors of said States and Territories, for the officers the same pay as allowed officers in the regular army holding the same rank, and for the men \$1 per day, for such officers and men as appeared and remained at the place of muster and were afterward received into the service of the United

States for the period between the date of assembly at the rendezvous and the date they were mustered into the service of the United States: *Provided further*, That for all officers and men of the National Guard, or militia, or naval reserves of the States and Territories, who appeared at the rendezvous for muster, and were rejected by the medical examiner or mustering officer, pay shall be allowed for the same to the States and Territories or the governors of States and Territories, at the several rates as fixed as aforesaid from the date of assembly to the date of their rejection: *Provided further*, That where States and Territories have not paid amounts to the officers and men or any part thereof the pay allowed them by this act, the same shall be paid by the States and Territories direct to the officers and men, and no money allowed by this act for officers and men shall be covered into the treasury of the State or Territory.

"SEC. 2. That under the appropriation made by said act the Secretary of the Treasury is hereby authorized to reimburse the governor of any State or Territory for reasonable expenses incurred by him for the actual transportation of the members of organized militia, or National Guard, or naval reserves of his State from the place of company, battalion, or regimental rendezvous to the State rendezvous, or place designated for examination and acceptance of the members of such organization into the volunteer army of the United States, and the actual transportation from such State rendezvous, or such place designated for examination and acceptance, to their respective company, battalion, or regimental rendezvous of such men as were rejected by the medical examiner or mustering officer: *Provided*, That no reimbursement shall be made for the transportation of any man who did not present himself for enrollment in the volunteer army of the United States as provided by law: *And provided further*, That the provisions of this section shall apply also to payments made by the governor of any State or Territory for the actual transportation of individual volunteers who presented themselves for enrollment in the volunteer army of the United States and who were rejected by the medical examiner or mustering officer.

"SEC. 3. That nothing in said act of July 8, 1898, shall be so construed as to prohibit the reimbursement of the governor of any State or Territory for reasonable expenses incurred for the subsistence of the members of any organization of the organized militia or National Guard, or naval reserves of his State or Territory after having been called out by the governor on or after April 25, 1898: *Provided*, That such organizations shall afterward have been accepted into the volunteer army of the United States.

"SEC. 4. That the expenses incurred by the governors of States in carrying out the provisions of this act shall be paid to them, notwithstanding any unsettled accounts, claims, or indebtedness of the United States against their States, and without prejudice to such unsettled accounts: *Provided*, That when such unsettled account is caused by a default in payment of principal or interest on any bonds or stock issued or guaranteed by any State, the ownership of which is vested in the United States, the Secretary of the Treasury be, and he is hereby, authorized and directed to institute any act or proceeding which he may consider advisable against such State or its representatives to secure the payment of the principal and interest of said bonds or stocks: *And provided further*, That where the governor

of any State or Territory, or any officer of the army detailed as mustering officer of volunteers, or any commander of a company or companies, or troop or troops, or battery or battalion, or regiment or brigade has purchased or authorized the purchase of supplies or equipments, or incurred any necessary expense for the comfort of the men in camp or rendezvous, and said supplies were used and equipments were subsequently taken into the United States service by said volunteers, and no receipts given to such military officer, the certificate to that effect of the governor of the State or Territory to which the volunteers belonged, shall be held sufficient to authorize the settlement and payment of such account on investigation, if the Treasury Department shall be satisfied of the fact of such purchase of such equipment and supplies, or that such necessary expenses were incurred and such use of such supplies, or such taking of such equipments into the United States service, and the voucher or vouchers of said officers be produced by said governor.

"SEC. 5. That the Secretary of the Treasury be, and is hereby, authorized to pay, out of any money in the Treasury not otherwise appropriated, the just and proper account or claim of any railroad, transportation company, or person for transportation of men or troops from place of enrollment to point of rendezvous, furnished at the request of the quartermaster general of the army or his agents, or at the request of any United States mustering officer or other officer authorized by the Secretary of War to enroll, muster, or mobilize volunteers for the war with Spain; and also to pay such just and proper accounts as may be presented for transportation back from point of rendezvous to place of enrollment of men who volunteered and were rejected by the medical examiner or mustering officer: *Provided*, That the amount allowed and paid for such transportation shall not be in excess of the rates charged for transporting troops of the United States under like circumstances.

"All claims under the provision of this act must be filed in the office of the auditor for the War Department, and must be supported by proper vouchers or other conclusive evidence of interest.

"SEC. 6. That all claims for reimbursement under this act or the act of July 8, 1898, shall be presented in itemized form to the Treasury Department on or before Jan. 1, 1902, or be forever barred."

Mount Rainier Park.—The following act was passed, creating a new national park:

"*Be it enacted, etc.*, That all those certain tracts, pieces, or parcels of land lying and being in the State of Washington, and within the boundaries particularly described as follows, to wit: Beginning at a point 3 miles east of the northeast corner of township No. 17 north, of range 6 east of the Willamette meridian; thence south through the central parts of townships Nos. 17, 16, and 15 north, of range 7 east of the Willamette meridian, 18 miles more or less, subject to the proper easterly or westerly offsets, to a point 3 miles east of the northeast corner of township No. 14 north, of range 6 east of the Willamette meridian; thence east on the township line between townships Nos. 14 and 15 north, 18 miles more or less, to a point 3 miles west of the northeast corner of township 14 north, of range 10 east of the Willamette meridian; thence northerly, subject to the proper easterly or westerly offsets, 18 miles more or less, to a point 3 miles west of the northeast corner of

township No. 17 north, of range 10 east of the Willamette meridian (but in locating said easterly boundary, wherever the summit of the Cascade mountains is sharply and well defined, the said line shall follow the said summit, where the said summit line bears west of the easterly line as herein determined); thence westerly along the township line between said townships Nos. 17 and 18 to the place of beginning, the same being a portion of the lands which were reserved from entry or settlement and set aside as a public reservation by proclamation of the President on the twentieth day of February, in the year of our Lord 1893, and of the independence of the United States the one hundred and seventeenth, are hereby dedicated and set apart as a public park, to be known and designated as the Mount Rainier National Park, for the benefit and enjoyment of the people; and all persons who shall locate or settle upon or occupy the same, or any part thereof, except as hereafter provided, shall be considered trespassers and be removed therefrom.

"SEC. 2. That said public park shall be under the exclusive control of the Secretary of the Interior, whose duty it shall be to make and publish, as soon as practicable, such rules and regulations as he may deem necessary or proper for the care and management of the same. Such regulations shall provide for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonders within said park, and their retention in their natural condition. The Secretary may, in his discretion, grant parcels of ground at such places in said park as shall require the erection of buildings for the accommodation of visitors; all of the proceeds of said leases, and all other revenues that may be derived from any source connected with said park, to be expended under his direction in the management of the same, and the construction of roads and bridle paths therein.

"And through the lands of the Pacific Forest Reserve adjoining said park rights of way are hereby granted, under such restrictions and regulations as the Secretary of the Interior may establish, to any railway or tramway company or companies, through the lands of said Pacific Forest Reserve, and also into said park hereby created, for the purpose of building, constructing, and operating a railway, constructing and operating a railway or tramway line or lines, through said lands, also into said park. He shall provide against the wanton destruction of the fish and game found within said park, and against their capture or destruction for the purposes of merchandise or profit. He shall also cause all persons trespassing upon the same after the passage of this act to be removed therefrom, and generally shall be authorized to take all such measures as shall be necessary to fully carry out the objects and purposes of this act.

"SEC. 3. That upon execution and filing with the Secretary of the Interior, by the Northern Pacific Railroad Company, of proper deed releasing and conveying to the United States the lands in the reservation hereby created, also the lands in the Pacific Forest Reserve which have been heretofore granted by the United States to said company, whether surveyed or unsurveyed, and which lie opposite said company's constructed road, said company is hereby authorized to select an equal quantity of nonmineral public lands, so classified as nonmineral at the time of actual Government survey, which has been or shall be made, of the United States not reserved and to which no adverse right or claim shall have at-

tached or have been initiated at the time of the making of such selection, lying within any State into or through which the railroad of said Northern Pacific Railroad Company runs, to the extent of the lands so relinquished and released to the United States.

"*Provided*, That any settlers on lands in said national park may relinquish their rights thereto and take other public lands in lieu thereof, to the same extent and under the same limitations and conditions as are provided by law for forest reserves and national parks.

"SEC. 4. That upon the filing by the said railroad company at the local land office of the land district in which any tract of land selected and the payment of the fees prescribed by law in analogous cases, and the approval of the Secretary of the Interior, he shall cause to be executed, in due form of law, and deliver to said company, a patent of the United States conveying to it the lands so selected. In case the tract so selected shall at the time of selection be unsurveyed, the list filed by the company at the local land office shall describe such tract in such manner as to designate the same with a reasonable degree of certainty; and within the period of three months after the lands including such tract shall have been surveyed and the plats thereof filed by said local land office, a new selection list shall be filed by said company, describing such tract according to such survey; and in case such tract, as originally selected and described in the list filed in the local land office, shall not precisely conform with the lines of the official survey, the said company shall be permitted to describe such tract anew, so as to secure such conformity.

"SEC. 5. That the mineral-land laws of the United States are hereby extended to the lands lying within the said reserve and said park."

Miscellaneous.—Apart from legislation for the District of Columbia and the usual multitude of private acts, the following measures were also passed:

For the relief of certain homestead settlers in Florida.

To change proceedings for admission to the Government Hospital for the Insane in certain cases and for other purposes.

Authorizing the President to appoint additional cadets at large to the United States Naval Academy.

To ratify agreements with the Indians of Lower Brule and Rosebud reservations in South Dakota, and making appropriations to carry the same into effect.

To amend section 27 of the Revised Statutes so as to allow the use of voting machines in congressional elections when authorized by a State law.

Reviving the grade of admiral in the navy.

To amend section 25 of the act of June 13, 1898, by adding the clause: "Whenever any bond or note shall be secured by a mortgage, but one stamp shall be required to be placed upon such papers: *Provided*, That the stamp tax placed thereon shall be the highest rate required for said instruments, or either of them."

To give preference right to settlers in entry of lands in Greer County, Oklahoma.

To limit the suspension of certain provisions of law relating to the War Department until March 1, 1900.

Establishing a criminal code for Alaska.

For public buildings at Abilene, Texas; Altoona, Pa.; Annapolis, Md.; Anniston, Ala.; Baltimore, Md.; Beaumont, Texas; Blair, Neb.; Bristol, Tenn.; Brooklyn, N. Y.; Brunswick, Ga.;

Butte City, Mont.; Canton, Ohio; Cleveland, Ohio; Clinton, Iowa; Dubuque, Iowa; Columbus, Ga.; Creston, Iowa; Eau Claire, Wis.; Elgin, Ill.; Elizabeth City, N. C.; Elmira, N. Y.; Fergus Falls, Minn.; Fitchburg, Mass.; Freeport, Ill.; Hastings, Neb.; Hot Springs, Ark.; Indianapolis, Ind.; Jackson, Miss.; Jamestown, N. Y.; Janesville, Wis.; Joliet, Ill.; Joplin, Mo.; Kansas City, Kan.; Lawrence, Mass.; Leadville, Col.; Lockport, N. Y.; Los Angeles, Cal.; Macon, Ga.; Menominee, Mich.; Minneapolis, Minn.; Monmouth, Ill.; New Brunswick, N. J.; New Iberia, La.; Newport News, Va.; Newport, Vt.; New York, N. Y.; Norfolk, Neb.; Norwich, Conn.; Oakland, Cal.; Omaha, Neb.; Oskaloosa, Iowa; Rome, N. Y.; St. Cloud, Minn.; Salem, Ore.; Salt Lake City, Utah; Seattle, Wash.; Springfield, Mass.; Stockton, Cal.; Streator, Ill.; Tampa, Fla.; Washington, D. C.; Wilkesbarre, Pa.; Winston, N. C.

Authorizing bridges across Arkansas and other rivers in Arkansas; Conecuh river, Escambia County, Alabama; Flint river, Ga.; Lake Champlain; Mississippi river; Missouri river at Lexington, at Oacoma, at Yankton; Monongahela river at Morgantown; Savannah river at Hutchinson's island; Tennessee river at Sheffield; Columbia river, Oregon; Corpus Christi channel, Texas; Missouri river, Boonville.

Granting right of way to Saginaw Southern Railroad through San Francisco Mountains Forest Reserve; to Little River Valley Railway through Choctaw and Chickasaw nations, Indian Territory, and through Ponca, Otoe, and Missouri reservations, Oklahoma, for telephone lines; to St. Louis, Oklahoma and Southern Railroad through Indian and Oklahoma Territories; to Kansas, Oklahoma, Central and Southwestern through Indian Territory; to Clearwater Valley Railroad Company through Nez Perces Indian lands; to Pasadena and Mount Wilson Railway through San Gabriel Forest Reserve; to Pensacola and Northwestern Railroad Company through United States military and naval reservations near Pensacola, Fla.; to Arkansas Northwestern Railway Company through Indian Territory; to Fort Smith and Western Railroad Company through Choctaw and Creek nations; to provide for the acquiring by railroads of right of way through Indian reservations, lands, and allotments.

Amending the law relating to the bonds of United States consuls.

Granting extra pay to officers and enlisted men of the United States volunteers.

Concerning sailing vessels of over 700 tons.

For leasing certain portions of forest reserves near medicinal or mineral springs.

Granting extra pay to workmen in navy yards.

For a military park at Vicksburg.

Appropriations.—Mr. Cannon, of Illinois, said in explanation of the appropriations made by the Fifty-fifth Congress:

"The appropriations made at the last session of the Fifty-fifth Congress will amount to \$673,658,400.73, showing an apparent reduction of \$219,573,214.82 below the appropriations made at the preceding session. This reduction is attributable to the necessarily large appropriations made at the session which closed in July last—the second session of the Fifty-fifth Congress—for expenses of the war with Spain. The entire appropriations made by the Fifty-fifth Congress aggregate \$1,566,890,016.28, of which amount the sum of \$482,562,083.47 is directly chargeable or incident to the war with Spain. Deducting the latter from the former sum, the remainder, \$1,084,327,932.81, represents the ordinary appropriations

made during the whole Congress for the normal requirements of the Government. The appropriations made by the preceding Congress, the Fifty-fourth, which adjourned March 3, 1897, amounted to \$1,044,580,273.87, or only \$39,747,658.94 less than the ordinary appropriations of this Congress after deducting the sums required for the war."

The appropriations for the fiscal year 1899–1900 were in detail as follow: Agriculture, \$3,726,022; army, \$80,430,194.42; diplomatic and consular, \$1,714,533.76; District of Columbia, \$6,834,535.77; fortification, \$4,909,902; Indian, \$7,604,755.81; legislative, etc., \$23,405,740.79; Military Academy, \$575,774.47; navy, \$48,100,094.58; pension, \$145,233,830; post office, \$105,634,183.75; river and harbor, \$14,973,877.94; sundry civil, \$48,498,722.58; total, \$491,642,167.87; deficiency for war expenses, etc., \$119,640; urgent deficiency, House of Representatives, etc., \$31,000; deficiency, 1898 and prior years, \$24,687,372.86; total, \$516,480,180.73; miscellaneous, \$28,500,000; total, regular annual appropriations, \$544,980,180.73; permanent annual appropriations, \$128,678,220; grand total, regular and permanent annual appropriations, \$673,658,400.73.

CONNECTICUT, a New England State, one of the original thirteen, ratified the national Constitution Jan. 9, 1788; area, 4,900 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; and 746,258 in 1890. Capital, Hartford.

Government.—The following were the State officers during the year: Governor, George E. Lounsbury; Lieutenant Governor, Lyman A. Mills; Secretary of State, Huber Clark; Treasurer, Charles S. Mersick; Comptroller, Thompson S. Grant; Attorney-General, Charles Phelps; Adjutant General, Louis N. Van Keuren; Insurance Commissioner, Edwin L. Scofield—all Republicans; Supreme Court of Errors, Chief Justice, Charles B. Andrews, Republican; Associate Justices, David Torrance, Republican; Frederic B. Hall, Republican; Simeon E. Baldwin, Democrat; and William Hamersley, Democrat; Clerk, George A. Conant.

Finances.—The receipts from all sources for the civil list funds in the fiscal year ended Sept. 30, 1899 (not including the balance of \$463,891.14 in the treasury Oct. 1, 1898), were \$2,749,273.20, an increase over the previous year of \$136,888.05.

The expenditures during the same period were \$2,530,280.33, an increase of \$258,758.82, leaving a balance in the treasury to the credit of the civil list funds, Sept. 30, 1899, of \$682,884.01.

The excess of receipts over expenditures during the year was \$218,992.87.

The following is the official statement in detail, issued from the Comptroller's office, of receipts and expenditures for the fiscal year ending Sept. 30, 1899:

Receipts.—Civil-list account, balance on hand, Oct. 1, 1898, \$463,891.14; other receipts from all sources during the year, \$2,749,273.20; total, \$3,213,164.34. Specific receipts: Interest of school fund, transferred, \$113,722.79; Agricultural and Mechanical College fund, transferred, \$20,829.47; Woodbury Bank, balance transferred, \$118.60; Litchfield Bank, balance transferred, \$145.30; avails of courts, clerks' fees (three months), \$1,507.31; commissioners of pharmacy, \$1,818; commissioners of shell fisheries, \$9,319.76; Comptroller (statutes sold), \$150; corporate franchise tax, \$4,700; tax on express companies, \$9,958.36;

fees from executive secretary, \$852.50; fees from Secretary of State, \$2,113.34; Greenwich Loan, Trust and Deposit Company (franchise tax), \$853.20; inheritance tax, \$115,195.30; receipts of Insurance Commissioner, \$77,946.98; interest account, \$34,566.53; tax on investments, \$92,425.12; itinerant vendors' license fees, \$75; tax on Meriden Trust and Safe Deposit Company, \$275; military commutation tax, \$150,598.84; miscellaneous receipts, \$17,544.88; tax on mutual fire insurance companies, \$11,036.38; tax on mutual life insurance companies, \$283,817.12; national aid to State homes for disabled volunteer soldiers, \$42,480; nonresident stock tax, \$167,537.27; tax on steam railroads, \$965,502.92; tax on street railroads, \$138,502.78; tax on rolling-stock companies, \$159.20; salaries of Bank Commissioners, \$6,515.05; salaries of Railroad Commissioners, \$11,623.68; salary of Building and Loan Commissioner, \$1,680.61; savings banks' tax, \$392,782.98; State Librarian (atlases sold), \$100; telegraph and telephone company's tax, \$14,026.65; charter fees, \$28,846; joint-stock capital tax, \$35.15; from forfeited bonds, \$19,760.79; from avails of courts, \$10,150.34.

Expenditures.—For payments from the treasury from Oct. 1, 1898, to Sept. 30, 1899, for the current expenses of the government, under the following heads: Sessions of the General Assembly, \$148,355.08; salaries and expenses in executive offices, \$38,417.23; judicial expenses, \$339,424.55; board of prisoners in county jails, \$112,682.62; State Capitol and grounds, \$45,294.16; contingent expenses, \$17,399.32; State Board of Education, \$28,865.88; State normal schools, \$68,747.97; common schools, \$440,415.93; State Library, \$3,569.61; State Prison, \$64,917.30; Connecticut School for Boys, \$68,195.10; Connecticut Industrial School for Girls, \$43,240.82; State paupers, \$1,361.26; humane institutions, \$314,943.58; sick and wounded soldiers, \$75,246; deceased soldiers, \$10,556.50; agricultural affairs, \$48,767.14; National Guard, \$215,330.32; Governor's Guard, \$7,683.93; printing and circulating public documents, \$43,973.92; soldiers' children, \$2,734.36; Fish and Game Commission, \$5,452.20; Shellfish Commission, \$10,777.01; State Board of Health, \$7,307.50; Railroad Commissioners, \$11,606.20; Bank Commissioners, \$6,041.55; Insurance Commissioner, \$32,459.31; State Board of Charities, \$4,199.94; taxes refunded, \$2,449.98; Pharmacy Commission, \$1,291.37; special commissions, \$8,454.20; Bureau of Labor Statistics, \$7,213.41; Inspector of Factories, \$4,338.02; separating grade crossings, \$20,736.82; Connecticut River Bridge and Highway District Commission, \$16,179.61; county health officers, \$6,519.89; School Fund Commissioner, \$13,139.85; Highway Commissioner, \$117,973.56; Building and Loan Commissioner, \$2,873.94; interest on State bonds, \$104,700; interest on Agricultural College fund, \$115.75; interest on town deposit fund, \$274.54; principal of the school fund, \$1,081.74; interest of school fund, \$1,861.77; James Root prison fund, \$141.81.

Grand List.—The grand list of the State, issued from the Comptroller's office, for October, 1898, amounted to \$552,887,762, an increase of \$18,422,505 from the amount of the preceding year. Summarized by counties, the results are as follow: Hartford, \$131,759,101; New Haven, \$162,297,142; New London, \$43,661,344; Fairfield, \$130,235,714; Windham, \$19,701,092; Litchfield, \$32,249,129; Middlesex, \$19,480,281; Tolland, \$13,503,959. The amount given above (\$552,887,762) includes the total list of taxable property in each town of the State as corrected by the Board of Equalization.

The funded debt of the State is \$3,240,100. Of this indebtedness, bonds to the amount of a million and a half of dollars, bearing interest at the rate of 3½ per cent., are due Jan. 1, 1903.

State Banks.—The State banks have the same capital as a year ago, and there is an increase of \$229,417 in their deposits. Their surplus and profit and loss accounts are less by \$15,595.

In their annual report for the year ending Oct. 1, 1898, the Bank Commissioners made an excellent showing for the savings banks of the State. The assets have increased during the year from \$166,175,213 to \$173,025,546, and, while the loans on real estate have increased over \$2,000,000, those made on collateral and personal security have only been decreased \$868,000. Loans of this class belong more especially to banks of discount. The deposits aggregate \$163,482,498.52, an increase of \$7,512,700.57 for the year. This is \$1,039,458.48 more than the increase in 1897. The number of depositors increased from 366,661 to 375,810, and the average amount due each depositor increased from \$425.37 to \$435.01. The largest amount due a single depositor is \$54,507.74. There are 271 depositors having more than \$10,000 each; 15,142 depositors having more than \$2,000 and not more than \$10,000; 33,928 have between \$1,000 and \$2,000; and 326,469 of the total of 375,810 have less than \$1,000 on deposit.

With capital remaining the same, the trust companies have an increase in deposits of \$485,161, and an increase in the surplus and profit and loss accounts of \$49,744.

Insurance.—The domestic associations are the same that were engaged in business at the close of the last fiscal year. During the past year four foreign associations withdrew from the State.

The total assets of the domestic associations on Sept. 30, 1898, were \$3,637,828.12, an increase over the preceding year of \$383,892.93; foreign associations, total assets, \$4,313,015.36, an increase of \$472,020.72. The mortgage loans of domestic associations increased \$302,009.55; loans on shares, \$30,317.75; real estate, \$41,457.30; stocks, bonds, and other securities, \$18,270.22; and cash decreased, \$13,177.22. The mortgage loans of foreign associations increased \$12,223.17; loans on shares, \$2,938.45; real estate, \$351,681.37; stocks, bonds, and other securities, \$61,450; and cash decreased, \$53,324.63. The liabilities in installments paid and earnings credited of domestic associations show an increase of \$339,231.64.

In 1898 19 fire insurance companies were admitted to this State, with a total capitalization of \$3,950,000. Ten fire insurance companies have withdrawn from the State since Jan. 1, 1898. Their total capitalization is \$2,050,000. The number of companies doing business in this State is 151.

The total capitalization of 150 marine companies is reported to be \$54,913,875. Their assets Dec. 31, 1897, were \$275,886,642.42.

Education.—The public schools for the year cost nearly \$3,000,000. Of this amount, a little more than \$2,000,000 was for running expenses—that is, for teachers' wages, fuel, and incidentals. The whole cost was equal to a tax of 5½ mills on all the grand list of the State.

The school fund amounts to \$2,014,680.67. This is a gain of more than \$6,000 over two years ago. Foreclosures of mortgages have resulted in small losses, and sales of bank stocks in larger apparent gains. The net earnings of the fund for the last year were nearly \$110,000, an income of about 5½ per cent.

The appeal of Yale University from the action of the New Haven assessors in adding a consider-

able quantity of property to its tax list was decided in favor of the university.

Steam Railroads.—Of the 50,000,000 passengers transported over these roads in the year not one was killed, and only 12 were injured. There was a small decrease in the number of passengers and in the earnings of this part of the business, but this decrease was more than offset by increase in freight and in the revenue derived therefrom. The companies have a capital of more than \$99,000,000, and during the past years the dividends to their stockholders have been nearly \$5,000,000. Their taxes paid to the State in 1898 were \$910,137.50, or more than one third of its revenue from all sources.

Street Railways.—The 31 street-railway companies of the State have capital stock to the amount of \$10,451,040, a funded debt of \$10,022,800, and floating indebtedness amounting to \$758,828.04. They pay a tax to the State of \$133,052.77.

Agriculture.—During the year the State paid for the support of its various agricultural institutions about \$47,000. Of this sum, \$3,500 went to the State Board of Agriculture, about \$12,700 to the experiment stations, \$16,800 to Storrs Agricultural College, about \$7,500 to the Cattle and Dairy Commission, and about \$6,400 to agricultural societies and associations.

Cattle.—The last General Assembly passed new laws concerning diseases among domestic animals, and repealed the tuberculin legislation of 1895. The new law has worked to the satisfaction of all concerned. It has resulted in the subsiding of unnecessary alarm, in the increased product and consumption of milk, and in a saving expense to the State, compared with two years ago, of more than \$44,000. There are more than 200,000 cattle in the State, and of these only 71 have been killed by action of the commissioner.

Manufactures.—The Commissioner of Labor, S. B. Horne, in his annual report, made public Jan. 2, 1899, for the year ending Nov. 30, 1898, gives much useful information concerning the manufactures of the State.

In cotton goods the total spindle capacity in 1897 (idle spindles included) was 1,094,068. The number of spindles (idle spindles included) at the taking of the eleventh census was 951,007. This shows an increase of 143,061 spindles. In woolen goods, according to the report mentioned above, 54 establishments used 17,626,388 pounds during 1897, to which amount should be added 4,041,171 pounds of "other material." There were 417 sets of cards in use, 3,213 looms, and 91,928 spindles in operation during the year. The average number of persons employed in all establishments was 7,738, of whom 4,761 were men, 2,507 women, and 470 boys and girls under sixteen years of age. The proportion of boys and girls to the total number employed was 6.1 per cent. The number of yards of woolen goods produced by all establishments was 17,235,929. The stated value of this production was \$12,176,827.67. Deducting from this amount the value of product "reported elsewhere," and the net product value of the quantity of goods reported as having been manufactured in 1897 was \$11,887,227.67. The total amount paid wages, exclusive of salaries, during the year was \$2,667,953.07. The proportion of product value paid in wages was therefore 22 per cent. Fifteen establishments were closed which had been engaged in the manufacture of woolen goods during the previous year.

There were 23 establishments for the manufacture of knit goods in operation in the State during the year. The amount of capital invested

(exclusive of surplus) was \$1,863,000. The average number of persons employed during the year was 3,006, of whom 913 were men, 1,921 women, 68 boys, and 104 girls. The total value of product manufactured by these establishments in 1897 was \$3,630,550.52, and the amount paid in wages (exclusive of salaries) for the same period \$967,752.47.

Information was secured from 25 establishments engaged in the silk industry which were in operation in 1897. The amount of capital invested in these (exclusive of surplus) was \$4,008,000. The value of the manufactured product was \$7,488,485.05, and the amount paid in wages (exclusive of salaries) \$1,734,739. The average number employed in all establishments was 5,154, of whom 2,093 were men, 2,590 women, and 471 boys and girls under sixteen years of age.

Shad Culture.—The Commissioners of Fish and Game report signal success in the propagation of shad. In the spring of 1895 they placed half a million fry in a retaining pond whose outlet flows into Farmington river. In the autumn of that year they let out into the open water these little shad, which then had grown to be from three to five inches long. Three years later thousands of the finest adult shad were caught in Farmington river for the first time in many years.

In 1897 the commissioners carried 6,000,000 shad fry in the retaining ponds in the town of Lyme, and in the autumn let them out into Connecticut river. In 1898 they treated more than 9,000,000 in the same way.

Charities.—The State Board of Charities reports 176 institutions for the delinquent, defective, and dependent classes which are visited by the board (including 88 town almshouses), and the amount of State aid that has been applied to the support of these institutions during the year was \$658,190, compared with \$732,858 in 1897 and \$662,329 in 1896. Part of the decrease is accounted for by the fact that about \$58,000 less was appropriated for building operations in 1898 than in the preceding year.

Crime.—The number of persons in the penal and reformatory institutions in the State on June 30, 1899, was as follows: State Prison, 506; Hartford County jail, 245; New Haven County jail, 258; New London County jails, 92; Fairfield County jails, 188; Windham County jail, 56; Litchfield County jail, 41; Middlesex County jail, 36; Tolland County jail, 11; State School for Boys, 440; Industrial School for Girls, 254; total, 2,127.

Legislation.—The most important legislation of the year was the passage to their first stage of two amendments to the Constitution. One abolishes the requirement of a majority vote in the election of the State ticket. The other provides for rearranging the senatorial districts and increasing their number. These amendments go over to the next General Assembly for action in both houses, a two-third vote being then required for passage. If this is given, the amendments will be submitted to the people.

The highway law was changed in important respects. The scope of investments by savings banks in sound securities was widely enlarged. Provision was made for testing the eyesight of school children; seven years was made the compulsory school age, and the law to encourage attendance at high schools was extended to all towns. The mechanics' lien law was variously amended.

The only enactment in the nature of a labor law was a bill prohibiting employers from any

action that shall prevent their workmen from joining labor organizations. Bicycles and all other rubber-tired vehicles must hereafter carry lights at night, and the stealing of bicycles is discouraged by the new law for the supervision of dealers in second-hand wheels. Restrictions were put upon the evil of excessive interest charges by dealers in furniture on the installment plan. The name of Storrs Agricultural College was changed to the Connecticut Agricultural College. It was forbidden to desecrate the national or State flag with advertisements, inscriptions, etc.

Sheep culture was encouraged by an exemption of \$100 worth of sheep from taxation. The open game season is now from October to December, and snaring of game birds is prohibited, even by the landowner. The trout season is extended to July 1, and if there is a late fishing season for shad and alewives the Fish Commission may extend the time.

Statute Revision.—Gov. Lounsbury selected the following representative men of the State for the commission to revise the statutes: Donald T. Warner, of Salisbury; Gardiner Greene, of Norwich; Henry C. White, of New Haven; James P. Andrews, of Hartford; Michael Kenealy, of Stamford; William A. King, of Willimantic.

Soldiers' Monument.—The Camp-field Monument Association has decided on a portrait statue of Gen. Griffin A. Stedman (who fell in the fighting before Petersburg, Aug. 5, 1864) in connection with the soldiers' monument that is to be erected on the old camp-ground site at the corner of Camp-field Avenue and Bond Street, which has been given for that object by John C. Barker, of Hartford.

Patents.—In proportion to population the State, as in previous years, had more patents granted to its citizens in 1898 than any other State in the Union. The total number granted to citizens of Connecticut was 831.

Expositions.—The last General Assembly passed a resolution authorizing the Governor to appoint a commissioner to serve for two years, who shall take such action as he shall deem advisable "to secure a full representation of the industries of Connecticut at the Paris Exposition in 1900 and at the Buffalo Exposition in 1901." The salary is fixed by the resolution at \$1,200 per annum and \$500 per annum for expenses. Gov. Lounsbury appointed ex-Senator Lee to be the commissioner.

Political.—The town elections held in 162 of the 168 towns of Connecticut do not reveal gains by either party indicating any marked political change. Of the 168 towns in the State, 79 voted for license and 89 no license, a gain of 2 for license.

Twenty-three towns voted on the question of town instead of district management of schools, and only 5 voted in the affirmative.

City elections were held in Waterbury, New London, Norwalk, and South Norwalk. The Democrats made a clean sweep in Waterbury. Edward G. Kilduff was elected mayor over Thomas D. Barlow by 3,740 to 2,232. The Board of Aldermen was saved to the Republicans by only 1 plurality, and they lost control of the Board of Education.

The city election at New London resulted in a Democratic victory by a small majority, 8 Democratic aldermen being elected to 7 Republicans, and most of the city officers being Democratic. The Board of Aldermen will be Democratic.

In Norwalk Charles L. Glover, Democrat, was re-elected mayor by a small plurality over A. B. Woodward. The Republicans were generally suc-

cessful on the remainder of the ticket, and will control the Council.

The Legislature re-elected United States Senator Joseph R. Hawley for the term ending in 1905.

COSTA RICA, a republic of Central America. The legislative authority is vested in the Congress, or House of Representatives, containing 32 members, 1 to 8,000 of population, elected for four years, one half being replaced every two years, by electoral colleges, for the members of which any man can vote who is self-supporting. The President, who is chosen by the Congress for four years, is Rafael Iglesias, who was re-elected for the term beginning May 8, 1898. The Vice-President is José Joaquín Rodríguez, with Dr. Carlos Duran and Asencio Esquivel as alternates. The Cabinet in the beginning of 1899 was composed as follows: Minister of Foreign Affairs, Worship, Instruction, Public Charity, and Justice, Pedro Pérez Zeledón; Minister of Gobernación, or the Interior and Police, and of Public Works, José Astua Aquilar; Minister of Finance, Juan B. Quiros; Minister of War and Marine, Demetrio Tinoco.

Area and Population.—The area is estimated at 23,000 square miles. The population was 243,205 at the census of 1892, divided into 122,480 males and 120,725 females, but 19,456 were estimated to have been omitted, besides 3,500 uncivilized Indians. In March, 1897, the population was computed to be 294,940. Since 1893 the Government has made efforts to induce immigration, granting concessions for agricultural colonies and selling public lands to settlers on favorable terms. There were 6,289 foreigners in 1892—Spaniards, Italians, Germans, British, Americans, and British West Indians. Since 1894 the immigration has been about 1,000 per annum. Education is gratuitous and compulsory. The sum expended on the schools by the Government in 1896 was 354,723 pesos, the number of pupils in 1897 being 21,913 in the elementary schools. The number of marriages in 1897 was 1,763; of births, 13,012; of deaths, 9,925; excess of births, 4,087.

Defense.—The permanent military force numbers 600 men; the militia, 12,000. In war all Costa Ricans between eighteen and fifty years of age can be called into the service.

Commerce and Production.—The soil and temperature at different altitudes are favorable for all kinds of vegetable products. The most valuable is coffee, which enriches this nation even when costly plantations have become almost valueless in other countries owing to depressed prices. The cultivation of cacao also is extending. Cattle are reared in some districts. The people raise corn, rice, and potatoes for food. The value of imports in 1896 was 4,748,818 gold pesos; exports, 5,979,727 gold pesos. The export of coffee was 11,089,523 kilogrammes, valued at 4,318,286 pesos in gold. The value of bananas shipped to the United States, the next most important export, was 670,072 pesos in gold. Other articles of export are hides, cedar, and various other woods.

Finances.—The revenue in 1898 was 8,424,104 pesos, and the expenditure 8,313,454 pesos. In 1897 the revenue was 7,435,611 pesos, of which customs produced 2,766,248 pesos and excise taxes 2,242,174 pesos. The expenditures for that year were 6,697,327 pesos, of which 3,501,354 pesos went for the Government expenses and 1,072,690 pesos for the public debt.

The foreign debt, which was £2,691,300 sterling in 1887, with arrears of interest amounting

to £2,119,512, was scaled down by an arrangement with the bondholders in 1888, and when the Government had defaulted again in 1895 a new settlement was reached in March, 1897, by which interest accrued since January, 1895, was cleared off by an immediate payment of £31,562, and a promise of annual installments of £5,000 for twenty years, the interest was reduced to 3 per cent. on £525,000 and to 2½ per cent. on £1,475,000 of bonds, and amortization at the rate of £10,000 a year was deferred till 1917. The amount of the foreign debt in 1898 was £2,095,000. The internal debt, which has been paid off at a rapid rate, was only 1,116,784 pesos in 1897.

Navigation.—The number of vessels entered during 1896 at the ports of Limon and Punta Arenas was 476, of 471,125 tons. The shipping belonging to Costa Rica in 1898 consisted of 3 steamers, of 600 tons, and 2 sailing vessels, of 551 tons.

Railroads, Posts, and Telegraphs.—The railroads have a total length of 131 miles, consisting of a section of the projected interoceanic railroad running from Limon to Alajuela, a distance of 117 miles, and the beginning of the western section from Punta Arenas to Alajuela, built as far as Esparza, 14 miles, and now being pushed farther. Other lines are in contemplation.

The telegraph lines in 1897 had a length of 917 miles.

CRETE, an island in the Mediterranean, forming an autonomous province of Turkey. The last insurrection of the Christians against Ottoman rule, occasioning an invasion of the island by Hellenic volunteers, led to the interference of the great powers. In 1896 the naval forces of Austria, England, France, Germany, Italy, and Russia blockaded the coast to prevent the arrival of arms and re-enforcements, and military detachments occupied the ports to preserve order. The Germans and Austrians afterward withdrew from the blockade. The Sultan finally granted autonomous government, and before November, 1898, withdrew all the Turkish garrisons. A provisional scheme of administration was put in force, while the officers in command of the troops of occupation proceeded to disarm the people. The Sultan nominated a governor, with the title of High Commissioner, accepting for this office at the instance of the powers Prince Georgios of Greece, second son of the King of the Hellenes, born June 24, 1869. He assumed office on Dec. 21, 1898.

Crete is a mountainous island, having very fertile valleys and lowlands. The area is 3,326 square miles, with a population of 294,190. The majority of the people have always been Christians of the Greek race and language. The island was once a dependency of Venice, and after the Ottomans took possession in 1669 many of the inhabitants went over to Islam. During the insurrection and immediately afterward a part of the Moslems emigrated. At the restoration of peace there were 88,000 left. Crete produces fruits and nuts, olives, wine, tobacco, cotton, and silk.

The Russian proposal of the appointment of Prince Georgios, communicated on Oct. 26, 1898, was not cordially seconded by all the co-operating powers, and was extremely distasteful to the Sultan, signifying the gravitation of Crete to Greece and the eradication of the rights and institutions of the Mohammedan population of the island. Finally, however, it was accepted as the best solution of the question. Prince Georgios accepted the nomination as High Commissioner in December, 1898, and in January, 1899, the inter-

national condominium was terminated and the naval forces were withdrawn. The mission of the foreign admirals lasted nearly two years, involving the blockade of a difficult coast, the occupation and military administration of the most important inhabited places and districts, the forcible suppression of violent outbreaks between the warring elements of the population, the arbitration of their differences, and even the organization of a system of law and administration. An international military force was retained to preserve order pending the organization of an indigenous police. The Council of the High Commissioner, consisting of 6 Christians and 3 Mohammedans, was appointed early in January. The Mohammedans who had been driven from their homes in the country districts and had taken possession of houses in the towns belonging to Christians were removed, and as soon as the Christian peasants who had taken refuge in Greece and the islands began to return the process of driving the Mohammedans from the island was commenced. The Prince exhorted the Mohammedans to return to their home and resume their former vocations, assuring them of the friendly and brotherly disposition of their Christian neighbors and the protection of the international troops. Those, however, who had lost their property or were without means of support were compelled to emigrate, while the Christians whose villages had been destroyed were provided for. The Prince in his proclamation hinted at a desire for the emigration of the Mohammedans, saying that they were free to depart, and could have passports for the asking. The Christians everywhere, catching at this suggestion, began to make the position of their Mohammedan neighbors unbearable. When a decree was issued in the beginning of February for the removal of the Moslems at Canea to their own districts about 1,300 more demanded permission to emigrate, as their lands had in many cases been leased to Christians, and they had no implements to till the ground. The Mohammedans that were crowded in the towns could not return to their villages without aid, for their houses and plantations were destroyed. The British authorities at Canea, fearing the economic effects of a general exodus, followed by the ultimate return of many of the emigrants in a state of destitution, refused to give passports till two months had expired. When this period terminated in January more than 3,000 obtained passports. The Prince appointed a commission of 16 persons to draw up a constitution for the new autonomous government. In the memorandum addressed to the Prince by the powers the institution of a National Assembly, in which all Cretan elements would be represented, was made the condition of his appointment, and he was enjoined to organize in accord with this National Assembly a system of autonomous government capable of assuring an equal measure of security to life and property and the free exercise of both religions. The new Constitution created a Chamber of Deputies elected by the inhabitants, except 10, who are nominated by the High Commissioner. The Council of the High Commissioner, appointed in January, consisted of 12 Christians and 4 Moslems. The Constitution was submitted to an extraordinary National Assembly, which came together on Feb. 21. M. Sphakianaki was elected president. It decided that the officers of the new gendarmery should be Europeans. Greek was declared to be the official language of the country. The military force of the island was to consist of a municipal guard, service in which was made com-

pulsory. The National Assembly is to meet biennially. The High Commissioner was forbidden for two years to contract a loan or to impose new taxation. At the suggestion of Russia it was decided by the occupying powers to submit the Constitution to the revision of the diplomatic corps at Rome, Admiral Canevaro, who had been the chief in command of the international squadron, now being Italian Foreign Minister. The draft of the Constitution, as amended by the Assembly, was passed unanimously on March 16. The prohibition against loans was waived in respect of one of 4,000,000 francs to reimburse the powers, who promised to advance that sum in order to cover past deficits and to procure timber for the rebuilding of the demolished villages. Later the Government was authorized to borrow 5,000,000 francs more at 3 per cent., to be used in making advances to the peasantry, both Christian and Mohammedan, to enable them to re-establish their homes. The representatives of the four powers objected to certain articles of the Constitution tending to restrict the free exercise of the Moslem religion and the legitimate rights of the Sultan, articles which had the effect of increasing the exodus of Mohammedans; also to articles infringing the rights secured to foreigners by the capitulations, and to one conferring on the Assembly power to elect a successor to Prince Georgios and to revise the Constitution in case of a vacancy. The Council of the High Commissioner was constituted on April 30 as follows: Education and Public Worship, M. Yamalaki, M. Sphakianaki having declined the post; Justice, M. Venezelos; Interior, M. Koundouros; Finance, M. Founis; Posts and Telegraphs and Public Safety, Hassan Skylianiki Bey. M. de Blonay, the Swiss financial adviser of the Prince, was not made one of the councilors. The administration of the districts, previously under the jurisdiction of France, Great Britain, Italy, and Russia, was handed over to the new civil authorities in July.

CUBA, an island of the West Indies, formerly a Spanish colony; since December, 1898, in the military occupation of the United States. The treaty of peace by which Spain relinquished her authority over the island was signed by the Peace Commissioners at Paris on Dec. 10, 1898, and was ratified by the United States Senate on Feb. 6 and by the Queen Regent of Spain on March 17, 1899. The United States Congress affirmed the independence of the island as a preliminary to armed intervention, yet after the surrender of the Spanish posts to United States officers a military government was established by orders of the President of the United States until such time as the Cuban people shall organize a stable government. The United States Government meanwhile assumes responsibility for the preservation of order and the protection of life and property. A military governor general was appointed, with residence at Havana, and a military governor, who shall receive instructions from the Governor General for each of the seven military departments. Major-Gen. John R. Brooke was appointed Governor General; Brig-Gen. Leonard Wood, governor of the province of Santiago; Brig-Gen. L. H. Carpenter, governor of the province of Puerto Principe; Brig-Gen. J. C. Bates, governor of the province of Santa Clara; Brig-Gen. James H. Wilson, governor of the province of Matanzas; Major-Gen. Fitzhugh Lee, of the United States volunteers, governor of the province of Havana and also of the province of Pinar del Rio; and Brig-Gen. William Ludlow, governor of the city of Havana.

Area and Population.—Cuba is a narrow island, 720 miles long, with an average width of 80 miles, hot and unhealthful in the low coast regions, but temperate in the mountainous interior. About a tenth of the surface has been brought under cultivation. Extensive areas have never been explored, and the primeval forest covers 20,000 square miles. The total area is estimated at 45,872 square miles. The population at the census of 1887 was 1,631,687, of whom 528,998 were negroes and mulattoes. Three fourths of the population were totally illiterate, yet there are 843 public schools, besides the state-supported university at Havana. Compulsory education was enacted in 1880. The population of Havana, the capital, was 200,000 in 1894; of Santiago de Cuba, 71,307; Puerto Principe, 46,641; Holguin, 34,767; Sancti Spiritu, 32,608; Cienfuegos, in 1892, 27,430; Cardenas, 23,680. The inhabitants of Cuba are divided into the whites, the colored, the blacks, and the Chinese. The whites are creoles or natives of Cuba, who are mostly planters, farmers, professional people, and traders; Spaniards, about 30,000 in number, residing mostly in Havana, and constituting to a great extent the commercial and capitalist class and that of the skilled artisans; Canary Islanders, who have been brought over to work on the plantations; and various foreigners. The negroes are mostly descendants of slaves imported from the west coast of Africa during this century, and are therefore less civilized and ambitious than the negroes of the United States, but they are hardier and stronger and more willing to perform hard and steady labor; the mulattoes and colored, furnishing the domestic servants, are about equal in number to the blacks; the Chinese, about 20,000 in number, were brought into Cuba after the suppression of the slave trade in 1869 to labor as coolies on the plantations, but their treatment was so severe that the Chinese Government refused to allow further importations.

Finances.—The revenue for 1898 was estimated at 24,755,760 pesos, of which 11,890,000 pesos were from customs duties. The ordinary expenditure was put down at 26,119,124 pesos, of which 12,602,216 pesos were required for the debt, 5,896,741 pesos for the Ministry of War, and 4,036,088 pesos for the Ministry of the Interior. The extraordinary revenue and expenditure was estimated at 80,000,000 pesos.

The Cuban debt was calculated to amount to £70,220,000 sterling in 1896, including £10,000,000 due the Spanish Government. By the issue of the war this debt remains an obligation of Spain, but Cuba, which had received practically no benefit from the loans, contracted mainly for military repression, is relieved of the whole of it.

Commerce and Production.—The soil of Cuba is so exceedingly fertile that sugar cane has been grown in the same fields for a century without the aid of fertilizers. The mountains are of coral formation, and the lowlands, especially in the east, are composed largely of fossil remains of marine fauna rich in lime and phosphates. Sugar is the chief product, and after that tobacco, which is manufactured into the finest cigars that are smoked in Europe or America, or exported to the United States to be made up there into cigars. It is the established type of cigar tobacco, and can not yet be grown elsewhere of a quality equal to the Cuban tobacco, especially that of the Vuelta Abajo district of Pinar del Rio. In this western province most of the tobacco is raised, while the central provinces are given up mostly to the cultivation of sugar cane. Coffee was formerly a more impor-

tant product than it has been of late, yet until the war of independence interrupted all industry there were flourishing plantations, and the quality of Cuban coffee stood high in the market. Such was the devastation and paralysis of industry caused by the guerrilla war, in which both sides interdicted production and destroyed buildings and crops, that the tobacco crop of Pinar del Rio in 1897 did not exceed 30,000 bales, little more than a tenth of the normal production. In 1893 the exports of tobacco from Cuba were 6,160,000 pounds of leaf and 134,210,000 cigars. The mills on sugar estates were destroyed to a great extent, and the planters were not permitted to grind cane. The product fell off from 1,004,264 tons in the season of 1894-'95 to 225,221 tons in 1895-'96 and 212,051 tons in 1896-'97. Only a fraction of the land suitable for the sugar cane has been utilized, and yet the exports of sugar have reached 1,100,000 tons in a year. Oranges were formerly exported, but the better-cared-for Florida fruit took away this trade. Bananas are cultivated in the eastern provinces and pineapples in the west. Cotton and cacao are raised to some extent. The number of agricultural holdings in Cuba was estimated in 1891 at 90,960, having an aggregate value of \$220,000,000 and an annual rental value of \$17,000,000. The live stock comprised 584,725 horses and mules, 2,485,766 cattle, 78,494 sheep, and 570,194 hogs. These animals disappeared during the war of independence. The Cuban tobacco crop averaged formerly 560,900 bales of 110 pounds, of which 338,000 bales were exported and 222,000 bales manufactured into cigars and cigarettes in Havana. The exports of leaf tobacco in 1895 were 30,466,000 pounds, and in 1896 they were 16,823,000 pounds. A decree forbidding leaf exports except to Spain, issued on May 12, 1896, checked the exportation of raw tobacco and stimulated that of cigars, of which 185,914,000 were exported in 1896. Nearly the whole of the leaf exported and half of the cigars are ordinarily taken by the United States. Exports of cigarettes in 1895 amounted to 48,163,846 packets.

The forests contain mahogany, cedar, logwood, ebony, lignum vitæ, sabicu, granadilla, redwood, and caiguaran, a wood that does not decay in the ground. The forest products exported include mahogany, cedar, which is the material also of Cuban cigar boxes, and various other timbers, honey and wax, dyes, medicines, and wild fruits of various kinds. The exports of cultivated fruits are important, especially of oranges and shaddocks, a trade which was revived in consequence of the destruction of Florida groves by frost. The mineral resources of Cuba have scarcely been tapped. The copper mines of Cobre, which were worked by the Indians before the Spaniards came, and furnished ore worth over \$2,000,000 a year for shipment to the United States for the twelve years ending with 1840, are still productive. The iron mines of Juragua continued operations during the insurrection, shipping to the United States from 30,000 to 50,000 tons of iron ore a year. The Juragua and the Daiquiri companies, both American, have \$5,000,000 of capital, and employ from 800 to 1,400 men. The neighboring mountains of Santiago province contain other deposits of this remarkable ore, one of the richest in the world, containing from 62 to 67 per cent. of pure iron, free from phosphorus and sulphur. West of Santiago de Cuba, in the Sierra Maestra mountains, extending for a length of 100 miles, are manganese mines that have scarcely been opened, but are probably capable of supplying all the steel furnaces of the

United States. There were 296 mines registered in Santiago before 1892, of which 138 were iron, 88 manganese, and 53 copper. Gold first attracted the Spaniards to Cuba, and it is still washed by the negroes, but no paying gold or silver ore has yet been found. A fine, pure asphaltum, used in the United States in the manufacture of varnish, is mined near Cardenas, and is found in other localities. Bituminous coal is found in various parts of the island.

The principal imports of Cuba are rice, wheat flour, jerked beef, wine, olive oil, lard, butter, potatoes, and other articles of food, textiles and clothing, machinery, and hardware. The Spanish exports to Cuba were \$28,046,636 in 1892, \$24,689,373 in 1893, \$22,592,943 in 1894, \$26,298,497 in 1895, and \$26,145,800 in 1896. Imports from Cuba into Spain amounted to \$9,570,399 in 1892, \$5,697,291 in 1893, \$7,265,120 in 1894, \$7,176,105 in 1895, and \$4,257,360 in 1896. Under the Spanish tariff not only manufactured articles, but most of the flour, which was once imported largely from the United States, was imported from Spain. Of the imports of flour in 1896, valued at \$4,285,522, Europe furnished 404,019 bags to 100,321 from America; of rice, value \$2,807,481, Europe furnished 853,538 hundredweight and America 23,800 hundredweight; of coal, 180,487 tons came from the United States and 29,050 tons from Europe, the total value being \$2,085,370; of lard, the imports were 194,308 hundredweight, valued at \$2,078,811, all from the United States; the imports of potatoes, valued at \$996,702, were 53,083 barrels from Europe and 231,774 barrels from America; those of salt fish, \$686,000 in value, were 5,036 drums from Europe and 79,521 from America; of imports of cheese, value \$323,673, 1,881 cases came from Europe and 44,358 from America; the imports of butter, 6,392 cases, of the value of \$319,700, came almost entirely from Europe; of Indian corn, 97,303 bags were imported, valued at \$467,049, all from America. The value of the merchandise exports from the United States to Cuba in 1893 was \$24,157,698; in 1894, \$20,125,321; in 1895, \$12,807,661; in 1896, \$7,530,880; in 1897, \$8,259,776. Exports of breadstuffs to Cuba declined from \$3,512,207 in 1893 to \$1,320,866 in 1897. Those of vegetables, principally potatoes, beans, and peas, were valued at \$626,954 in 1897. Under the head of provisions, the total value of which declined from \$5,700,536 in 1893 to \$2,421,715 in 1897, the exports of bacon from the United States to Cuba in the latter year were valued at \$574,402; of hams, \$374,185; of lard, \$1,255,183. The total exports to Cuba of agricultural and other products, including provisions, declined between 1893 and 1897 from \$10,492,352 to \$4,628,011; agricultural implements, from \$130,341 to \$3,624; railroad cars, from \$271,571 to \$9,202; cotton cloth, from \$75,359 to \$25,008; other manufactures of cotton, from \$72,819 to \$42,444; manufactures of India rubber, from \$42,879 to \$27,257; car wheels, from \$18,073 to \$2,782; cutlery, from \$21,094 to \$6,773; machinery, from \$2,792,050 to \$55,069; nails and spikes, from \$107,002 to \$25,016; rails, from \$327,411 to \$14,650; saws and tools, from \$243,544 to \$34,686; steam engines, from \$130,652 to \$1,189; wire, from \$321,120 to \$35,905; boots and shoes, from \$114,943 to \$15,195. The imports from Cuba into the United States were \$78,706,506 in value in 1893, \$75,678,261 in 1894, \$52,871,259 in 1895, \$40,017,730 in 1896, and \$18,406,815 in 1897. The imports of Cuban asphaltum into the United States declined during these years from \$25,992 to \$7,628; drugs and dyes, from \$277,269 to \$5,273; bananas, from \$1,641,387 to

\$147,133; other fruits, from \$559,019 to \$7,829; molasses, from \$1,081,034 to \$167; sugar, from \$60,637,631 to \$11,982,473; woods, from \$1,071,123 to \$63,670; iron ore, from \$641,943 to \$475,281; spirits, from \$19,419 to \$8,295; leaf tobacco from \$8,940,058 to \$2,306,067; manufactured tobacco, from \$2,787,030 to \$1,971,214. Shipments of gold from Cuba to the United States increased from \$1,024,950 in 1893 to \$4,454,032 in 1897, while the contrary movement of gold from the United States to Cuba from \$6,403,264 in 1893 fell off to nothing. The imports into Mexico from Cuba in 1897 were only \$363 in value; exports from Mexico to Cuba, \$26,700. The imports of British merchandise into Cuba in 1896 were valued at \$174,187, and exports from Cuba to Great Britain at \$5,843,892; from Belgium the imports were \$208,304, and exports to Belgium \$1,089,239; imports of French goods were \$3,338,900, and exports to France \$424,600.

Navigation.—Havana was visited by 1,179 vessels, of 1,681,325 tons, in 1895; Cienfuegos in 1897 by 231 vessels, of 309,758 tons.

Telegraphs.—The length of telegraph lines in 1897 was 2,300 miles, all belonging to the Government. The telephones are also Government property, but are leased to a company.

Railroads.—Although Cuba has not yet an adequate railroad system, and for lack of it many of the resources of the island are unavailable, yet there are over 1,000 miles of railroad, besides private branches connecting the main lines with the sugar estates. There are 10 railroad companies. The most important one, the Havana Ferrocarriles Unidos, has 4 lines, of the total length of 246 miles, connecting Havana with Matanzas, Batabano, Union, and Guanajay. The main line of the Cardenas-Jucaro system, which has 206 miles of railroads, including branches, connects Cardenas with Santa Clara. Another company has lines running from Cienfuegos to Santa Clara, from Concha and Sagua la Grande to Las Cruces and to Chinchilla, from Sitiecito to Camajuani, and from Caibarien to Placetas, their total length being 186 miles. The Matanzas company has a line connecting Matanzas with Esles, and branches to Murga, Nieves, Atrevedo, and other places, the total length of the system being 173 miles. A railroad in the west, owned since 1891 by an English company, runs from Havana to Pinar del Rio, 109 miles. The Mariano Railroad, 9 miles, running from Havana to a seaside village, is also owned by English investors. The Guantanamo Railroad, 10 miles in length, runs from Caimanera to Soledad. The Tunas and Sancti Spiritus line runs from Tunas de Zaza to Valle, 24 miles; the Trinidad Railroad from Casilda to Fernandez, 22 miles. A line from Gibara to Holguin is 20 miles; one from Puerto Principe to Nuevitas, 45 miles. The Santiago Railroad connects Santiago de Cuba with San Luis, and by a branch with Sabanilla, the total length being 33 miles. Including the narrow-gauge railroad, 15 miles in length, from the seaport of San Cayetano to Viñales, the military Jucaro-Moron Railroad from Jucaro to Estero, 40 miles, and the military terminal railroad of Havana harbor, 6 miles long, the aggregate length of the railroads of Cuba is 1,135 miles.

The Military Government.—When the United States military authorities took over the island from the Spaniards at the end of 1898 the effects of war and of the reconcentration policy of Gen. Weyler were visible everywhere. Nearly a third of the population had been wiped out by battle, massacre, starvation, exposure, or disease, and many of the survivors were too en-

feebled to resume at once their ordinary occupations, even if facilities for work were at hand. As it was, the people were still huddled in the towns, while the country had been swept bare of all the means of civilized existence. Tobacco and cane plantations were utterly destroyed, houses and cane mills burned, the cattle that once grazed on the hills all killed. In Havana and the other cities no means of giving employment to the town population could be found. Trade and commerce were at a standstill. The factories were still, the wharves and warehouses empty. Shiploads of provisions were sent over by the United States Government to feed the Cuban army and such necessitous poor people as required assistance for a few weeks until the crops of sweet potatoes, yams, corn, and other food products were matured. The Cubans who had contributed money for feeding the troops and reconcentrados organized committees for the purpose of devoting their future efforts to the reconstruction of the industrial life of the island. The relief offered by the United States army was made conditional on work being done. The wealthy and charitable Cubans decided to apply their subscriptions to the purchase of agricultural implements and oxen, so as to enable the people crowded in the cities to go back to the country and till the soil. Plantation owners offered land rent free to such as were willing to raise crops, and recipients of rations were given to understand that these would be continued on no other condition. Those who were accustomed to labor embraced the opportunity. The impoverished families that had formerly lived in luxury suffered most, for the distributors of rations hesitated about relieving their necessities for fear of creating envy among those who had to work for the food they received. Some of the Cuban generals took an initial step toward the disbandment of the army by quartering their men on the plantations, partly to guard them from marauders and partly to assist in working the fields, the owners of the plantations furnishing rations in return for protection. Some of the soldiers took work on the cane plantations at current wages, but most of the generals discouraged their men from returning to civil life, and kept their commands together pending the settlement of the question of the pay of the Cuban army and that of the future political status of Cuba. The Spanish garrison evacuated Havana on Jan. 1, and Gen. Jimenez Castellanos, who was made captain general on the departure of Gen. Blanco some weeks before, made formal delivery of Cuba to Gen. Brooke. The Seventh Corps of volunteers, trained by Gen. Fitzhugh Lee, formed the occupying force of Havana and the western provinces. Gen. Ludlow, who was appointed military governor of Havana city, would allow no Cuban soldiers with arms to enter for fear of collisions with Spaniards. The Cubans were rendered distrustful when they were excluded from participating in receiving the surrender. Gen. Maximo Gomez declared that unless the immediate independence of Cuba be proclaimed or a date fixed for the inauguration of the Cuban Republic he would keep his army under arms. Other Cuban generals did not feel the same jealousy, and some of them continued to discharge their men when opportunities offered for finding work on the sugar plantations. United States Commissioner Charles Gould, who had charge of the distribution of rations, and the provincial governors, who sought for capable Cubans to take official positions, did much to dissipate the doubts entertained by Cubans regarding the good faith of the

United States Government which the action of Gen. Shafter in excluding Gen. Calixto Garcia from sharing in the triumph at Santiago had first awakened and the course of the United States military commission for the evacuation of Cuba had intensified. The committee of the Cuban Assembly passed a resolution recommending the soldiers to accept employment. The American forces in Cuba at the time of the Spanish evacuation numbered 32,458 men and 1,456 officers. In Havana province 16,914 were stationed; in Matanzas, 3,654; in Santiago, 7,405. Gen. Gomez toward the end of January ordered the Cuban officers to rejoin their commands and to concentrate the forces in the province of Santa Clara. Thence he marched to the province of Havana, where the United States authorities gave him the palace of the Governor General outside the city as quarters for him and his staff. He made a request that the United States advance \$60,000,000 to be distributed among the officers and men of the Cuban army to pay them for their services and compensate them for losses incurred in the war of independence. The United States Government refused to advance this or any sum for the payment of the Cuban soldiers, but offered to advance \$3,000,000 to induce them to give up their arms and enable them to return to their homes and resume peaceful occupations. Robert Porter, the United States special commissioner, made it plain to the Cuban commander in chief that no larger sum would be given. When he saw that it was useless to dispute longer about the amount, Gen. Gomez objected to the surrender of the Cuban arms to the United States authorities. He thought that the soldiers ought to retain their arms, that it was compatible with peace to have an army with arms reserved to defend Cuba against her enemies. The majority of the Cuban officers, objecting to the negotiations being carried on for the payment of the army on the basis of \$3,000,000, denied the authority of Gen. Gomez to treat with the United States Government in the name of the army. They held that only the Cuban Assembly could accept or decline such a proposal. He declared that he would observe the rulings of the Assembly so far as he considered them beneficial to Cuba. When Gen. Gomez consented to accept the amount offered, and the gold was shipped from New York, the Assembly came together, and on March 12 impeached Gen. Gomez by 26 votes to 4 and dismissed him from the post of general in chief on a charge of failure in his military duties and disobedience to the Assembly. He still continued the negotiations with Gen. Brooke, and had the approval of most of the Cuban people. The army lists presented by the Cuban officers showed nearly 40,000 men; but as none were to receive a share of the \$3,000,000 who had not borne arms previous to the middle of 1898, the United States officers insisted that the lists be revised. The Cuban Assembly was reconvened, and the disputes that arose as to who were entitled to receive pay caused a delay, and drove Gen. Gomez to decline to take part in the distribution. The question about what was to be done with the arms and how they should be surrendered was made a point of honor by Gen. Gomez. The instructions from Washington were that the arms should be surrendered to United States officers. Gen. Gomez would not accede to this, and proposed, if they could not be kept in armories for the future use of the Cuban army, that they be deposited with the alcaldes of the towns, to be preserved in museums as souvenirs of the war of independence.

Gen. Brooke finally compromised the matter, agreeing that they should be surrendered to alcaldes in the presence of United States officers, turned over to the joint care of these and of representatives of the Cuban army, shipped under guard to Havana and Santiago, and there placed in United States armories under the immediate charge of armorers appointed by Gen. Gomez, to be exhibited as relics of the insurrection and the Spanish-American War. The money was to be distributed by American and Cuban commissioners. Every Cuban soldier who was in the service before July 17, 1898, and was not in receipt of a salary from a Government or municipal office, received upon identification by his company officers and the delivery of his arms and equipments the sum of \$75 in United States currency. The Cuban commissioners, influenced by the Assembly, would not at first fall in with the arrangement made between Gen. Brooke and Gen. Gomez, but the soldiers, following the advice of their general in chief, gave up their arms and disbanded.

When Gen. Bates retired from the governorship of Santa Clara province his command was merged with that of Matanzas, and taken over by Gen. Wilson, who abolished the rural police created by his predecessor and maintained order with a municipal police. Gov.-Gen. Brooke and the military governors of the provinces surrounded themselves with civilian subordinates, officers of the Cuban army, and other Cubans and Spaniards. The island became perfectly peaceful under their conciliatory administration, and the people turned to the reconstruction of the industries of the island where this was possible. So much had been destroyed that without foreign capital the wheels of industry could not be set moving again. American capitalists were not so ready to avail themselves of the opportunities for investment as English and German capitalists, who acquired many properties that were in the market at low prices, but without proceeding immediately to utilize them and thus furnish work to the people. English agents acquired much of the railroad stock that Spanish holders wished to get rid of. The sugar plantations had been so devastated that the principal industry of the island could not be revived without replacing buildings and machinery at enormous expense, which the depressed condition of the cane-sugar cultivation did not warrant. The conditions of the Cuban tobacco trade, on the other hand, were more inviting than they had ever been. No suitable substitute had been found for good grades of Havana tobacco during the time that the Cuban insurrection and the war had kept them out of the market. The soldiers of Gomez and other Cubans who wanted work consequently found employment in the tobacco fields, and raised the largest crop that the island ever produced.

Cubans who had political aspirations and found no employment under the American administration stirred up an agitation concerning the continued military occupation, and threatened to raise a revolt against American rule, which seemed to them to grow more fixed and permanent. These were the members and friends of the Cuban military assembly that had endeavored in the beginning to obtain recognition and power as the native governing body. Gen. Gomez, who exerted his influence at that time to prevent these malcontents from making mischief, assured the Cuban people once more of his complete faith in the honor of the Americans and the fidelity of the United States Government to

its pledges. The efficient and orderly administration of the American army officers and the great improvements that they wrought in the sanitation of cities, the organization of the post office, police, justice, public schools, etc., reconciled many Cubans to the idea of the perpetuation of American rule, while the endeavors of the military governors to make use of native administrative talent wherever it could be found made the greater number who looked forward to independence content to wait for the gradual development of the Cuban republic. The process of economical reconstruction and the influx of outside capital gave the Government a good revenue from customs duties. The sanitary improvement of Havana by Gen. Ludlow and of Santiago by Gen. Wood kept the yellow fever in check to an extent never before known in Cuba, and gave promise that the scourge would be banished as it had been from the Southern ports of the United States. Americans who sought public employment in Cuba were in nearly all instances disappointed. The post office was reorganized on

American lines by E. G. Rathbone, yet of the employees 570 were Cubans and only 130 Americans. The agitators who wished to provoke a rising against the Americans were actuated mainly by personal ambition. They uttered their incendiary ideas in meetings and in the press without being checked by the authorities, who were convinced of the peaceful and law-abiding character of the Cuban people and of the impossibility of stirring them up to insurrection against the provisional government so long as the means of providing for their families were opened to them. Cubans everywhere were eager to learn English, recognizing that Cuba under any government will be economically dependent on the United States.

The military character of the government was rendered as inconspicuous as possible under Gen. Brooke, and a further advance in the direction of normal civil administration was made in the autumn, when that officer retired and was succeeded as Governor General by Gen. Leonard Wood.

D

DELAWARE, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 7, 1787; area, 2,120 square miles. The population, according to each decennial census, was 50,096 in 1790; 64,273 in 1800; 72,674 in 1810; 72,749 in 1820; 76,748 in 1830; 78,085 in 1840; 91,532 in 1850; 112,216 in 1860; 125,015 in 1870; 146,608 in 1880; and 168,493 in 1890. Capital, Dover.

Government.—The following were the State officers during the year: Governor, Ebe W. Tunnell; Secretary of State, James H. Hughes; Treasurer, L. Heisler Ball; Auditor, John A. Lingo; Attorney-General, Robert C. White; Adjutant General, Garrett J. Hart; Insurance Commissioner, Edward Fowler; Agricultural Inspector, E. H. Baneroft; Chancellor, John R. Nicholson; Chief Justice, Charles B. Lore; Associate Justices, Ignatius C. Grubb, W. C. Spruance, James Pennewill, and William H. Boyce; Clerk, W. S. Hutson. All are Democrats except Messrs. Ball and Lingo and Justices Spruance and Pennewill, who are Republicans.

Finances.—The disbursements for 1898 exceeded the receipts by \$47,110.10, while for the year next preceding the receipts exceeded the disbursements by \$28,910.80. The discrepancy of 1898 was due to three unusual causes of expenditure—the Constitutional Convention and the special session of the Legislature, which together cost over \$62,000, and the expense of fitting out the militia for service in the Spanish war.

The total indebtedness, Jan. 1, was \$819,750. The assets of the State in investments amounted to \$1,024,452; there was \$49,254 in cash in the treasury, showing a large excess of assets.

Within a few years improvements and additions to the Statehouse, the State Hospital, the armory, and the State Library have been made, amounting in all to \$144,967.

The estimates of the Treasurer for 1899 were: Receipts in the general fund, \$338,319, and expenditures \$304,230; income of the school fund from investments, \$31,105, and from appropriation from general fund, \$100,000; expenditures of school fund, \$131,105, of which \$12,000 is for free text-books; receipts of the sinking fund from the oyster revenue, \$4,500, and expenditures \$4,310.

Education.—The State Board of Education made a report to the Legislature on its work for the seven months of 1898 in which it had been in existence. It was found that there were no reliable statistics on many points concerning the schools, and a series of blanks were sent out to gather such knowledge. Steps have been taken for more thorough examination of teachers and for the introduction of better text-books. The report says: "It is a fact that in the great majority of the school districts three fourths of the annual expense is directly borne by the State through the school dividend. In many instances the district only expends \$25 a year of the amount raised by taxation. Under these conditions it is but just that the State should see that its money is expended for the best interests of its wards, the children in our free schools. That it is not so expended is apparent from the report of the superintendent of schools for Sussex County. When it is realized that so many of the districts in one county alone are utterly unmindful of the most elementary principles governing the good health of the children, the absolute necessity of a better knowledge of school conditions must be manifest. In yet other instances the overcrowded condition of some of the school-rooms would seem to indicate that the State does not afford, in fact, to all the children an opportunity to gain a common-school education. The board calls attention to the facts set forth in the reports of the county school commissioners for Sussex County concerning a peculiar tribe or race of our citizens, known as Indians or Moors, located in Indian River Hundred. Under the conditions detailed by them, it would seem but wise that the commission for that county should be authorized to lay out a school district or districts for this race or tribe, and that the general school law should be made applicable to such districts when so laid out." The action here suggested was taken by the Legislature.

Delaware College had in March a membership of 90. In June there were 2 graduates in the classical course, 7 in the Latin, 2 in the mechanical engineering, and 1 each in the civil and electrical engineering courses.

The one hundredth anniversary of the Forwood Public School in Brandywine Hundred was cele-

brated Aug. 17. The land on which the house stands was given for the purpose, June 17, 1799, by Richard Justison, who had received it from the proprietary governor of the three counties.

State Institutions.—The population of the State Hospital for the Insane in October was 295, of whom 128 were women.

The question arose this year whether the Levy Court of New Castle County was liable for support of boys committed to the Ferris Industrial School. The Legislature had so amended the charter in 1898 as to provide that the county should pay at the rate of \$100 a year for every boy committed; and the Levy Court resisted, on the ground that the school is a private corporation, that the new Constitution forbids appropriations of public money to such institutions by cities and towns, and that the amendment to the charter was in contravention of the Constitution. The court decided for the school, on the ground that the appropriation is not to the corporation as such, but for the maintenance and education of boys, who would otherwise be committed to the county jail.

Militia.—The last muster of the National Guard before it went into the service of the Government in 1898 showed a membership of 549 officers and men, and when the regiment went into camp it numbered 400 to 500. The places of those who declined to enlist for the war were filled by volunteers, some of whom enlisted as members of the State militia for three years, and others only for national service. In all, more than 1,600 entered the service. At the beginning of 1899 there were about 500 State militia organized in a regiment of 10 companies. The Adjutant General desired the Legislature to make provision for one of 12 companies, in order that there might be three full battalions, conforming to the national regulations. Of the \$30,000 voted by the Legislature to cover the expenses of fitting the militia for national service, \$22,275 was expended.

Banks.—The trials in connection with the defalcation of the teller of the First National Bank of Dover (see Annual Cyclopædia for 1898, page 218) were ended in October this year by the entering of a *nolle prosequi* against United States Senator R. R. Kenney, whose two trials resulted in disagreement of the juries. The teller, W. N. Boggs, was sentenced in May to pay a fine of \$6,500 and be imprisoned in the New Jersey Penitentiary five years. Of the three others convicted, one died in the Penitentiary in July and two others—Clark and Cotter—are serving sentences of five years each.

The committee of the Legislature on private corporations received a report from accountants appointed to investigate the affairs of the Farmers' Bank, which was organized in 1807, with its principal bank at Dover and branches at Georgetown, Wilmington, and New Castle. On their recommendation the capital stock was reduced and the branch at New Castle discontinued. It is stated by the authorities that, "with the New Castle branch wound up, the Farmers' Bank will be able to pay 8-per-cent. dividends within a year, and the State will get \$117,000 in cash for its canceled stock, and in one year the same revenue from the remaining three fourths as now for the whole."

The Delaware Railroad.—A new railroad company has been formed by the consolidation of the old Delaware Railroad, the Queen Anne's and Kent, the Delaware and Chesapeake, and the Cambridge and Seaford. The capitalization is \$2,987,000. By the consolidation of the roads into

one company the operations of the system, which is an important adjunct to the Pennsylvania Railroad, will be simplified.

The Delaware and Chesapeake Canal.—The annual report to the stockholders of the company in June showed that the revenues from tolls for the past year were \$135,522.99; from other sources, \$8,816.81; total, \$144,339.80; maintenance, \$45,119.37; balance, \$99,220.43.

Defenses of the Delaware.—The report to the War Department, made in October, gives details of the work on the defenses of the Delaware the past year. They include two masonry works of old type, one of which is in the charge of an ordnance sergeant. No new work is contemplated at this site. The other was garrisoned for a portion of the year, but the troops have been withdrawn and modern batteries are in course of construction at the site. Modern works of defense are also located at two other points on the river which are garrisoned.

Rivers and Harbors.—The river and harbor bill reported in January carried an appropriation for Wilmington harbor amounting in the aggregate to \$220,780. Of this sum, \$45,000 is appropriated in cash available during the fiscal year ending June 30, 1900, and \$170,780 is the additional amount which the Secretary of War is authorized to expend in future contracts to complete the existing project.

Appropriations were made for other improvements as follows: Appoquinimink, Smyrna, Murderkill, and Broad Creek rivers, each \$5,000; Mispillion river, \$2,500; Nanticoke river, \$3,000. The Government has spent \$150,000 on the inland water way between Delaware and Chincoteague Bays, but no appropriation was made to continue the improvement. St. Jones river is to be surveyed for a new project.

Wilmington.—Statistics give the tonnage of domestic commerce of the city in 1898 as 614,315, and the value \$26,870,675; the total value of foreign imports, \$86,500; foreign exports, \$4,883,000. The vessels trading in the harbor not included in this were 40, with tonnage of 10,590, engaged in daily river and harbor work, not including numerous vessels engaged in coastwise trade, of which no complete record is kept. There passed in and out of the port during 1898 976 steamers, barges, tugs, schooners, vessels, floats, laden with merchandise or for repairs, not including the regular lines of daily connections. Freight and passenger lines between Wilmington and Philadelphia and Penn's Grove carry annually 530,000 passengers, and freight valued at \$16,500,000.

Twenty-one vessels were built, aggregating 13,346 tonnage, and the vessels repaired had a total tonnage of 102,288.

The two hundredth anniversary of the consecration of Holy Trinity (Old Swedes) Church, in Wilmington, was celebrated May 28. While not the oldest church edifice in the country, it is the oldest now in use for regular religious service. The building has been carefully restored, the old forms of staircase, pews, and other parts have been preserved in the new material, and the work of modern innovations from time to time has been removed. Among the gifts for the bi-centennial was a massive carved chair, made of wood from the church itself, from the widow of Rev. Charles Breck, and a portrait of the first pastor, Rev. Ericus Tobias Borek, from the Swedish Mining Company in Fahlun, which gave a silver service to the church in 1718. The portrait is a copy of one at Fahlun, where Mr. Borek ministered after leaving Wilmington.

Political.—Charges of bribery were made in connection with the registration for the election in the autumn of 1898, and arrests were made the following year.

The municipal election in Wilmington this year showed a great falling off in the Union-Republican vote compared with the regular. Out of a total poll of 10,081 votes, the highest Union-Republican vote was 1,822, and the regular 3,451. The Union-Republican vote was 18 per cent. of the total, against 30 per cent. in 1896, and 34 per cent. of the total Republican, against 51 per cent. in 1896.

Legislative Session.—The General Assembly met Jan. 3 and adjourned March 13. C. H. Salmon was President of the Senate, and Theodore F. Clark was elected Speaker of the House, Jan. 7, on the ninety-first ballot. The Senate stood 9 Democrats and 8 Republicans; the House, 12 Democrats and 23 Republicans.

The Governor in his message recommended the passage of a general corporation bill as contemplated by the new Constitution, a subject which was before the special session in 1898, but failed of being enacted into a law; an act to insure frequent settlements of collectors with county treasurers; a good highway law; provision for having State printing done and stationery supplies furnished by contracts awarded after advertisements for bids; and consideration of the subject of a State exhibit at the Paris Exposition.

The Legislature enacted a general incorporation law and a general law for the government of building and loan associations, providing for reports to the Insurance Commissioner and supervision by him. The act concerning free schools was amended, an act for providing graded-school facilities was passed, and one relating to circulating libraries for the schools. Teachers of ten years' experience were exempted from the requirement of examination, and special acts relating to schools and school moneys were passed. Some changes were made in the game and fish laws. The act providing for the assessment of poll taxes was repealed, and also an act providing that upon a preliminary argument, which may be for a simple matter, an appeal may be taken to the Supreme Court, thus delaying the trial of the case almost indefinitely. Before the passage of this act the practice was that an exception should be noted in the court below of any ruling upon a demurrer. The case should then proceed to trial in the lower court, and the question reserved, as well as all other questions involved in the trial of this case, should be determined at one time.

Other acts of the session were:

Regulating the sale of liquors to minors, insane persons, and any not of sound mind.

Appropriating \$1,500 to the State Fair Association.

Authorizing the appointment of six trustees with power to borrow \$100,000 for the purpose of erecting buildings and establishing a workhouse in New Castle County.

Establishing a State Board of Agriculture.

Authorizing the Superior Court to change the names of wives and children in divorce cases.

Regulating the licensing of pilots.

Providing for giving the State jurisdiction of crimes begun in the State and finished elsewhere.

Requiring the closing of barber shops on Sunday.

Regulating the sale of yellow-trefoil seed mixed with the seed of red clover.

Fixing a standard of measurement for oysters.

Providing punishment for persons using worthless checks.

For the protection of labels and seals of labor organizations.

To prevent adulteration of candy.

Giving parties in suits for divorce the right of appeal.

Changing the name of Little creek to Little river.

Regulating the sale of poisons.

Providing that a voter when designating his choice of candidates shall mark his ballot with a lead pencil.

Taxing roving bands of gypsies.

Amending the act relating to the practice of dentistry.

Among the items of the general appropriation bill were salaries of the Governor, \$2,000; Secretary of State, \$1,000; librarian, \$550; Chancellor, \$3,800; Chief Justice, \$3,800; the four associate justices, \$14,400; court stenographer, \$1,500; Treasurer, \$1,450; Auditor, \$1,200; Attorney-General, \$2,000; the two State detectives, \$2,400; the three county superintendents of schools, \$3,000; also, for institutes for white teachers, \$450; for colored, \$100; for farmers' institutes, \$400; for Board of Agriculture, \$1,200; Industrial School for Girls, \$1,500; Delaware College, \$19,200; State College for Colored Students, \$4,800; State printing, \$6,000; for expenses of indigent deaf, blind, and idiotic children in institutions outside the State, \$2,800; for the free public schools, and in addition to the income arising from investments of the public-school fund, to be used exclusively for the payment of teachers' salaries and for furnishing free text-books, \$100,000; for the education of juvenile delinquents committed from this State to the House of Refuge in Philadelphia, \$300; for paying interest on the indebtedness of the State, \$34,000; State Hospital, \$45,000.

A joint resolution was adopted asking Congress to provide for deepening the channel in Delaware river to 30 feet, and a House resolution requested Congress to confirm the treaty of peace with Spain.

An act providing for three legislative attorneys was repassed after having been vetoed.

Some bills that were passed by one house or both houses were hidden or carried away to prevent their final passage and approval. One enabling State officials to furnish corporate surety disappeared before it was signed, and was afterward found under a desk in Representatives Hall. One relating to municipal elections in Wilmington was hidden after having been passed by the Senate; and one providing for the investment of \$22,035, a portion of the school fund which was found to be in the Farmers' Bank uninvested, was missing, and did not reach the Governor.

A bill was introduced and passed, the object of which was to suppress gambling. It imposed a fine not to exceed \$500. When the bill reached the Governor the words "in any one year" followed the limit of \$500 fine, thus virtually making the \$500 a license fee to carry on gambling for a year. The result of investigation indicated that a bill with these words added had been substituted for the one that passed, and the indorsement of the clerk had been forged upon it. An indictment was found against E. D. C. Hege-man, who was reported to have acknowledged that he wrote the bill; but the indictment was quashed, on the ground that there was no law to meet one of the counts, and the other was defective.

One of the duties devolving upon the Legisla-

ture was the election of a successor to United States Senator George Gray. The Republicans had a majority of 10 on joint ballot; but the division between the regular Republicans and the Union Republicans, or "Addicksites," caused a deadlock, which continued through the session, and no Senator was chosen. One hundred and thirteen ballots were taken. J. Edward Addicks was the candidate of the Union Republicans; the regular Republicans voted for H. A. Du Pont, F. G. Du Pont, William S. Hilles, Anthony Higgins, Levi C. Bird, W. C. Spruance, J. S. Willis, Joseph H. Chandler, Hiram R. Burton, P. L. Cannon, and H. A. Richardson; and the Democrats for George Gray, L. Irving Handy, J. G. Gray, J. B. Pennington, Willard Saulsbury, John A. Nicholson, John Biggs, and John Pyle.

An incident of the voting was the defection of three Democrats—one Senator and two Representatives—who on the last day voted for J. E. Addicks. They were severely censured by their party, and requested to resign their seats by the Democratic State Central Committee. They gave as a reason that they wished to defeat the election of a regular Republican.

Charges of bribery in connection with the senatorial contest were freely made. It was believed that money had been used, and a member of the Legislature asserted that it had been offered to him by another member to induce him to vote with the Union Republicans; and an indictment was found against the accused member, who was acquitted after trial by jury.

The statute forbidding the attachment of wages in New Castle County, except for board and lodging, was brought to test in the Superior Court, and was declared constitutional.

DENMARK, a kingdom in northern Europe. The legislative body, called the Rigsdag, consists of an upper house, the Landsthing, containing 66 members, 12 appointed for life by the Crown and 54 elected by the highest taxpayers, and the Folkething, or popular assembly, composed of 114 members elected by all male citizens over thirty years of age, with the exception of domestic servants and recipients of public charity.

The reigning King is Christian IX, born April 18, 1818, the son of the Duke of Schleswig-Holstein-Sonderburg-Glücksburg, who by the Treaty of London, signed on May 8, 1852, was appointed successor of Frederick VII, the last King of the house of Oldenburg, and on the demise of the latter came to the throne on Nov. 15, 1863. The heir apparent is Prince Frederik, born June 3, 1843.

The Cabinet was composed in the beginning of 1899 of the following members: President of the Council and Minister of Finance, H. E. Hørring; Minister of the Interior, V. de Bardenfleth; Minister of Justice and for Iceland, N. R. Rump; Minister of Foreign Affairs *ad interim* and Minister of Marine, Vice-Admiral N. F. Ravn; Minister of War, Col. C. F. E. Tuxen; Minister of Public Instruction and Ecclesiastical Affairs, Bishop H. V. Sthyr; Minister of Agriculture, Alfred Hage.

Area and Population.—The city of Copenhagen, covering 8 square miles, had 312,859 inhabitants in 1890; islands in the Baltic, 5,024 square miles, 917,401; the peninsula of Jutland, 9,743 square miles, 942,121. The total area is 14,775 square miles, with a population of 1,059,322 males and 1,112,983 females, not including the Färøe Islands, which have an area of 514 square miles and 12,955 inhabitants. The population of the kingdom in the beginning of 1898 was estimated at 2,310,000. The number of mar-

riages in 1897 was 17,488; of births, 69,522; of deaths, 38,712; excess of births, 30,810. The number of emigrants in 1897 was 2,260, chiefly bound for the United States.

Finances.—The revenue for 1899 was estimated at 68,568,723 kroner; expenditure, 68,430,032 kroner. For 1900 the estimate of revenue is 68,162,192 kroner, of which 821,220 kroner are the balance from the domain revenues, 5,030,199 kroner interest on assets of the state, 10,467,500 kroner proceeds of direct taxes, 48,019,000 kroner indirect taxes, mainly customs and excise, 332,460 kroner net receipts from posts and telegraphs, 570,312 kroner separate revenues, 1,100,000 kroner the balance from lotteries, and 1,821,501 kroner revenue from the employment of property and funding of debt. The disbursements are estimated at the sum of 67,970,912 kroner, of which 1,203,200 kroner are for the civil list and appanages, 319,016 kroner for the Rigsdag and Council of State, 6,828,100 kroner for interest and expenses of the debt, 3,356,812 kroner for civil and military pensions, 698,556 kroner for the Ministry of Foreign Affairs, 2,448,895 kroner for the Ministry of Agriculture, 4,850,478 kroner for the Ministry of the Interior, 4,594,797 kroner for the Ministry of Justice, 4,461,425 kroner for the Ministry of Education and Ecclesiastical Affairs, 10,316,835 kroner for the Ministry of War, 6,996,844 kroner for the Ministry of Marine, 4,168,378 kroner for the Ministry of Finance, 78,431 kroner for Iceland, 5,425,489 kroner for extraordinary state expenditure, and 12,403,656 kroner for improvement of state property and reduction of debt.

The public debt on March 31, 1898, amounted to 208,193,351 kroner, paying mostly 3 per cent. interest. The invested reserve fund amounted to 17,890,461 kroner; the total investments to 73,164,075 kroner, not including the state railroads, valued at 218,021,694 kroner, nor the domains.

The Army and Navy.—The army is divided into two general commands. The infantry is formed in 5 brigades of 2 regiments each, the regiment having 3 line battalions and 1 in reserve, the war strength of each battalion being 21 officers and 1,050 men. It is armed with the Krag-Jørgensen rifle of 1889, of 8 millimetres. The cavalry consists of 5 brigades of 3 squadrons, the full effective of the squadron being 5 officers and 150 men. The artillery comprises 2 regiments of field artillery, each consisting of 2 sections of 3 batteries, the war effective being 4 officers and 200 men, with 8 steel guns of 9 centimetres caliber, and 1 regiment of fortress artillery, composed of 3 battalions of 4 companies of line and 2 of reserve. The engineers are organized in 1 regiment of 9 line companies and 2 in reserve. The peace effectives in 1898 were 50 officers and 25 men in the staff; 450 officers, 1,170 noncommissioned officers, and 5,072 men in the infantry; 90 officers, 167 noncommissioned officers, and 480 men in the cavalry; 160 artillery officers, 370 noncommissioned officers, and in the field artillery 324 and in the fortress artillery 975 men; 50 officers, 80 noncommissioned officers, and 270 men in the engineers; and 24 officers and 11 noncommissioned officers in the reserve corps of Copenhagen and Bornholm; total, 814 officers, 1,824 noncommissioned officers, and 7,121 men. In case of war the reported strength of the army is 1,448 officers and 63,134 noncommissioned officers and men, with 128 pieces of artillery.

The navy comprises 5 armor clads, 3 monitors, 2 large and 3 small cruisers, 8 gunboats, 3 school ships, 1 torpedo vessel, and 13 first-class and 12

second-class torpedo boats. Most of the ships were built at Copenhagen. The Skjold, launched in 1896, of 2,160 tons displacement, with 9 inches of side armor, carries in a turret a single 26-ton gun, with 3 quick firers as a secondary battery. The deck-protected cruisers Heimdal, Hekla, and Geiser have a displacement of 1,310 tons; Ejen, 2,740 tons; and Valkyrien, 3,020 tons. The latest addition is the Herluf Trolle, of 3,470 tons. Another ship of the same design is building.

Commerce and Production.—The land laws of Denmark forbid the consolidation of farms into landed estates, and encourage the subdivision of the existing farms into smaller holdings. Tenant farmers have the fullest control of their land so long as they pay their rent. The crop of rye in 1897 was 17,570,000 bushels; of barley, 18,580,000 bushels; of oats, 34,140,000 bushels; of wheat, 3,368,000 bushels; of potatoes, 19,550,000 bushels; of beets and other roots, 147,000,000 bushels. There were exported 20,800 horses, 81,122 cattle, and 6,250 sheep in 1897. The production of alcohol in 1897 was 3,586,000 gallons; of beet sugar, 48,345 tons. The total value of imports in 1897 was 416,797,703 kroner; of exports, 328,121,076 kroner. The domestic exports amounted to 243,500,000 kroner, of which sum 197,300,000 kroner represent food substances, 36,900,000 kroner raw materials, 7,200,000 kroner articles of personal or household use, and 2,100,000 kroner manures, seeds, and fodder. The imports for domestic consumption were valued at the total of 325,900,000 kroner, of which 78,100,000 kroner represent food substances, 103,500,000 kroner raw materials, 68,600,000 kroner articles of personal and domestic use, 21,500,000 kroner fuel, and 54,200,000 kroner manures, seeds, and fodder. The principal imports in 1897 were cereals for 60,838,000 kroner, textile goods for 50,065,000 kroner, colonial goods for 39,477,000 kroner, pork, lard, eggs, and butter for 35,701,000 kroner, metals and hardware for 32,466,000 kroner, wood and wood manufactures for 24,212,000 kroner, coal for 22,413,000 kroner, drinks for 7,001,000 kroner, and live animals for 2,531,000 kroner. The principal domestic exports were butter, eggs, and pork products for 164,266,000 kroner, live animals for 27,617,000 kroner, and cereals for 8,429,000 kroner.

The amount of trade with each of the principal countries in 1897 is given in kroner in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	78,807,000	191,188,000
Germany	129,301,000	65,737,000
Sweden and Norway	59,051,000	36,647,000
Russia	38,709,000	20,379,000
United States	48,335,000	2,119,000
France	10,644,000	1,861,000
Belgium	7,029,000	1,027,000
Netherlands	7,844,000	725,000
Danish colonies	2,959,000	4,139,000
Rest of America	7,823,000	171,000

The people of Denmark have developed the principle of co-operation further than any people in Europe, and by patriotic mutual efforts have tided over the agricultural crisis by the entire revolution of their rural industries, and have so extended the cultivated area as to make room for the population displaced by the annexation of Schleswig-Holstein to Germany, as well as the natural increment of a country that was growing prosperous while other farming populations were growing poorer. The laws have been framed to encourage, even compel, the division of the land into small farms, and the yeomanry,

instructed by means of the most complete and elaborate system of agricultural schools and lectures and model farms, are organized in co-operative associations for the purpose of working up and marketing their produce. Their dairy products, provisions, and eggs are the main exports of the country, the mainstay of its prosperity; and as they are kept up to the highest commercial standard, they find a steady market at high prices in Great Britain. The earliest butter factories were started about 1880, and now Denmark supplies Great Britain with butter to the amount of over \$35,000,000 a year. Cheesemaking was tried later, and as the result of scientific study and experimentation and of knowledge obtained from all countries and disseminated freely, not only by the agency of the Government, but by the help and participation of individuals of various classes, cheeses of many types are now made in Denmark to perfection, and are exported to Russia and other countries. So also with poultry farming. There was first a national association formed for the improvement of the breed of fowls and the promotion of the industry. Lecturers were sent through the country to instruct the people who were interested, and sittings of eggs were supplied from a central establishment through various local branches. Later a co-operative society, comprising nearly 20,000 members, was formed for the purpose of marketing eggs, which it collects throughout the country, marks, sorts into grades and sizes, packs securely, and ships to England, paying a stipulated price on receiving the eggs from the members, and dividing the profits among them at the end of the year. This system has built up an export trade in eggs amounting to \$3,500,000 per annum. The co-operative butter factories receive the milk from the farmers, who have been taught to care for their cattle in the best manner and to feed them economically. By the aid of the Government and the wealthy classes the breed, which has always been kept up to a high standard, has been improved by selection, so that the export of breeding stock has become an important branch of trade. The butter has a reputation second to none. To utilize the skim milk and obtain the best value for the surplus grain the breeding of hogs was introduced, the quality improved by selection, as with other live stock, and co-operative curing factories established to receive the fattened pigs from the farmer, giving him current market rates, to turn them into choice hams and bacon for the British market, the fatter and grosser kinds going to Germany, and to divide profits at the close of each year. By this method the exports of hams and bacon have increased to over 1,000,000 hundredweight a year. Instead of exporting grain, as formerly, Denmark now imports from Russia and the United States in order to feed the hogs. The highly developed system of stock farming and mixed farming, which has taken the place of ordinary agriculture, has been brought about by raising the intelligence of the people and training them in a practical knowledge of rural economics, and they have embraced with zest the opportunities offered, making sacrifices to attend the winter schools and serve an apprenticeship in the training farms.

The production of the country would not be what it is except for an extraordinary scheme of reclamation that originated with Lieut.-Col. E. M. Dalgas, who had fought for the preservation of the duchies, and after their loss suggested this plan of redeeming waste lands to make up for the diminution of the national territory. An

expanse of over 3,500 square miles in Jutland, long denuded of the original forest, was a complete desert of heath, morass, and sand dunes. The Government and individuals gave abundant support to the scheme of reclaiming this area. A society was organized that obtained a membership of 25,000 persons, divided among 50 branches. The reclamation of the lands was effected by means of drainage and irrigation canals, the planting of forests and hedges, and the distribution of marl brought by specially constructed railroads. Colonies of agriculturists established themselves on the farms recovered from the heath and sand, supplementing them by plantations of their own, the state guaranteeing 25 per cent. of the cost of planting permanent forest. Other societies and companies engaged in similar reclamation works, and the state and local authorities also bought up tracts of arid land to be planted with trees. An efficient system of education in forestry and the reclamation and utilization of waste land was organized, and experimental farms and special schools were founded. The result has been thus far that 2,000 square miles have been brought under cultivation as farms, pasture lands, or forest. It has also had the educational effect of giving a new impulse to farming and stock raising throughout the country. The mechanical trades of Denmark, which are largely concentrated in Copenhagen, have been all organized in trade unions, and these are united in a compact organization, the Central Association of Trade Unions, which is closely federated with the Social Democratic party. Of the 80,000 workmen engaged in industrial production, practically all are members of trade unions and of the Social Democratic party, which exercises a great influence through the party organ, the most widely circulated newspaper in Denmark. This paper brings in a large revenue to the party, which has several well-appointed clubhouses, each with a central hall, where lectures and political addresses are given. The party has also established a co-operative bakery in Copenhagen, which sells good bread at low prices, forcing competitors to do the same. Lately a co-operative butcher shop and curing establishment has been started. The party has also established a system of exchanging country children and city children during the summer vacation. The industrial employers have organized themselves in a central federation in order to be able to cope with the federation of trade unions, and they were ready for a trial of strength and eager to seize an opportunity before their organization should show signs of disintegration. An occasion was found in a dispute that grew out of a strike of joiners in some of the villages of Jutland. After the central association of trade unions had come to an agreement with the employers' federation for the settlement of the strike, the striking joiners refused to accept the terms agreed upon. The employers' federation therefore, on May 2, 1899, declared a general lockout of the whole joining trade, involving about 3,500 men. The Jutland joiners, some 300 in all, now repented; but the employers were determined to force the main issue for which they were organized. Accordingly, they formulated a series of demands, the rejection of which would result in a lockout of all the men employed in carpentering, building, engineering, and the iron trades, embracing half the industrial population of Denmark. One demand was that all agreements made between the central associations of workmen and employers should be binding on all local branches of the trade unions;

another was that employers should have the entire direction of the organization and arrangement of labor in their factories; a third stipulated that no permanent employees, foremen, etc., should be members of trade unions; a fourth was that all agreements between masters and men on questions of wages and hours of labor should be terminable on Jan. 1 of each year instead of on notice given a certain number of weeks or months beforehand. The workmen's federation was unwilling to undertake the responsibility of carrying out the first of these demands, and all the others they rejected on principle as constituting a vital attack on the position of the trade unions. The last one especially would cause all settlements of labor disputes to come to an end at the very time of year when workmen were least in demand, and consequently least able to bargain for favorable terms. Their main demands having been rejected, the employers' federation on May 24 declared a general lockout of all men employed in the building and iron industries or others connected with these, such as plumbers, painters, tinsmiths, and the like. The sympathy of the Liberal party, the press, and the general public was with the workmen in this struggle, which the employers had forced on for the purpose of crushing unionism. Leading men of all parties joined with the Social Democrats in a scheme for providing intellectual entertainment and instruction to the workmen during the period of their enforced idleness, and thus preventing them from falling into drunken or slothful habits. Lectures on historical and scientific subjects, dramatic entertainments, poetical recitals, concerts, visits to museums and picture galleries, and courses of reading and instruction were arranged with the assistance of almost all the teachers and professors of Denmark. The workmen, on their part, embraced eagerly the opportunities offered to them and their families for acquiring knowledge and instruction. The permanent trade court on June 24 declared unanimously that the lockout was inconsistent with the expectations the unions were justified in founding on the existing agreements with the employers. Abandoned by their own representatives in this court, the employers' federation, which already had great difficulty in keeping the smaller employers in line, although at first with conditions that were considered unacceptable by the trade unions, agreed to accept the offer of the court to act as a board of conciliation. The workmen's confederation having accepted the proposal at once, a compromise was at length effected in this manner.

Navigation.—The number of vessels engaged in foreign trade entered at Danish ports during 1897 was 32,036, of 2,712,224 tons cargo; cleared, 31,424, of 713,671 tons cargo. Of coasting vessels, 35,389 were entered and 35,431 cleared.

The merchant marine on Jan. 1, 1898, consisted of 44 steamers, of 182,702 tons, and 3,652 sailing vessels above 4 tons, having an aggregate tonnage of 173,406.

Railroads, Posts, and Telegraphs.—The total length of railroads in operation in 1897 was 1,532 miles. The state lines comprised 1,087 miles.

The postal traffic in 1897 was 80,821,201 letters and post cards and 74,403,222 newspapers, books, and samples.

The state telegraph lines on Jan. 1, 1898, had a length of 2,088 miles, with 8,549 miles of wire. There were 597,437 internal, 1,262,734 international, and 149,617 official messages sent during 1897. The telephones, which belong to the Gov-

ernment, had 575 miles of lines, with 1,067 miles of double wire.

Dependencies.—Denmark has colonies in the West Indies, which once were prosperous, but are no longer a source of wealth and commerce (see WEST INDIES). The Danish possessions on the coast of Greenland, having an area of 46,740 square miles and a population of 10,516, are visited by Government vessels, which bring the stores required and take away the products of the fisheries and the chase. The imports in 1897 were valued at 767,000 kroner, and the exports at 368,000 kroner. Iceland is a self-governing dependency, with an area of 39,756 square miles and 70,927 inhabitants. The imports in 1897 were 1,520,000 kroner; exports, 2,972,000 kroner.

DISASTERS IN 1899. Absolute accuracy can not be attained in any general list of accidents and disasters. The reports published of such mishaps are often to be found only in the telegraphic news columns of daily papers, and, save in the case of very great loss of life or property, they are not ordinarily referred to again. The Journal of Commerce and Financial Chronicle of New York prepares carefully revised lists of fires, and the Railroad Gazette, also of New York, performs a like service for railway accidents. The summaries of these, condensed from the columns of the journals named, may therefore be accepted as not far from correct. In regard to marine disasters, only those have been mentioned that have attracted general comment at the time of their occurrence. The long list of missing ships can not properly be inserted here, but it may be mentioned that, on the authority of Capt. A. G. Froud, R. N., no fewer than 10 "tramp" steamers left American ports in January and have since been given up as lost. Probably no such losses occurred in any other month of the year, but the record as it stands is sufficiently appalling, since it involved the loss of several hundred lives and several million dollars. That reasonable care would prevent more than half of the "accidents" here recorded is probably a safe estimate, and this is notoriously true as regards fires, which annually destroy something like \$100,000,000 worth of property, as shown by the monthly summaries printed herewith.

January 1. Sycamore, Ohio, new locomotive engine wrecked on trial trip, engineer killed.

2. Trains in collision, New Concord, Ohio, 2 tramps killed.

4. Water tank bursts in New York, neighborhood flooded, several persons hurt. Train derailed, Jefferson City, Mo., 2 killed; cause, a landslide.

5. Shipwreck: British and French steamers in collision in English Channel, 12 lives lost.

6. Explosion: boiler bursts in a shipyard at Barking, England, 10 killed, 40 hurt.

7. Landslide, British Columbia: Frazer river dammed, its course changed, and farms ruined.

8. Trains in collision, Elk Valley, Tenn., 4 killed, 2 hurt, 2 locomotives wrecked, much rolling stock burned; cause, orders misread.

9. Trains in collision at Sunol, Neb., and Dunellen, N. J., 21 killed, 31 hurt.

10. Trains in collision, Council Bluffs, Iowa, 3 killed; cause, fog.

11. Train derailed, Ingomar, Cal., 1 killed; cause, stray sheep on track.

12. Fire: Memphis, Tenn., dry-goods houses burned; loss, \$450,000.

13. Train wrecked, Gilmore, Ark., 1 killed, 3 hurt.

14. Trains wrecked at Monks, N. J., Benson,

N. C., and Lacosti, Texas, 5 killed, 12 hurt. Shipwreck: British ship *Andelina*, off coast of Washington, 19 lives lost.

15. Trains in collision, Angell, Arizona, 1 killed, 3 hurt, 2 engines and 12 cars wrecked.

17. Destructive floods on the Continent and in the British Islands, lasting several days, property destroyed and live stock drowned.

21. Train wrecked at Great Bend, Pa., 1 killed, 2 hurt.

23. Trains in collision, North Hanover, Ill., 3 killed.

24. Train wrecked, Washington, D. C., 1 killed.

25. Train derailed, Cattaraugus, N. Y., 1 killed, 1 hurt. Fire: Wilkesbarre, Pa.; loss, \$250,000.

29. Explosion in a mine at Cartagena, Spain, 14 killed. Train wrecked, Coalton, Ohio, 2 killed, 6 hurt.

30. Train wrecked, Larrabee Point, Va., 6 hurt.

31. Military train wrecked, Iuka, Miss., 12 soldiers hurt.

Summary of train accidents in January: 96 collisions, 94 derailments, 7 others; total, 197. Killed: 40 employees, 20 passengers, 3 others; total, 63. Hurt: 80 employees, 93 passengers, 3 others; total, 176.

Fires in January: Brooklyn, N. Y., furniture factory, \$300,000; Troy, N. Y., dry goods, \$200,000; Memphis, Tenn., various buildings, \$450,000; Bridgewater, Nova Scotia, stores, \$255,000; New York stores, \$425,000; Chicago, Ill., lumber, \$325,000. Total fires in January, 244; aggregate loss, \$10,718,000.

February 1. Fire: business houses in Columbus, Ohio; loss, \$750,000.

2. Train wrecked by a snowslide, Glenwood Springs, Col., 3 killed, 2 hurt; another at Grand Junction, Iowa, 1 killed.

3. Trains in collision, San Simon, Arizona, 2 killed, 1 hurt; cause, a blinding sandstorm.

4. Train wrecked, Point Pleasant, N. J., 1 killed, 1 hurt.

6. Trains in collision, Imlay City, Mich., 3 killed, 4 hurt.

7. Fire: Winnipeg, Manitoba, hotel and other property; loss, \$450,000. Trains in collision, Antonia, La., 2 killed, 4 hurt; the engineer's watch being slow was the probable cause of the accident. Collision, Indian Creek, Pa., 1 killed, the wrecked trains took fire and were mostly burned.

8. Severe blizzardlike storm over the greater part of the United States east of the Rocky mountains; traffic everywhere impeded at the North and killing frosts in Florida.

10. Fire: Frankfort, Ky., the Executive Mansion burned; loss, \$100,000. Train wrecked, Chickamauga Park, Ga., 1 killed, several hurt.

11. Trains in collision, Butte, Mont., 1 killed, 1 hurt; cause, a cloud of steam from a factory beside the track.

12. Avalanches at Silver Plume and Colorado Gulch, Col., 24 killed. Fire: Yankton, S. Dak., part of insane asylum burned, 12 lives lost. Severe gales and unprecedentedly high tide along the southern coast of the British Isles, many cattle drowned and property destroyed.

13. Destructive storm continues in the Northeastern United States, with excessive cold. Earthquakes in the Middle Central States. Train accidents, most of them caused by the storm, at Fleming Park, Pa., Grove City, Pa., Gallaghersville, Pa., and South Unadilla, N. Y., 5 killed and 10 hurt.

14. Trains wrecked at Kenova, W. Va., Charleston, S. C., Wissahickon, Pa., 5 killed, 10 hurt. Fires in Philadelphia and Chicago; total loss more than \$1,000,000.

15. Fire in the United States Navy Yard, Brooklyn, valuable models and patterns destroyed; loss more than \$1,000,000.

16. Trains in collision, Philadelphia, 1 killed, 5 hurt.

18. Train wrecked at Dixon, Ill., 1 killed, 1 hurt; and at Blossoms, Va., 1 killed, 1 hurt; cause, forgetfulness of orders. Train wrecked in Belgium, 21 killed, 100 hurt.

22. Train wrecked, Lehigh, Pa., 1 killed; cause, a fallen stone on track.

23. Trains in collision at Weed, Wyo., 2 killed, 7 hurt; cause, a defective switch.

24. Fire: Minneapolis, Minn., Tribune building and other property; loss, \$300,000. Trains in collision, Philadelphia, Pa., 1 killed, 8 hurt; cause, misplaced switch.

28. Fire: Holyoke, Mass., hotel and stores burned; loss, \$500,000. Train wrecked, Corinth, Ky., 1 killed; cause, a beam maliciously placed on track.

Summary of train accidents in February: 80 collisions, 92 derailments, 6 others; total, 178. Killed: 35 employees, 2 passengers, 4 others; total, 41. Hurt: 118 employees, 44 passengers, 4 others; total, 166.

Fires in February: Chicago, 4 different fires, loss, \$1,791,000; New York, 3 fires, \$800,000; Holyoke, Mass., stores, \$310,000; Minneapolis, business houses, \$236,000; Muscogee, Mich., sundry buildings, \$400,000; Columbus, Ohio, stores, \$750,000; Philadelphia, factories, \$610,000; Winnipeg, Manitoba, hotel, \$400,000; Toronto, Ontario, stores, \$250,000; Cincinnati, hat and clothing warehouses, \$350,000; Philadelphia, business houses, \$400,000; Port Washington, Wis., factories, \$425,000; Brooklyn, N. Y., navy yard, \$1,000,000. Total fires in February, 279; aggregate loss, \$18,469,000.

March 1. Trains in collision, White Plains, N. Y., 3 killed, 2 hurt; orders misread. Shipwreck: British steamer Labrador, off Tobermory, Scotland.

2. Military train wrecked, Tupelo, Miss., 2 soldiers killed, 6 hurt. Trains in collision, Chicago, Ill., 2 killed, 1 hurt. Fire: Charlotte, N. C., freight depot and cotton presses; loss, \$400,000. Chicago, bookstore burned; loss, \$550,000.

3. Trains in collision, Delphi, Ind., 1 tramp killed.

5. Explosion: naval magazine, Toulon, France, 60 killed, 100 hurt. Train wrecked, Ardenheim, Pa., 2 killed, 2 hurt, 3 locomotives and 12 cars wrecked. Another train wrecked, Westfield, N. Y., 14 hurt.

6. Fire: West Point, Miss., college buildings burned, also cotton presses; loss, \$400,000. Shipwreck: tug James Brown sinks near Philadelphia, 11 lives lost.

7. Disastrous storms in Buenos Ayres, large quantities of wheat destroyed. Train wrecked, Lovett, Pa., 1 killed, 3 hurt.

8. Trains in collision, Plainfield, N. J., 1 killed.

9. Trains in collision in Allegrippus, Pa., 2 killed.

10. Trains in collision, Granger, Ind., 2 killed, 1 hurt.

11. Destructive hurricane on the coast of Queensland, Australia, 411 lives lost.

12. Train derailed, Wayne, Pa., 1 killed, 1 hurt.

15. Explosion: boiler tube of British battle ship Terrible, 1 killed, several hurt.

17. Fire: Windsor Hotel burned, New York, 45 lives lost. Train derailed, Wheeler, Ky., 1 killed, 1 hurt; cause, a landslide. Other wrecks at Volland, Kan., 23 hurt, and at Bronco, Ga., 1 killed, 2 hurt.

18. Cyclonic storm in Arkansas, Mississippi, and Alabama, about 25 lives lost.

19. Trains in collision, W. Va., 1 killed, 2 hurt.

20. Train wrecked, West Seneca, N. Y., 1 killed, 2 hurt; cause, ice in the switch.

22. Trains in collision, New Boston, Mich., 1 killed, 2 hurt; cause, fog.

24. Fire: Cleveland, Ohio, stove works burned; loss, \$450,000.

26. Trains wrecked at Mohrsville, Pa., and Pittsburg, Pa., 5 killed, 1 hurt.

27. Train derailed, Glen Loch, Pa., 1 killed, 9 cattle cars wrecked; cause, a defective switch.

29. Fire: Hartford, Conn., factory burned; loss, \$180,000. Steamboat Rowena Lee sunk near Tyler, Mo., 60 lives lost.

30. Shipwreck: steamer Stella, on Casquet Rocks, British Channel, about 80 lives lost. Train wrecked, Texas Creek, Col., 1 killed.

Summary of train accidents in March: 47 collisions, 55 derailments, 3 others; total, 105. Killed: 31 employees, 3 passengers, 2 others; total, 36. Hurt: 72 employees, 68 passengers, 4 others; total, 144.

Fires in March: Denver, Col., grain, \$180,000; Charlotte, N. C., cotton, \$400,000; West Point, Miss., colleges, etc., \$400,000; Holyoke, Mass., hotel, etc., \$325,000; Jacksonville, Fla., lumber, \$250,000; Chicago, business houses, \$300,000; New York, hotel and stores, \$1,300,000; Amesbury, Mass., opera house, \$185,000; Cleveland, Ohio, stoves, etc., \$275,000; Chicago, felt works, \$400,000. Total fires in March, 197; aggregate loss, \$11,493,000.

April 3. Train wrecked at Rochester, N. Y.; 3 boys stealing a ride mischievously apply the air brakes and wreck several cars.

4. Shipwreck: steamer Chilkat cast away off Eureka harbor, California, 10 lives lost.

5. Train wrecked, Westbrook, Me., 2 killed.

7. Fire: dwelling house burned in New York, 12 lives lost.

8. Destructive flood in the Yellowstone river, Montana, 12 lives lost.

9. Shipwreck: steamers Maria and Kingswell in collision off Tripoli, 45 lives lost.

11. Fire: country home of W. K. Vanderbilt burned; loss, \$250,000.

12. Train wrecked, Flint, Mich., 1 killed.

13. Trains wrecked, Moscow, Idaho, and Mount Dallas, Pa., 2 killed, 1 hurt.

14. Trains in collision, Willock, Pa., 2 killed.

15. Fire: Cleveland, Ohio, business houses burned; loss, \$1,000,000.

20. Train wrecked, Big Rock, Ill., 1 killed, 4 hurt.

21. Train wrecked, Greenwood, Tenn., 1 killed, 1 hurt.

22. Fire: Omaha, Neb., business houses burned; loss, \$200,000.

24. Train wrecked, Gila Bend, Arizona, 2 killed, 2 hurt; bridge broke down, wreck caught fire.

26. Fire: Dawson City, Neb.; loss, \$1,000,000. Destructive tornado in northern Missouri, about 42 killed and 100 hurt.

28. Train wrecked, Oak Lane, Pa., 1 killed.

29. Train wrecked, Chippewa Falls, Wis., 1 killed, 2 hurt.

30. Train wrecked, Rochester, N. Y., 2 killed, 13 hurt.

Summary of train accidents in April: 38 collisions, 74 derailments, 2 others; total, 114. Killed: 18 employees, 2 passengers, 4 others; total, 24. Hurt: 39 employees, 28 passengers, 1 other; total, 68.

Fires in April: New York, dwelling house, \$155,000; Oak Dale, N. Y., dwelling houses,

\$250,000; Oshkosh, Wis., furniture, \$150,000; Cleveland, Ohio, business houses, \$400,000; Mattawaunkeag, Me., tannery, \$150,000; Omaha, Neb., warehouses, \$170,000; Pittsburg, Pa., business houses, \$210,000. Total fires in April, 202; aggregate loss, \$9,213,300.

May 1. Fire: Columbia, S. C., Gen. Wade Hampton's house burned, valuable library and collection destroyed.

2. Train wrecked, Milwaukee, Wis., 1 killed.

4. Fire: Greenville, N. C., sundry houses burned; loss, \$100,000.

5. Train wrecked, Bedford, Ind., 1 killed, 1 hurt.

8. Train derailed, Saunders, Wis., trestle gives way, engine and 40 cars fall into ravine, 1 killed, 1 hurt.

12. Trains in collision, Exeter, Pa., 29 killed, 60 hurt; cause, disregard of signals. Explosion: chlorate, St. Helen's, England, 3 killed, many hurt.

13. Trains wrecked at Reading, Pa., 28 killed, 40 hurt; and at Riddle, Ore., 3 killed and 1 hurt.

14. Fire: Manchester, N. H.; loss, \$100,000. Train derailed, Garrett, Mo., 1 killed, 2 hurt; cause, a stray pony on track.

15. Shipwreck: ship John R. Kelly lost off Port Stanley, Falkland Islands. Train wrecked at Waring, Ga., 1 killed, 3 hurt.

16. Train wrecked at Zehners, Pa., 2 killed, several hurt; cause, a spike laid on the track by a boy. Another at Dupont, Del., caused by a fallen tree, 4 hurt.

19. Shipwreck: bark Samiento, totally disabled at sea.

21. Shipwreck: steamer City of Paris, on the Manacle Rocks, coast of Cornwall (floated off July 11). Fire: town of Poroso, Poland, 12 lives lost.

25. Fire: St. John, New Brunswick; loss, \$500,000.

26. Train wrecked, Cañon City, Texas, a wash-out and waterspout derails the entire train, 1 killed.

27. Train wrecked, Mandan, N. Dak., 1 killed, 7 hurt.

28. Waterloo, Iowa, train wrecked by a wash-out, 7 killed, 40 hurt. Another at Whitesboro, Texas, 2 killed.

29. Train wrecked, Otis, Iowa, 2 killed, 160 cattle drowned.

30. Train wrecked on Chicago Elevated Railway, 40 hurt.

31. Trains wrecked at Paulsell, Cal., and Desplaines, Iowa, 1 killed, 16 hurt.

Summary of train accidents in May: 65 collisions, 108 derailments, 8 others; total, 181. Killed: 22 employees, 35 passengers, 7 others; total, 64. Hurt: 60 employees, 142 passengers, 6 others; total, 208.

Fires in May: Philadelphia, stores, \$205,000; Chicago, lumber, \$430,000; Dawson, Alaska, sundry buildings, \$850,000; Brooklyn, N. Y., mills, \$192,000; St. John, New Brunswick, warehouses, \$500,000; Coney Island, N. Y., sundries, \$150,000. Total fires in May, 162; aggregate loss, \$9,091,000.

June 5. Fire: New Orleans, La., St. Charles Theater burned.

6. Violent storm in Spain, heavy hail falls in Madrid, several persons killed, and much damage done. Train wrecked at Hickman, Col., 1 killed, 1 hurt.

7. Fire: Augusta, Ga.; loss, \$250,000. Train wrecked at Goffs, Kan., 19 hurt.

8. Train wrecked at Saunders, Wis., 2 killed; cause, a defective bridge. Another train wrecked at Grand View, Mo., 40 hurt. Floods in Texas, 25 drowned.

9. Trained wrecked, Kilby, Va., 2 killed, 1 hurt.

11. Train derailed, Geneseo, Ill., 15 hurt. Fire: Armstrong Ordnance Works, Newcastle-on-Tyne, England; loss, \$1,000,000.

12. Tornado in Minnesota and Wisconsin, about 250 killed and 200 hurt.

16. Explosion: Caledonia mine, North Sydney, Cape Breton, 11 killed. Shipwreck by collision, river Oder, Germany, 30 drowned.

21. Violent storm, Nenagh district, Ireland, many fatalities and much damage to crops. Train wrecked at Tip Top, Mo., 1 killed, 1 hurt; cause, a stray cow.

26. Trains wrecked at Canterbury, W. Va., and Haleyville, Ala., 1 killed, 7 hurt.

27. Train wrecked, Deadham, Mass., 1 killed, 1 hurt.

28. Shipwreck: steamer Margaret Olwill lost in Lake Erie, 9 lives lost. Train wrecked, Heckland, Ind., 1 killed, 2 hurt.

Summary of train accidents in June: 100 collisions, 115 derailments, 5 others; total, 220. Killed: 15 employees, 1 passenger, 3 others; total, 19. Hurt: 73 employees, 95 passengers, 5 others; total, 175.

Fires in June: Augusta, Ga., business houses, \$250,000; Laurel, Del., sundry buildings, \$325,000; Toledo, Ohio, freight house, \$300,000. Total fires in June, 152; aggregate loss, \$6,714,850.

July 2. Fire: Summit, N. J.; loss, \$150,000.

4. Continued floods in Texas, mainly in the Brazos river, about 300 lives lost.

6. Train wrecked, Waldron, Mo., 1 killed, 6 hurt.

8. Severe storms of hail, wind, and rain in southern England, much damage to property in the vicinity of Canterbury. Fire: Ludington, Mich., railroad elevator burned; loss, \$120,000. Also at Coulterville, Cal., town nearly destroyed; loss, \$250,000.

10. Collision, Newman, Cal., 2 killed, 11 hurt, all women.

11. Trains in collision, Penfield, Mich., 9 hurt.

12. Electrical storm in middle England; intense darkness prevailed, cattle were killed by wind and lightning, and many persons were injured.

13. Train wrecked, Glendale, Mo., 2 killed, 5 hurt.

16. Fire: Brooklyn Navy Yard, N. Y., uniforms and supplies destroyed to the value of nearly \$300,000.

17. Fire: Mount Vernon, Ind., mill burned; loss, \$100,000. Also at North Bend, Ind., foundry burned; loss, \$100,000.

18. Trains wrecked at Lenzburg, Ill., and Haverhill, Ohio, 4 killed, 7 hurt.

19. Mount Etna in eruption and severe earthquake shocks in Italy.

21. Explosion on British "destroyer" Bullfinch in the Solent, 10 killed.

22. Destructive storm in England and Ireland. Trains in collision, West Moreland, Tenn., 1 killed, 6 hurt, a trestle broke, the train fell 60 feet into a ravine, and the wreck was burned.

23. Explosion of an Austrian torpedo boat, 5 killed. Fire: Toledo, Ohio, wheat elevator burned; loss, \$1,000,000.

26. Fire: many valuable buildings destroyed in Marienburg, Prussia. Trains in collision, Angel, Arizona, 1 killed, 1 hurt.

27. Shipwreck: collision in the Volga river between Russian cargo barge and a passenger steamer, 155 drowned.

29. Train wrecked, Lackawaxen, Pa., 3 killed, 21 hurt.

31. Severe hailstorm in North Dakota, wheat crop damaged to the supposed amount of \$250,000. Trains wrecked at Desplaines, Ill., and Moina, Iowa, 5 killed, 10 hurt.

Summary of train accidents in July: 96 collisions, 116 derailments, 5 others; total, 217. Killed: 31 employees, 9 passengers, 5 others; total, 45. Hurt: 100 employees, 94 passengers, 7 others; total, 201.

Fires in July: Brooklyn, 3 fires, loss, \$765,000; Toledo, Ohio, grain, \$845,000; Phoenix City, Ala., sundry buildings, \$200,000; Coulterville, Cal., sundry buildings, \$200,000; Memphis, Tenn., paper mills, \$250,000. Total fires in July, 204; loss, \$11,426,400.

August 3. First report of a notable storm, which began far to the eastward of the American coast and lasted until Sept. 12, during which time it moved first through the West India Islands, and then northward along the coast of the United States, causing almost unprecedented destruction of shipping and loss of life; no accurate returns are obtainable of the number of lives lost or of the number and names of all the vessels destroyed. Estimates place the number of lives at several thousand.

5. Trains in collision, Manassas, Va., 2 killed.

6. By the breaking of a gangplank at Bar Harbor, Me., 20 persons were drowned. Trolley accident, Bridgeport, Conn., 29 killed.

7. Trains in collision, Offut, Tenn., 1 killed, 2 hurt.

8. The hurricane referred to under date of Aug. 3 swept over Puerto Rico; 2,000 lives supposed to have been lost and the island almost desolated. The same is true of neighboring islands in the same latitude. Train wrecked, Los Palos, Cal., 2 killed, 5 hurt.

10. Fire: Dallas, Texas, buildings burned; loss, \$250,000.

12. Fire: Yokohama, Japan, about one square mile of buildings burned, 16 lives lost.

17. Train wrecked at Juvisy, France, 17 killed, 73 hurt.

21. Fire: Victor, Col., business houses burned; loss, \$2,000,000.

28. Fall of the Chicago Coliseum, 9 killed, many hurt; cause, faulty construction of framework. Train wrecked, Barracksville, W. Va., 5 killed.

30. Train wrecked, Montclair, N. J., 3 killed, 14 hurt.

Summary of train accidents in August: 89 collisions, 100 derailments, 4 others; total, 193. Killed: 30 employees, 4 passengers, 5 others; total, 39. Hurt: 95 employees, 43 passengers, 16 others; total, 154.

Fires in August: Newark, N. J., car houses, \$300,000; Glens Falls, N. Y., cement works, \$250,000; Chicago, paint works, etc., \$300,000; Placerville, Idaho, nearly the whole town, \$250,000; Curwensville, Pa., \$400,000; Lockport, N. Y., \$250,000. Total fires in August, 146; total losses, \$9,703,700.

September 1. Mine flooded, island of Chikoku, Japan, 600 lives supposed to be lost.

2. Fire: Kansas City, Kan.; loss, \$250,000. Train wrecked, Denton, Ky., 2 killed, 2 hurt.

3. Hurricane in the Azores, many wrecks and much loss of life. Carriage wrecked by a railway train, Cedar Grove, Wis., 3 killed.

6. Severe electrical storm in London: the city was flooded by a violent downpour of rain, and for a time a frightful darkness prevailed. Trains wrecked at Narrows, Va., 2 killed and 28 hurt; Millers, Pa., 4 killed; Williamson, Pa., 7 killed.

9. Train wrecked, Columbia, S. C., 4 killed.

10. Trains wrecked, Tiona, Pa., and Richmond, Ind., 2 killed, 9 hurt.

11. Train wrecked, Nayang, Pa., 2 killed, 2 hurt.

12. Explosion on board German war ship Wacht,

4 killed, 4 hurt. Train wrecked, Oxford, Iowa, 4 killed, 6 hurt.

13. Hurricane in Bermuda, dockyards damaged and much other destruction of property. Trains wrecked at Baird, Pa., and Famoso, Cal., 6 killed, 6 hurt.

15. Destructive electrical storm in central England. Floods in the Danube river, bridge carried away at Vienna, 20 or more lives lost. Hurricane: Newfoundland, 400 fishing vessels believed to have been lost. Train wrecked, Sterling Run, Pa., 1 killed, 2 hurt.

17. Fire: Promised Land, N. Y., factory burned; loss, \$500,000.

18. Fire: Farnham, N. Y., business section burned; loss, \$250,000. Trains wrecked, Rhineland, Mo., and Talbot, Tenn., 2 killed, 5 hurt.

19. Fire: Lowville, N. Y., mill burned, also lumber yard; loss, \$250,000.

20. Trains wrecked, Swope Park, Mo., Windham, Minn., 8 killed, 4 hurt. Earthquake in Asia Minor, great mortality.

21. Shipwreck: steamer Scotsman, off Belle Isle, 15 women and children drowned. Earthquake: island of Ceram, East Indies, thousands perish.

23. Trains wrecked, Florence, Col., and Reno, Col., 11 killed, 6 hurt.

25. Earthquake in Alaska. Shipwreck: steamer Adula, coast of Jamaica, 5 lives lost.

26. Earthquake, rain, and landslides in Darjeeling, India, great destruction of life and property. Trains wrecked, Auburn, N. Y., and Oskaloosa, Iowa, 10 killed, 7 hurt.

27. Trains in collision, Paisley, Mont., 4 killed, 2 hurt.

28. Train wrecked, Stroudsburg, Pa., 1 killed, 1 hurt; cause, fog.

Summary of train accidents in September: 116 collisions, 110 derailments, 5 others; total, 231. Killed: 65 employees, 13 passengers, 15 others; total, 93. Hurt: 135 employees, 80 passengers, 11 others; total, 226.

Fires in September: Kansas City, Mo., pork-packing works, \$400,000; Chicago, Ill., sundry buildings, \$300,000; Castorland, N. Y., lumber, \$225,000; Cincinnati, Ohio, sundry buildings, \$500,000; Pumers Point, Va., stores, etc., \$330,000. Total fires in September, 179; aggregate loss, \$12,778,800.

October 2. Trains wrecked, Wilton, Ark., and Penn Haven Junction, Pa., 3 killed, 4 hurt.

6. Train wrecked, Thorpe, Wis., 1 killed, 15 hurt.

7. Typhoon in eastern Japan, 50 lives lost.

8. Floods and tempest in Italy, 40 lives lost in province of Salerno alone.

11. Train wrecked, Short Creek, W. Va., 8 hurt.

12. Earthquake in Java, several thousand lives believed to have been lost.

16. Trains in collision, Granite Cañon, Wyo., 2 killed, 3 hurt.

19. Train derailed, Stoneville, N. C., 3 killed.

20. A violent storm in southern Italy, 3 killed and 20 hurt by lightning.

21. Fire at Faires, Ala., 14 lives lost. Train wrecked by collision, Neeleysville, Mo., 1 killed, several hurt.

23. Trains in collision, Wabash, Ind., 2 killed, 2 hurt.

26. Shipwreck: British steamer Zurich founders off the coast of Norway, 17 lives lost.

27. Train wrecked, Langtry, Texas, 2 killed, 3 hurt.

28. Train wrecked, Laramie, Wyo., 1 killed, 2 hurt.

30. Disastrous storm on the island of Jamaica, several lives lost and houses swept away by flood.

31. Steam ferryboat Chicago sunk in collision

with steamer City of Augusta in New York harbor. Train wrecked, Crofton, Ky., 6 persons hurt by an explosion of an oil tank, wreck mostly burned.

Summary of train accidents in October: 165 collisions, 121 derailments, 6 others; total, 292. Killed: 26 employees, 4 passengers, 14 others; total, 44. Hurt: 107 employees, 48 passengers, 13 others; total, 168.

Fires in October: Duqucen, Ark., sundry buildings, \$250,000; Des Moines, Iowa, stores, \$435,000; Mill Valley, Cal., forest, \$280,000; Brooklyn, N. Y., warehouses, \$500,000; Oakland, Cal., residence, \$300,000; Hackettstown, N. Y., colleges, \$300,000. Total fires in October, 195; aggregate loss, \$12,046,250.

November 1. Shipwreck: schooner William M. Bird, off Cape Romain, South Carolina, 6 lives lost.

2. Trains wrecked, Georgetown, S. C., and Laceyville, Pa., 6 killed, 3 hurt. Shipwreck: United States steamship Charleston, off Luzon, Philippine Islands.

4. Trains in collision, Radnor, W. Va., 2 killed.

8. Trains in collision, Kokomo, Ind., 16 hurt.

9. Train derailed, Alexis, Mich., 13 hurt.

12. Trains in collision, McKee's Rocks, Pa., 3 killed.

13. Trains in collision, Lindley, N. Y., 2 killed.

15. Trains derailed, Riverton, Va., 4 killed.

17. Steamer Patria takes fire and is abandoned in the North Sea.

19. Train derailed, Humboldt, S. Dak., 6 killed, 4 hurt.

22. Trains in collision, McCools, Ind., 1 killed, 4 hurt; cause, fog.

24. Trains wrecked, Georgetown, Ga., and Glenwood Springs, Col., 5 killed.

25. Trains in collision, Coshocton, Ohio, 3 killed, 12 hurt.

29. Trains in collision, Paterson, N. J., 6 killed, 22 hurt. Fire: Lippincott's publishing house, Philadelphia, and other buildings burned; loss, \$125,000. Also college buildings at New Athens, Ohio.

Summary of train accidents in November: 122 collisions, 137 derailments, 7 others; total, 266. Killed: 43 employees, 9 passengers, 4 others; total, 56. Hurt: 118 employees, 85 passengers, 1 other; total, 204.

Fires in November: Kansas City, Mo., stores, \$461,000; Waukegan, Ill., factories, \$400,000; Massillon, Ohio, stores, \$250,000; Memphis, Tenn., warehouses, \$290,000; Montreal, Quebec, confectionery and other buildings, \$500,000; Detroit, Mich., stores, \$425,000. Total fires for November, 168; losses, \$11,857,650.

December 2. Destructive tidal wave on the coast of Chili, many shipwrecks.

3. Fire: Clinton, Mass., theater burned; loss, \$150,000.

4. Trains in collision, Salida, Col., 6 killed, 3 hurt. Shipwreck: British army transport Ismore lost in St. Helena Bay.

5. Shipwreck: steamer Niagara founders in Lake Erie, 16 lives lost. Fire: Meridian, Miss., business block burned; loss, \$250,000.

7. Fire: Reading, Pa., factory burned; loss, \$250,000.

9. Explosion: Carbonado, Wash., 32 lives lost.

10. Fire: Augusta, Ga., hotel and other buildings; loss, \$500,000. Also at Enfield, N. H., mill burned; loss, \$100,000.

21. Landslide, Amalfi, Italy, convent, hotels, and many other buildings fall into the sea; about 20 lives believed to have been lost.

23. Explosion: fire damp at Brownsville, Pa.,

40 coal miners killed; cause, authorized use of open lamps.

24. Shipwreck: British steamer Ariosto, near Cape Hatteras, North Carolina, 21 drowned.

25. Earthquake: severe shocks in southern California.

28. Fire: Essen, Germany, the Krupp gun works; damage, \$70,000.

30. Fire: Chicago, sundry buildings burned; loss, \$1,000,000.

Summary of train accidents in December: 127 collisions, 105 derailments, 4 others; total, 236. Killed: 46 employees, 11 passengers, 8 others; total, 65. Hurt: 98 employees, 66 passengers, 7 others; total, 171.

Fires in December: Meridian, Miss., stores, etc., \$250,000; Reading, Pa., factory, \$275,000; New York city, two fires, \$940,000; Augusta, Ga., business houses, \$785,000; Fort Wayne, Ind., stores, etc., \$200,000; Chicago, Ill., stores, etc., \$950,000. Total fires in December, 217; aggregate loss, \$13,260,000. Total for 1899, \$136,773,200.

In the city of New York, according to the report of the Board of Health, there were during the year 1,563 accidental deaths (including those by sunstroke).

DISCIPLES OF CHRIST. A statistical report presented at the annual Christian missionary meetings showed that the present number of churches of the Disciples was 10,298; of communicants, 1,118,396; of Bible schools, 7,765, with 732,642 enrolled pupils; of ministers, 6,339; and of sittings in churches, 1,566,653; amount of expenditures for all benevolences, \$5,454,787; total value of church property, \$18,256,761. These numbers represented a gain for the year of 210 churches, 42,781 communicants, 315 Bible schools, 32,597 pupils in the same, 317 ministers, 50,000 church sittings, \$184,202 in expenditures for benevolent purposes, and \$1,059,264 in value of church property. Besides the sums raised by the Foreign and American Christian Missionary Societies, which are given in another part of this article, \$165,000 had been raised by the State and district missionary societies, making the whole amount contributed for foreign and domestic missions \$567,296. Under the heading of contributed for educational and other benevolences were included \$100,000 for buildings and endowments of schools, \$21,550 for the widows' and orphans' fund, and \$6,651 for ministerial relief, making a total of \$128,201. The sum of \$4,775,000 had been raised further for local church work, the whole making a total of \$5,470,497 for the year's contributions. A table showing the growth of the churches in membership by periods of ten years gave the following numbers, "as near as could be ascertained": In 1830, 12,000 members; in 1840, 40,000; in 1850, 118,000; in 1860, 225,000; in 1870, 350,000; in 1880, 475,000; in 1890, 611,000; in 1895 (five years), 889,019; in 1899, 1,118,396.

The annual meetings of the Missionary and Church Extension Societies were held in Cincinnati, Ohio, Oct. 12 and the following days. The meeting of the American Christian Missionary Society (Domestic) was its fiftieth, and the occasion was marked by a review in the report of its work since it was organized in 1849. The amount of \$860,500 raised and expended during that time through the treasury of the society had been supplemented by \$2,300,000 raised on the mission fields. Forty-six State and district boards of missions had come into being under the care and help of the national board and auxiliary to it. The missionaries of the general board had organized 2,361 churches and baptized 98,360 per-

sons into membership. The State boards reported 295,198 additions to the churches through their missionaries. This society had given to the Church the various other societies—the Christian Woman's Board of Missions, which had raised \$770,000 since its organization; the Foreign Christian Missionary Society, which had raised and expended \$1,141,000 for foreign missions; the Board of Church Extension, which had raised \$236,000 for that work; the Board of Negro Evangelization, which had raised \$68,000 before its offering was united with that of the General Home Board; and the Board of Ministerial Relief, which had raised about \$29,000 for the help of aged and needy ministers. The last year had been the most prosperous in its history. Its receipts had been \$100,550, showing a gain of \$60,662 from the previous year. Of this amount \$29,100 came in the form of special gifts to the permanent fund. In addition to the receipts of the general society, the State boards had received \$294,065. The national board was helping 32 State and district boards of missions, and employed 109 missionaries, who had organized 63 churches and baptized 6,046 believers, while more than 15,000 persons had been baptized during the year under the ministrations of the State boards. Missions were carried on in 20 large cities; in Manitoba, Ontario, and the maritime provinces of Canada; among the Mexicans in San Antonio, Texas; and a mission had been opened in Puerto Rico in November, 1898.

The Board of Ministerial Relief had received \$6,682.

The twenty-fourth annual report of the Foreign Christian Missionary Society showed that the receipts for the year had been \$152,728, indicating a gain of \$21,801 over the previous year. Of this amount, \$56,781 had been contributed by the churches as churches, and \$39,071 by the Sunday schools; \$9,390 were the proceeds of bequests; and \$22,425 had been received on the annuity plan. Ten new missionaries had been appointed to Africa, India, Japan, China, and Cuba, and were to sail after the adjournment of the convention, while 2 others were to go to Japan in the next year. Men were needed to serve as evangelists. A number of new buildings had been erected in the several mission fields. The missions in China, Japan, India, and Turkey returned 71 missionaries, 149 native helpers, 717 members, 465 additions during the year, and 1,570 pupils in the schools, and 11,302 patients had been treated in the hospital connected with the mission in China. The Scandinavian missions returned 168 members at Copenhagen, Denmark; 9,958 in Norway, where a church had been formed in Christiania; and 26 in Malmö, Sweden. A new station had been opened at Lund, Sweden. In England the aggregate membership of the churches and missions was 2,412, and 2,541 pupils were enrolled in the Sunday schools, while the Christian Endeavor Societies had 379 members. The English churches had raised \$17,488 for self-support and \$2,419 for missions. The first station in Africa had been occupied at Bolengi, about

500 miles from the mouth of the Congo and 2° north of the equator, where 3 missionaries were in service. In accordance with the directions of the convention of the previous year, Cuba had been visited by a committee, who had decided to open a mission there at the earliest moment practicable, and a mission to the Philippine Islands was contemplated.

The total receipts of the Board of Church Extension had been \$64,276, a gain over the previous year of \$22,952. Of this amount, \$17,933 were derived from annuities, \$2,152 from bequests, \$16,612 collected on loans, and \$47,664 new receipts. Fifty-eight loans, aggregating \$53,786, had been closed, and 73 loans, amounting to \$41,940, had been granted but not closed. A class of named loan funds, in memory of donors or such other persons as they may designate, had been instituted, the condition of which is the payment of \$5,000 at once or in annual subscriptions through a series of ten years. Seven such funds had already been founded.

The Christian Woman's Board of Missions reported for its twenty-fifth year. Its total receipts had been \$109,089, and it had employed in Jamaica, India, and Mexico, for the whole or a part of the time, 27 missionaries, working in 26 stations, and in the United States 33 missionaries, doing special work in 20 States and the country at large. Besides these, a number of missionaries were laboring in Colorado and parts of Montana, to whom remittances were not made directly.

The total amount of the year's contributions for all the national and State boards is given in the report of the American Christian Missionary Society as having been \$690,017.

Disciples in England.—The nineteenth annual conventions of the Christian Association and Christian Woman's Board of Missions of England were held Sept. 12 to 14. The 15 churches and missions returned 2,412 members, showing a net increase of 172, while 391 persons had been baptized. The total contributions for self-support and benevolences, excluding those for missions, had been £3,583, or £113 more than in the previous year, while the contributions for missions were £455, against £276 in the previous year. The value of church property was given as £29,413. The receipts of the Self-denial League, which has been formed to raise money for the Evangelist fund and the opening of new work, had been at the rate of £75 per member. The Christian Woman's Board of Missions had received more than £200, and had sent boxes to India and to China. A resolution was adopted, at the instance of the Christian Total Abstinence Association, declaring it the opinion of the conference that, "in view of the fearful results accruing from the use of alcoholic liquors and the curse it brings upon the home life and church life of the nation, . . . no Christian should make, buy, sell, or use as a beverage intoxicating drinks, and that Christians should not provide for their children stimulating food which excites the appetite for intoxicating liquors."

E

EAST AFRICA. The coast of Africa between Cape Guardafui and Cape Delgado, over which the Sultan of Zanzibar once exercised sovereign rights, has been divided, by agreement between Germany, Great Britain, and Italy, among those three powers. German East Africa, embracing

an area of about 380,000 square miles, with 4,000,000 inhabitants, is divided on the south from the Portuguese colony of Mozambique by the river Rovuma; from British East Africa on the north by a conventional boundary running northwestward from the Umbe river to the shore of Vic-

toria Nyanza, deflected so as to include Mount Kilimanjaro in German territory, and continued west of the Victoria lake along 1° of south latitude to the eastern boundary of the Congo Independent State, which forms the western limit of German East Africa. British East Africa, according to the agreement made with Italy, is divided from the protectorate that was asserted by the latter power over Abyssinia and adjacent territories by the Juba river up to 6° of north latitude, by that parallel as far as 35° of west longitude, and by that meridian northward to the Blue Nile. The British sphere, merging into the equatorial and Soudanese provinces, nominally belonging to Egypt under the suzerainty of Turkey, includes the territory acquired from the Sultan of Zanzibar by the British East Africa Company, and afterward taken under direct imperial control, which has an estimated area of 270,000 square miles, with 5,000,000 inhabitants, and the native kingdom of Uganda, the conquest of which exhausted the resources of the British East Africa Company, having an area of about 58,000 square miles and 1,000,000 inhabitants; also the islands forming the sultanate of Zanzibar, with an area of 988 square miles and 210,000 inhabitants. Including the territories between Uganda and the Congo State, which are gradually being subjected to British control, and the former Egyptian conquests, the sphere claimed by Great Britain embraces an area of more than 1,000,000 square miles. British Somaliland, 68,000 square miles in extent, is attached to Aden, which is a dependency of the Indian Government. The Italian sphere, embracing the rest of Somaliland, with a coast line extending from Wahadu to Bandar Ziyada, has an estimated area of 190,000 square miles, with a population of 400,000.

Zanzibar.—The Seyyid, or Sultan, of Zanzibar, Hamud bin Mohamed bin Said, born in 1858, is still the nominal ruler of Zanzibar, but the practical direction of affairs has passed to the British agent and consul general, who acts under the instructions of the Foreign Office in London. The British protectorate was established in 1891, when a mixed administration was constituted, with Sir L. Matthews as Prime Minister. All new acts and additional expenditure require the sanction of the British agent and consul general, Sir Arthur H. Hardinge. The soldiers and police, under command of Gen. Raikes, number 600. The Sultan receives an allowance of about 120,000 rupees a year. The revenue is derived mainly from customs duties and taxes on products of the country, mainly on cloves. All public expenditure must be approved by the British agent as well as the Sultan. The legal status of slavery was abolished on April 6, 1897. The town of Zanzibar, with a population of about 30,000, is the distributing point for nearly all the trade of East Africa, and this is in the hands of the 7,000 Banyan merchants from India, who live there. It was made a free port in 1892, and its commerce includes the exportable produce of the sultanate, as well as of German and British East Africa. The total value of imports in 1897 was £1,399,078, against £1,275,470 in 1896; the value of exports was £1,189,668, against £1,158,806. The imports of cloves, the staple product of the Zanzibar dominions, grown chiefly in Pemba, were £91,942 in value in 1897, and the exports £92,416; imports of rice were £103,410, and exports £62,098; imports of piece goods were £346,451, and exports £322,741; imports of ivory were £108,592, and exports £134,007; imports of copra, etc., were £42,933, and exports

£65,814; imports of rubber were £17,569, and exports £29,470; imports of coal were £70,428; of groceries, £64,353. Other exports were gum of the value of £20,244; skins, £15,371; pearls, £13,179; fish, £12,644. The trade with different countries in 1897 was as follows:

COUNTRIES.	Imports.	Exports.
British India.....	£401,263	£97,803
Great Britain.....	169,894	162,422
Germany.....	91,726	34,591
France.....	25,341	76,341
German East Africa.....	227,029	412,309
British East Africa.....	43,548	106,267
Zanzibar and Pemba.....	143,687	81,161

The number of vessels engaged in foreign trade entered at the port of Zanzibar during 1897 was 150, of 245,368 tons, of which 64, of 109,612 tons, were German; 48, of 75,013 tons, British; 28, of 52,373 tons, French; and 10, of 8,370 tons, of other nationalities.

The decree that the British commissioner obtained from the Sultan, enabling slaves to claim emancipation, resulted in less than two years in the manumission of about 8,000. After that few applied for papers, but the custom grew up for slaves to hire themselves as laborers for wages with their masters or others, especially at harvest time, or to contract with their masters to give service in lieu of rent for land occupied by them. The total slave population of Zanzibar and Pemba is variously estimated between 144,000 and 266,000. The antislavery agitators in England complained that slaves must apply to the Mohammedan *walis* for emancipation papers, and they took serious exceptions to the exemption of concubines from the Sultan's emancipation decree.

British East Africa.—On July 31, 1893, the British East Africa Company abandoned the territory situated between the Tana and the Juba, and the administration reverted to Zanzibar, which had been taken under the protection of Great Britain, in accordance with the Anglo-German convention of July 1, 1890. On June 15, 1895, the British Government declared a protectorate over all the territory between the coast and the limits of Uganda. On June 30, 1895, the British East Africa Company abandoned the coast strip leased from the Sultan of Zanzibar, and the administration passed to the Imperial Government, and was placed under the supervision of the consul general at Zanzibar. On Aug. 31, 1896, the whole territory was made a separate protectorate, under the name of the East Africa Protectorate. It is divided into the coast province, with capital at Mombasa; Ukamba, with capital at Machakos; Tanaland, including Witu, with capital at Lamu; and Jubaland, with Kismayu for its capital. The population of about 2,500,000 includes 13,500 Asiatics and 390 Europeans and Eurasians. Mombasa, the seaport and chief city, has 24,700 inhabitants. The subcommissioner, C. H. Craufurd, has his residence there. The place is connected by a submarine cable with Zanzibar, and with Lamu by a telegraph line. The harbor has been improved by the construction of durable jetties and docks. The revenue of the protectorate for 1897 was £39,186; for 1898, £43,841. An import duty of 5 per cent. is levied under the Brussels act. The principal imports are English and Indian cottons, brass wire, beads, and provisions. The exports are ivory, India rubber, cattle, goats, grain, copra, hides, gum copal, etc. The whole trade is conducted by the Banyan merchants. The total value of imports in 1898 was 4,464,827 ru-

pees, against 3,925,597 rupees in 1897; of exports, 1,087,266 rupees, against 1,172,026 rupees in 1897. The vessels entered at Mombasa in 1898 had an aggregate tonnage of 196,630 tons. The railroad under construction from the port of Mombasa to the coast of Victoria Nyanza will have a total length of about 550 miles, of which 300 miles were completed by May 1, 1899, bringing it to the healthful and populous country of Kikuyu, the exportable products of which will afford some return traffic. In the malarial coast zone the rate of mortality among the Indian coolie laborers was high. No fewer than 28 men were killed by lions before measures were taken to protect the workmen. The supplies for the German settlement on Kilimanjaro are conveyed over the railroad, and the downward traffic in ivory is already considerable. The route of the railroad as originally surveyed by Major MacDonald terminated at the northeast shore of the lake. A

later the official excuse was that the high prices paid for labor on the Uganda Railroad would cause all the slaves, if they were set at liberty, to desert the plantations of their masters and leave the whole coast district uncultivated. Slavery is recognized as legal only in the territory leased from the Sultan of Zanzibar, the 10-mile strip of coast, within which are situated the plantations of the Arab slaveholders. The opinion was given by the Attorney-General of Great Britain in 1897 that it was an offense against British law when British subjects anywhere in the world were themselves concerned in the sending back and restoring to slavery of persons claiming to be free, simply because they were slaves. This was hailed by the members of the Antislavery Society as a final blow to slavery in the protectorate, for no runaway slave could be returned to enforced servitude if the British consul and subcommissioner, sitting as judge of the

GONYE FALLS, ON THE ZAMBESI.

later survey makes the railroad turn to the southwest and terminate at the southern end of the lake, close to German territory, shortening the route by 100 miles. The sum voted by the British Parliament for the construction of the line was £3,000,000. Of this, £1,700,000 had been spent before September, 1898, when about 170 miles were completed. The cost in the mountainous country beyond the Kikuyu escarpment is certain to be greater, so that the original estimate will be exceeded by a large sum.

The pledge of the British Government, given by Mr. Balfour, that slavery should be abolished on the mainland at the earliest possible moment has for years afforded the theme for embarrassing reminders to the antislavery agitators, especially Bishop Alfred E. Tucker, of the diocese of East Equatorial Africa. The rebellion of Mbaruk furnished for some time a plea for delay. The rebellion in Uganda was put forward as the ground for inaction in the beginning of 1899, and

Mombasa provincial court, did not decide on the rights of the master and had not the power of the protectorate at his back to enforce his decree. In March, 1899, the Attorney-General explained in the House of Commons that he did not mean to say that a British subject was not allowed to express his opinion that a man coming before him in a court had established his right to slaves. The missionaries who harbor runaway slaves formerly refused to admit the policemen sent to return them to their masters, but when the authorities of the protectorate asserted the right to compel missionaries to restore slaves who had fled to their stations they generally allowed them to be taken away. After the Attorney-General uttered his dictum that it was a criminal offense to restore persons to slavery, some of the missionaries declared that they would in the future resist any search for fugitive slaves on their premises. Sir Arthur Hardinge complained that several of the missions encour-

aged slaves to leave their masters by allowing them to have ground to cultivate and build upon without exacting in return either rent or services, but only that they attend church and send their children to school. The chief cause of the discontent of the coast Arabs, which led to the rebellion of Mbaruk and Raschid bin Salim in 1895 and 1896, is the antislavery policy actively pursued by many of the missionaries, and identified with the Government also, since the suppression of the maritime slave traffic was the object of the earliest interference of Great Britain in Zanzibar. The British Government, guided by the reports of Sir Arthur Hardinge, is not yet prepared to abolish slavery on the mainland, although the legal status of slavery has been abolished in Zanzibar. Although slaves have been running away in greater numbers since the rebellion, the condition of slavery is represented in reports as beneficial to the slaves and necessary to the economic life of the country, as even a natural and necessary social relation, because all ordinary Africans feel the necessity of depending on a chief or master. The slave owners in this part of Africa give their slaves a piece of ground to cultivate in return for a part of the produce or for service at stated times, or they allow them to go forth to trade or to work on condition of their handing over a part of their profits or wages. In this relation the slave looks to his master and to his fellow-slaves for care and aid in times of sickness or distress. He occupies a fixed social status, as does also the freedman voluntarily manumitted by his master; one who has obtained his freedom by the intervention of Englishmen, on the other hand, is regarded as an outcast, and is avoided and despised by all. The policy of the British Government was defined in instructions sent by Lord Salisbury to Sir Arthur Hardinge on Feb. 11, 1899, that no British official shall hand back slaves; that the native courts, however, will not be deprived of any powers they exercised before the proclamation of 1890, but in every case the master will be required to prove clearly that the slave has been and is legally owned. In taking over the Government of Zanzibar in 1890 the British Government gave a pledge that all slaves possessed at that date by subjects of the Sultan should remain as they were, and their status should be unchanged.

Uganda.—The British protectorate declared over Uganda on June 19, 1894, was extended in July, 1896, to Unyoro and other countries to the west as far as the agreed boundary of the Congo Independent State, which is 30° of east longitude northward to the water parting of the Nile and Congo basins; and in the east it was made to include Usoga. The protectorate is administered by a commissioner and consul general, E. J. L. Berkeley, although in Uganda there is a nominal king, the infant son of King Mwanga. Close to Mengo, the capital, is the fort of Kampala, where British troops are quartered. Indian soldiery has been introduced to take the place of the Soudanese troops, who mutinied and fled across the Nile. The residence of the commissioner is Port Alice, on Victoria Nyanza. The railroad that is being constructed from Mombasa to the east shore of the lake will have its terminus at Ugove Bay; 260 miles had been completed by Feb. 1, 1899. The soil of Uganda is fertile and adapted for coffee culture. The natives of Uganda, who are divided in religion into Catholics, Protestants, Mohammedans, and heathen, are skillful in ironwork and pottery. The imports in 1895 were valued at 222,006 rupees, ex-

clusive of Government stores; exports, 244,728 rupees.

The first mutiny of the Soudanese troops in Uganda, of whom there were 1,600, constituting at that time the sole military force in the protectorate, was checked by Major MacDonald, who had come to lead an expedition to the source of the Juba and into the Nile country. The mutiny started among the Soudanese companies assigned to him, which were companies that had previously been overworked and not paid up, as the trade goods intended for their pay could not be brought up in time from the coast. Major MacDonald with the loyal Soudanese and a detachment of regulars drove the mutineers out of Uganda to the northward. On the arrival of Indian troops early in 1898, the rebels were pursued and dispersed when on the point of crossing the Nile into Unyoro, where the Soudanese garrisons were known to be ripe for revolt. The departure of Major MacDonald for Lake Rudolf and the head waters of the Juba, followed by that of Major Martyr down the Nile, deprived the protectorate of a part of the available force for maintaining order, though this part consisted largely of Soudanese troops taken over from Emin Pasha, the element which had caused the disturbance, and which it was now the policy to replace with other troops. The Soudanese Uganda Rifles were formerly considered a model corps by the officers who commanded them and obtained from them stanch and efficient service in many difficult situations. In the course of time the men became discontented, because their work was heavy and continuous, their pay and clothing frequently in arrears, the pay smaller than porters earned, scarcely exceeding that of native laborers, and only a fifth as much as soldiers received in the neighboring German protectorate. When the mutineers had been pursued across the Nile and broken up, Mr. Berkeley, the commissioner of Uganda, believed the crisis to be over. The British administration had, however, other foes to cope with besides these Nubian soldiers. Kabarega, the slave-raiding King of Unyoro, whose power was great until his army was severely defeated by the Uganda Rifles at the end of 1893, recovered from that disaster, and in 1895 attacked a British fort. In 1895 his new army was almost annihilated, and from that time he carried on a guerrilla war, moving about with a few hundred followers, stirring up disorders in districts where the British power was not vigorously displayed. Mwanga, the ex-King of Uganda, who had reversed the friendly policy of Mtesa, his father, toward British missionaries and explorers, and in 1885 murdered Bishop Hannington and begun the active persecution of native Christians, was deposed in 1888 and succeeded by his brother Kawewa, who was overthrown by the Arabs. After that Mwanga with British help regained possession of the kingdom, professed Christianity, and expelled the Arabs in 1890. The British control became irksome to him, and the oppression of Catholics and Mohammedans led to a revolt in 1897, in which he joined. After his defeat he fled to German territory, and his infant son was proclaimed King with a regency. In 1898 Mwanga escaped from German surveillance and began an irregular war in the western districts of Uganda, going about with a smaller or greater body of followers, and taking reprisals from the British party. After the departure of Major MacDonald's expedition Kabarega and Mwanga joined forces and entered into communication with the Nubians, who recrossed the Nile to take part in a campaign against the

British. The former campaign that Major MacDonald had conducted against the Soudanese with 17 Indian regulars and 340 Suahilis at the outset, rising to 2,000 of all classes at the close of the operations, had extended over 40,000 square miles. The British forces had the co-operation of the Protestant Waganda and Wasoga chiefs, who commanded 3,300 rifles. The losses on the British side were 280 killed and 555 wounded; those of the Soudanese mutineers and their allies were estimated at 1,300. When the rebellion broke out afresh in the fall of 1898 Uganda was garrisoned with a regiment of Indian troops, 400 faithful Soudanese, and a small force of Suahilis. As Col. Martyr was about to start on his expedition to the Nile two companies of his troops were ordered to remain behind in Unyoro, where the Soudanese mutineers had reappeared. On Oct. 10 Lieut. J. A. Hannington, while marching to Masindi, a fort in the middle of Unyoro with 30 Baluchi soldiers, was attacked by a body of Soudanese and compelled to retreat to the fort at Kisilaza, losing 17 men, their baggage, and some of their arms. The mutineers, who had lost about 100 men, attacked the fort, but withdrew after losing 25 more. Troops were hastily summoned to defend the country against the Nubians, Mwanga's people, and Kabarega's people, who were all joined together, about 300 Soudanese and 600 natives, who had captured three Waganda forts. Another rebel chief joined them later from Buddu, and they returned to the siege of Kisilaza, intending after its capture to march upon Mengo, the capital of Uganda. A mutiny of the Suahili company of the Uganda Rifles added to the complications of the situation, but this was promptly quelled. About this time Lieut.-Col. Evatt arrived with more troops from India. He marched at once to the relief of the beleaguered garrison. The Indian troops in the fort repeatedly repelled attacks of greatly superior forces, inflicting severe losses upon them, and when the re-enforcements arrived the rebels, who were suffering greatly from scarcity of food, were quickly surrounded by various columns of Government troops. The movement of troops was difficult in the jungle grass, 12 feet high and more, that covered the country; but the Waganda auxiliaries could move as fast as the rebels, and made their escape impossible. On Dec. 6 Bilal Effendi, the leader of the Soudanese, was killed in action, 40 prisoners were taken, and the mutineers were broken up and dispersed. The rebellious Roman Catholic chiefs began to make terms of peace. Mwanga was quite disheartened, but he was kept a virtual prisoner by Kabarega. The rebels were driven from point to point, and as they lost ground the British gained allies. The remnant of the rebel forces was finally overtaken and defeated by Col. Evatt on the east bank of the Nile on April 9, 1899. They made a stout resistance, losing 300 men. Kabarega, completely disabled with wounds, was taken prisoner, and Mwanga also. This ended the rebellion. The two chiefs were deported. An entire change in the administration of the protectorate had already been decided upon. Sir Harry H. Johnston, distinguished as an African administrator, was appointed in the place of Mr. Berkeley, but with the power to reorganize the whole system of government, with the title of special commissioner, commander in chief, and consul general. The Waganda, who had aided the British effectually in the last war, were taken into the service as soldiers to replace the Soudanese and the Suahili. The new administrator was no longer unable to communicate with the Lon-

don authorities, but could send and receive dispatches by the telegraph within twenty-four hours.

Major MacDonald started from Uganda with the avowed object of delimitating the British and Italian interests on the river Juba, but the ultimate object of pushing forward into the Nile valley if possible, so as to prevent the French from acquiring a position on the west bank of the Nile. The country north of Mount Elgon as far as Lake Choga was first explored, then the country beyond to the western shore of Lake Rudolf and farther north, where the Abyssinians, in order to forestall the British, had preceded them with an army which had devastated the whole region. On the return march the column

A STREET IN BERBERA.

was beset by the nomadic and warlike Turkhans. Another column advanced from Mount Elgon through Karamoyo and Bukhora in the direction of Lado, on the Nile, but turned about when it came into the dangerous proximity of a force of mutinous Soudanese, who had escaped from Uganda, up to Lakuka. Capt. Kirkpatrick, while exploring the borders of Karamoyo, was murdered by the Nakwai, who afterward fought a battle with the main force. Another tribe attacked a detachment on Mount Elgon, and shortly afterward the expedition, finding that no supplies had been sent up, started for the coast, arriving at Mombasa on March 4, 1899. The region traversed was in the main a high plateau, healthful, and covered with good pasturage, with mountains rising to 10,000 feet.

A later expedition, under Col. Martyr, had for its object to occupy the country from Uganda

down the Nile to the advanced posts established by Lord Kitchener in the Soudan. With four companies of the Soudanese troops of Uganda who had remained loyal Col. Martyr was ordered to proceed down the Nile by water to Fashoda and establish posts as far as Sobat, so as to control the water way and connect Uganda with the country occupied by the Anglo-Egyptian forces. The expedition advanced as far north as Rejaf, but was unable to make its way down the river, owing to the collection of vegetation, which blocked navigation. Foweira and Fajao, the latter 140 miles north of Uganda, had been occupied by British forces previously. The Martyr expedition established posts at Wadelai and Affuddo, and early in 1899 built Fort Berkeley, on the Nile, 350 miles from Fashoda. The dervishes were on the upper Nile, but at the approach of the English expedition their forces dispersed.

British Somaliland.—The ports of Berbera and Zaila were once occupied by Egypt, but the coast was declared a British protectorate in 1884. The area of the British sphere was originally about 75,000 square miles, but by cession made to the Negus of Abyssinia in 1897 it was reduced to 68,000 square miles. A duty of 5 per cent. is levied on all imports and 1 per cent. on exports, except sheep, goats, cattle, gold, ivory, and civet. The principal imports are piece goods, rice, and dates. The exports are hides and skins, ostrich feathers, cattle, sheep, and gum. The imports in 1898 of Berbera, Bulhar, and Karam were valued at 2,795,750 rupees; exports, 2,447,765 rupees; imports of Zaila, 2,426,700 rupees; exports, 2,807,644 rupees. Indian troops with British officers are garrisoned at the ports.

German East Africa.—The German protectorate is under the administration of an imperial governor, Major-Gen. Liebert, who resides at Dar-es-Salam. The estimate of revenue for 1899 was 5,965,200 marks, of which 100,000 marks came from direct imposts, 1,625,000 marks from customs duties and other taxes, 435,000 marks from administration receipts, and 3,805,200 marks from the imperial treasury. The expenses for salaries are 3,385,633 marks; for stores and materials, 2,244,400 marks; and extraordinary expenditures on public works, 322,000 marks; leaving 13,167 marks for the reserve fund. For 1900 the expenditures are estimated at 8,000,000 marks, toward which the Imperial Government contributes 5,985,000 marks. The Europeans on Jan. 1, 1897, numbered 922, of whom 678 were Germans. The military force consisted of 172 Germans and 1,572 native soldiers, besides a police force of 15 German officers and 482 Askaris. There are 7 Catholic and 3 Protestant missionary societies working among the natives, who are Bantus mixed with other races, and near the coast are intermixed with Arabs. They cultivate bananas, pulse, and maize. German settlers have cocoanut, coffee, vanilla, caoutchouc, tobacco, and vanilla plantations. The value of imports in 1897 was 6,840,731 rupees, against 7,008,287 rupees in 1896; of exports, 3,736,197 rupees, against 3,329,941 rupees. The export of ivory in 1897 was 1,107,000 rupees in value; of caoutchouc, 851,000 rupees. Other exports are mtama, sesame, copra, tallow, copal, rhinoceros horns and teeth, and tobacco. Of the imports 1,841,000 rupees came from Germany, 572,000 rupees from Great Britain, 2,813,000 rupees from India, 272,000 rupees from Arabia and Persia, 105,000 rupees from Zanzibar, and 1,238,000 rupees from other countries. Of the exports 2,671,000 rupees went to Germany, 831,000 rupees to Zanzibar, and 234,000 rupees to other countries.

Italian Somaliland.—The sultanate of Obbia was taken under Italian protection in February, 1889, and in April of the same year the protectorate was extended to the Mijertain Somalis. In August, 1892, the Sultan of Zanzibar ceded to Italy the whole coast from Obbia to the Juba river. The Benadir coast was placed under the control of a commercial company in 1896 for a term of fifty years. The treaty of Adis Abeba restored to Abyssinia the interior, restricting the rights of Italy to a coast strip of 180 miles, extending farther on the Juba river so as to take in Logh. The coast stations of Brava, Merka, Mogadoscio, and Warsheikh are within the Italian sphere.

ECUADOR, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 30 members, 2 from each province, elected for four years, and a House of Representatives of 33 members, 1 to 30,000 of population, elected by the votes of all adult male Catholics able to read and write, for the term of two years.

The President of the republic is Gen. Eloy Alfaro, elected for the regular term of four years in January, 1897. The Vice-President is Manuel B. Cueva. The Cabinet at the beginning of 1899 contained the following members: Minister of the Interior, Police, Worship, and Public Charity, Dr. R. Gomez; Minister of Foreign Affairs, Justice, Public Instruction, and Immigration, B. Alban Mestanza; Minister of War and Marine, Gen. N. Arellano; Minister of Finance and Acting Minister of Public Works, R. Valdivieso.

Area and Population.—The area of the republic is about 120,000 square miles. The population is estimated at 1,271,861. The whites number about 100,000; mixed races, 300,000; Indians, 870,000. The Galapagos Islands, area 2,400 square miles, have about 200 inhabitants. Quito, the capital, contains about 80,000 inhabitants.

Finances.—The revenue for 1898 was estimated at 9,093,551 sucres, and expenditure at 11,005,141 sucres, the same as for 1897. About 70 per cent. of the revenue is derived from customs, 15 per cent. from taxes on real property and on cacao, rum, and tobacco, 6 per cent. from the gunpowder and salt monopolies, and 9 per cent. from excise duties, rents of state property, and post-office receipts.

The foreign debt, which was scaled down in 1892 from over £2,000,000 to £750,000, amounted in 1898 to £693,160, but interest had been suspended since 1896. The internal debt amounts to 7,500,000 sucres. In 1898 the Guayaquil and Quito Railroad Company agreed to assume the foreign debt in return for special privileges. This is an American corporation. The Government had arranged with the English holders of the foreign debt to pay 4 per cent. interest and 1 per cent. sinking fund on 35 per cent. of the outstanding amount. The railroad company agreed to assume this obligation, and arranged with the bondholders to exchange 6-per-cent. railroad bonds, with 1 per cent. amortization, for one half of the reduced Government bonds, and to deposit in London £12,500 a year, representing the 4 per cent. interest and 1 per cent. sinking fund on the whole amount of the foreign debt that the Government had agreed to pay, but which the company proposed to apply to the interest and rapid reduction of the railroad bonds given in exchange for half this debt, while the other half would be amortized by the sinking fund of 1 per cent.

The Army.—The regular army consists of 4 battalions, 2 columns of light infantry, a regiment of cavalry, a brigade of field artillery, and

a brigade of fortress artillery, having a total strength of 3,341 officers and men. The National Guards number about 30,000.

Commerce and Production.—The chief commercial product is cacao, of which 14,800 tons were sent down to Guayaquil in 1897. Coffee is cultivated also with success. Other agricultural products are rice and sugar. The rubber trees are disappearing from accessible parts of the forest, but lately attention has been given to replanting. Gold is washed profitably by the natives, and an English and an American company are engaged, the one in crushing quartz and the other in hydraulic mining. The country is also rich in petroleum, coal, iron, lead, and copper, and has some silver mines in profitable operation. The chief imports are cotton and other cloth and provisions. The total value of imports in 1895 was 8,520,000 sucres. The exports were valued at 11,562,740 sucres in that year, 10,889,190 sucres in 1896, and 12,176,280 sucres in 1897.

Navigation.—The port of Guayaquil was visited in 1897 by 190 vessels, of 265,208 tons, of which 100, of 140,621 tons, were British. The number of coasting vessels was about 2,000.

Railroads and Telegraphs.—An American company in 1896 undertook to carry on to Sibambe the railroad long before completed from Duran, opposite Guayaquil, for 58 miles to Chimbo.

The telegraph lines have a total length of 1,242 miles.

Attempted Revolution.—In January, 1899, the exiled Clerical leaders collected a large force beyond the border in Colombia for the purpose of invading Ecuador, rousing their partisans to insurrection and overthrowing the Alfaro administration. The Government was fully prepared. Its forces met the invading rebels at San Aneja on Jan. 23, and a pitched battle was fought which lasted all day. The victory rested with the Government, but only after desperate fighting, with severe losses on both sides. More than 600 men were killed and several hundred mortally wounded. The insurgents in the end were put to flight, leaving 400 prisoners in the hands of the Government troops.

EGYPT, a principality in northern Africa, tributary to Turkey. The government is an absolute monarchy of the Mohammedan type, though the throne passes by the European law of primogeniture, and the Khedive, or Viceroy, is advised by a Council of Ministers. The reigning Khedive is Abbas Hilmi, born July 14, 1874, who succeeded his father, Mehemet Tewfik, on Jan. 7, 1892. Since the intervention of Great Britain for the suppression of the military revolt of 1882 the country has been occupied by a British army, and since Jan. 18, 1883, an English financial adviser, who has a seat in the Cabinet, exercises the right to veto any financial measure and has a dominating influence in all important acts of government. The events that took place in 1881 and 1882, consequent upon the bankruptcy of the Egyptian treasury, led to a conference of the powers at Constantinople, where the principal powers signed a protocol by which they bound themselves to seek no territorial advantage or the concession of any exclusive privilege. But England, owing to the progress of the insurrection headed by Arabi Pasha, intervened by force of arms, whereupon the conference dissolved. Since then successive prime ministers of England have given assurances that Great Britain would evacuate Egypt as soon as Egypt should be able to maintain a firm and orderly government.

The Cabinet of the Khedive, which was constituted on April 16, 1894, was composed in the beginning of 1899 of the following members: President of the Council and Minister of the Interior, Mustapha Fehmi Pasha; Minister of War and Marine, Mohammed Abani Pasha; Minister of Public Works and of Public Instruction, Hussein Fakhry Pasha; Minister of Foreign Affairs, Butros Ghali Pasha; Minister of Finance, Ahmet Mazlum Pasha; Minister of Justice, Ibrahim Fuad Pasha.

Area and Population.—The total area of Egypt, including the desert regions, is 400,000 square miles, but only 12,976 square miles in the valley and delta of the Nile are settled and cultivated. The sedentary native population in June, 1897, was 9,047,905; nomads, 573,974; foreigners, 112,526; total population, 9,734,405, comprising 4,947,850 males and 4,786,555 females. Of the foreigners 38,175 were Greeks, 24,467 Italians, 19,557 British, 14,155 French, 7,117 Austro-Hungarians, 3,193 Russians, 1,301 Persians, 1,277 Germans, and 3,284 of other nationalities. Not included in the enumeration were Siwa Wahat, with 5,000 sedentary Egyptians; Dongola, recently reconquered, containing 53,037 sedentary and 3,389 nomadic inhabitants; or Suakin, containing 15,378 sedentary Egyptians and 335 foreigners. The increase in population since 1882 has been at the rate of 2.76 per cent. per annum. The population of the principal towns in 1897 was: Cairo, 570,062; Alexandria, 319,766; Tintah, 57,289; Port Said, 42,095; Assiout, 42,012.

Finances.—The budget for 1899 makes the total revenue £ E. 10,600,000, of which the land tax produced £ E. 4,661,300, other direct taxes £ E. 132,700, customs £ E. 900,000, tobacco £ E. 1,000,000, octrois £ E. 210,000, salt £ E. 183,000, fisheries £ E. 60,000, navigation dues £ E. 57,000, stamps and registration £ E. 38,000, various duties £ E. 32,000, railroads £ E. 1,920,000, telegraphs £ E. 47,000, port of Alexandria £ E. 145,000, other ports £ E. 2,000, post office and postal steamers £ E. 116,000, lighthouses £ E. 70,000, gold assay office £ E. 6,000, Ministry of Justice £ E. 480,000, various ministries £ E. 25,000, exemption from military service £ E. 100,000, interest on deposits £ E. 30,000, Government property £ E. 95,000, Suakin £ E. 12,000, deductions from salaries for pension fund £ E. 62,000, transfer from reserve fund to cover reduction of the land tax £ E. 216,000. The total expenditure for 1899 was estimated in the budget at £ E. 10,560,000, of which the civil list of the Khedive and appanages required £ E. 253,861, Council of Ministers £ E. 4,122, Legislative Council £ E. 8,456, Ministry of Foreign Affairs £ E. 11,116, Ministry of Finance £ E. 87,147, Ministry of Public Instruction £ E. 107,964, Ministry of Interior £ E. 394,195, Ministry of Justice £ E. 395,623, Ministry of Public Works £ E. 637,903, general expenses of ministries £ E. 100,678, provincial administrations £ E. 321,790, customs £ E. 77,246, coast guard £ E. 96,143, octrois £ E. 27,295, salt, etc., £ E. 46,810, fisheries £ E. 1,400, navigation dues £ E. 2,297, railroads £ E. 956,726, telegraphs £ E. 44,000, port of Alexandria £ E. 31,716, other ports £ E. 3,565, post office and postal steamers £ E. 107,589, lighthouses £ E. 27,076, gold assay office £ E. 2,597, Ministry of War £ E. 439,570, army of occupation £ E. 84,825, Government of Suakin £ E. 120,517, pensions £ E. 439,000, Turkish tribute £ E. 665,041, Daira Khassa £ E. 34,000, Moukabala £ E. 150,000, interest and exchange £ E. 20,866, domains deficit £ E. 60,000, expenses of Caisse de la Dette

£ E. 35,000, service of guaranteed loan £ E. 307,125, preference debt £ E. 1,003,056, unified debt £ E. 2,182,906, suppression of *corvée* £ E. 250,000, unforeseen expenses £ E. 32,000, economy from conversion of the privileged debt £ E. 265,037, Government share of receipts in excess of expenditures £ E. 415,887, and Soudan deficit £ E. 317,255.

The revenue for 1897 was £ E. 11,092,564 and expenditure £ E. 10,659,257, leaving a surplus of £ E. 433,307. For 1898 the revenue was estimated at £ E. 10,440,000, and expenditures at the same amount. The extraordinary expenditure occasioned by the reconquest of the Soudan was charged against the special reserve fund, absorbing that and leaving a deficit of £ E. 666,000 at the end of the calendar year 1898. The general reserve fund at the beginning of 1898 amounted to £ E. 3,831,749; the fund derived from economies from conversions, £ E. 2,767,262. The charges on account of debts of all kinds, including Turkish tribute and the Moukabala, the internal debt extinguishable by an annual payment of £154,000 sterling till 1930, amounted for 1899 to £ E. 4,723,031, or £4,845,800 sterling. The charges on the debts managed by the Caisse de la Dette were £3,930,280 sterling for 1898. The amount of these debts on Jan. 1, 1898, was £103,863,940 sterling, of which £55,971,960 represent the 4-per-cent. unified debt, £29,393,580 the 3½-per-cent. privileged debt, £8,558,100 the 3-per-cent. guaranteed loans, £6,431,500 the 4-per-cent. Daira Sanieh loan, and £3,508,800 the 4½-per-cent. domains loan.

The Army.—After the disbandment of the Egyptian army in 1882 a new army was organized, to be commanded by a British general with the rank and title of sirdar. Major-Gen. Kitchener, who after the defeat of the Khalifa at Omdurman in 1898 was elevated to the peerage as Lord Kitchener of Khartoum, is the present sirdar. Under the military law of Dec. 22, 1882, supplementing the law of Aug. 5, 1880, all Egyptians, with the exception of priests, professors, and students, are liable to serve from the age of twenty-one six years in the active army, passing then into the *redif* for five years, and lastly for five years into the territorial reserve. Exemption can be obtained by paying £ E. 20. The peace effective of the army must not exceed 18,000 men. The effective authorized in 1898 was 664 officers, 712 employees, and 13,685 men, formed in 13 battalions, 9 squadrons, and 7 batteries of 6 guns, with 1,300 horses, 1,700 camels, and 310 mules.

The Egyptian police in 1898 numbered 23 European and 67 native officers, 240 employees, and 6,106 men. It is composed of soldiers of the *redif* and in part of foreigners. The coast guard numbered about 50 officers and 1,000 men.

The British army of occupation, for the expenses of which the Egyptian treasury provides £87,000 a year, had in the beginning of 1899 a strength of 5,553 men.

Commerce and Production.—The cotton crop in 1896 was 5,879,479 kantars of 99 pounds. The sugar crop in 1897 amounted to 72,918,250 kantars. There are 3,779 villages, cultivating 4,961,462 feddans, the feddan being equal to 1.03 acre. In 2,444 of the villages cotton is grown. The number of date trees is 3,452,674. The cattle and farm animals, including camels, number 1,668,860. Of the total cultivated area nearly three fourths are *Kharaji* lands, subject to an average tax of 22s. a feddan. The rest of the lands are mostly *Ushuri*, subject to tithes averaging 7s. a feddan. The *Wakf* lands, belonging to the mosques, are

leased at a moderate rent, and the tenants may sell their leases or transmit them to their heirs. All cultivators must pay about 4s. per feddan annually for materials necessary to keep the irrigation system in order, and may be required to give their labor to keep the Nile embankments in repair or to watch them in flood time, although for other purposes the *corvée* has been abolished. Of a total area of 4,721,300 feddans cultivated in 1894, holders of less than 5 feddans, 513,080 in number, possessed 933,700 feddans; 75,130 holders had 552,700 feddans, divided into farms of between 5 and 10 feddans; 61,740 holders had between 10 and 50 feddans each, the total area being 1,234,200 feddans; and 11,430 larger proprietors possessed 2,000,700 feddans. Of the last many were British corporations and investors. The lands of the fellahin are mortgaged to a great extent, and many former proprietors have lost their properties and fallen into the condition of laborers. Next to cotton and sugar, the most important crops are wheat, maize and durrah, clover, beans, barley, lentils, rice, fenugreek, onions, potatoes, melons, lupin, peas, flax, henna, indigo, castor oil, and sesame.

The total value of the imports in 1897 was £ E. 10,603,672, and of exports £ E. 12,321,220. The imports of specie, not included in the above, were £ E. 2,921,722; exports, £ E. 2,369,479. The imports of cotton cloth were £ E. 1,798,600 out of the total value of £ E. 3,526,666 for textile manufactures and materials; imports of cereals and vegetables, £ E. 1,196,409; of coal, wood, etc., £ E. 1,178,954; of metals and metal manufactures, £ E. 1,128,897; of spirits, oils, etc., £ E. 636,303; of tobacco, £ E. 521,518; of provisions and drugs, £ E. 389,673; of animals and animal food products, £ E. 374,848; of dyes, etc., £ E. 253,872; of chemicals, £ E. 252,212; of glass, stone, lime, etc., £ E. 235,238; of leather goods, leather, and skins, £ E. 174,132; of books, paper, and rags, £ E. 145,573; of various animal products, £ E. 64,611; of miscellaneous goods, £ E. 524,766. The exports of textiles were of the value of £ E. 8,989,445, raw cotton amounting to £ E. 8,915,640; exports of cereals, vegetables, etc., £ E. 2,389,630; of provisions and drugs, £ E. 645,928; of skins, leather, and leather goods, £ E. 89,244; of animals and animal food products, £ E. 49,081; of other animal products, £ E. 35,014; of metals and metal goods, £ E. 26,172; of wood, coal, cane work, etc., £ E. 18,700; of rags, paper, etc., £ E. 14,592; of spirits, oils, etc., £ E. 14,308; of chemical products, £ E. 8,715; of stone, lime, glass, etc., £ E. 1,463; of miscellaneous goods, £ E. 25,177.

The commerce in 1897 was distributed among various countries as follows:

COUNTRIES.	Imports.	Exports.
Great Britain	£ E. 3,536,425	£ E. 5,932,078
France	1,237,115	1,119,370
Russia	378,462	1,732,913
Turkey	1,534,535	362,481
Austria-Hungary	752,433	459,208
America	118,072	970,620
Italy	417,129	417,676
Germany	299,551	418,600
Belgium	500,282	27,624
British colonies in the East.	496,572	64,248
Spain	2,488	274,217
China and the far East	99,295	26,258
British Mediterranean colonies	114,518	8,407
Greece	37,678	21,414
Morocco	49,541
Persia	29,137	1,442
Other countries	478,921	484,664
Total	£ E. 10,082,154	£ E. 12,321,220

Great Britain imported from Egypt in 1896 raw cotton of the value of £6,484,450 sterling, cotton seed of the value of £1,801,079, beans of the value of £227,716, and sugar of the value of £94,829; and exported to Egypt cotton goods of the value of £1,722,955, coal of the value of £899,005, iron of the value of £409,172, and machinery of the value of £249,479.

Navigation.—The number of vessels entered at the port of Alexandria in 1897 was 2,203, of 2,267,120 tons, of which 657, of 1,034,019 tons, were British; 139, of 280,359 tons, French; 140, of 242,252 tons, Austrian; 100, of 204,087 tons, Italian; 83, of 179,049 tons, Russian; 777, of 126,456 tons, Turkish; 184, of 82,166 tons, Greek; 35, of 61,369 tons, German; 19, of 33,365 tons, Swedish and Norwegian; and 49, of 15,998 tons, of other nationalities. The total number cleared was 2,143, of 2,270,836 tons, of which 663, of 1,046,886 tons, were British; 139, of 278,333 tons, French; 141, of 243,921 tons, Austrian; 119, of 206,927 tons, Italian; 86, of 185,572 tons, Russian; 714, of 111,704 tons, Turkish; 184, of 85,449 tons, Greek; 35, of 59,946 tons, German; 19, of 29,317 tons, Swedish and Norwegian; and 45, of 22,781 tons, of other nationalities.

Railroads, Posts, and Telegraphs.—The total length of railroads in operation on Dec. 31, 1898, was 1,238 miles, of which 1,166 miles belonged to the Government. Of the total, which does not include 390 miles on the Daira Sanieh estates nor other agricultural railroads, nor the military railroad recently constructed in the Sudan, 825 miles were in the delta and 413 miles in Upper Egypt. The Government had under construction 226 miles, while private companies were building 64 miles, and had concessions for 230 miles in the delta. During 1897 there were 10,742,546 passengers conveyed on the state railroads, and 2,796,096 tons of freight. The gross receipts were £ E. 1,982,883, and the operating expenses £ E. 859,523; net receipts, £ E. 1,123,360.

The post office in 1897 carried 11,300,000 internal and 2,250,000 foreign letters and postal cards, 7,000,000 internal and 980,000 foreign newspapers, and 173,000 internal and 56,000 foreign parcels. There were 509,500 post-office orders and remittances, representing a total sum of £ E. 16,922,000.

The Government telegraph lines on Jan. 1, 1898, had a total length of 2,058 miles, with 8,770 miles of wire. The number of messages sent during 1897 was 2,498,834.

Suez Canal.—The number of vessels that passed through the canal in 1897 was 2,986, of 11,123,403 tons, of which 1,905, of 7,389,237 tons, were British; 325, of 1,194,106 tons, were German; 202, of 807,995 tons, were French; 206, of 532,272 tons, were Dutch; 78, of 265,231 tons, were Austrian; 44, of 218,514 tons, were Russian; 48, of 199,695 tons, were Spanish; 71, of 198,161 tons, were Italian; 36, of 165,425 tons, were Japanese; 48, of 117,794 tons, were Norwegian; 7, of 7,770 tons, were Turkish; 3, of 6,627 tons, were American; 3, of 5,916 tons, were Chinese; 3, of 5,344 tons, were Egyptian; 2, of 4,457 tons, were Siamese; 2, of 1,954 tons, were Danish; 1, of 1,648 tons, was Swedish; and 1, of 891 tons, was Mexican. The number of passengers was 191,224. The gross receipts were £2,913,222 sterling. The loan and share capital was 463,120,739 francs on Jan. 1, 1898, besides which 151,174,307 francs of earnings have been applied to improvements. The net profits in 1897 were 39,315,531 francs. The amount distributed in dividends was 40,913,803 francs.

The number of vessels that passed through the

canal in 1898 was 3,503, of 9,238,000 tons, of which 2,295 vessels were British, 356 German, 221 French, 193 Dutch, 85 Austrian, 74 Italian, 54 Turkish, 49 Spanish, 48 Russian, 47 Norwegian, 46 Japanese, 10 Egyptian, 8 Danish, 4 American, 4 Chinese, 3 Portuguese, 2 Greek, 1 Roumanian, and 1 Argentinian. The receipts amounted to 87,906,000 francs. The number of passengers who went through the canal was 219,000. The capital expenditure on improvements was 5,022,000 francs.

The Mixed Tribunals.—The charter of the mixed tribunals expired on Feb. 1, 1899, and after their decision regarding the diversion of the reserve fund of the Caisse de la Dette to meet the expenses of the Sudan campaign the English resolved upon the reorganization of these tribunals. The charter is given for a term of five years. The Egyptian Government addressed a circular note to the European powers, calling attention to the expiration of the charter. An international commission met at Cairo in April, 1898, to consider and report on the Government proposals. In December, 1898, an extension of one year was proposed in order to give time to consider points of divergence, also the question of the jurisdiction to be given to the tribunals in cases of fraudulent bankruptcy. The powers were slow in replying to the last circular, only six of the fourteen powers interested having sent replies prior to January, 1899. As the charter would expire with that month, the Egyptian Government made concessions on sundry points. The Government had asked that the competence of the tribunals should be determined entirely by the nationality of the actual parties to suits, not by the mixed character of the interests involved. The subcommission partly approved the Egyptian demand, but refused to interfere with the jurisdiction of the tribunals over *sociétés anonymes* and over the administrations of the Daira Sanieh, the railways, and the Alexandria municipality. The Egyptian Government agreed that *sociétés anonymes* should remain entirely under the jurisdiction of the tribunals, but demanded that the Daira Sanieh, the railways, and the municipality of Alexandria should not remain subject to them in questions concerning natives. The Government agreed to renew the charter for five years if this last demand were accepted. The most important changes in the commercial code are the power to grant permission to a debtor of good faith to manage his own business, without subjecting him to the inconvenience of being declared bankrupt; the institution of a delegation of creditors, who are permitted to appoint from one to three delegates to watch over the receiver and examine books and documents; and the restrictions placed upon receivers in the realization of assets, they having hitherto had absolute power, and frequently laid themselves open to charges of grave abuse. Under the new order they are obliged to submit their operations to the judge in bankruptcy for approval. The mixed tribunals will hereafter have power to inflict from one to five years' imprisonment on fraudulent bankrupts and their accomplices. In revising the penal code unremunerated labor for the Government has been substituted for simple imprisonment in default of payment of fines, and the English ticket-of-leave system was introduced for well-conducted convicts. The project of revising the Mekhemeh Sherieh, which is the highest religious court, met with strenuous opposition from the native Legislative Council. In hope of reforming the maladministration of justice in the religious courts, two judges from the native appeal court were appointed to sit on the bench

with three judges of the religious court. The Grand Mufti and the Grand Cadi pronounced against this as contrary to the Mohammedan religion. The Government, after considering the grounds of opposition, decided to advise the Khedive to exercise his authority, and accordingly a decree was signed enforcing the reform. The Cadi's court will be composed of six judges, three to be nominated by the Khedive, two selected from the native court of appeal, and the Cadi presiding. Judgments are to be rendered by a majority of the five presided over by the Cadi. The Mekhemeh, or religious courts, show a disinclination to abandon their old methods, and continue to throw out a large number of cases, while judging only a few. A diminution of serious crimes has taken place since 1896, however, and the proportion of convictions to cases tried has increased. The Government has decided to accept all the Assembly's suggestions for the reassessment of the whole of the land of Egypt. The unsatisfactory work of the mixed tribunals in Cairo led to the forming of an additional chamber of the court, with judges from Alexandria and Mansourah, to facilitate the clearing up of business that has accumulated. The mixed tribunals do nearly five sixths of the registration of deeds and similar formalities that do not concern judicial tribunals in other lands.

The Soudan.—Early in January, 1899, Lord Cromer laid down to the assembled sheikhs at Omdurman the principles on which the Soudan will be governed. The government will be by the Queen of England and the Khedive of Egypt, and the sole representative of both sovereigns was at that time the sirdar of Egypt. An agreement was signed by Lord Cromer and Boutros Ghali on Jan. 19 confirming this system of administration, and also defining the term Soudan, which means all territories south of 22° of north latitude which had never been evacuated by the Egyptian garrisons and those provinces which were administered by the Government of the Khedive previous to the rebellion, and were then temporarily lost to Egypt, and have since been reconquered by the two governments acting together, or might be reconquered in the future. The British and Egyptian flags are both to be used on land and sea throughout the Soudan, except in the town of Suakin, where the Egyptian flag only is used. One officer alone shall have supreme military and civil command. He is termed the Governor General of the Soudan, and is appointed by khedivial decrees. Laws, orders, and regulations for the good government of the Soudan, and for the holding, disposing, and devolution of property may be made, altered, or abrogated by proclamation of the Governor General, who shall notify the British agent in Cairo and the President of the Council of Ministers. Laws, orders, and regulations so issued may apply either to the whole or to any part of the Soudan, and may alter or repeal any existing law, either by explicit statement or by implication. No law or decree enacted hereafter can apply to the Soudan without the permission of the Governor General. No special privileges will be given to any one nationality in regard to trading or holding property in the Soudan. Import duties are not payable on goods from Egypt, but may be levied on goods entering the Soudan from Suakin or other ports on the Red Sea. Duties on goods leaving the Soudan will be prescribed from time to time by proclamation. The mixed tribunals will have no jurisdiction in the Soudan, which is under martial law. No consuls or consular agents are allowed to reside in the

Soudan without the consent of the British Government. The importation of slaves is prohibited, and special attention will be given to the enforcement of the Brussels act of July 2, 1890, relative to the import and sale of liquors and firearms. On Jan. 5 Lord Cromer laid the foundation stone of the Gordon Memorial College at Khartoum, built with funds subscribed in Great Britain by all classes of the population in response to Lord Kitchener's appeal. The Soudan budget for 1899 shows £ E. 39,500 of local receipts and £ E. 356,755 of expenditure, the balance of £ E. 317,255 being provided from the Egyptian treasury. The expenditure was distributed as follows: Khartoum central administration, £ E. 4,700; finance, £ E. 8,020; justice, £ E. 1,760; sanitation, £ E. 2,976; schools, £ E. 1,984; military garrison, £ E. 2,237; buildings and repairs, £ E. 5,000; post office, £ E. 3,000; telegraphs, £ E. 4,000; railways, £ E. 50,000; salaries of 6 provincial governors and 64 other officials, £ E. 18,032; district police, composed of 123 officers and 682 men, £ E. 21,100; religious tribunals, £ E. 2,424; military garrisons in the provinces, £ E. 17,569; prisons, £ E. 2,168; military operations, £ E. 197,455; provincial administration of Dongola, £ E. 12,426; of Berger, £ E. 12,426; of Kassala, £ E. 12,426; of Sennar, £ E. 8,354; of Fashoda, £ E. 8,354; of Khartoum, £ E. 21,127.

After the battle of Omdurman on Sept. 2, 1898, and the retirement of Abdullah, the Khalifa, who narrowly escaped capture in the battle in which his forces were shattered and his power overthrown, several attempts were made to take him prisoner during his retreat in the direction of El Obeid, but he evaded the pursuing detachments. He remained in the neighborhood of El Obeid for some months, raiding the Arab tribes of the district for food, and gathering together what he could of his scattered forces that remained loyal. In the beginning of 1899 he began to move northward through Kordofan toward the posts held by Anglo-Egyptian garrisons. When the British forces took possession of Omdurman they destroyed the tomb of the Mahdi, whose remains were thrown into the Nile, an act which aroused indignation in Europe as well as in Egypt and the Soudan. The skull alone was preserved, and this was reinterred at Wady Halfa. Lord Kitchener explained afterward that the desecration of the tomb and destruction of the remains of the false prophet was a political necessity on account of the fanatical superstition in which the tomb and body of the Mahdi were held by the followers of his religion.

The Khalifa when he went to El Obeid subsisted on the large supply of grain which he had stored there, and had a large treasure also and quantities of ammunition, previous to the military disaster at Omdurman. These resources that he still possessed encouraged him to issue a proclamation declaring that the battle fulfilled the prophecy which had foretold that all waverers in Mahdism would be weeded out in a battle with the infidels, and that the survivors, being the true believers, would rally at Abba, the island birthplace of Mahdism, and would drive the infidel before them. Emir Ahmed Fedil, a cousin of Abdullah, was the last of the Khalifa's lieutenants to have an organized force at his command. He had his home at Gedaref, between the Atbara and the Blue Nile. Moving down to the Nile with a large force of dervishes, he attempted to cross at the cataract near Roseires, 426 miles south of Khartoum, but was opposed on Dec. 26, 1898, by Col. Lewis with a Soudanese regiment

and a force of irregulars. Three quarters of the dervishes were well posted on an island in the river when Col. Lewis advanced to the attack by a ford. The Egyptian force captured the dervish position, and then dispersed a detachment of 300 dervishes that Ahmed Fedil had taken across to the opposite bank to fire upon the assailants as they approached the island. Ahmed Fedil escaped southward, still with a large body of followers, although the dervishes lost nearly 2,000 in killed and captured, while 6 Egyptian officers were wounded and 27 men killed and 124 wounded. Fedil withdrew to the province of Kordofan, where he joined the Khalifa in the vicinity of Lake Shirkeleh. The Khalifa had about 3,000 men, including a detachment under a Baggara Emir that was sent from Omdurman before the arrival of the sirdar's forces to form the nucleus of a new army in case of defeat at that place. He was joined also by the dervish force under Emir Arabi Wad Dafalla, which had evacuated Bor. Immediately after the battle of Roseires Lord Kitchener went in search of the Khalifa, reconnoitering as far as Duem, where he found the dervishes well intrenched near Lake Shirkeleh, and in such numbers that the Egyptian troops retired without engaging the enemy. A force of dervishes advanced toward the Nile, and their outposts fired upon a passing gunboat. Later the Egyptians moved in force upon the dervish encampment near Lake Shirkeleh, causing the Khalifa to evacuate the position and retire farther away from the river. Duem was then occupied as the advanced post of the Anglo-Egyptian forces. The Khalifa's camp was 140 miles west of the White Nile and 170 miles from Duem, which was garrisoned by an Egyptian battalion and some artillery and a camel corps. Parties of dervishes continued to raid the villages on the river, and ventured within a day's march of the post at Duem. When the Egyptians developed greater strength in the south they renewed their efforts to capture the Khalifa, until in the middle of May he moved farther south toward the Dar Sagalla mountains. After that the expeditions against him were abandoned for a time by order of the sirdar. The troops available at Omdurman and at Duem when active operations were resumed in the autumn consisted of 8 squadrons of cavalry, 5 batteries of artillery, 8 battalions of infantry, and 5 companies of the camel corps, over 10,000 men altogether. There were besides the garrisons left on the Blue Nile, in the eastern Soudan, and in the Fashoda district. The railroad bridge over the Atbara, the construction of which was given to an American firm because none in England would contract to complete it within the required time, was finished in August, and the railroad was declared open to ordinary traffic. There were 587 miles of railroad north of the bridge, and 122 miles were in working order south of it, leaving 75 miles to be completed to Khartoum. Lord Kitchener took a camel ride through the eastern Soudan in April, and discovered there much ruin and famine, the Hadendoas suffering most, the whole of them having been collected by the Baggaras into Osman Digna's camp, where large numbers of them perished. The Shukurieh tribe was reduced from 80,000 camels to 1,000. The sirdar met the sheikhs of the different districts, who were then repairing as far as possible the damage wrought by the dervishes and collecting the scattered people.

In October Lord Kitchener ascended the Nile to a point 400 miles above Omdurman, and then marched inland about 50 miles until he was with-

in 30 miles of the place where the Khalifa was encamped. The Khalifa retired, being unwilling to accept battle. He was reported to have a force of 5,000 fighting men. Still, the sirdar did not consider him formidable or likely to give trouble, although his forces might at any time increase from local causes, and the fanatical and desperate tribesmen who remained true to him were themselves a constant menace to the peace of the Soudan. When Lord Kitchener withdrew a part of the garrison at Omdurman, leaving only a small force under Sir Francis Wingate, the Khalifa decided to make a forward movement. The Khalifa Abdullah el Taaishi, who had remained for some time at Gedir, went northward in November, and was heard of in the neighborhood of Gedid. The sirdar collected a force as rapidly as possible, with the object of cutting him off and, if possible, destroying his army. On Nov. 21 Col. Sir Francis Wingate set out from Fachi Shoya in search of the Khalifa with a force of Egyptian infantry, black irregulars who had served under the Mahdi, Arab horsemen, a camel corps, a field battery, and six Maxim guns. The total strength of the column was 3,700 men. The Khalifa's advance guard of 2,400 men was encountered at Abo Adil, near the White Nile, on Nov. 22, having retreated from Mefissa at the approach of the Egyptian troops. The dervishes bravely charged up the hill where the mounted troops and artillery commanded their camp, and were only stopped within 60 yards of the guns by the infantry, who came up just in time. The Egyptians then made a general advance, driving the defeated enemy through their camp and several miles beyond. The Egyptian loss was only 1 killed and 6 wounded, while of the dervishes 400 were killed and 300 taken prisoners, most of them wounded. The rest rejoined the main body of the Khalifa's troops. The Khalifa's army was advancing northward when the Egyptian column was sent out by the sirdar, and its intended route was that by which Ahmed Fedil retreated. Col. Wingate judged that the Khalifa would either advance to give him battle or endeavor to escape by way of Gedid to Sherkeleh; not retreat over the route by which he had marched, as he had exhausted all the food and water when coming. The Egyptian column therefore proceeded as rapidly as possible to Gedid to stop the Khalifa from going west out of reach or to be in advantageous position to strike him if he tried to advance north, according to his original plan. From Gedid the Arab scouts that had enabled the Egyptians to surprise the dervish advance guard were sent out to find where the Khalifa was encamped. He was located with all his force at Om Debrekat, only six miles away. Advancing by a night march, the Egyptians before dawn on Nov. 24 occupied a ridge overlooking the dervish camp just before the Khalifa's men moved up, intending to take up a position on the same commanding ground. As the guns opened on the advancing dervishes the Khalifa moved his forces to the right, with the intention of turning the Egyptian left flank. The Egyptians concentrated their fire on that point and prolonged their line with the reserve battalions, in order to protect their flank. As soon as the dervish assault was checked Col. Wingate swung his right wing around, and a general advance all along the line swept the enemy through their camp. The Khalifa, although he saw that the battle was lost, did not stir from the spot in the center of the main attack, but courted death with his brothers Senussi Ahmed and Haroun Mohammed, Sadik, his son, Ali Wad Hila, Ahmed Fedil, his

chief fighting leader, and all his faithful emirs around him. They were all found dead in a group, their horses killed behind them, and the *mulamirin*, or black bodyguard of the Khalifa, lying prone, their faces to the foe, in a straight line about 40 yards in front of their master's body. In the camp were found about 6,000 women and children. The dervishes accepted *aman*, or quarter, and the fugitives, who were pursued by the cavalry, surrendered as soon as they knew that the Khalifa was dead. Besides the women and children, about 4,000 fighting men were taken, with large numbers of cattle and arms and property of various kinds. Of the Egyptian force, 27 were killed or wounded; of the dervishes, 700. Although Osman Digna was not among the slain or the captives, the power and influence of Mahdism was extinguished forever. Lord Kitchener sent officials to administer the reconquered territory, and reconstruction proceeded at such a pace that he announced the purpose of throwing the whole Egyptian Soudan open to commerce from Jan. 1, 1900.

The Anglo-French Agreement.—An agreement between England and France, delimiting the spheres of influence of both countries in Africa so far as they were not already defined in the Niger convention, was signed on March 21, 1899. Great Britain retains Bahr-el-Ghazal and Darfur, while Wadai, Bagirmi, Kanem, and the territory to the north and east of Lake Chad are relinquished to France, whose sphere extends south of the Tropic of Cancer as far as the western limit of the Libyan desert. The country between the Nile and Lake Chad and between 5° and 15° of north latitude the two countries agree to treat equally in commercial matters. The withdrawal of the French from Fashoda made it more apparent than ever that colonial policy in Africa must be governed by questions of the commercial interests of European nations. France, in order to protect and further her commerce in Africa, negotiated for the possession or reversion of Tibesti and of Wadai and Kanem, which are crossed by the caravan routes going to and from the Nile, and also by those going to and from Tunis and Tripoli. The possession of the whole eastern shore of Lake Chad insures territorial continuity and establishes closer communication between the various African possessions of France—namely, the French Congo, Senegal and the French Soudan, and the Sahara territory extending southward from Algeria and Tunis. France will also have commercial access to the Nile from the Lake Chad country through the central Soudan and from the French Congo territories on the Ubangi and Welle. The meager knowledge of the geography of the central Soudan makes it difficult to calculate the gains or losses of the two countries resulting from the agreement. Three separate methods were used in determining the boundary. The line of separation commences at the junction of the Congo Free State and the watershed of the Congo and Nile rivers, and follows the water parting up to 11° of north latitude, then runs north to 15° in such manner as to leave all of Wadai on one side of the boundary and Darfur on the other. The frontier line between those two countries will be traced by a mixed commission. North of 15° of latitude the line of separation starts at the intersection of the Tropic of Cancer with the meridian 16° east of Greenwich, near the southern frontier of Tripoli, and runs southeast till it meets the twenty-fourth meridian of east longitude, which it follows to the northern frontier of Darfur. The present agreement is the com-

plement of the Niger convention of June 14, 1898. The whole course of the Nile river is left under British control, but France does not abandon her diplomatic position regarding the status of Egypt and all territories formerly governed by Egypt as reverting to the independent Government of the Khedive under the suzerainty of the Ottoman Sultan upon the termination of the temporary military occupation of Egypt by Great Britain. England expects the conquered provinces of the Egyptian Soudan to become self-supporting. The present condition of Darfur is not known. Neither is the political state of Wadai, the old Sultan having recently died, and Abu Said been proclaimed Sultan in the beginning of 1899. Bagirmi is a flat country, rising slightly toward the north. Including Bagirmi, Wadai has a population of about 2,600,000 persons, partly Arab and partly negro, and an area of 172,000 square miles. The Mabab, who have embraced the Mohammedan religion and live in the northeastern part of Wadai proper, are the ruling race. The eastern frontier of the French sphere is the mountain range of Tibesti, which is almost unknown. In Rome and in Constantinople this latest Anglo-French agreement was regarded as an encroachment on what has always been regarded as the Hinterland of Tripoli. After the French occupation of Tunis Turkey would not negotiate for a delimitation of the boundaries of Tripoli, fearing such negotiations would acknowledge sovereign rights of France in Tunis. France was thus able to extend her influence to the south without hindrance. Italy, which looks forward to the future possession of Tripoli when Turkish might shall no longer be able to hold the empire together, has considered the possession of Tibesti and Ghadames indispensable to Tripoli, whose chief value lies in the caravan routes which run through this large territory to distant parts of Africa. In the event of the disintegration of the Ottoman Empire Italy's contingent claim to the reversion of the country lying between Tunis and Egypt is held with a fixity of purpose that admits no rival pretensions, and her moral claim has not yet been disputed. The policy of England, her ally in the Mediterranean, which gave Tunis to France, deeply wounded Italian susceptibilities, and now the abandonment to France of the main caravan routes of Tripoli in the new Anglo-French agreement has given a shock to Italian feeling that threatens the stability of the Anglo-Italian naval alliance. Italy has at various times prompted the Ottoman Porte to make objections to encroachments made by France in the Hinterland of Tripoli; but the Turks, viewing Italy's interest in Tripoli with suspicion, took measures for the military defense of the vilayet itself rather than of the caravan routes and the oases of the desert. The Turkish protests were ignored by both France and Egypt, because the pretensions of the Porte were so enlarged beyond the Italian suggestions as to embrace extensive territories already in the possession of other powers. In reply to Italy's request for explanations regarding the Anglo-French agreement, both France and England gave assurances that Italy need fear no movement against Tripoli in the future, and that no efforts would be made by either of them to interfere with the trade routes between Tripoli and the interior. The British Government by the new convention engaged not to acquire either territory or political influence to the west of the line separating the two spheres, and the French Republic engaged not to acquire territory or influence to the east of the same line.

EVANGELICAL ASSOCIATION. The summary of the statistics of this body for 1899 gives the following total numbers: Of itinerant preachers, 1,031; of local preachers, 511; of members, 117,613; of members newly received during the year, 7,967; of adults baptized, 1,169; of infants baptized, 6,394; of new conversions, 8,782; of Sunday schools, 2,178, with 23,641 officers and teachers and 148,867 pupils; of catechumen classes, 911, with 10,735 catechumens; of Young People's Alliances, 987, with 34,960 members; of churches, 1,819; of parsonages, 696.

The total receipts of the Missionary Society for the year 1898-'99 had been \$199,673, the average of contributions being \$1.73 per member. The amount showed a gain over the previous year of \$9,124. The expenditures had amounted to \$146,000. The missionary debt had been paid, and for the first time in thirty-two years the treasury was free from obligations. The 548 home missions returned 543 missionaries, 46,577 members, 4,153 conversions, and 4,497 members newly received during the year. Fourteen missions had been changed to stations, and 22 new missions had been established. The foreign missions returned 106 stations, 130 missionaries, 14,250 members, 1,532 conversions, and 1,348 members newly received during the year, and 3 new stations had been formed. The whole shows an increase of 9 missions, 14 missionaries, and 670 members, and a decrease of 1,163 conversions and 699 members newly received. The Woman's Missionary Society had 6 conference organizations and 115 auxiliaries, with 2,587 members, and had contributed \$4,374, or \$1.76 per member. At the request of this society the Board of Missions had appointed 2 women missionaries to Japan, to be supported by the women's organization.

The Evangelical Correspondence College includes three schools, of which the Evangelical School of Theology embraces 10 departments in theology, Christian philosophy, and sacred languages, and had in 1898-'99 174 students; the Evangelical Reading Circle had 450 students enrolled; and the Evangelical Bible School had nearly 2,000 students.

The assets of the Charitable Society were reported to the General Conference as amounting to \$31,641, showing an increase of \$1,100 in the past four years.

A report was made to the General Conference concerning the Orphan House.

The twenty-second General Conference met at St. Paul, Minn., Oct. 5. A general episcopal address was presented, reviewing the condition of the Church, in which a check to its growth or reduction of the rate of increase was recognized as a result of the disturbances which it had suffered resulting in the formation of the United Evangelical Church as a separate body. This, however, did not appear so plainly in the foreign conferences in Germany and Switzerland and Japan, which had not suffered so seriously from the disturbances, and where the growth had been unhindered. Among the more important matters of business transacted by the Conference was the formation of a board of church extension, the object of which was defined to be "the assistance of needy congregations in the erection of houses of worship." A petition, numerously signed, asking for lay representation in the annual and general conferences, was referred to a committee of 5 preachers and 4 laymen, a bishop presiding, to prepare a practicable plan and report the same to the next General Conference. A centennial celebration or commemoration of the one hundredth anniversary of the existence of the

Church was determined upon to be held in the year 1900, on or about the time of the year when Jacob Albright effected the first organization. It was decided that the general celebration be held at Linwood Park, and a local committee was appointed to carry the scheme into effect; that each annual conference arrange for one or more general celebrations, and provide for the holding of celebrations by each individual society within its bounds; and that offerings be solicited for the higher institutions of learning, with provision for the application of special offerings to the particular benevolent societies of the Church to which donors may desire them appropriated. The bishops were empowered to appoint delegates to the Ecumenical Council of Methodism, to be held in London in 1901. J. J. Esher, Thomas Bowman, W. Horn, and S. C. Breyfogel, the present incumbents of the office, were re-elected bishops for the term of four years. Provision was made for the preparation of a commentary on the catechism for the use of ministers and teachers in the Sunday schools. The Conference determined to open a fund for beginning a mission in China. A minute was passed recognizing "the deaconess movement as the highest practical expression of the Samaritan law of Christian philanthropy," and welcoming its introduction into the Evangelical Association, and a committee was constituted to oversee the organization of its work in any part of the Church. The Christian Endeavor Society, the Epworth League, and the Baptist Young People's Union having adopted uniform prayer-meeting topics, favorable consideration was invoked for the adoption of the same by the Young People's Alliance of this Church. A report was adopted for insertion in the discipline concerning the relation of young people to the Church, recognizing those who have been baptized as belonging to it and as objects of its solicitude and pastoral care. The report of the Committee on Public Morals dealt with the subjects of family devotion, the Christian Sabbath, and temperance, and included resolutions against the seating in the national House of Representatives of Brigham H. Roberts as a member from Utah.

EVENTS IN 1899. The attention of the world has been largely fixed throughout the year upon wars, actual and possible, and upon means for preventing their recurrence. In our own country scandals connected with the Spanish war and the deplorable outbreak of hostilities in the Philippine Islands commanded a large share of public attention. In France the renewed army scandal of the Dreyfus case drew the attention of the world, while the International Peace Congress at The Hague resulted more favorably than had been expected in the direction of arbitration. In October the South African war startled the whole world by its developments, and the year ended with universal peace apparently as far off as ever.

January 1. Cuba: Spanish sovereignty terminates and the flag of the United States is raised at all military posts. Gen. John R. Brooke, U. S. A., military governor. Samoa: Hostilities begin between the rival native kings. Boston: Formal opening of the Terminal Railroad Station.

2. New York: Inauguration of Gov. Theodore Roosevelt. State Legislatures meet in California, Montana, and Tennessee. Sicily: Outbreak of tax riots.

3. State Legislatures meet in Delaware, Minnesota, Nebraska, North Dakota, and Pennsylvania. Denver: Organization of the United States 16-to-1 Money League.

4. State Legislatures meet in Colorado, Connecticut, Illinois, Maine, Massachusetts, Michigan, Missouri, New Hampshire, New York, North Carolina, and Rhode Island. Washington: Both branches of Congress reassemble after the holiday recess. Consideration of the treaty of peace with Spain begins at once in the Senate.

5. Egypt: The corner stone of the Gordon Memorial College laid at Khartoum by Lord Cromer. State Legislatures meet in Idaho and Indiana.

6. India: Lord Curzon installed as Viceroy.

7. Philippine Islands: Aguinaldo summons his countrymen to resist American occupation.

9. State Legislatures meet in Arkansas, Oregon, South Dakota, Utah, and Washington.

10. Washington: Charlemagne Tower nominated ambassador to Russia and Addison C. Harris minister to Austria-Hungary; both were duly confirmed by the Senate.

11. Washington: Joseph H. Choate nominated ambassador to the court of St. James. West Virginia: Meeting of the State Legislature. Vermont: The Governor appoints Chief-Judge Jonathan Ross for the unexpired senatorial term of Mr. Morrill, deceased. Connecticut: Renomination of Senator Hawley.

12. Washington: Commissary-General Eagan charges Gen. Miles with falsehood before the War Investigating Committee.

14. England: Launch of the White Star steamer Oceanic at Belfast, the largest ship now afloat. Washington: Senator Hoar offers a resolution favoring the independence of the Philippine Islands.

15. New York: Organization of the General Federated Union, a powerful labor organization, comprising two societies that are now dissolved.

16. Brooklyn, N. Y.: The Rev. Newell Dwight Hillis, of Chicago, invited to assume the pastorate of Plymouth Church.

17. A court-martial ordered for the trial of Commissary-General Eagan for insubordination and conduct unbecoming an officer and a gentleman. Washington: The President appoints a commission to visit the Philippine Islands and report upon the situation there. Election to the United States Senate of Chauncey M. Depew (Republican), New York; Albert J. Beveridge (Republican), Indiana; Joseph Hawley (Republican), Connecticut; Eugene Hale (Republican), Maine; Henry Cabot Lodge (Republican), Massachusetts; C. K. Davis (Republican), Minnesota; and F. M. Cockrell (Democrat), Missouri.

18. Pennsylvania: Beginning of a protracted contest over the re-election of United States Senator Quay, John Wanamaker being the leader of the opposition.

19. New York: United States transport Grant sails for Manila with the Fourth Infantry and part of the Seventeenth Infantry.

20. France: Proceedings in the Chamber of Deputies looking to the reopening of the Dreyfus case. Hungary: An attempt made in the Chamber of Magnates to demand the intervention of the Crown in a political crisis.

21. Egypt: Lord Kitchener, of Khartoum, appointed Governor of the Soudan.

22. Belgium: A Cabinet crisis occurs between the King and some of his ministers on questions connected with the electoral system.

24. Texas: Charles A. Culberson (Democrat) elected United States Senator. New Jersey: John Kean elected United States Senator. The Legislatures of Wyoming and Nevada re-elect their respective Senators, Messrs. Clark and Stewart.

25. West Virginia: Nathan B. Scott (Repub-

lican) elected United States Senator. Washington: Beginning of the court-martial of Gen. Eagan.

26. San Francisco: The Twentieth Infantry sails for Manila.

28. Montana: William A. Clark (Democrat) elected United States Senator.

30. Spain: Arrival at Barcelona of a military transport with 1,250 Spanish soldiers, 350 of whom are seriously ill, while 56 died on the voyage.

31. Wisconsin: Joseph V. Quarles (Republican) elected United States Senator.

February 1. The American flag raised at the island of Guam, in the Ladrone archipelago, Commander Tausig of the gunboat Bennington assuming the temporary governorship.

2. Cuba: Gen. Gomez agrees to co-operate with the United States authorities to secure the disbanding of the Cuban army.

4. Philippine Islands: First encounter between Filipinos and Americans.

5. Manila: Filipinos attack the American outposts and are repulsed with heavy loss.

7. Army: The Eagan court-martial, having convicted him on Jan. 27, and recommended his dismissal from the service, the sentence is mitigated by the President to suspension from duty for six years. (Subsequently he was "retired" at his own request.)

10. Washington: The President signs the treaty of peace with Spain.

11. Washington: The President nominates Horace A. Taylor, of Wisconsin, to be Assistant Secretary of the Treasury.

15. Washington: The President nominates George W. Wilson, of Ohio, to be Commissioner of Internal Revenue.

16. France: Sudden death of President Faure.

18. France: Émile Loubet elected President of the republic.

20. Russia: By order of the Czar the inhabitants of Finland are deprived of certain time-honored privileges as regards home government. Spain: The Cortes meets in Madrid to consider the peace treaty and other questions of national importance. Washington: A bill is passed appropriating \$20,000,000 to pay Spain under the terms of the treaty of peace. The vote stood 219 to 34.

21. Manila: Attempt of the insurgents to burn the city.

22. Spain: In the Cortes the ministry is bitterly attacked on account of its policy regarding the Philippines.

28. Spain: A measure rejecting the cession of the Philippines is defeated by a close vote.

March 1. Spain: Resignation of the Sagasta ministry on the question of ceding the Philippines.

2. Army: Six regiments of regular troops ordered to re-enforce Gen. Otis at Manila.

3. Navy: Rear-Admiral George Dewey promoted Admiral. Spain: Señor Silvela undertakes to form a new ministry.

4. Manila: Arrival of the members of the American Commission. The United States troops land on the island of Negros.

11. Cuba: The Assembly impeaches Gen. Gomez and degrades him from the army.

13. Washington: The President appoints Mr. Herbert Putnam, of the Boston Public Library, to be Librarian of Congress. Delaware: Adjournment of the Legislature without electing a United States Senator.

15. Spain: The Cabinet decides to ratify the treaty of peace with the United States.

16. Chicago: Renomination of Mayor Harrison by the Democrats.

17. Spain: The Queen Regent signs treaty of peace with the United States.

18. Cuba: Rioting occurs at Havana between the police and the populace. Manila: Arrival of the United States battle ship Oregon after a voyage of sixty-three days from the United States. California: Adjournment of the Legislature without electing a United States Senator.

21. Egypt: An Anglo-French treaty signed, amicably adjusting the Nile boundary.

22. Cuba: An increase of the Havana police force by 400 men ordered by Gen. Ludlow.

28. Cuba: Establishment of an independent postal service under authority of the department at Washington.

31. Philippine Islands: Fighting has been almost continuous since the outbreak of hostilities, and, although the American troops are uniformly successful, the Filipinos are able through their great numbers to maintain an extremely annoying system of guerrilla warfare, which entails constant, though not large, losses of killed and wounded on the part of the Americans.

April 1. Samoan Islands: Engagement between the allied forces of the English and Americans and the natives of Mataafa's army; 3 officers and 4 sailors killed. Detroit, Mich.: A committee appointed by the Common Council to purchase and operate all street railroads.

3. Greece: Resignation of the ministry. Ohio: Important elections held in Cleveland, Toledo, and Columbus.

4. Chicago: Carter H. Harrison, Democrat, re-elected mayor by a plurality of 40,000 over Z. R. Carter, Republican. Denver, Col.: H. V. Johnson elected mayor.

5. Rhode Island: Gov. Dyer, Republican, re-elected with a Republican Legislature.

19. England: The House of Commons rejects a bill to repeal the Irish coalition act.

20. Washington: Ratification of a new extradition treaty between the United States and the Orange Free State.

21. Pennsylvania: Ex-Senator Quay acquitted of a charge of conspiracy for the misappropriation of State funds.

25. England: Celebration of the three hundredth anniversary of Cromwell's birth.

26. New York: Passage of a bill for rapid transit.

28. New York: Adjournment of the State Legislature.

29. Puerto Rico: Brig.-Gen. George W. Davis appointed military governor. Idaho: Several hundred striking miners in the Cœur d'Alene district capture a railroad train, arm themselves, and destroy much mining property. The Governor asks for Federal troops. Philippine Islands: Gen. Otis, in reply to commissioners from Aguinaldo, demands an unconditional surrender on the part of the Filipino insurgents, and the commissioners withdraw after a fruitless errand.

May 1. The first anniversary of Admiral Dewey's victory at Manila. The day is generally celebrated throughout the possessions of the United States. Washington: Warrants for \$20,000,000 turned over to the Spanish agent, as provided by the terms of the treaty of peace.

2. Resignation of the Italian Cabinet. Cuba: The military governor issues decrees of reform in Spanish laws. Washington: Burial with military honors of 252 soldiers who died in Cuba and Puerto Rico.

3. Canada: Installment of the Most Rev. Dennis O'Connor, Roman Catholic Archbishop of To-

ronto. Kentucky: Dedication of the State monument to Union and Confederate soldiers on the battlefield of Chickamauga.

7. Charleston, S. C.: Indictment in the United States Circuit Court of 13 men charged with lynching Frazer B. Baker, the negro postmaster at Lake City.

8. New York: The Mazet Investigating Committee opens its inquiry into the Tammany administration.

10. Pana, Ill.: A street riot among miners causes death of 7 people, many wounded. Charleston, S. C.: Annual reunion of Confederate veterans.

11. Rome: The Pope proclaims a universal jubilee for the Holy Year of 1900.

14. New York: Ordination of the Rev. Dr. Charles A. Briggs, lately a Presbyterian, to be a priest in the Protestant Episcopal Church.

15. Cuba: Gen. Gomez gives up the task of paying off his compatriots with the \$3,000,000 given him by the United States for that purpose.

16. Boston: Resignation of the Rev. Edward Everett Hale, pastor for forty-three years of the South Congregational Church.

17. England: The Queen lays the corner stone of the Victoria and Albert Museum. Holland: The International Peace Congress meets at The Hague.

20. Manila: Admiral Dewey sails for home on the flagship Olympia.

25. Yale University: Prof. Arthur T. Hadley chosen president.

26. New York: The Governor signs the amended franchise tax bill as passed by the special session of the Legislature.

29. Washington: The President removes about 4,000 offices from the classified civil-service list.

30. President Krüger of the South African Republic and Sir Alfred Milner hold a conference respecting the alleged grievances of the Outlanders. New Rochelle, N. Y.: A bronze bust unveiled of Thomas Paine. Rhode Island: Inauguration of Gov. Dyer for the third term.

31. France: The Court of Cassation pronounces for a revision of the sentence of Capt. Dreyfus, and asks for a new court-martial.

June 1. France: Enthusiastic reception of Major Marchand, who defied the British on the upper Nile. Idaho: The Supreme Court rejects the application made in behalf of the rioting miners for a writ of *habeas corpus*.

4. France: President Loubet is attacked by a mob.

5. France: The Chamber of Deputies supports the course of the Government in punishing the rioters who attacked President Loubet. London: The House of Commons, by a vote of 393 to 51, grants \$150,000 to Gen. Lord Kitchener for the establishment of a college at Khartoum.

8. Philippine Islands: Gen. Luna, a Filipino leader, assassinated by order of Aguinaldo.

10. Rhode Island: The yacht Columbia launched at Bristol.

12. France: Resignation of the ministry, in consequence of a defeat in the Chamber of Deputies.

13. France: The Baron De Christiani sentenced to four years' imprisonment for assaulting the President.

14. Flag Day in the United States, a newly designated holiday, celebrated in many places. New York: Bronze statue unveiled of ex-President Arthur in Madison Square.

15. Paris: First formal meeting of the Venezuelan Arbitration Committee.

16. Spain: The first United States minister

under the peace treaty, the Hon. Bellamy Storer, formally received by the Queen Regent.

22. France: A new ministry formed by M. Waldeck-Rousseau.

26. London: Opening of the International Council of Women. Launch of the yacht Shamrock on the Thames.

29. Belgium: Riotous demonstrations against the electoral reform bill. New London, Conn.: Harvard wins in three boat races with Yale.

July 1. France: Capt. Dreyfus lands and is transferred to the military prison at Rennes to await retrial. Washington: Conclusion of a reciprocity treaty with Jamaica.

3. Spain: Adjournment of the Senate after ratifying the treaty of peace with the United States.

4. France: The Chamber of Deputies adjourns after sustaining the Government's decision not to debate the wages of workmen and the hours of labor.

5. Detroit: The State Supreme Court declares unconstitutional the law providing for the purchase by the city of the street-railroad system.

6. Philippine Islands: Spanish commissioners secure the release of prisoners held by insurgents. Serbia: An attempt made to assassinate ex-King Milan in Belgrade. England: The House of Commons adopts the Lords' amendment excluding women from membership in the county council. Gen. Joseph Wheeler ordered to report for duty in the Philippines. Detroit: Annual convention of the Society of Christian Endeavor.

10. Serbia: Martial law declared throughout the department of Belgrade. The United States Government refuses to consider claims of Austro-Hungarian subjects in the recent miners' riots at Hazleton, Pa.

11. Russia: The Czar declares his brother, Grand Duke Michael Alexandrowitch, heir to the throne since the death of the Grand Duke George. Washington: An order is issued extending the protection of the American flag to vessels owned in Puerto Rico and the Philippines. California: Meeting of the National Educational Association at Los Angeles.

12. Cuba: Quarantine established at the city of Santiago to check the yellow fever; Gov.-Gen. Brooke reforms the Spanish *incommunicado* system of imprisonment.

13. England: The House of Commons passes the tithe-rent-rating bill.

17. Washington: The new German ambassador, Herr Von Schwartzstein, presents his credentials to the President. Manila: American newspaper correspondents unite in a protest against the military censorship of the press.

18. Washington (State): Arrival of \$6,000,000 in gold dust from Alaska. South African Republic: The Government provides for a seven-year franchise and to permit the naturalization of sons of Outlanders.

19. Washington: Resignation of Russell A. Alger as Secretary of War.

20. Chicago: Meeting of the Democratic National Committee.

21. Paris: Opening of the Venezuela arbitration case before the Joint Tribunal. Louisiana: Five Italians charged with murder are hanged by a mob. Washington: An official denial is published of the charges of American newspaper correspondents in Manila.

22. Washington: Elihu Root, of New York, appointed Secretary of War in place of Mr. Alger, resigned. England: In an international athletic contest Oxford and Cambridge show themselves superior to Yale and Harvard. Opening of Wag-

ner Festival at Bayreuth. Cleveland, Ohio: State troops called out to preserve order in connection with the street-railroad strike. Washington: Reciprocity treaties signed between the United States and several of the British West Indian colonies.

22-24. Manila: Arrival of the United States transports Zealandia and Sheridan with reinforcements for Gen. Otis.

24. Washington: Reciprocity treaty signed between United States and France. Crete: The English withdraw their protectorate, leaving the island under the governorship of Prince George of Greece.

25. England: Launch of the battle ship Vengeance. France: Launch of the battle ship Suffren at Brest; she is the largest vessel in the French navy. Philippine Islands: Gen. Otis proclaims a provisional government for the island of Negros.

26. Samoan Islands: An agreement reached abolishing the kingship and agreeing to government by an administrator with a council. Santo Domingo: Assassination of President Heurieux.

28. Washington: A postal convention is adopted with the Government of Peru.

30. England: Two balloonists cross the English Channel, landing at Dieppe, after reaching an altitude of 10,000 feet. Washington Territory: Return of the Alaskan Scientific Expedition to Seattle.

31. Ex-Secretary Alger issues a statement defending his course while at the head of the War Department. England: The Archbishops of Canterbury and York decide against the use of incense and processional lights in the Church of England. Sir Julian Pauncefote, ambassador to the United States, raised to the peerage.

August 1. Washington: Secretary Root assumes charge of the War Department. Cuba: Gen. Ludlow suppresses a Cuban newspaper for seditious language. Canada: Thomas Bain elected Speaker of the Dominion House of Commons.

2. Santo Domingo: Two of the assassins of President Heurieux executed.

5. Spain: The court-martial at Madrid acquits Gens. Toral and Pareja for the surrender of Santiago to the forces of the United States.

7. France: Beginning of the second trial by court-martial of Alfred Dreyfus.

8. South Africa: The Transvaal Parliament authorizes the Government in time of war to call upon every inhabitant for military service, and rejects English proposition for inquiry into alleged wrongs of foreigners.

9. England: Parliament adjourns.

10. Mexico: War breaks out with the formidable Yaqui Indians.

12. New York: Richard Croker, the Tammany leader, declares in favor of Bryan and against the Government's policy in the Philippines.

14. France: An attempt made to assassinate M. Labori, leading counsel for Dreyfus.

15. Paris: Anti-Jewish riots break out. Russia: The Czar declares the newly acquired Chinese port of Talien-Wan open for all nations. President McKinley addresses the Roman Catholic Summer School on one of the islands of Lake Champlain. Boston: Annual meeting of the League of American Wheelmen.

16. France: The Dreyfus court refuses postponement of the trial on account of the shooting of M. Labori.

17. Army: The enlistment ordered of 10 new regiments of United States volunteers and their colonels are appointed by the War Department.

19. Switzerland: Congress of Zionists at Basle. An American proposal rejected for the colonization of Jews in the island of Cyprus.

20. France: Continued riotous demonstrations of anarchists, Socialists, and the like in Paris.

21. Army: Secretary Root appoints Lieut.-Col. Joseph P. Sanger to superintend the taking of a census in Cuba.

22. Washington: Ex-Speaker Thomas B. Reed resigns his place in Congress. France: M. Labori is able to resume his duties with counsel in the Dreyfus trial.

23. Germany: The Emperor holds a council of Prussian ministers at Potsdam.

24. San Francisco: Enthusiastic reception of California volunteers returning from the Philippines.

25. Russia: The Czar issues an order for the systematic education of the children of the nobility.

26. Egypt: Lord Kitchener opens the Atbara bridge (of American construction) on the Soudan Railway. United States and Germany: A parcels' post convention signed.

29. Navy: The new battle ship Alabama develops a speed of $17\frac{1}{2}$ knots on her trial trip.

31. Brussels: The Chamber of Deputies rejects a motion to revise the Constitution.

September 4. France: The Senate summoned by President Loubet to sit as a high court for the trial of persons charged with treason. Philadelphia: Thirty-third annual encampment of the Grand Army of the Republic.

7. Detroit: National encampment of the Sons of Veterans.

9. France: The court-martial in Capt. Dreyfus's case finds him guilty and sentences him to ten years' imprisonment. Rioting in consequence at Rennes and in Paris.

10. France: The members of the Dreyfus court-martial recommend that he be not again punished.

12. Spain: Martial law declared in the province of Vizcaya.

13. Michigan: Gov. Pingree announces his retirement from politics.

14. Philadelphia: Opening of the National Export Exposition.

17. Illinois: Eight negroes killed in a mining riot at Cartersville. South Africa: The Transvaal refuses to comply with English demands regarding the franchise.

18. China protests against the order of Gen. Otis excluding Chinese from the Philippines.

20. St. Louis, Mo.: An antitrust conference of State governors and attorneys-general begins its sessions. Africa: A Russian exploring expedition discovers a hitherto unknown range of mountains in Abyssinia. West Virginia: Two thousand miners in the New River region strike for higher wages. Algiers: Nine persons wounded during an anti-Jewish riot.

24. London: A mass meeting in Trafalgar Square, nominally in sympathy with the Transvaal Republic, turns into a war demonstration.

25. Arrival of Admiral Dewey on the Olympia in New York Bay.

27. Chicago: Organization of the Young People's Christian Temperance Union.

28. Venezuela: Caracas, the capital city, invested by revolutionists.

29-30. New York: Naval and land parades in honor of Admiral Dewey's return.

30. Army: Capt. Oberlin Carter sentenced by court-martial to five years' imprisonment and fined \$5,000 for misappropriation of funds. Austria: Appointment of Count Clary as Prime Minister.

October 1. Philippine Islands: Insurgent commissioners hold an interview with Gen. Otis at Manila.

2. Texas: An enthusiastic welcome extended to W. J. Bryan and other Democratic party leaders. West Africa: Members of a German exploring expedition massacred by natives near the Calabar river.

3. South Africa: A treasure train wrecked with apparent intent on its way to Cape Town. Paris: The Venezuelan Court of Arbitration announces its decision, which is in effect a compromise. Yachting: First day of international sailing races off New York.

4. Philadelphia: Admiral Schley elected commander of the Loyal Legion. Washington: The President and members of the Cabinet start on a journey through the middle West.

10. South Africa: The Transvaal Republic presents an ultimatum to Great Britain.

11. South Africa: An armed force invades Natal, a British possession, thus beginning the South African war. A British armored train wrecked by the Dutch near Mafeking; 15 soldiers killed. Norway: King Oscar under protest signs a bill recognizing a separate Norwegian flag. Tennessee: An attempt to rob a bank at Servierville results in the killing of one robber, while others are wounded and one commits suicide rather than be taken alive.

15. West Africa: A German expedition against the Cameroons kills 200 of them in revenge for their attack upon a German expedition.

16. Virginia: Opening of the Dismal Swamp Canal, an important link in inland navigation from Chesapeake Bay southward. Cuba: The work of taking a census of the island begins under American officials.

17. England: Parliament meets to take action in regard to the South African war.

20. England: The House of Commons votes large credits for war purposes. Washington (State): Convention of the Women's Christian Temperance Union. Yachting: Final race for the America's Cup off New York.

24. South Africa: The Orange Free State proclaims annexation of a part of the British territory. Venezuela: The revolution declared successful. Colombia, South America: A revolution in full progress; a naval fight takes place in the Magdalena river.

25. Russia: A large number of high Government officials arrested for malfeasance in office. Illinois: Strikers at Decatur engage in rioting against officers and nonunion men.

The month ends with the South African war fairly begun between the Transvaal Republic and the Orange Free State as allies against the British Empire as represented by a somewhat inadequate army hurried forward to meet the emergency. Several sharp encounters have taken place, the British generally getting the worst of it; the important British posts at Ladysmith, Mafeking, and Kimberley are already closely invested by superior forces.

November 1. Navy: A three-days' test of Marconi's wireless telegraphy by war vessels at sea gives favorable results.

2. Kansas: A sword of honor is presented to Gen. Frederick Funston by the State in recognition of his distinguished military services.

6. Washington: The President appoints the governors of all the States to serve as a committee on the centennial celebration of the establishment of the national capital at Washington.

8. Germany and Great Britain agree upon terms respecting the partition of the Samoan Islands.

Richmond, Va.: A memorial unveiled in honor of Miss Winnie Davis, daughter of Jefferson Davis, President of the late Confederate States.

11. Pennsylvania: An encounter between police officers and robbers at Titusville results in the killing of two men and the wounding of several others. New Mexico: An attempt to arrest an Indian malefactor results in a fight, in which six Indians and one white man are killed. Cuba: Gov.-Gen. Brooke issues the first Cuban thanksgiving proclamation.

15. Washington: Secretary Gage announces the intended purchase of \$25,000,000 in 5-per-cent. Government bonds.

16. It is announced that two of the great women's temperance unions have decided to unite under one organization.

17. Egypt: A monument to De Lesseps, the engineer of the Suez Canal, dedicated at Port Said. Colombia, South America: Sharp fighting between Government troops and rebels, the Government having apparently the best of the campaign. Columbus, Ohio: At the congress of the National Municipal League a programme for general legislation was adopted.

19. Brooklyn, N. Y.: Resignation of the Rev. Richard S. Storrs, pastor for fifty-three years of the Church of the Pilgrims.

22. Egypt: Decisive battle between the Anglo-Egyptian troops and the dervishes on the upper Nile, apparently destroying the dervish power; their leader, the Khalifa, is slain.

23. The general assembly of the Knights of Labor passes resolutions denouncing President McKinley.

25. Great Britain officially notifies the nations that a state of war exists in South Africa.

27. Washington: Agreement of the United States with the partition of the Samoan Islands as arranged between Great Britain and Germany. Pennsylvania: An anonymous benefactor gives the university of the State \$250,000 to erect a laboratory of physics.

30. Columbia, S. C.: Dedication of a State home for negro boys and girls.

The war in South Africa is still in its preliminary stage. Great Britain is making every exertion to press forward re-enforcements and supplies, but her resources are not equal to the emergency, and the Dutch allies have not only carried the war into British territory, but hold all that they have taken, and threaten to advance still farther toward the principal towns in the British possessions. The situation at the end of the month is so critical that the financial markets of the world are notably affected thereby.

December 4. Washington: Congress organizes, with David B. Henderson as Speaker of the House. The Supreme Court in the Addystone Pipe case renders an antitrust decision.

5. The President's annual message is read to both houses of Congress. Chicago: Consolidation of the Pullman and Wagner Palace Car Companies. United States and Guatemala: A parcels post treaty signed.

6. Army: Brig.-Gen. Leonard A. Wood, who has rendered distinguished services of a civil character as governor of Santiago province in Cuba, is promoted major general, and a few days later is made Governor General of Cuba.

7. Philadelphia: It is announced that Peter A. B. Widener has purchased a site on which will be erected a school and hospital for crippled children.

9. Lease announced of the Tehuantepec Railroad to a firm of British contractors.

11. Michigan: Opening of the fifteenth annual

convention of the American Federation of Labor at Detroit. New Jersey: Arrest at Newark of representatives of numerous bogus corporations operating under the State laws, and charged with fraudulent use of the mails.

14. The one hundredth anniversary of the death of George Washington is appropriately celebrated in various parts of the United States. The President delivers an address at Mount Vernon.

17. England: The appointment is announced of Gen. Lord Roberts to the chief command of British forces in South Africa, with Gen. Lord Kitchener as his chief of staff.

18. New York: A notable decline takes place in the money market, and several important failures are announced. The banks come to the relief of the financial situation. England: Volunteers for the Transvaal war come forward in great numbers.

19. Philippine Islands: Major-Gen. Henry W. Lawton, U. S. A., killed in action near San Mateo.

24. Rome: The Pope performs the ceremony of opening the Holy Door at St. Peter's.

28. Washington: The bodies of the men who perished in the Maine disaster, having been brought from Cuba, are buried in the Arlington Cemetery with full military honors.

30. Seizures of German and American ships and goods by the British as contraband of war cause protests on the part of owners.

31. Philippine Islands: A native plot to throw bombs and inaugurate an uprising among the natives in Manila on the occasion of Gen. Lawton's funeral is discovered and frustrated by the military authorities.

The year ends with the Filipino forces so effectually dispersed that the whereabouts of their leader, Aguinaldo, is unknown, while his most trusted officers, and even his own family, are held as prisoners. Nevertheless, a formidable guerrilla warfare continues, necessitating the constant employment of troops for arduous service. In South Africa, at the end of December, the Dutch allies held all that they had gained in the British colonial possessions, and still successfully defied all attempts of the British to relieve the three beleaguered garrisons at Ladysmith, Kimberley, and Mafeking. The British losses to date from the beginning of the war, in October, were 1,027 killed, 3,675 wounded, and 2,511 missing or taken prisoners; total, 7,213. The losses of the Dutch allies are not known.

EXPOSITION, NATIONAL EXPORT.

This exposition, the first of its kind ever held in this country, was opened in Philadelphia Sept. 14, and continued until Dec. 2, 1899.

Origin.—Several years ago representative men of the business interests of Philadelphia organized a Commercial Museum, which has been in active operation since 1897. Its objects are to foster and promote, by practical and systematic efforts, and by new, original, and effective methods, the foreign trade of America. Through the heads of its various departments it is in constant communication with more than 20,000 correspondents abroad, through whom it keeps in touch with every phase of international commerce. The museum contains collections consisting of, first, manufactured articles arranged in lines of manufacture; and, second, raw products, which are displayed so as to show the geographical distribution and the development of the subject. It is possible from these collections to show the consuming capacity of any country by the exhibition of the goods that are most salable there, and also to show its producing capacity. A pan-American commercial congress

NORTH PAVILION AND MAIN ENTRANCE OF THE MAIN BUILDING.

was held under the auspices of this museum in 1897, which resulted in the placing of orders for American manufactures amounting to several million dollars, and since that time the holding of an exposition has been the ambition of the museum authorities. The preliminary steps that were taken for that purpose in October, 1897, were abandoned temporarily, owing to the war with Spain in 1898, and it was therefore not until December, 1898, that a bill giving the exposition the sanction and support of the National Government was passed by the House of Representatives, although before that time a bill had been put through the Senate. The National Government gave \$300,000 to the exposition, contingent upon an equal amount being raised from other sources. Accordingly, \$200,000 was appropriated by the Philadelphia City Council, \$50,000 by the State Legislature, and \$50,000 was raised through private subscription. Later an additional \$50,000 was appropriated by Congress for the purchase of samples of foreign goods to enable domestic manufacturers to acquire a knowledge of the style of goods wanted by foreigners, so as to compete successfully in their production.

Officers.—The officers of the Philadelphia Exposition Association conducting the National Export Exposition were: P. A. B. Widener, president; W. W. Foulkrod, John Birkinbine, and Sydney L. Wright, vice-presidents; B. W. Hanna, secretary; Sydney L. Wright, treasurer. The following were the officers of administration: William P. Wilson, director general; Edmund A. Felder, assistant director general; J. F. Weisinger, chief clerk; W. A. Raborg, chief clerk, department of exhibits; W. A. Sullivan, superintendent of terminal service; Frank W. Harold, chief of the department of publicity and promotion; William Buergermeister, German editor; William E. Cash, chief of the departments of admissions and concessions; William Harper, chief of the department of foreign samples; C. A. Green, superintendent of the department of foreign samples; John Birkinbine, engineer in chief; A. M. Greene, Jr., mechanical engineer; C. C. Billberg, electrical engineer; J. H. Stewart, assistant engineer; Edwin Elliot, assistant to engineer in chief; and Charles P. Hunt, captain of the guard.

Grounds and Buildings.—The grounds were on the west bank of Schuylkill river, and included a tract of 56 acres deeded to the Philadelphia museums by the city of Philadelphia, together with a tract of 6 acres secured for temporary use. The main entrance was at the north end of the grounds, on South Street. The exposition was easily accessible from all parts of the city by street-car and steam railways going directly to the entrance.

The main building was 1,000 feet long and 400 feet wide. It included three pavilions, two stories high, and an auditorium with a seating capacity of 5,000. The building covered 9 acres, and the area of floor space aggregated 12½ acres. The main entrance was in the north pavilion, which opened into a lobby 60 by 90 feet, beyond which and between the north and central pavilion was the auditorium, 200 feet long and 140 feet wide. On either side of the auditorium were arcades for exhibits, 78 feet wide by 300 feet long. In the auditorium the sessions of the International Commercial Congress were held and concerts were given. The pavilions were of brick and structural steel, and were each 90 by 380 feet. Each was two stories high. The second floor of the northern pavilion was devoted to the offices

of the exposition; the second floors of the other pavilions were given up to exhibits. These constitute the permanent part of the structure, and are destined to become the home of the Commercial Museum. Each entrance to the main building was flanked with pedestals, on which were groups of statuary, representing various industries, and the pediments over the entrances of all of the buildings contained heroic figures, symbolizing various aspects of manufacture and commerce. The walls of the main building were covered with a coating of white staff, and the cornices were of the same material. Around the roof ran an iron balustrade of rich design, and from the numerous staves floated the flags of the nations represented in the International Commercial Congress. The design of the building was by Wilson, Brothers & Co., assisted by G. W. and W. D. Hewitt.

The Implements, Vehicles, and Furniture Building was of the Flemish style of architecture, and had 72,000 square feet of floor space. The outside dimensions were 450 by 160 feet. Inside the finish was similar to that of the main exhibition hall—olive-green pillars and roof trusses, the ceiling finished in the natural color of the wood, and the walls painted in light tints. Four aisles ran lengthwise and six across the building, giving visitors an opportunity to see everything without hindrance. Broad walks and driveways surrounded it, and on the west was an automobile speedway. It was designed by Wilson, Brothers & Co.

The Transportation Building was 450 feet long and 75 feet wide. It was carefully designed by Wilson, Brothers & Co., and was adapted for the exhibits of locomotives and railroad rolling stock, electric cars, and equipment for electric railways. Its trackage, available for exhibits of rolling stock, was connected with the Philadelphia, Wilmington and Baltimore Railroad, of the Pennsylvania Railroad system.

Amusement Features.—These were grouped on the north end of the grounds, close to the entrance, on an avenue 800 feet long, called the Esplanade. The special attractions were a Chinese village; an Oriental theater, coffee house, and smoking room; an old plantation, Hagenback's trained animals, a glass works in full operation; Chiquita, the Cuban midget; Jim Key, the educated horse; the flag house of Betsy Ross Memorial Association, Edison's electric fairyland, and a cinematograph. Also throughout the life of the exposition two concerts were given daily in the auditorium by eight of the best-known bands and orchestras in the country, including the United States Marine Band and Damrosch's orchestra. Two concerts were given by the combined banjo, mandolin, and guitar clubs of Philadelphia, and on German day the combined singing societies of Philadelphia were heard in concert.

Opening Exercises.—At Mayor Ashbridge's office in City Hall were gathered, on the morning of Oct. 14, Admiral Sampson and the officers of his fleet, Gov. Stone and his staff, and the officials of the National Export Association, the Commercial Museum, and the Franklin Institute. These, with other distinguished guests, were escorted to the grounds by the marines of the North Atlantic squadron and the United States Marine Band. After the assembling in the auditorium, the first vice-president, Mr. W. W. Foulkrod, delivered an address, turning the exposition over to the Governor of Pennsylvania. He was followed by Director-General Wilson, on the plan and scope of the exposition, who said:

"The purpose of this exposition is to show the foreign consumer what the American can make, and how cheaply and how well he can make it." Gov. Stone, in behalf of the State, then accepted the exposition, and handed it over to the mayor of Philadelphia, saying in part: "We are selling our goods in every country on the globe, for the reason, and the only reason, that we sell a better article for less money than any other country can sell. The time has come for us to hoist our flag and proclaim it to the world, and that is the purpose of this exhibition. We invite the world's buyers to be the judge. We want the world's trade, and our demand is supported alone

tion of your most sanguine hopes of the success and influence of this undertaking." This concluded the exercises.

Exhibits.—As indicated by the scope of the exposition, the exhibits were confined for the most part to those American products for which a market is sought in foreign countries—electric devices, food products, new articles, and other things in the manufacture of which the United States excels. Of all these the exhibits were of decided interest. The American varieties of automobiles attracted considerable attention. Of conspicuous importance was the special collection of articles gathered for the exposition. Side by side

THE ESPLANADE ON OPENING DAY.

by the merits of our products." Mayor Ashbridge then accepted the exposition from the Governor, and then Congressman William P. Hepburn, of Iowa, chairman of the House Committee on Interstate and Foreign Commerce, delivered an address. The benediction was pronounced by Archbishop Ryan, of Philadelphia, and at its conclusion a telegraph instrument was moved to the front of the stage and communication was obtained with the White House in Washington. First Vice-President Foulkrod informed President McKinley that the exposition was ready to be declared open. The President at once sent the following message: "The opening of the National Export Exposition marks another important and most gratifying advance in the extension of our trade and commerce, and the promotion of more cordial relations in these respects with other nations. Accept for yourself and your associates my hearty congratulations and best wishes for the abundant realiza-

were shown, for example, the various forms of head gear worn in different parts of the world. Each display of this character was marked with a card showing where it was made, the cost of production, and the selling price. By a study of such samples a cloth manufacturer, for instance, could see at once what styles and qualities of print cloth are desired in the Philippines, and whether they are sold there at a price that he can meet in competition. This feature of the exposition was unique, and commanded much attention.

Commercial Congress.—This was convened on Oct. 12, and was opened by former Senator George F. Edmunds, representing the trustees of the Commercial Museum. He introduced the Hon. David J. Hill, Assistant Secretary of State, who, in behalf of President McKinley, extended to all the delegates assembled, and to all the foreign representatives who participated in the conference, the most cordial welcome of the United States. Subsequently addresses were

made by Mayor Samuel H. Ashbridge, the Hon. George F. Edmunds, and Director-General William P. Wilson, after which a few telegraphic messages were read, and then Dr. Hill announced that the congress was formally opened.

The congress continued until Nov. 1, and was attended by 350 foreign delegates, representing 40 nations. In addition to that, delegates were registered from 200 chambers of commerce of the United States. Some well-known person was chosen to preside each day, beginning with the Hon. Thomas B. Reed, and papers pertaining to topics affecting international trade were presented by men particularly interested and competent to consider every phase advanced. Typical of the papers read were the following: The Independence of Nations, by Edward Atkinson; The World as a Market for American Iron and Steel, by John H. Sternbergh; and The Southern Cotton Industry, by D. A. Tompkins.

Results.—At midnight on Dec. 2 Director-General Wilson of the exposition went to the south entrance of the exposition grounds and, in the presence of the officials, declared the exposition closed. Earlier in the evening there was a meet-

ing of the Board of Directors in the south pavilion, at which the reports of the heads of departments were received. In reviewing the results attained by the exposition, Director-General Wilson said that not only were the receipts sufficient to meet every obligation, but a substantial surplus would remain after all debts were paid. In many respects it had been the most successful exposition of its kind ever given in this country. As an instance of this he showed that the daily average of paid admissions was greater at the Export Exposition than the daily averages of the expositions at San Francisco, Atlanta, and Omaha. The total number of admissions at the Export Exposition had amounted to about 1,500,000. Treasurer Wright said that, after all debts were paid, a surplus of about \$50,000 would remain, which would be divided between the Commercial Museum and the Franklin Institute. Nearly all obligations had already been met.

That the exposition did a vast amount of good to the manufacturing interests throughout the country is generally admitted by all who were in a position to observe the nature and extent of the results which it attained.

F

FARMERS' NATIONAL CONGRESS. The Farmers' National Congress of the United States met in nineteenth annual session, in Faneuil Hall, Boston, at 10 A. M., Tuesday, Oct. 3, 1899. Addresses of welcome were made by the Hon. Josiah Quincy, mayor of Boston; Gen. Francis H. Appleton, representing Gov. Wolcott, the State Horticultural Society, and the State Board of Agriculture; and E. G. Preston, secretary of the Boston Chamber of Commerce. Responses were made by the Hon. W. D. Hoard, of Wisconsin, president of the congress; John M. Stahl, of Chicago, secretary of the congress; the Hon. Benjamin F. Clayton, of Iowa, chairman of the Executive Committee of the congress; and the Hon. W. G. Whitmore, of Nebraska.

In his annual address President Hoard paid an eloquent tribute to "Boston and this grand old Commonwealth of Massachusetts, with their heroic history, their steadfast adherence since the beginning of the nation to republican ideals of government, their magnificent contributions of intellect and patriotic purpose to the growth of national character, achievement, and destiny." He said:

"The principal drawback and hindrance to agricultural thought, profit, and progress is a lack of union and sympathy between scientific theory and the everyday practice of the farm. As yet there is a wide gulf between the teacher of agricultural science and the working farmer, and our farmers are especially lacking in appreciation of the great value to them of the scientific teacher. They think that very much of what is done at experiment stations, taught at agricultural colleges, or related in dairy and farm papers, for instance, is nothing but theory. A new order of teaching agriculture needs to be instituted in this country, as is being done in some of the countries of Europe. The Canadian Government has solved this problem in one line at least—it has introduced dairying into regions where the industry was unknown by building cheese factories and creameries in the latest and most improved form, and placing them in charge of graduates of Government dairy schools. These

institutions were maintained until the farmers about them had learned the way and method of true practice, when they were absorbed by local capital. The difference between successful and unsuccessful men in all callings is not luck, but rather judgment and energy. Good judgment is an act of the mind, and one must have a mind well stored with sound knowledge and well trained to use it in order to exercise the best judgment. I see a ray of hope in the fact that this great national body of farmers have come to see the tremendous importance of this question. I hope you will include it every year in your programmes until discussion is crystallized into action all over the nation."

President Hoard also recommended co-operation among farmers, the conservation of the fertility of the farm, and the preservation of political independence. He said: "It is largely through the submergence of the political influence of the farming classes that the present unfair and offensive systems of taxation exist."

Committees on credentials, finance, and resolutions were appointed.

At the afternoon session Dr. Henry H. Goodell, President of the Massachusetts Agricultural College, read a paper on The Mission of the Experiment Station, which he stated to be "to apply scientific methods and principles to the investigation of all questions affecting rural economy; to teach the teacher, furnishing him with a body of facts from which coherent law can be deduced; to become bureaus of utility, distributing centers of information to the thousands applying to them for aid; to act as a detective force, preventing and exposing fraud in the sale of fertilizers, concentrated cattle foods, the products of the dairy, seeds, and the thousand and one spraying mixtures offered in the market; and the testing of foreign seeds, fruits, shrubs, and trees for either ornamental or economic purposes."

J. W. Stockwell, secretary of the Massachusetts State Board of Agriculture, read a paper on Decline of Farm Lands in the East: Cause and Remedy. Among the causes he mentioned unjust taxation, poor rural schools, and trusts. For

remedies he suggested electric railways, rural free-mail delivery, farmers' institutes, and granges.

At the evening session the Hon. Franklin Dye, secretary of the New Jersey State Board of Agriculture, read a paper on Agricultural Progress and Profit, in which he said:

"Greater intelligence applied to all agricultural work is the need of to-day. The chemist has

WILLIAM D. HOARD,
PRESIDENT OF THE FARMERS' CONGRESS SINCE 1898.

revealed the laws, hitherto unknown, by which the farmer, in co-operation with Nature, may secure greatest results at least cost. By the use of his intellect, by skill, by utilizing the information placed at his disposal, by better methods, one man moves forward to success on the farm, while another, failing to apply business principles and common-sense methods, loses in the game. We are face to face with new conditions. The world will not wait for the man who stands still in his calling. The nonprogressive man must drop out of the ranks."

At the morning session on the 4th the Hon. W. B. Powell, of Pennsylvania, delivered an address on Inventions for Farmers, in which he pointed out that 90 per cent. of the patents for inventions granted in the United States are to farmers or farmers' sons; that a very large percentage of the patents granted are for farm implements and machines; that inventions put to practical use within the past twenty-five years only had revolutionized farming; and that the farmer who did not avail himself of what invention had done to multiply the farmer's capacity for production put himself at a great disadvantage. Mr. Powell pointed out that many of the most useful and profitable inventions had been of seemingly unimportant and certainly simple things, and he called attention to several needed inventions to accomplish simple but highly useful results.

The following amendment to the constitution was adopted: "The time and place of holding the annual meeting shall be determined by the Executive Committee, acting with the president and secretary, which committee shall have full power to make all proper arrangements therefor."

At the afternoon session W. S. Delano, of Nebraska, read a paper on Problems confronting

Farm Life. Among these problems he mentioned the ravages of insects, soil exhaustion, education of rural children, taxation, and land titles. He advocated stringent laws for the protection of birds; less grain and more stock and dairy farming; kindergarten work and practical elementary instruction in botany, chemistry, physics, and entomology in country schools; better tax laws and the Torrens system of land transfers; the parcels post; and thorough organization of farmers.

He was followed by E. F. Wetstein, of Kentucky, in a paper on Intensive Gardening, who said: "The sharpness of competition compels us to raise many crops on the same ground and within a few months, and to do this the soil must be in an ideal condition. In the fall we apply between 50 and 75 tons of well-rotted stable manure to the acre. It is turned down to a depth not exceeding 4 inches. The following spring we plow to a depth of 10 or 12 inches. Commercial fertilizers may be used to advantage as a top dressing on crops while growing. Cow-peas, rye, Indian corn, and clover, sowed every two or three years to alternate with barnyard manure, have proved highly advantageous. I have realized a net profit of \$150 to \$200 per acre in one season."

At the evening session the Hon. J. H. Brigham, Assistant Secretary of Agriculture, delivered an address on Foreign Markets for Farm Products. He said: "With the exception of Hungary and Russia, we can produce horses cheaper than any other country in the world, while at the same time our horses are better suited to the requirements of Europe. The department has discovered a remedy for hog cholera which has resulted in a saving of 80 per cent. of the hogs affected. We can produce mutton for Europe just as economically as we can produce anything else. The department desires to build up the markets for American dairy products all over the world, because when our butter goes abroad we sell merely skill combined with sunshine. We purpose at the coming exposition in Paris to have our corn prepared in many ways and presented to the visitors, with literature printed in the several European languages, giving information concerning this great product of ours."

He was followed by Prof. Willis L. Moore, chief of the United States Weather Bureau, who spoke on Benefits of the United States Weather Bureau to the Farmer. He pointed out the fact that the weather forecasts had saved the California raisin producers and the stock raisers of the plains hundreds of thousands of dollars a year, and that much valuable property had been saved in the lower Mississippi valley by flood warnings. He called attention to the great benefit to farmers, gardeners, and stock raisers everywhere of the cold-wave warnings of his bureau.

Thursday morning the Hon. C. C. James, Deputy Minister of Agriculture for Ontario, Canada, read a paper on Teaching the Elements of Agriculture in the Common Schools, which, he said, might be made optional in city and town schools, but should be obligatory in rural schools. He said that in rural schools the pupils should learn about the air and the soil, the growth of plants and of animals, and their diseases; and especially that they should learn to see, to touch, to hear, and even to smell and taste. "If their senses are rightly trained, they will be able to acquire facts for themselves. One of the greatest educational curses is to train a child to become an intellectual miser—a mere hoarder of facts."

The Hon. L. S. Coffin, ex-Railway Commission-

er of Iowa, addressed the congress on Railway Transportation. He said: "As the railway company takes the place and in some sense the obligation of the government to see to it that there are public highways for the movement of the commerce and travel of the nation, all patrons of these semigovernment railways should be treated equally. I am not yet a convert to the idea of the danger or wrong of the cheap long haul. As long as active competition holds sway between great trunk lines, I do not see how the amount of watered or real stock cuts much of a figure in freight rates. The farmers of the great West, although they have been ridiculed and maligned as favoring drastic granger legislation, know too well the value of railroad transportation to make an unreasonable war on railroads."

At the afternoon session Dr. E. B. Voorhees, director of the New Jersey Agricultural Experiment Station, read a paper on Fertilizers and their General Application, in which he emphasized the necessity for and economy of the judicious use of commercial fertilizers and the value and necessity of official inspection, and laid down the scientific principles of the general application of fertilizers. The congress extended a vote of thanks to Dr. Voorhees.

The Hon. James W. Robertson, Dominion Commissioner of Agriculture, Ottawa, addressed the congress on the Canadian Department of Agriculture. He said: "There are only some kinds of help which a government may with benefit and safety extend to its people—those that develop intelligence, skill, and the tendency and powers of organization. The Department of Agriculture believes in the newspaper. It is one of the most taking ways of diffusing information. We have employed traveling dairy instructors. The Government has established illustration stations—to give object lessons. Farmers have been encouraged in every practicable way to enlarge the sphere of co-operation with one another."

JOHN M. STAHL,
SECRETARY OF THE FARMERS' CONGRESS.

Dr. E. L. Furness, of Indiana, presented a paper on Farming as it Influences and is Influenced. He said: "Everywhere man clings to the land. It is the earth that nourishes him, and on the rational and scientific culture of the soil depend not only the existence and power of nations, but

the perpetuation of the human family. Occupation, with ownership of land, will bring out the best results for the individual and the community. The difficulties the farmer has always faced has brought out in his character the essential destructiveness to overcome them, and by opposing he has grown strong in the struggle. To supply his wants and protect himself he has had to plan, devise, and build, thus developing constructiveness. The necessity to deal with and preserve young and tender plants and animals has cultivated in him a painstaking and fostering spirit."

The evening session was devoted to good roads. The Hon. W. W. Armstrong, of New York, speaking of Advantages of State Aid to Farmers, said that the State-aid law should not compel a locality to build good roads until the sentiment of the locality itself inaugurated the movement, and that it should provide substantial assistance to those localities desiring good roads, and in such a way that those localities most desiring good roads may get aid first. The Hon. H. T. Budd, Commissioner of Public Works of New Jersey, read a paper on What New Jersey Farmers think of State Aid, which made it clear that they heartily approved it. Mr. William E. McClintock, member of the Massachusetts Highway Commission, gave the history of The Roads built in Massachusetts by State Aid.

This session was presided over by Sterling Elliott, chief consul of the Massachusetts division of the League of American Wheelmen, and the programme was arranged by Otto Dörner, chairman of the Highway Improvement Committee of that organization. In this way the congress showed its sympathy with the good roads' movement and State aid.

Friday morning the Hon. H. C. Adams, Dairy and Food Commissioner of Wisconsin, read a paper on The Necessity of Pure-food Legislation. He said: "The people of this country spend at least \$300,000,000 for food products that are mixed with cheap or injurious adulterants or sold under misleading names. The food question is a serious one. It concerns the public health. It touches the public pocket. Oleomargarine has its rights. It has a right to be sold under its own name and color if not injurious to the public health. Pure-food legislation should be both State and national. A national pure-food law would give the food products of this country better standing in foreign markets."

At the afternoon session was read a paper prepared by Mr. H. R. Hilton, of Kansas, on The Western Tenant and his Eastern Landlord, in which it was shown that "the tenant farmer should be given a longer lease, and a chance to help himself, help his nonresident landlord, and help his State."

The evening session was treated to an eloquent address on Improved Farming in the South, by Col. T. C. Slaughter, of Texas. He said: "Cheap cotton is teaching us diversity of crops with a vengeance. The South has been and is still land poor, but new methods are coming into vogue. Booker T. Washington understands fully the true condition of his people, and every Southern citizen bids him Godspeed in his noble work. The South is building here and there silos, packeries, sugar refineries, canneries, flouring mills, wool and cotton and oil mills; she is organizing State and county farmers' institutes, horticulture, dairy, cattle, sheep, swine-breeders', and truck-growers' associations; she is agitating the question of teaching agriculture in her common schools; she is learning to grow early vegetables,

fruits, potatoes, and lambs; and she is learning the use of the best improved implements."

The congress voted to include in the printed proceedings of the meeting a paper on Dairying, prepared by the Hon. B. Walker McKeen, secretary of the Maine State Board of Agriculture, which there was not time to have read.

BENJAMIN F. CLAYTON,
PRESIDENT OF THE FARMERS' CONGRESS, 1893-1897.

The following officers were elected to serve for two years: President, the Hon. W. D. Hoard, of Fort Atkinson, Wis.; first vice-president, Capt. R. G. F. Candage, of Massachusetts; second vice-president, Col. John S. Cunningham, of North Carolina; secretary, John M. Stahl, of Chicago, Ill.; first assistant secretary, George A. Stockwell, of Rhode Island; second, D. C. Kolp, of Texas; third, E. A. Callahan, of New York; treasurer, the Hon. Levi Morrison, of Pennsylvania; executive committee, the Hon. B. F. Clayton, of Indianola, Iowa, chairman; Dr. E. L. Furness, of Indiana; the Hon. W. G. Whitmore, of Nebraska; E. F. Wetstein, of Kentucky; Col. T. C. Slaughter, of Texas. The following State vice-presidents were chosen: Alabama, George I. Motz; Arkansas, R. R. Dinwiddie; California, D. L. Cantlin; Colorado, F. Bemis; Connecticut, J. H. Hale; Delaware, J. A. Whitaker; Florida, T. J. Appleyard; Georgia, W. G. Northen; Idaho, W. H. Buchanan; Illinois, A. F. Moore; Indiana, J. N. Babcock; Indian Territory, Mrs. Julietta A. Jordan; Iowa, Eugene Secor; Kansas, T. M. Potter; Kentucky, C. S. Longest; Louisiana, John Dymond; Maine, O. Gardner; Maryland, W. L. Amos; Massachusetts, O. B. Hadwen; Michigan, C. S. Kelsey; Minnesota, W. M. Liggett; Mississippi, Charles Scott; Missouri, G. W. Waters; Montana, C. W. Hoffman; Nebraska, P. M. Morse; Nevada, S. P. Davis; New Hampshire, J. D. Roberts; New Jersey, Franklin Dye; New Mexico, A. Goetz; New York, F. E. Dawley; North Carolina, J. S. Cunningham; North Dakota, S. M. Edwards; Ohio, D. L. Pope; Oklahoma, H. A. Todd; Oregon, R. Baird; Pennsylvania, John Hamilton; Rhode Island, H. L. Greene; South Dakota, H. L. Loucks; Tennessee, G. M. Slaughter; Texas, W. A. Rhea; Vermont, D. H. Morse; Virginia, H. E. Alvord; Washington, D. Buchanan; West Virginia, John Myers;

Wisconsin, E. M. Anderson; Wyoming, E. L. Ramsey.

Resolutions were adopted favoring rural free-mail delivery, and asking for its rapid extension; protesting against any national appropriation to be expended directly or indirectly in the irrigation of lands; recommending farmers to write to members of legislatures and Congress in favor of the legislation asked for by the congress; requesting Congress "to pass an act providing that no dairy or food products shall be falsely branded or labeled as to the State or Territory in which they are made or produced"; commending the efforts of Massachusetts to exterminate the gypsy moth, and recommending national aid in the work; recommending to the States in which bovine tuberculosis exists an investigation of that disease to determine if there may not be a better way of treating the disease than is now in practice; requesting Congress to take such action as may be necessary to prevent unjust discrimination in freight rates; calling on Congress to enact such legislation as will enable American-built mail carriers and freighters to compete successfully with the subsidized and bountied merchant ships of foreign countries in carrying our imports and exports; requesting Congress to enact a law providing that oleomargarine, butterine, imitation butter, imitation cheese, etc., when transported into any State or Territory, whether for sale, use, or storage, shall upon arrival become subject to the laws of such State or Territory enacted in the exercise of its police powers, and not be exempt by reason of being transported in the original importer's package; requesting the several States to support in a greater degree the public-school system; commending the Pan-American Exposition in 1901 as an opportunity for the complete representation of the agricultural resources of the Americas; approving the efforts of the National Dairy Union to secure the passage of a law by Congress increasing the internal-revenue tax on oleomargarine to ten cents a pound; asking Congress to enact a pure-food law, prohibiting the transmission from State to State of articles of food which are injurious to the public health and the interstate traffic in adulterated foods, and compelling the labeling of compound foods in such a manner as to advise consumers of their character and composition; declaring in favor of the patriotic principle of home-grown products to supply the needs and requirements of our people, and especially commending the beet-sugar industry; and asking Congress to pass a law to prevent the false branding and labeling of maple sugar or maple sirup as to the State in which it is manufactured or produced. The congress also adopted the usual resolutions of thanks to the press, to those who had welcomed the congress to Boston, and to all who had made the meeting of the congress profitable or pleasant.

FINANCIAL REVIEW OF 1899. Early in the year there was more or less political friction between Great Britain and France growing out of the irritation resulting from the Fashoda incident, and at the same time the feeling seemed to prevail among the French people that Great Britain desired to provoke war. The action of the Bank of France, at the close of the previous year, in refusing to discount financial bills, though it was intended to force the French banks to withdraw money they had so long employed in promoting speculation in Germany, was thought to give some color to the rumor that the Bank of France had reason to know that war with England was impending. The internal

political condition of France was unsettled because of the Dreyfus affair, and a sentiment widely prevailed throughout Europe that a military coup might be precipitated. This feeling was so intense in France that depositors largely withdrew money from banks, and some of them remitted it to London, indicating want of confidence in the Government. The political and financial conditions here noted tended to check business throughout Europe at the beginning of the year. Fortunately, however, more cordial relations were established between Great Britain and France by the end of January through the pacific declarations of the French ambassador to London, and also through assurances by Mr. Chamberlain, of the British Cabinet. The situation rapidly improved, business revived, and the outlook grew quite hopeful. Though the Dreyfus affair began in February to be more or less of a disturbing factor in France, its influence was entirely local, and prosperous business conditions generally prevailed, and especially throughout Great Britain. The sudden death of President Faure, of France, on the 16th was followed by the election of M. Loubet on the 18th, and, though the demonstrations of the revolutionists against the new President were disturbing, nothing serious resulted therefrom. General trade continued to expand in England, though speculation languished in London. Money, however, was in active demand, reflecting the improvement in business, and there seemed to be an impetus given the latter by the British agreement with France, toward the end of March, settling the respective spheres of influence in Africa of both countries. Until the middle of April there was not an event of importance to cause the least apprehension. Then the petition of the Uitlanders to the British Government for its intervention with the Transvaal Government for the redress of grievances resulted in some political friction between the two governments, which was intensified early in May by the refusal of President Krüger to make the least concession either to the Uitlanders or to the mining industry. Gradually the political situation grew more tense, and toward the end of June war seemed unavoidable. There was, however, little interruption to trade, though speculation in London was held in check. In July political conditions grew more hopeful, and they so continued until near the end of September, with a growing conviction that President Krüger would finally recede from his position of opposition to British demands. Then the insistence of the English Colonial Secretary that President Krüger should promptly accede to the British requirements brought about an acute political crisis, which was followed, Oct. 10, by an ultimatum by the Transvaal President demanding that "all troops on the borders of the republic shall be instantly withdrawn, that re-enforcements of troops which have arrived in South Africa shall be removed within a reasonable time, and that her Majesty's troops which are on the high seas shall not be landed at any port of South Africa." No reply was made by the British Government to this ultimatum, and on Oct. 11 a movement of troops of the Orange Free State, which had formed an alliance with the Boers, began, and a state of war was inaugurated. While British military preparations then became active, the financial preparations by the Bank of England had already begun, and on Oct. 3 the bank rate was raised from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent., and on the 5th from $4\frac{1}{2}$ to 5 per cent., the managers of the bank foreseeing that, as the country would soon have its supplies of gold from the

Transvaal (amounting to at least £1,500,000 per month) cut off, measures must be taken to attract gold from the Continent. The double raise in one week in the bank rate, it may be noted, was precipitated by an advance by the Imperial Bank of Germany on the 3d to 6 per cent. Thereafter financial tension prevailed throughout Europe, and on Nov. 30 the Bank of England rate was raised to 6 per cent. Troops were hurried from England to South Africa; fast transports were secured from the transatlantic lines, more or less crippling ocean traffic, and international commerce was to some extent disturbed. The first important battle in Natal resulted in disaster to the British, Gen. White being defeated at Ladysmith on Oct. 30, and being thereafter besieged by a superior force. A column under Gen. Gatacre, moving to the relief of Kimberley, which was in a state of siege, was defeated at Stormberg, Dec. 10; another column, under Gen. Methuen, was entrapped at Magersfontein on the 11th; and Gen. Buller, moving to the relief of Ladysmith, was defeated at Chieveley, Tugela river, on the 15th. These successive disasters caused consternation in England. Field-Marshal Roberts was directed to supersede Gen. Buller in command of the forces in South Africa, and additional re-enforcements were sent to the seat of war. The Imperial Bank of Germany on the 19th advanced its rate to 7 per cent., and the Bank of France, which had raised its rate to $3\frac{1}{2}$ per cent. on the 8th, further advanced it to $4\frac{1}{2}$ per cent. on the 21st. Thus prevented from obtaining greatly needed supplies of gold from the Continent, the Bank of England, while maintaining a 6-per-cent. discount rate, adopted the expedient of raising the price of gold in order to attract the metal from New York. There was an absence of news from the seat of war after the defeat of Gen. Buller, and military operations were apparently unimportant for the remainder of the year.

More or less tension began to develop at Manila early in February between the United States military authorities and the Filipinos under Aguinaldo, and Feb. 6 the latter attacked the United States troops, inaugurating an insurrectionary movement, which continued almost uninterruptedly throughout the year. In November the insurgents were driven into the interior of Luzon, and the Filipinos thereafter conducted a harassing guerrilla warfare. Admiral Dewey, it may be noted, returned to the United States at the end of September, and was enthusiastically welcomed by the citizens of New York, Sept. 29 and 30.

By far the most important feature of the year was the rapid progress which was made in the organization of industrial and other combinations of capital, which were known as trusts. Such concerns as were organized in 1898, it may be noted, though having a total capitalization of \$873,263,000, then attracted comparatively little attention, simply exciting surprise at their magnitude. Early in 1899, however, facilities were offered by New Jersey and other States for the organization of these corporations, and they began to grow with marvelous rapidity, while the aggregate capitalization reached enormous amounts month by month. The apparent recklessness with which these organizations were created attracted the notice of conservative bankers, and in April, at the suggestion of Secretary Gage, the officers of the New York banks began to take measures for self-protection to guard against the threatened danger to the market of the great mass of overcapitalized properties, which were even then regarded as a serious menace to the

situation. The conservative measures above noted consisted principally in discriminating against the stocks of the new corporations when such stocks were offered as collateral on loans, the bankers with good reason insisting that the dividend-earning capacity of the properties should be fully demonstrated before the stocks could be recognized as adequate security. Influenced by this conservative policy, the digestion of such stocks as had already been sold by the promoters of the organizations was arrested, and the market for them became congested. The promoters of many new concerns found it difficult to secure capital sufficient to float their enterprises, and a large number were abandoned. Some schemes—notably iron and steel combinations—met with success, mainly because of the marvelous prosperity of these industries, and this success gave encouragement to the promoters of other enterprises, so that some progress was made with these organizations almost to the end of the year. Where success depended, however, upon borrowing in the market or the enlistment of capital other than that represented in the industry embraced in the combination, progress continued exceedingly slow, and increasing difficulties were experienced when the money market grew stringent. In the opinion of close observers, the stringency in money which was noticeable at intervals after August was in great measure due to the vast amount of overcapitalized properties, which were constantly being offered upon the market as collateral, and also to borrowings by the promoters of these organizations from institutions other than banks.

The grand total of stocks and bonds represented in the above-noted combinations created or projected during 1899 was \$5,215,795,000. Of this amount, the capital of completed industrial organizations was \$712,850,000 of preferred and \$1,125,650,000 of common stock, and \$182,395,000 bonds. The capital of other completed organizations was \$37,000,000 preferred and \$310,500,000 common stock, and \$50,000,000 bonds. The capital of uncompleted consolidations, pending at the end of the year, was \$619,500,000 common stock. The capital of consolidations projected and abandoned was \$1,110,700,000. The capital of new companies formed was \$769,850,000, and new issues of stock by other companies were \$288,350,000. This makes a classified total of \$749,850,000 preferred stock, \$4,233,550,000 common stock, and \$232,395,000 bonds; a grand total, as above noted, of \$5,215,795,000. Adding the capital creations of such organizations in 1898, as above, makes the enormous amount of \$6,089,058,000 in two years.

The organizations, it may be noted, embraced almost every conceivable branch of industry, from iron and steel to bicycles; from electric to compressed-air motors; from interoceanic-canal construction to matches; from railroad cars to automobiles—indeed, everything of whatever nature which was manufactured or otherwise produced was secured by the ever-watchful promoter for conversion into a consolidation or combination of some character. The attractiveness of the stocks of these companies was sought to be increased by provision for from 6- to 8-per-cent. dividends, most of which were made cumulative. The capitals of some of the companies were enormous, few being less than \$5,000,000, and by far the majority being between \$25,000,000 and \$100,000,000. The largest capitalization was that of the Carnegie Steel Company—\$350,000,000, of which \$100,000,000 was in bonds. This organization, however, was abandoned. The Distilling Company of America had \$55,000,000 of preferred

and \$70,000,000 of common stock; the National Steel Company, \$27,000,000 of preferred and \$32,000,000 of common stock; the Amalgamated Copper Company, \$75,000,000 of common stock; and other companies of similar character had equally large capitals. It is not surprising that conservative bankers early in the year reached the conclusion that such capital creations, which were in very many cases entirely unjustifiable, were a menace to the market. Neither is it surprising that the attempt to float these properties met with resistance through utter inability of the market to digest them.

A noteworthy incident of the year was the payment by the United States to Spain of \$20,000,000 gold for what is known as the Philippine indemnity. On April 11 ratifications of the treaty of peace between the United States and Spain were exchanged at Washington, M. Jules Cambon, the ambassador from France to the United States, representing the Spanish Government. On April 29 the State Department officially requested the Treasury Department to pay the \$20,000,000 indemnity to M. Cambon, whereupon four warrants for \$5,000,000 each were drawn, and on May 1 M. Cambon received these warrants and receipted for the same, thus completing the payment of the indemnity under the provisions of the treaty.

Not only was the payment of this indemnity noteworthy, but likewise was the manner in which the money was transferred to Europe. It should be observed that, owing to the scarcity of notes in the Treasury, the assistant treasurer at New York had since April in the previous year settled his debit balances at the New York Clearing House with gold. In order to avoid the daily transfer of the metal between the subtreasury and the clearing house for this purpose, the assistant treasurer devised a form of receipt which, with the concurrence of the Clearing House Association, was accepted in lieu of the gold. This receipt represented the theoretical deposit of gold in the subtreasury. For example, the manager of the clearing house would collect from the assistant treasurer the amount of the debit balance of the latter at the clearing house for that day, whereupon the assistant treasurer would theoretically pay this sum in gold. The manager would then theoretically deposit this gold in the subtreasury, taking therefor a receipt or receipts for divisional parts of the total amount, which receipts, drawn to order, would be paid by the manager to such banks as were creditors at the clearing house on that day. The receipts were available by any of the banks for the settlement of indebtedness at the clearing house or for deposit at the subtreasury in the customs fund, against which banks having the accounts of importers drew checks for the payment of duties at the customhouse. Gradually, therefore, the receipts would be returned to the assistant treasurer and be canceled, having performed the original function of settling his debit balance at the clearing house, and indirectly the later function of the payment of duties at the customhouse. And this too, it should be observed, without the bodily movement of gold.

On May 4 the first of the three warrants for \$5,000,000 of the Philippine indemnity above noted was deposited by a representative of the French embassy with Mr. James Stillman, president of the National City Bank of New York, for collection. This warrant, instead of being collected by the bank directly from the assistant treasurer, which manner of collection would involve the movement of gold, was collected through the clearing house on the follow-

ing day. The process of collection then involved the presentation by the manager of the clearing house to the assistant treasurer of this warrant, precisely as other vouchers of the indebtedness of this official at the clearing house were customarily presented, and payment thereof was made in the manner above described, with receipts representing the theoretical deposit of the gold in the subtreasury by the manager of the clearing house. The remaining warrants for \$5,000,000 each of the Philippine indemnity were collected in a similar manner, and the receipts representing the amount were in due course returned to the assistant treasurer in settlement of obligations to the Government and canceled. Thus was the Philippine indemnity collected without the removal of the gold from the vaults of the Treasury.

The manner of the transfer of the indemnity to Europe and of the final settlement with the Spanish Government through the Deutsche Bank of Berlin is thus described by the secretary of that institution:

"As correspondents of the Bank of Spain we contracted on the 27th of April, 1899, to place in Europe within twenty days, and at a fixed rate of exchange, the United States indemnity for the Philippine Islands of \$20,000,000 put at Spain's disposal. We undertook to transfer £2,000,000 to London, 40,000,000 francs to Paris, and the balance of about 10,000,000 marks to Berlin, in which cities the Spanish Government had, as it permanently has, interest coupons maturing of its foreign debt issued in the English, French, and German markets.

"Under our instructions the Spanish authorities directed the French ambassador to the United States to receive from the United States Treasury the \$20,000,000 and to pay the same to the National City Bank of New York.

"On May 15, 1899, we had completed our payments in London, Paris, and Berlin, and on the same day the National City Bank of New York received the last installment on account of the \$20,000,000, the entire transaction being thus terminated as far as the two governments were concerned.

"It is hardly necessary to add that the entire \$20,000,000 could not have been transferred from New York to Europe within so short a period without disturbing the exchange and money markets. We therefore, on joint account with the National City Bank, made the necessary advances to spread the operation over a longer period, and arranged to settle the Spanish claim by making payment of the above-named amounts on this side, while the National City Bank was gradually securing the exchange on the other.

"At no time before, during, or after the war had we made any advance to the Spanish Government, nor has there ever existed any indebtedness to us from the same or from the Bank of Spain. The transfer of the entire indemnity and the payment of the \$20,000,000 was a *bona fide* exchange transaction carried out in the ordinary course of business.

"By referring to the Bank of Spain's weekly published balance sheets of May last it will appear that the bank's assets, under the heading of 'balances with foreign correspondents,' were increased at that time by the amount above stated, while the debit of the Spanish treasury to the bank simultaneously decreased 119,000,000 pesetas, which was reported to have been the amount credited to the Spanish Government by the Bank of Spain for the United States indemnity."

The following tabular survey of the economical conditions and results of 1899, contrasted with those of the preceding year, is from the Commercial and Financial Chronicle:

ECONOMICAL CONDITIONS AND RESULTS.	1898.	1899.
Coin and currency in the United States, Dec. 31.....	\$2,179,049,124	\$2,253,133,438
Bank clearings in the United States.....	\$68,931,197,724	\$93,977,903,186
Business failures.....	\$130,662,899	\$90,879,889
Imports of merchandise (year).....	\$634,964,448	\$798,845,571
Exports of merchandise (year).....	\$1,255,546,266	\$1,375,499,671
Gross earnings 119 roads (year).....	\$666,283,785	\$730,883,810
Railroad construction, miles.....	3,200	4,500
Wheat raised, bushels.....	675,148,705	547,303,846
Corn raised, bushels.....	1,924,184,660	2,078,143,933
Cotton raised, bales.....	11,235,383	9,500,000
Pig iron produced (tons gross).....	11,773,934	13,620,703
Anthracite coal (tons gross).....	41,899,751	47,665,203
Petroleum production, barrels.....	31,100,630	32,300,000
Immigration into the United States (fiscal year).....	229,233	311,715

Money.—As was the case in 1898, the noteworthy feature of the Treasury situation was the great abundance of gold. The net holdings of this metal, in coin and bullion, were, at the end of December, 1898, \$246,529,176. Owing to the usual disbursements at the beginning of this year, this amount was reduced by the close of January to \$228,652,341. By April 30, however, there was an increase to \$246,140,226. In consequence of the payment of the Philippine indemnity in the following month, there was a reduction by the end of May to \$228,415,238. This amount, however, was the lowest of the year. Thereafter the net gold holdings of the Treasury increased, and by Oct. 12 they were \$258,081,565. At the close of the year they were \$213,187,408. It may be noted that in August the Treasury Department resumed the issue of gold certificates, which had been suspended since the beginning of 1896, and the outstanding certificates at the end of December were \$184,844,619.

At the beginning of the year the New York associated banks held \$173,442,100 specie, nearly all of which was gold coin. This amount was increased by Feb. 25 to \$202,658,300. Then came a reduction by April 8 to \$187,152,500, followed by an increase to \$206,876,500, the maximum of the year, May 27. From that amount there was a decrease to \$136,778,300, Nov. 18. The specie holdings by the banks at the end of the year were \$143,496,900.

The loans of the associated banks at the beginning of the year were \$713,803,800. There was an increase to \$793,852,900, the maximum of the year, July 8, followed by a decrease, due to liquidation, hereinafter noted, to \$676,636,400, Nov. 25. The loans at the end of the year were \$673,689,400. The movement in specie was as above noted. The bank holdings of legal tenders at the beginning of January were \$56,808,700. The maximum of the year (\$61,156,500) was recorded Jan. 28. Changes were comparatively slight until after June 17, when the amount held was \$59,787,800. Thereafter, however, there was a gradual reduction to \$46,337,200, the minimum of the year, Nov. 11, and the amount held at the close of the year was \$52,682,900. The deposits of the banks were \$826,881,700, Jan. 7. There was an increase to \$914,810,300, the maximum of the year, March 4, followed by a reduction to \$883,595,300, April 29. Then came an increase to \$909,004,800, June 24, succeeded by a decrease to

\$736,836,900, the minimum of the year, Nov. 18. The amount of deposits at the close of the year was \$740,046,900. The surplus reserves of the banks were \$23,530,375 at the beginning of the year. There was an increase to \$39,232,025, Jan. 28, followed by a reduction to \$15,018,825 by April 8, and then came a rise to \$43,933,725, the maximum of the year, May 27. There was a rapid reduction to \$5,062,475 by July 8, succeeded by a recovery to \$15,082,350 by Aug. 19; but thereafter there was an irregular decrease to \$6,652,200 deficiency, the minimum of the year, Nov. 25. This deficiency in the reserve, it may be noted, was the first recorded since Aug. 12, 1893. The surplus reserve at the end of the year was \$11,168,075.

The condition of the New York Clearing House banks, the rates of interest, exchange, and silver, and the prices of United States bonds on Jan. 2, 1900, compared with the same items for the preceding two years, are given in the following table:

ITEMS.	1898.	1899.	1900.

+ Extended at 2 per cent.

Money on call loaned at the Stock Exchange during the year at 1 per cent. in March and at 186 per cent. in December, the higher rate resulting from a sudden panic in the money market on Dec. 18, the culmination of influences which had gradually increased the monetary tension since October. Though the January settlements were almost unprecedentedly large, there was comparatively slight disturbance to the money market, in consequence of preparations therefor. This was due to the fact that such preparations were completed early in the previous week, and the resulting accumulations of money were freely loaned after the middle of the first week in January, causing a fall in the rates for money on call at the Stock Exchange to 2½ per cent. from 6 per cent. early in the week. For the remainder of the month the money market was easy, and rates on call averaged 3½ per cent. This easy tone continued throughout the month of February and in March until toward the close, and the lowest rate of the year (1 per cent.) was recorded after the middle of this month. Toward the close, however, money on call grew more active, because of rapidly decreasing bank reserves, and loans were made at 9 per cent. In April and in May, though bank reserves recovered, money was more or less active, loaning as high as 8 per cent. in the first-named month and at 7 per cent. in April, and as low as 2 per cent. each month. The activity continued throughout June and July, again influenced by low bank reserves, with loans in June as high as 15 per

cent. and in July at 7 per cent., while the lowest rate each month was 1½ per cent. The bank reserves partially recovered again in August, resulting in more normal conditions for money, and loans were made at 5 per cent. and at 2 per cent. In September and thereafter until the end of the year the monetary situation was entirely unique. At every important center of the country except this city, and even in other branches of the money market at this center, money was apparently in good supply. Indeed, in some of the Western centers the offerings of money were so greatly in excess of the local demand that investments were made thereat in New York commercial paper, and much money belonging to Western banks was loaned in this city on time on pledge of stock collateral. Moreover, the stringency at this center was chiefly observable in call money, of which, because of the low bank reserves, there was an insufficient supply. It was during October and November that the rate

for money on call was recorded at 35 per cent., and even then money on time was obtainable from banks and from trust companies on good Stock Exchange security at not exceeding 6 per cent. for from sixty days to six months. It is noteworthy that mercantile borrowers were not in the least embarrassed by this condition of the money market, and at no time did first-class single-name paper rule above 6 per cent., while choice notes almost daily sold until December as low as 5½ per cent., and exceptionally good indorsements were until the above-named month in demand at 5 per cent. This remarkable derangement of equilibrium of money was due to the fact that concurrently with the usual autumn movement of money from this center to the interior for crop purposes there was a continuous drain of money from the New York banks into the Treasury for customs and internal revenue, while the Treasury disbursements gradually diminished. It would seem, therefore, that the prosperous conditions of the country, as reflected in the increased importations and in the augmented manufacturing interests, which were subject to internal taxation, were largely responsible for the noteworthy low condition of the bank reserves at this center. The constantly decreasing reserves compelled banks to call in loans, while the daily requirements of Stock Exchange borrowers, though somewhat diminished through liquidation, were still large and, indeed, so great as at times to be extremely urgent. Hence the excessively high rates above recorded in Octo-

ber and in November for call loans. The attempts of the Treasury Department, Oct. 10, to relieve the monetary stringency at this center through the anticipation of interest on the public debt, and later, Nov. 15, through the purchase of bonds, were only partially and temporarily effective, and it was not until early in December that the situation grew more normal. Even then there were almost daily spasms of activity in the call-loan branch of the market, causing money to loan as high as 12 per cent., though loans were made as low as 3 per cent. Toward the end of the second week in December the London discount market grew quite tense by reason of the succession of disasters to the forces of Gen. Gatacre near Stormberg, to those of Gen. Methuen near the Modder river, in Cape Colony, and to those of Gen. Buller near Colenso, Natal. The Bank of England, instead of raising its rate of discount, advanced its price for American eagles and for gold bars, and, moreover, offered advances on gold while in transit with a view to attracting the metals from New York, and consequently gold to the amount of \$2,400,000 was shipped hence to London on the 16th. Almost concurrently the Globe National Bank of Boston, which, being embarrassed, had received temporary aid from the Boston Clearing House, could not fulfill the obligations which the directors had undertaken for the rehabilitation of the bank, and therefore it was placed in the hands of a receiver. At the same time the Broadway National Bank of Boston suspended as the direct result of the failure of a firm of which the vice-president of the bank was the principal member. These

day of the year and the movement of gold to London continued. It should be observed that assurances were given during the last week that the depositors of the Globe National Bank and of the Broadway National Bank of Boston would be paid in full, and a reorganization of the company made it certain that the depositors of the Produce Exchange Trust Company of this city would sustain no loss. These assurances seemed to aid in restoring confidence in the situation. The national banks of this city and elsewhere throughout the country altogether deposited \$17,000,000 Government bonds as security for public money, and the deposits of internal-revenue collections in depository banks began perceptibly to increase. The entirely local character of the monetary derangement above noted was again strikingly illustrated by the fact that rates for money did not materially advance in Boston during the disturbance at that center; neither was there any special demand for money on time in this city, while commercial paper was nominally quoted at 6 per cent.

The clearings of the New York associated banks were unprecedentedly large during 1899, amounting to \$60,761,791,901, against \$41,971,782,437 in 1898. Clearings of all banks in the country were likewise beyond precedent, amounting to \$93,977,903,186, against \$68,931,197,724 in 1898. The clearings on April 11 at New York were the greatest on record, amounting to \$352,882,567, and the largest balances were \$19,340,997, May 23. The following is the New York Clearing House statement of bank totals at the beginning of each quarter of 1899 and at the end of the year:

DATE.	Loans.	Specie.	Circulation.	Deposits.	Legal tenders.
January 7.....	\$713,808,800	\$173,442,100	\$15,858,200	\$826,881,700	\$56,808,700
April 1.....	779,951,100	187,144,300	13,870,600	898,917,000	53,079,800
July 1.....	786,884,000	182,466,100	13,583,500	905,127,800	58,090,400
October 7.....	710,582,500	147,252,400	15,534,700	781,158,800	48,680,500
December 30.....	673,689,400	143,496,900	16,042,700	740,046,900	52,682,900

embarrassments in Boston had more or less influence in this city, and on the following Monday, the 18th, there arose, toward noon, a sudden demand for money, due to the suspension of the Produce Exchange Trust Company of this city. Panicky conditions immediately developed, and the rate for money on call at the Stock Exchange rose to 186 per cent. A conference of representatives of large banks and prominent banking interests was promptly called, and in half an hour a pool of \$11,000,000—\$1,000,000 from each of those present—was contributed by these banks and bankers and loaned upon the Stock Exchange. This abundant supply of money caused the rate to fall to 6 per cent., but later there was a recovery to 40 per cent. On the following morning the Clearing House committee promptly assembled, offering \$10,000,000 on the exchange, but only \$5,000,000 was required. Late on Monday afternoon, it should be noted, the Secretary of the Treasury announced that the Government had decided to increase the number of depository banks and the amount of deposits in such banks by diverting to such of these institutions as would qualify by the deposit of Government bonds as security all of the receipts from internal revenue—estimated at about \$1,000,000 per day—for the ensuing thirty days or longer. This action by the Treasury Department and the above-noted action by the New York Clearing House committee fully restored confidence, and nearly normal monetary conditions thereafter prevailed for the remainder of the month, though money loaned on call at 25 per cent. on the last

Stocks.—The stock market was irregular during the first week in January, influenced by profit taking and also by reports of somewhat strained political and financial relations between Great Britain and France, and the tendency was downward. The market was partially affected also by reports that our army in the Philippines would meet with obstruction from the insurgents in seeking to gain possession of the territory. There was, however, a recovery in the tone of the market early in the second week in January, and then the conspicuous feature was enormous transactions at generally advancing prices, and there were also indications of buying of American stocks in London for New York account. The movement continued large and the tendency upward for the remainder of the month, and the market was influenced toward the close by rumors, which, however, were unconfirmed, of the formation of a through line of railroad from ocean to ocean by the consolidation of the Union Pacific with the New York Central system. The rise in prices was so rapid not only in investment but in speculative properties that it was not surprising that a reaction began with the opening of February. There was evidence that, tempted by the high prices, many Europeans had disposed of their stocks, and there was likewise evidence of comparatively free selling of investment properties by domestic holders. Lenders of money were, it may be noted, inclined to discriminate against certain classes of the new industrial stocks when they were offered as collateral on loans, and this conservatism had its

effect upon the speculation in these properties. The beginning of hostilities in Manila between the United States troops and the insurgents had some unfavorable influence temporarily. During the second week in the month there was an irregular recovery, aided by the subsidence of the political tension between England and France, above noted, and the sympathy aroused by the sudden death of President Faure seemed to contribute to a better feeling between France and Great Britain. A domestic event of a partially unsettling character in the second week was a phenomenal storm of snow which swept over the Middle States, and the storm was more or less severe in all parts of the country. The movement of freight on the railroads was interrupted, and the stock market was heavy until the end of the week, when there was a recovery in prices, with the anthracite coal shares leading, these being affected by the improved condition of the trade and by an advance in prices of the product. The market was active and generally strong for the remainder of the month, though at intervals irregular, in consequence of realizing sales. The unsettled state of affairs in the Philippines and a rumor, subsequently denied, that the American fleet in Manila had sunk a German war vessel had a depressing effect upon the market early in March; but it was observed that there was good support to railroad mortgages and to investment stocks, and prices speedily recovered. One favorable circumstance, it may be noted, was the adoption by the stockholders of the Central Pacific readjustment scheme. A firmer tone for money had a partially disturbing effect upon stocks soon after the opening of the month; but the tension was promptly relieved, whereupon prices recovered. One feature in the second week was an advance in some of the recently organized industrial properties, and there was exceptionally good buying of American Sugar Refining stock on a report that the differences with the opposition company had been adjusted. The denial of this report, however, caused a sharp fall in the stock; but this decline had no particular influence upon the rest of the market, which was strong, under the lead of the Anthracite Coal stocks, the Granger shares, and Brooklyn Rapid Transit, the movement in the latter being due to a report, later denied, that control of the Long Island Railroad had been obtained. The improvement in the industrial situation and in railroad traffic rates contributed greatly to the strength of the market for the remainder of the month. One notable movement was a rise, accompanied by large transactions, in New York Central, Chicago and Northwestern, and Union Pacific. The market, as a whole, was more buoyant in the closing days in March than it had been at any time since January; and this, too, notwithstanding the fact that the rates for money were unsteady, due to exceptional causes, and also that the railroad net earnings for February indicated the effect of the heavy snowstorms in that month. Activity in money on call and more decided discrimination by lenders against the newer industrial stocks caused the market to open active and lower in April, and there was quite general liquidation during the first week. The attitude of the banks toward the industrials was felt to be justified by the fact that, since the beginning of the year, there had been vast amounts of these stocks placed upon the market, and it was asserted that they were a menace to the situation. The remarks of Secretary Gage at the centennial anniversary dinner of the Manhattan Bank seemed to call public attention to the dangerous over-

capitalization of industrial properties, and the banks thereafter were even more rigid in their discrimination against these stocks as collateral on loans than before. While the industrial shares fell off as the result of this discrimination, there was good support to the better class of railroad properties, and improved earnings of the principal lines contributed to the advance in the Granger stocks. Toward the middle of the month there was a notable rise in the Vanderbilt properties, followed by a recovery in almost the entire list, and, influenced by renewed evidences of improvement in the iron and steel situation, and also by easier rates for money, the market advanced. One feature was a rise in Great Northern and in Chicago, Burlington and Quincy, and there was also good buying of Louisville and Nashville and Southern Railway preferred. Seasonable weather, encouraging reports regarding the crop situation, large railroad earnings, continued ease in money, and favorable news from the Philippines contributed to make the market generally strong in the closing week of the month. On the 1st of May stocks were unfavorably influenced by a rise in exchange to near the gold-exporting point, supposed to be due to preparations for the remittance of the \$20,000,000 indemnity to Spain, which indemnity was paid on the previous Saturday by the State Department to the French minister, representing the Spanish Government. The disclosure on the following day that the remittance would be made with exchange resulted in a partial recovery in stocks; but the passage of the Ford franchise tax bill by the State Legislature was an adverse influence, which tended to keep the market unsettled for the remainder of the week, and, indeed, during the greater part of the following week, when the selling was so liberal as to have a demoralizing effect upon most stock values, and the greatest declines were in the local traction stocks. Though there were occasional recoveries, due to repurchases to cover short contracts, the movement was quite irregular, with the first-class investment properties the strongest. On the last day of the week the sudden death of ex-Gov. Roswell P. Flower, who had been an active promoter of Brooklyn Rapid Transit, caused an unsettling fall in the stock of this company and in the shares of other corporations in which his stock commission house was interested. The decline was promptly checked, however, and by Monday of the following week large supporting orders in what were known as the Flower properties brought about a recovery. The calling by Gov. Roosevelt of a special session of the Legislature to reconsider the Ford franchise bill contributed to an improvement in the market, and, though irregular, it was generally strong for the remainder of the week and to the close of the month, the passage by the Legislature of the amended franchise law stimulating a rise in the local traction stocks in the last week. Railroad earnings continued to show increases, and the exceptionally strong position of the associated banks exerted a favorable influence upon the general market. The tendency was downward at the beginning of June. Higher rates for exchange, the unexpected shipment of gold to Europe, fears of the adverse effect of the franchise law, antitrust legislation in many States, and the outbreak of yellow fever at New Orleans had more or less of an unsettling influence, and there was some manipulation by the bear operators in the market. There was later a recovery in the tone and a more active speculation, influenced by favorable railroad earnings,

by an increase in the dividend on Atchison preferred, by easy money, and by good crop reports, and, though gold exports continued, they seemed to have little effect upon the stock speculation. Toward the middle of the month, though the share market was irregular with wide fluctuations, there was notably good buying of railroad mortgages at advancing prices. The irregular movement in stocks continued for the greater part of the remainder of the month, though there was a substantial advance in high-grade railroad shares. The industrial stocks were, however, generally lower, indicating an oversupply. The development of political tension between Great Britain and the Transvaal Government caused higher discounts in London, and there was some selling of securities for European account. In the closing days of the month the approval by the directors of the New York Central and of the Boston and Albany Railroads of the terms of a lease by the former of the latter had a favorable influence, and the improvement was aided by encouraging crop prospects, but the gain was in only a comparatively few specialties. One notable feature of the situation was the greatly augmented railroad earnings, due not only to increased traffic but to better rates.

The market opened in July with a good demand for railway stocks, and one feature was a well-sustained advance in Pennsylvania, while Louisville and Nashville sold at the highest price in seven years. The general market was strong for a few days, after which it irregularly yielded to realizing sales. Later material changes in the condition of the banks, as disclosed by the weekly statement, caused some apprehensions of activity in money, and this fear was taken advantage of by the bears to attack the market; but the first-class railroad properties were well sustained, and especially New York Central, Pennsylvania, Chicago and Northwestern, and Northern Pacific. Toward the middle of the month labor troubles on the Brooklyn Rapid Transit lines, encouraged, as was alleged, for speculative purposes, made these stocks temporarily weak, and after their recovery the market became quite dull. There was, however, a good demand for railroad bonds, and Western railway shares were favorably affected by large traffic returns. One notable feature in the third week was a rise of 25 points in New York Air Brake stock, on news of a favorable decision in its suit with the Westinghouse, but this was followed by a decline of 40 points. In the closing week of the month the market was dull, though generally strong, with the Trunk-line stocks, the Grangers, and shares of all properties directly or indirectly connected with the manufacture of iron and steel leading. General business activity, favorable crop prospects, large railroad earnings, and rumors of contemplated new railway combinations contributed to the improvement. The market was active and generally strong in August, influenced by the conditions above noted, and also by the assurance that the corn crop would be the largest on record. European purchases of stocks through the arbitrage houses were large; labor troubles at the West and the local gas war appeared to have no disturbing effect, and dividend announcements in Chesapeake and Ohio, Southern Pacific, and Union Pacific preferred stimulated buying of these properties. Among the notable movements were a rise in all the iron and coal stocks, and especially in Tennessee Coal and Iron. International Paper stock fell 12½ points, and Brooklyn Rapid Transit declined on the publication of the annual report, but later there was a recovery.

Toward the end of the month the development of an acute situation in the Transvaal caused some selling of stocks for European account; but the offerings were promptly absorbed, and the market closed strong, though the higher rates for money served somewhat to check speculative operations, particularly in the industrial properties. Early in September the reduction in bank reserves foreshadowed activity in money; the Transvaal situation seemed to be more threatening; there was some apprehension of trouble in France growing out of the Dreyfus trial, which disturbance, it was thought, might be unfavorably reflected in our exchange market, and the outlook was unfavorable. Still, notwithstanding these conditions, the market was strong, and there was a quite general advance in all properties, even the industrial shares. In the second week, however, a further reduction in bank reserves, accompanied by the calling of loans, resulted in more active rates for money at the Stock Exchange, and the tendency of the market was downward, with more or less sharp declines in the industrial stocks. The death of Cornelius Vanderbilt on the 12th, it may be noted, had no influence upon the market. One feature, however, was a fall of over 17 points in Brooklyn Rapid Transit, and there were wide fluctuations in Tennessee Coal and Iron, Colorado Fuel and Iron, the Tobacco, and the iron and steel stocks. The tendency was downward in the early part of the third week, influenced by further losses in bank reserves, calling of loans, and still dearer rates for money on the Stock Exchange. There seemed, however, to be supporting orders in many of the specialties at the decline, and quite noticeable buying of Delaware, Lackawanna and Western and Brooklyn Rapid Transit. Though money continued stringent in the last week of the month, the stock market was not unfavorably influenced thereby, partly for the reason that the engagement of \$2,350,000 gold in London for shipment hither was announced, and it was felt that the monetary situation might otherwise soon be relieved. The market was dull and irregular, however, and the most active stocks were Delaware, Lackawanna and Western, Tennessee Coal and Iron, American Sugar Refining, American Tobacco, Consolidated Gas, and Federal Steel. In the first week of October the disturbing influences were the double advance in the rate of discount by the Bank of England, a rise in the rate by the Imperial Bank of Germany, higher foreign exchange, and dear rates for money in our market. There was liberal selling of stocks for European account early in the week, and also large offerings by the commission houses and considerable bearish pressure, which at intervals had an unsettling effect, but good properties seemed to be well sustained, and the market closed at a substantial recovery, under the lead of the anthracite coal shares. The outbreak of war in the Transvaal in the second week of the month appeared to have no special influence upon our market, probably for the reason that the London security markets were not greatly affected. The local money rate was easier, and there was a better feeling, due to the offer of the Treasury to anticipate payment of the interest on the public debt. The stock market was irregular and lower after the middle of the week, with the traction stocks heavy and the iron and steel properties well supported. One feature was a rise in Pullman, on a rumor that control of the Wagner Palace Car Company had been obtained. There was a good demand for first-class railroad mortgages, which continued in the following week,

and then there was a more active and a stronger market than had been observed for nearly a month. One notable feature was a steady advance in Great Northern preferred, while Delaware, Lackawanna and Western and Chicago and Northwestern were higher. There was a broader market for stocks in the closing week of the month, influenced by favorable traffic returns, by the placing of large orders by several roads for rails and for equipment, by the consolidation of the Pullman and the Wagner Palace Car Companies, and by the announcement of the intended distribution of new shares of New York Central stock at par. The local traction stocks were quite strong, as also were the anthracite coal properties. Though money was active and higher on the Stock Exchange, the security market was generally strong, and it seemed to be favorably influenced early in the month by the result of the State elections, which indicated gains for the dominant political party, thus encouraging efforts which were expected to be made at the ensuing session of Congress for the radical reformation of the currency. Another favorable influence, it may be noted, was a fall in the rates for foreign exchange. The stock market soon grew irregular, however, in consequence of realizations, and the notably weak properties were the local traction issues and some of the recently organized industrials. The railroad shares were, however, well supported. The announcement on the 15th, by the Secretary of the Treasury, that he would purchase \$25,000,000 4- and 5-per-cent. bonds, for the purpose of relieving the monetary situation, had a stimulating effect upon the security market, and the tone was buoyant and the advance in prices quite decided, due to rebuying to cover short contracts, and one prominent feature was a good demand for railroad mortgages. There was also exceptional strength in New York Central, caused by reports that the lease of the Boston and Albany road would be ratified by the stockholders. Gradually more settled monetary conditions and improved dividend prospects exerted a stimulating influence upon the market, and the tendency was generally upward for the remainder of the month. One feature toward the close was an advance in New York Central and in Pennsylvania, on reports of a contemplated union of interests with a view to the establishment of more stable and remunerative rates for trunk-line traffic. The market for the industrials was unfavorably influenced early in December by the decision of the United States Supreme Court in the Addyston Pipe Line case, which decision was interpreted as unfavorable to the combinations of capital known as trusts. The recommendation in the President's message favoring legislation by Congress, having for its object the regulation of trusts, also tended to have a depressing influence upon these properties, and the whole market declined. The fall in prices gradually grew more decided, in consequence of a bearish demonstration upon certain specialties, notably Brooklyn Rapid Transit, and in the week ending the 16th the tendency of the market was almost uninterruptedly downward, influenced by the selling of securities for European account; by the increasing tension in the London discount market, accompanied by movements by the Bank of England to attract gold from New York; and by the disturbed condition in Boston, resulting from the embarrassments of the Globe National and the Broadway National Banks of that city. On the 18th, during the panic in the New York money market, elsewhere noted, the selling of stocks was general, and in very many cases the

lowest prices of the year were recorded. There was a partial recovery following the restoration of confidence in the monetary situation, but the stock market was more or less feverish thereafter until the last week in the year, when there was quite a general recovery in prices of leading properties, with good buying of investment stocks as the feature, and the market was strong at the close.

Total sales of stocks at the New York Stock Exchange for 1899 were 172,882,462 shares, against 112,699,957 in 1898; 77,324,172 in 1897; 54,490,643 in 1896; 66,583,232 in 1895; 49,075,032 in 1894; 80,977,839 in 1893; 85,875,092 in 1892; 69,031,689 in 1891; 71,282,885 in 1890; and 72,014,600 in 1889.

The following shows the highest prices of a few of the speculative stocks in 1898 and the highest and lowest prices in 1899:

STOCKS.	1898.	1899.	
	Highest.	Highest.	Lowest.
American Sugar Refining Co.	146 $\frac{1}{2}$	182	114 $\frac{1}{2}$
American Tobacco	153 $\frac{1}{2}$	229 $\frac{1}{2}$	78 $\frac{1}{2}$
Brooklyn Rapid Transit.....	78	137	61
Central New Jersey	99	129 $\frac{1}{2}$	97
Chicago, Burlington and Quincy ..	125 $\frac{1}{2}$	149 $\frac{1}{2}$	114 $\frac{1}{2}$
Consolidated Gas	305 $\frac{1}{2}$	223 $\frac{1}{2}$	163
General Electric	97	192	95 $\frac{1}{2}$

The Crops.—The early indications pointed to a smaller yield of winter wheat, owing to unfavorable conditions resulting from extremely cold weather in February, and the outlook for spring wheat was far from satisfactory until June, when prospects improved. The Russian crop of wheat was said to be deficient, and, as this report seemed to indicate the probability of a continued demand by Europe upon our supplies of grain, prices advanced at the distributing centers, stimulating the liberal marketing of reserves from the previous year's crop. Corn made good progress in July and in the later summer months, and the expectations then of an unprecedented yield of this cereal were fully realized. As the harvest of spring wheat progressed there seemed to be good evidence that the yield would be fully as great as that of the previous year, and the prospects for oats were regarded as excellent. The cotton crop made good progress, and early in the picking season there appeared to be assurance of a yield nearly as large as that of the last year. When the crop began to come into the market from the plantations, however,

it was seen that the yield was not likely to be as large as was expected, and the revised estimates placed the crop at not exceeding 9,500,000 bales. The most striking feature of the year was the steady advance in the price of cotton. English spinners, influenced by the conviction that there would be a large yield of the staple, refrained from buying early in the season. The price advanced in response to liberal purchases by Southern and Northern spinners, and this fact also seemed to deter buying by English manufacturers, though the Continental spinners bought largely. Toward November, however, the British manufacturers appeared to realize the fact that the crop would be below their early expectations, and then their purchases contributed to maintain the advance in the price of the staple to the end of the year. It is noteworthy that the exports of cotton to Great Britain for four months of the cotton year ending Dec. 31 were only 518,410,203 pounds, against 1,166,756,962 pounds for the same time in 1898, while exports to France were 223,140,120 pounds for the four months in 1899, against 252,127,048 pounds for the same period in 1898, and exports to Germany were 363,544,165 pounds for four months in 1899 and 550,868,410 pounds for the same time in 1898. Exports to Japan increased from 12,094,822 pounds in the cotton year 1898 to 49,660,787 pounds in the cotton year 1899. Another factor which more or less influenced the export movement not only for cotton, but for breadstuffs and for all exportable products, was the high ocean freight rates, which were caused by the withdrawal from the regular transportation lines of large numbers of steamers which were employed by the British Government for the transport of troops and military supplies to the seat of war in South Africa. The dearth of transportation facilities also materially checked the export movement in other commodities. The following shows the yield and the value of the crops for the years 1898 and 1899 on the basis of the price at New York at the beginning of the years 1899 and 1900:

PRODUCTS.	CROP OF 1898.			CROP OF 1899.		
	Yield.	Price, Jan. 3, 1899.	Value.	Yield.	Price, Jan. 2, 1900.	Value.
Wheat, bushels.....	675,148,705	\$0 81 $\frac{1}{2}$	\$548,558,322	547,303,846	\$0 75 $\frac{1}{2}$	\$413,898,533

Total values.....			\$1,720,358,042			\$1,631,464,856

Foreign Exchange.—The exports of domestic and foreign merchandise for the year ending Dec. 31, 1899, were \$19,953,405 above those of 1898, and the imports of merchandise were \$163,881,123 greater. The excess of merchandise exports over imports for the year was \$476,654,100, against \$620,581,818 for 1898. The excess of exports over imports of merchandise and gold and silver coin and bullion for 1899 was \$493,455,303, against \$503,278,544 in 1898. Gold imports were \$5,815,553 in excess of exports in 1899, against \$141,968,998 in 1898.

The rates for exchange were low at the beginning of the year, influenced by liberal supplies of commercial bills, and imports of gold from London to the amount of \$1,500,000 were announced in the first week. Sixty-day sterling was quoted at the opening of January at \$4.81 $\frac{1}{2}$ to \$4.82, while sight sterling was \$4.84 $\frac{1}{2}$ to \$4.84 $\frac{1}{2}$, and cables were \$4.85 $\frac{1}{2}$ to \$4.85 $\frac{1}{2}$. Gradually the market grew stronger, influenced by a demand for seventy-day bills for investment, and

later by an inquiry for sterling for remittance against securities sold for European account. Toward the end of the month, however, the investment inquiry relaxed, commercial bills became smaller in volume, and the marketing of maturing investment drafts caused a slight recession in rates for short sterling. The tone was firm at the close of the month, with rates for sixty day, \$4.82 $\frac{1}{2}$ to \$4.83; for sight, \$4.84 $\frac{1}{2}$ to \$4.85; and for cables, \$4.85 $\frac{1}{2}$ to \$4.85 $\frac{1}{2}$. The tone was strong in February, with a good demand to remit for securities bought in London for New York account, and there was a dearth of commercial bills. The market opened with sixty-day sterling, \$4.83 $\frac{1}{2}$ to \$4.83 $\frac{1}{2}$; sight, \$4.85 $\frac{1}{2}$ to \$4.85 $\frac{1}{2}$; and cables, \$4.85 $\frac{1}{2}$ to \$4.86. The highest and the closing rates for the month were \$4.84 $\frac{1}{2}$ to \$4.84 $\frac{1}{2}$ for long, \$4.86 $\frac{1}{2}$ to \$4.86 $\frac{1}{2}$ for short, and \$4.87 to \$4.87 $\frac{1}{2}$ for cables. The Bank of England reduced its discount rate from 3 $\frac{1}{2}$ per cent. to 3 per cent. on Feb. 2, and the Imperial Bank of Germany on Feb. 21 reduced its rate from 5 to 4 $\frac{1}{2}$ per cent. The market opened weak in March, influenced by higher rates for money, and also by free offerings of bills against the Central Pacific readjustment scheme, and rates were \$4.84 $\frac{1}{2}$ to \$4.84 $\frac{1}{2}$ for sixty-day, \$4.86 $\frac{1}{2}$ to \$4.86 $\frac{1}{2}$ for sight, and \$4.86 $\frac{1}{2}$ to \$4.87 for cables. Later easier rates for money in our market and a firmer tone for discounts in London caused a slight advance in sterling, after which the market grew dull, and it was without special feature until toward the end of the month. Then there was a very strong tone, influenced by rumors that preparations were being made for the remittance of the Philippine indemnity, it being assumed that when the money was paid by the United States Government it would be remitted through exchange, thus causing more or less of an urgent inquiry for sterling. The market was also influenced by a demand to remit for securities sold for European account, and there was a notable absence of all kinds of bills. The tone was easier at the close, at a recession of one quar-

ter of a cent from the highest rates to \$4.84 $\frac{1}{2}$ to \$4.84 $\frac{1}{2}$ for sixty-day, \$4.86 $\frac{1}{2}$ to \$4.86 $\frac{1}{2}$ for sight, and \$4.87 $\frac{1}{2}$ to \$4.87 $\frac{1}{2}$ for cables. High rates for money during the first week in April tended slightly to depress exchange, which, after opening at the figures above noted, fell to \$4.83 $\frac{1}{2}$ to \$4.83 $\frac{1}{2}$ for long, \$4.85 $\frac{1}{2}$ to \$4.86 for short, and \$4.86 $\frac{1}{2}$ to \$4.87 for cables. Toward the middle of the month there was a recovery, due to buying, which was supposed to be connected with preparations to remit the Philippine indemnity when it should be paid. The tendency was upward to the end of the month, when rates were \$4.85 $\frac{1}{2}$ to \$4.85 $\frac{1}{2}$ for sixty-day, \$4.87 $\frac{1}{2}$ to \$4.87 $\frac{1}{2}$ for sight, and \$4.87 $\frac{1}{2}$ to \$4.88 for cables, the rate for sight, it may be noted, being close to the gold-exporting point. When the fact appeared that the remittance of the Philippine indemnity would be made through exchange, which had already been accumulated, the market for sterling, after opening strong at \$4.85 $\frac{1}{2}$ to \$4.86 for sixty-day, \$4.87 $\frac{1}{2}$ to \$4.88 for sight, and \$4.88 $\frac{1}{2}$

to \$4.88½ for cables, suddenly developed weakness, and rates fell by the 10th to \$4.84½ to \$4.85 for long, \$4.86½ to \$4.87 for short, and \$4.87½ to \$4.87½ for cables. There was a gradual recovery, however, followed by an irregular movement, and the tone closed firm at \$4.85½ to \$4.86 for long, \$4.88 to \$4.88½ for short, and \$4.88½ to \$4.89 for cables. These rates clearly foreshadowed gold exports, and early in June there was a demand to remit for securities sold for European account, and during the month \$17,050,000 gold was shipped. The opening rates for exchange were the same as those at the close of May. The offerings of sterling against gold exports caused an irregular recession in rates until after the middle of the month, when there was a more decided decline, and the market closed easy at \$4.85½ to \$4.85½ for sixty-day, \$4.87½ to \$4.87½ for sight, and \$4.88 to \$4.88½ for cables, these rates being the lowest of the month. Gold exports ceased after the shipment of \$2,250,000 early in July. The exchange market opened at the figures ruling at the end of June, and there was a steady decline, influenced by dearer rates for money, until the 13th, when an advance in the Bank of England minimum to 3½ per cent. caused a temporary recovery. Later, however, the market grew easier, and it closed weak at \$4.83½ to \$4.83½ for long, \$4.86½ to \$4.86½ for short, and \$4.87½ to \$4.87½ for cables. Liberal offerings of long sterling, in the expectation of covering with grain and cotton bills later in the season, made exchange weak during the early part of August, and, after opening at \$4.83 to \$4.83½ for long, \$4.86½ to \$4.86½ for short, and \$4.86½ to \$4.87 for cables, there was a decline by the 10th to \$4.82½ to \$4.82½ for sixty-day, \$4.86 to \$4.86½ for sight, and \$4.86½ to \$4.86½ for cables. Then the Imperial Bank of Germany advanced its rate of discount to 5 per cent., in consequence of increasing tension at Berlin, and there was some expectation that the Bank of England would likewise advance its rate. Sterling grew firmer, so continuing until the 17th, when, there being no change in the Bank of England rate, the tone grew easier. Though irregular thereafter, the market closed heavy, with rates for sight sterling \$4.86 to \$4.86½, while those for long sterling and for cables were unchanged compared with the rates at the opening of the month. Higher rates for money dominated the foreign-exchange market in September, and the tendency was almost uninterruptedly downward. After opening at \$4.83 to \$4.83½ for long, \$4.86 to \$4.86½ for short, and \$4.86½ to \$4.87 for cables, the market advanced one quarter of a cent and then gradually declined to \$4.81½ to \$4.81½ for sixty-day, \$4.84½ to \$4.85 for sight, and \$4.85½ to \$4.85½ for cables by the close of the month. Gold to the amount of \$2,350,000 was shipped hither from London, the open market discount rates at that center advanced, and by the end of the month it was expected that the Bank of England would be forced to raise its rate because of the increasing tension in discounts in London. One feature of our exchange market was the negotiation of sterling loans as a measure of relief to the money market. On Oct. 3 the Bank of England advanced its rate of discount from 3½ to 4½ per cent., immediately following a rise by the Imperial Bank of Germany from 5 per cent. to 6 per cent., and on the 5th the Bank of England further advanced its rate to 5 per cent. The almost unprecedented occurrence of two advances in the rate of discount in one week by the Bank of England indicated extreme tension, which was clearly due to the rap-

idly developing acuteness in the relations between England and the Transvaal Government. The above-noted action by the Bank of England had a direct influence upon the exchange market, causing a fall in long and a rise in short sterling, rates being adjusted to conform to the higher discounts in London. After opening at \$4.81 to \$4.81½ for long, \$4.85½ to \$4.85½ for short, and \$4.86 to \$4.86½ for cables, rates for long declined to \$4.80½ to \$4.81, while those for short advanced to \$4.85½ to \$4.86, and those for cables to \$4.86½ to \$4.87. From these figures the whole market rose, and by the 19th rates had advanced to \$4.83½ to \$4.83½ for long, \$4.87½ to \$4.87½ for short, and \$4.88½ to \$4.88½ for cables. The rise, it may be noted, was directly due to the invasion of Natal by the Boers on the 11th. This news caused a sharp demand for exchange to cover bills previously sold. Moreover, the market was reported to be largely overdrawn, and hence the urgency of the inquiry for bills. After this demand subsided rates gradually fell off to the close of the month, when they were \$4.82½ to \$4.83 for long, \$4.86½ to \$4.86½ for short, and \$4.87½ to \$4.87½ for cables. The exchange market was influenced at the beginning of November by high rates for money, and later by the prospect of a less strained monetary situation through relief by the Treasury, and also by some relaxation in the tension of the discount market in London. Rates opened at \$4.83 to \$4.83½ for sixty-day, \$4.86½ to \$4.87 for sight, and \$4.87½ to \$4.88 for cables. Then there was a rapid fall until the 13th, due to dear money in this market, and rates on that date were \$4.80½ to \$4.81 for long, \$4.84½ to \$4.85 for short, and \$4.86 to \$4.86½ for cables. The market was further influenced by liberal offerings of commercial bills against cotton and breadstuffs, and also by drafts against sterling loans. After the announcement by the Treasury Department of the offer to buy \$25,000,000 bonds the exchange market sharply recovered, rates rising by the 17th to \$4.81½ to \$4.82 for long, \$4.86 to \$4.86½ for short, and \$4.87 to \$4.87½ for cables. A noteworthy feature was the movement in one week from rates almost low enough to permit gold imports to those which were almost high enough to justify gold exports. The market gradually grew weaker after the above-named date, affected by continued activity in money and by offerings of bills against purchases of stocks for European account, but it closed with a slight recovery at \$4.81 to \$4.81½ for long, \$4.86 to \$4.86½ for short, and \$4.87 to \$4.87½ for cables, influenced by the advance on the 30th of the Bank of England rate to 6 per cent. The tone was firm at the opening in December, with long unchanged at the above-noted figures, while short was higher at \$4.86½ to \$4.86½, and cables were advanced to \$4.87½ to \$4.87½. The Bank of France moved its rate of discount up to 3½ per cent. on the 7th, and the open-market rate at London grew firmer, more or less influencing our exchange market, which advanced with a firm tone. The news of the disastrous repulse of Gen. Buller by the Boers at Tugela river, near Chieveley, on the 15th, following the defeat of Gen. Gatacre at Stormberg on the 10th and of Gen. Methuen at Magersfontein on the 12th, caused consternation in England, and there was a security panic in London. The open-market discount rate consequently rose sharply, the Bank of England advanced the bid price for bar gold and for American eagles, and also offered to make advances on gold while in transit from New York. Influenced by these inducements, \$2,450,000 gold was

shipped hence to London on the 16th. Exchange grew firm, with figures adjusted to conform to the higher open-market rates in London, and the tone was strong. The Bank of France, it may be noted, advanced its rate of discount on the 21st to $4\frac{1}{2}$ per cent., while on the 19th the Imperial Bank of Germany advanced its rate from 6 per cent. to 7 per cent. Moreover, the Bank of France raised the premium on gold to rates which prohibited withdrawals of the metal from the bank for export. The crisis in money at this center on the 18th had a temporarily unsettling effect upon exchange. Offerings were, however, restricted, because of the almost entire absence of demand, and therefore rates did not show material declines. Later supplies of bankers' bills for remittance came largely from those drawn against gold exports, and, while there was a good supply of commercial drafts, they were promptly absorbed at full prices. The higher discount rates at London caused a gradual fall in long sterling in the third week of the month to $\$4.80\frac{3}{4}$ to $\$4.81$, while short sterling advanced to $\$4.87\frac{1}{4}$ to $\$4.87\frac{1}{2}$, and cables to $\$4.88\frac{1}{2}$ to $\$4.88\frac{3}{4}$. Gold to the amount of $\$5,425,000$ was shipped to London in the week ending the 20th, and in the last week of the year the shipment to London was $\$3,350,000$. The exchange market closed quite strong at $\$4.81\frac{1}{2}$ to $\$4.82$ for sixty-day, $\$4.87\frac{1}{4}$ to $\$4.87\frac{1}{2}$ for sight, and $\$4.88\frac{1}{2}$ to $\$4.89$ for cables.

Railroads.—The business of the railroads showed almost uninterrupted gains during the year. Tariffs were well maintained from the beginning to the end of the year, and the railroad traffic was so great in the fall that, notwithstanding large additions to the equipment of the principal lines, there was a remarkable dearth of transportation facilities. Among the notable events of the year was the successful readjustment scheme of the Central Pacific Railroad Company providing for the payment in full of the claims of the Government, amounting to $\$58,812,175$; the lease by the Southern Railway of important lines, including the Mobile and Birmingham, the Northern Alabama, and the South Carolina and Georgia; the purchase by a syndicate of the Chicago and Alton; an increase of $\$15,000,000$ in Great Northern stock; the sale by the Delaware and Hudson of its canal; the lease of the Boston and Albany by the New York Central; the purchase by the Baltimore and Ohio of the Baltimore and Ohio Southwestern; an increase in the capital of the Southern Pacific from $\$150,000,000$ to $\$200,000,000$ to acquire the Central Pacific; the consolidation of the Pullman and the Wagner Palace Car Companies; the increase of $\$15,000,000$ in the stock of the New York Central to provide for 15,000 additional cars; the purchase by a syndicate of the interests of the Crocker and of the Stanford estates in the Southern Pacific; the authorization by the Pennsylvania Railroad Company of an allotment of $\$13,000,000$ stock to provide for new equipment and construction; and the acquirement by the Hocking Valley of control of the Toledo and Ohio Central. Dividends were increased by the Burlington, Cedar Rapids and Northern, the St. Paul and Omaha, the Louisville and Nashville, the Union Pacific, the New York Central, the Chicago and Northwestern, the Boston and Maine, and by other more or less important roads. Dividends were declared for the first time by the Iowa Central on its preferred stock; by the Chicago, Indianapolis and Louisville on its preferred stock; by the Chesapeake and Ohio; by the Evansville and Terre Haute; by the Hocking Valley; by the Pittsburg, Bessemer and Lake Erie; and by the

Flint and Père Marquette. One notable event was the acquirement by parties interested in the New York, Ontario and Western of the coal properties of the Lackawanna Iron and Steel Company in the vicinity of Scranton, Pa., estimated to contain from 25,000,000 to 30,000,000 tons of anthracite coal. It is noteworthy that very few foreclosure proceedings were instituted during the year, indicating the prevalence of prosperous conditions throughout the country. The Baltimore and Ohio receivership was terminated June 30, and later large purchases of the stock by the president of the Great Northern gave some color to a rumor that a close alliance between the two roads was contemplated.

The listings of railroad bonds on the Stock Exchange during the year amounted to $\$446,634,000$, and of new railroad stocks to $\$410,716,630$. Of the $\$525,384,240$ of bonds of all companies listed, $\$154,304,760$ represented new issues, $\$22,908,000$ old issues newly listed, and $\$346,171,480$ for replacing old securities. Of the $\$704,172,605$ stocks listed, including railroad and miscellaneous companies, $\$311,420,285$ represented new issues and $\$392,752,320$ for replacing old securities. The above-noted total of stocks listed was greater by $\$175,918,609$ than the total listings in 1898, and larger than the listings in ten years. The stocks placed on the "unlisted" department of the Stock Exchange, including those of 11 industrial corporations, those of the Brooklyn Rapid Transit Company, and of the Wagner Palace Car Company, amounted to $\$286,313,650$ common and $\$142,187,400$ preferred, a total of $\$428,501,050$.

The following shows gross and net earnings of the trunk lines:

ROADS.	1897-'98.	1898-'99.
PENNSYLVANIA:		
Gross earnings.....	$\$65,603,612$	$\$72,922,812$
Net earnings.....	$20,659,962$	$22,144,462$
NEW YORK CENTRAL:		
Gross earnings.....	$45,774,240$	$46,184,658$
Net earnings.....	$16,263,226$	$17,055,076$
ERIE:		
Gross earnings.....	$33,740,861$	$33,752,703$
Net earnings.....	$8,302,822$	$8,582,778$
BALTIMORE AND OHIO:		
Gross earnings.....	$28,524,537$	$30,430,623$
Net earnings.....	$7,351,526$	$8,873,548$

Manufacturing Industries.—The most notable feature of the year was the enormous increase in the organization of industrial concerns, elsewhere referred to. There was marvelous improvement in the iron and steel industry during 1899. Production of iron steadily increased, the demand was urgent, unsold stocks were depleted, and prices were more than doubled. At the end of the year the pig-iron production was 296,959 tons per week, or at the rate of 15,500,000 tons per annum, against an output of 11,773,934 tons in 1898. The price of Bessemer pig iron at Pittsburg at the end of 1898 was $\$10.64$ per ton, while at the close of 1899 it was $\$25$ per ton. Steel billets advanced from $\$15.90$ per ton in December, 1898, to $\$36.37$ in the same month of 1899. Steel rails and, indeed, all manufactures of steel were in urgent request, particularly in the latter part of the year, and the principal railroads bought largely of rails and equipment, while the export demand for iron and steel products was entirely unprecedented. There was also a great expansion in the cotton-manufacturing industry not only at the South, but in New England. Standard print cloths at Fall River advanced from $2\frac{3}{4}$ to $3\frac{1}{2}$ cents per yard, and, under the influence of the improved condition of the industry, wages of opera-

tives were increased to the highest figures on record in recent years. The woolen industry was not so active as was that of cotton until after the middle of the year; then it gradually improved, and its condition was thereafter very satisfactory. Though there was less marked improvement in other lines of industry, all were prosperous. The dry-goods trade was exceedingly profitable throughout the greater part of the year in all branches, and consumption appeared to be largely in excess of production, causing generally advancing prices. Indeed, not since the resumption of gold payments was activity in trade and manufactures so general.

Commercial failures during the year numbered 9,337, the smallest since 1883, when they were 9,184. The liabilities amounted to \$90,879,889, against \$130,662,899 in the previous year, and they were the lowest since 1881, when \$81,155,933 were recorded. It is noteworthy that not only were the liabilities smaller in the aggregate, but they were less also in both manufacturing and trading in every section of the country, except New England, where the financial troubles in December involved several manufacturing concerns with heavy liabilities, though their failures were not due to the condition of their trade. Such uniformity of improvement throughout the country is extremely rare, indicating the exceptionally prosperous and sound business conditions prevailing during the year.

Exports of manufactures during 1899 were \$380,787,891, against \$307,924,994 in 1898, \$279,652,721 in 1897, and \$253,690,533 in 1896.

FINE ARTS IN 1899. Under this title are treated the principal art events of the year ending with December, 1899, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris.—As in 1898, the two Salons were obliged, on account of the preparations for the Universal Exposition of 1900, to give their exhibitions side by side in the Galerie des Machines, which after the close will be transformed into a Salle des Fêtes for the coming exposition. A single admission gave access to both exhibitions, the Société des Artistes Français receiving two thirds and the Société Nationale des Beaux Arts one third of the receipts. In the future art exhibitions will be held in the new Palais des Beaux Arts, now building in the Champs Elysées.

Paris: Salon of the Artistes Français.—The Société des Artistes Français elected the following officers for the year: Honorary Presidents, Léon Bonnat, Édouard Detaille; President, Jean Paul Laurens; Vice-Presidents, Benoit Édouard Loviot, Emmanuel Frémiet; Corresponding Secretary, Tony Robert-Fleury; Treasurer, Émile André Poisseau; Secretaries, Albert Maignan, Auguste Bartholdi, Jean Louis Pascal, Augustin Mongin.

The annual exhibition (May 1 to June 30) comprised 5,152 numbers, classified as follows: Paintings, 2,033; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 1,110; sculptures, 868; engraving on medals and precious stones, 111; decorative art, 244; architecture, 263; engraving and lithography, 523.

The following are the honorary awards for 1899: Section of Painting: Medal of honor, Francis Tattetgrain, Saint-Quentin pris d'Assaut. No first-class medal awarded. Second-class medals: Alberto Pla y Rubio, La Guerre; Hubert Denis Etcheverry, Les Nounous—Arigeoise et Bretonne; Fulop Laszlo, portraits; Désiré Lucas, Y a Personne?—Intérieur de Ferme Bretonne; Émile Boggio, Labor; Louis Lemaire, Pivoines et Rosier

Grimpant; Marcel Rieder, Nocturne; Henry Perreault, Défense héroïque du Col de Banyuls; Pascal Blanchard, portraits; Ernest Gaston Marché, Automne; Edmond Borchard, Un Coup de Collier—Concarneau; Jean Eugène Julien Massé, Les Clos à Vaux-Harlin; Jean Laronze, Le Calme; Charles Hoffbauer, Les Gueux; Antonin Mercié, Colère d'Amour; Maurice Demonts, Les Sorcières; Henry Gaston Darien, Marché aux Oiseaux—Paris; Amédée Buffet, Jésus à Béthanie; Victor Bourgeois, Fin de Rude Journée—Marafichers Picards; Paul Sébilleau, Le Lever de la Lune au Golfe Juan. Third-class medals: Adrien Moreau-Neret, Georges Lavergne, Louis Alexandre Cabié, L. Jean-Pierre, Henri Zo, Léon Eugène Géroème Dambeza, Henri Thierrot, Jacques Camoreyt, Marius Bartholot, Prosper Piatti, Jules Pagès, Maurice Chabas, Alexandre Chantron, William Édouard Laparra, Theo Henri Mayan, Henry Grosjean, Albert Decamps, Jules Victor Verdier, Mme. Gruyer-Brielman, Paul Eugène Sieffert, Victor Tardieu, Paul Place-Canton, Henry Mourin, Mlle. Hedda Stoffregen, Frederick Melville du Mond, Alfred Renaudin, Edmond de Palézieux, John Noble Barlow.

Section of Sculpture: Medal of honor, Ernest Dubois, Le Pardon (marble group). First-class medals: Aimé Octobre, Le Remords (marble group); Jean Carlus (bronze and granite monument); Jean Boucher, Un Soir (marble group). Second-class medals: Jacques Louis Villeneuve, Jules Grosjean, Roger Bloche, Pierre Laurent, Mlle. Jeanne Itasse, Charles Louis Picaud, Sylvain Kinsburger, Paul Mélin, Paul Breton, Charles Perron, Ferdinand Faivre. Third-class medals: Mme. Marguerite Syamour, Albert Guilloux, Frederic Pierre Tourte, Nicolas Grandmaison, Paul Moreau-Vauthier, Pierre Aubert, Marie Pierre Curillon, Richard E. Brooks, Paul Auban.

Section of Architecture. Medal of honor, Édouard Loviot, Grande Salle des Fêtes et Cérémonies and Exposition de l'Agriculture for the exposition of 1900. First-class medals: Henri Paul Hannotin, Projet de Sanatorium; Félix Bouthon, État Actuel et Restauration des Thermes d'Augusta Trevirorum (IV^e Siècle); Alexandre Maistrasse, in collaboration with Marcel Berger, Projet de Salle des Fêtes pour Aubervilliers. Second-class medals: Benjamin François Chaussemiche, Georges Balleyguier, Paul Édouard Heuneux, Jean Laborey, Joseph Charles Chausspiéd. Third-class medals: Gabriel Belestia and Joseph Thillet, Max Sainsaulieu, Fernand Jules Bourdilliat, Louis Charles Guinot.

Section of Engraving and Lithography: Medal of honor, Aristide Lionel le Conteux (etching). First-class medal, William Barbotin (engraving). Second-class medals: Louis Jean Muller (etching), Joseph Sourbier (lithograph), Eugène Juillerat (lithograph). Third-class medals: Julien Deturek, Lucien Pénat, Georges Antonin Lopisgich, Georges Serrier, Pierre Gustave Taverne, Antoine Martin, Mlle. Marguerite Vernaut, Eugène Dété, Victor Dutirtre, Léonard Antoine Jarraud.

The great picture to which the medal of honor was awarded—Tattetgrain's Saint-Quentin pris d'Assaut—exhibits the flight of the inhabitants of the town after its capture in 1557 by the army of Philip II under the Duke of Savoy. Women of all ages, with disheveled hair and terrified faces, accompanied by many children, crowd the streets, hurrying frantically between burning houses, the walls of some of which are falling in on them. It is a striking illustration of war's horrors.

Another great canvas, by Rochegrosse, L'Assassinat de l'Empereur Geta, represents the young emperor hiding despairingly under the robe of

his mother, Julia Domna, who herself is mad with terror at the sight of the daggers of the assassins. The picture is strong and rich in color.

L'Exécution des Pazzi, by Barbin, illustrates a mediæval horror, the punishment of the Pazzis for their participation in the conspiracy against the Medici in Florence in 1478.

Leftwich Dodge contributed a large picture, *The Conquest of Mexico* by Hernando Cortez, which shows all the horrors of the war of the conquest concentrated in the great temple, the staircase of which is strewn with dead and wounded. The composition is strong and very effective.

A masterly shipwreck scene was exhibited by Émile Maillard, with terrific waves sweeping over a vessel whose bulwarks are partly gone. The captain, clinging to the mast, which is about to fall, is giving the order to cast off the boats, already crowded with people, while frightened passengers run on the deck and a priest and some sisters raise their hands to Heaven.

M. Rubé exhibited a powerful picture of a Spanish soldier, who, having lost his sight in the Cuban war, is groping along the wall as he enters the house of his sympathizing mother. *The Funeral of Cæsar*, by Piatti, an Italian painter, contains many figures in diverse attitudes and costumes, and shows much conscientious work. *The Triumph of Toulouse*, by Jean Paul Laurens, is a vast composition, which attracted universal attention. *Le Sermon sur le Bord du Lac*, by M. Du Gardier, is an impressive picture, representing Christ preaching to the fishermen, who are listening with the attention of conviction.

One of the curiosities of the exhibition was Louis Béroud's *Salon Carré du Louvre*, showing the fairies that inspire great artists coming to breathe with flowers their most celebrated canvases—Correggio's *Antiope*, Rembrandt's *Old Philosopher*, and Guido's *Rape of Dejanira*. Another singular picture, by M. Piatosky, exhibits *Death*, who has just come out of a house in which he has left a corpse, crossing a garden full of verdure and flowers, while dogs howl at him.

Paris: Salon of the Société Nationale.—The tenth annual exhibition of the Société Nationale des Beaux Arts comprised 2,854 numbers, of which 1,492 were paintings, 622 designs, drawings, etc., 167 engravings, 147 sculptures, 360 art objects, and 66 architecture.

Among the exhibits, Boutet de Monvel's *Joan of Arc* recognizing the King received much attention. The picture is executed like an old missal, without shadows, and is remarkable in detail, the ladies of the court of Charles VII being dressed in real brocade. The heads are excellently drawn, and the whole composition very skillful.

Homage à Puvis de Chavannes, by Guillaume Dubufe, is a large picture in the style of the great, decorative painter, representing him seated in an attitude of meditation, while two nereids approach holding a gold palm over his head. The background is a reproduction of one of Puvis de Chavannes's compositions.

Une Lutte de Femmes, by Jean Veber, is a singular picture, the scene of which is located, perhaps ironically, in Devonshire, England. It represents two stout matrons, completely nude, engaged in a wrestling match on a platform, surrounded by a crowd of women spectators.

A new *Angelus* picture, *L'Heure de l'Angelus*, by Aimé Perret, bears no resemblance to Millet's famous picture, but is the work of a true artist. It represents a young goose girl standing against

a twilight sky, forming an exquisite and poetical statue.

A triptych, entitled *Eden*, by Levy-Dhurmer, represents in the first panel Eve listening to the serpent's bad advice; in the second, she shares with Adam the lessons thus imparted to her; and in the third, regrets all in the midst of a landscape planted with cypress. In another triptych, by Rondel, the middle panel is devoted to *Fra Angelico's Prayer to the Virgin*, while the other two, suggestive of the anachronism of Dagnan-Bouveret in his Christ with his Disciples at Emmaus, are occupied by the faithful in the costumes of to-day.

Conspicuous in the exhibition of sculpture was Augustus St. Gaudens's equestrian statue of Gen. Sherman. The general is firmly seated on a capering horse in a modest and dignified attitude, but with a face that betokens a victor. Rodin's *Eve après sa Faute*, in bronze, is a powerful group, rivaling in grandeur the works of the Italian masters of the sixteenth century. *The Struggle for Life*, by Cordier, representing two lions fighting, is a work exhibiting great anatomical skill and artistic treatment.

London: Royal Academy.—The thirtieth annual winter exhibition, devoted to the works of Rembrandt, is said to have been superior to the Rembrandt Exhibition of 1898 at Amsterdam. Among the exhibits was the large picture of 1633, from Buckingham Palace, *The Shipbuilder and his Wife*, one of the best examples of the painter's early work. Other canvases were: *The Young Gentleman with a Hawk*, *The Lady with a Fan*, *The Lady with a Parrot*, *Belshazzar's Feast*, *A Man in Armor*, *A Man with a Sword*, *Lord Ilchester's Rembrandt* in a Yellow Gabardine, and *Lord Iveagh's famous Rembrandt*, which stands alone in portraiture.

The one hundred and thirty-first summer exhibition, which comprised more than 2,000 exhibits, was fully up to the general standard, having, besides its oil pictures, a goodly representation in sculpture, water colors, and miniatures. Many of the more prominent painters, among them Sir E. J. Poynter, Prof. Herkomer, and Messrs. Orchardson, Yeames, Watts, and Fildes, sent only portraits. Alma-Tadema contributed a large picture, entitled *Thermæ Antoniane*, a scene in the baths of Caracalla, in which are introduced many gay groups illustrative of the frivolous society under the decaying empire.

The Coasts of the Sirens, by J. Olsson, a successful rendition of classic romance, shows the sirens in a cavern, out of the semi-darkness of which are seen opposite cliffs and ships with orange-tawny sails passing in strong sunlight.

Val Prinsep's *Cinderella* represents a rustic maiden, possessing a good share of natural charms, as becomes a princess in disguise, seated in the chimney corner, holding wood in her apron, as if tending the fire that blazes under the hanging pot. She is clad in a dark-blue dress, making a pleasing contrast with the glowing orange of the pumpkins at her side.

On the Road to Mandalay, by F. Goodall, introduces a Tommy Atkins in khaki, the somber color of which assorts with the pink, white, and purple garments of a Burmese maiden who propitiates him with an offering of champak flowers.

God save the Queen, by John Charlton, shows the portico of St. Paul's, as seen from the south corner, with the royal carriage in the center and her Majesty's bodyguard of Indian cavalry, in their uniforms of blue and red and their head gear of cloth of gold, in the foreground.

Another brilliant representation of the same

event is Mr. Gow's *St. Paul's: The Queen's Diamond Jubilee*, a commission for the Guildhall Gallery. It represents the west front of *St. Paul's*, and the figures are larger than those of Mr. Charlton.

Perseus and Andromeda, by A. T. Nowell, exhibits a nude *Andromeda* escaping from the folds of the dragon, which *Perseus* is spearing. Among other noteworthy pictures are: *Love the Conqueror*, by Byam Shaw; *My Lady's Garden*, by J. Young Hunter; *O Mistress mine, where are you Roaming?* by Edwin Abbey; *The Diver*, by Henry Tuke; and *Laus Deo*, by Solomon J. Solomon.

Among the best pictures of the year were J. S. Sargent's portraits of Mrs. C. Hunter, Miss Octavia Hill, Miss J. Evans, and Lady Faudel-Phillips.

London: New Gallery.—The winter exhibition was devoted to the works of the late Sir Edward Burne-Jones. It is doubtful if so complete an exposition of his art will ever be gathered together again, for very few of the greater productions of the different stages of his career were absent from the collection. Among many other notable pictures, we may mention *The Merciful Knight*, *Danaë's Tower*, *Pan and Psyche*, *Love and the Pilgrim*, *The Prioress's Tale*, *The Depths of the Sea*, *Merlin and Vivien*, *Laus Veneris*, *King Cophetua* and the *Beggar Maid*, *The Mirror of Venus*, *The Hesperides*, *The Golden Stairs*, *The Wheel of Fortune*, *The Annunciation*, *The Wine of Circe*, the unfinished *Triumph of Love*, and many portraits, sketches, and designs.

London: Guildhall Exhibition.—The corporation of London exhibited this year a splendid collection of the works of England's greatest landscape painter, J. M. W. Turner. The oil painting ranged over a period of fifty years, from 1799 to 1849, the earliest example being *Kilgarren Castle*. Among others were: *Calais Pier*, *The Victory bringing Home the Body of Nelson after Trafalgar*, *The Wreck of the Minotaur*, *Mercury and Hersé*, *The Falls of Terni*, *Apollo and the Python*, *Dido building Carthage*, *Snowdon*, *The Campo Santo*, *Venice*, *The Bridge of Narni*, and *The Marriage of the Adriatic*, the last named having been for many years in the possession of Mr. Ruskin. The exhibition was one of the notable ones of the season.

London: Miscellaneous.—In the picture sales of 1899 28 canvases were sold for 1,400 guineas and over, while in the sales of 1898 15 only exceeded that amount.

The Sir John Fowler collection realized for 91 lots over £65,000, an average of over £700 per lot. The London Art Journal makes an interesting comparison between this and some previous notable sales, in which the total sums realized were as follow: Ruston sale (1898), £45,995; Pender (1897), £75,916; Goldsmid (1896), £67,342; James Price (1895), £87,144; Adrian Hope (1894), £49,884; Dudley (1892), £99,564; Murieta (1892), £50,592; David Price (1892), £69,577; Wells (1890), £78,312; Bolekow (1888), £66,567; Becket-Denison (1885), £71,050.

Among the highest prices obtained at the Fowler sale were: *Hobbema*, a noble landscape (41 by 50 inches), 9,100 guineas. It had been for four generations in the family of Richard Ford, author of the *Guide to Spain*, from which it was purchased in 1871 by Sir John Fowler for £3,100. *Turner*, *View of Venice*, 8,200 guineas; *View of Oxford from the Abingdon Road*, 4,000 guineas; *Lake of Nemi* (water color), 3,000 guineas; *Temple of Jupiter* (water color), 1,700 guineas; *Edin-*

burgh (water color), 1,000 guineas; *Lucerne* (water color, painted for Ruskin), 1,300 guineas. *Landseer*, *Ptarmigan Hill*, 2,000 guineas. *Phillip*, *A Chat around the Brasiro*, 2,700 guineas. *W. Muller*, *Slave Market, Cairo*, 1,300 guineas; *View of Gillingham*, 1,500 guineas. *W. Collins*, *Sunday Morning*, 1,380 guineas. *Greuze*, *La Petite Mathématicienne*, 1,680 guineas. *Meissonier*, *The Smoker*, 1,280 guineas. *Rosa Bonheur*, *Highland Cattle*, 1,450 guineas. *Sir John Fowler*, it will be remembered, was the engineer of the great *Forth Bridge*. His collection had been the work of thirty years.

Three important works of Rubens from the famous Lee Court collection were sold on May 13: *The Holy Family*, 8,300 guineas; *The Conversion of Saul*, 1,950 guineas; *The Woman taken in Adultery*, 1,950 guineas. On the same day 14 of Lord Methuen's pictures were sold, including *Lorenzo di Credi*, *Virgin Enthroned*, 680 guineas; *Gentile da Fabriano*, *Coronation of the Virgin*, 560 guineas; and *Andrea del Sarto*, *The Painter's Portrait*, 890 guineas. Among miscellaneous properties, two portraits by Franz Hals brought respectively 3,000 and 2,000 guineas, for which the late owner had paid £100 apiece. *Romney's Mrs. Francis Newbery* fetched 1,650 guineas; *J. Hoppner's Harriet Westbrook*, wife of Shelley, 1,380 guineas; and a portrait of a young girl, by *Raeburn*, 1,900 guineas.

In a composite sale in June a portrait of Sir Walter Scott, by Sir J. Watson Graham, brought 1,500 guineas; *Reynolds*, portrait of John Hely Hutchinson, 1,250 guineas; Sir H. Raeburn, Mrs. F. Robertson Reid, 1,320 guineas; *Murillo*, Christ bearing the Cross, 700 guineas; *G. Morland*, Farm Scene, 850 guineas; and *Hobbema*, *Woody Landscape*, 620 guineas.

The sale of the collection of R. Paterson Pattison included a few interesting works: *G. Romney*, *Viscountess Melville*, 900 guineas, and *Lady Hamilton*, 910 guineas; *J. Maris*, *Town on Dutch River*, 500 guineas, and *Dutch Fishing Boat Ashore*, 1,350 guineas.

At a sale by Messrs. Agnew in July a portrait of a young lady, a replica of an early Lawrence, attributed by error to Reynolds, fetched 2,800 guineas. *La Musette*, by Watteau, brought 1,380 guineas, and *Strolling Players*, by Landseer, 350 guineas.

The committee of the Burne-Jones Memorial fund, charged with the selection of one of his pictures for the National Gallery, have fixed upon *King Cophetua* and the *Beggar Maid*, for which £6,500 is asked. This choice, which many think does not represent the artist at his best, has met with considerable criticism.

Antwerp.—The tercentenary of Van Dyck was commemorated by an exhibition of his works, by a grand civic display, and by other celebrations. The collection of pictures, gathered from the galleries and churches of his own country and from many foreign galleries, gave the best opportunity possible of studying the several periods of his art. Many examples were sent from England, the Queen contributing three from Windsor Castle—the head of Charles I in three positions, his three children, and the portrait group Killigrew and Carew. The Dukes of Devonshire, Portland, Westminster, and Norfolk, Lords Spencer, Sackville, and Darnley, and other English owners were represented by contributions from their galleries, and Italy, France, Germany, Austria, and Russia lent important examples of the great master.

An interesting feature of the celebration was a magnificent procession organized by the artists of Antwerp, representing the progress of art

through the ages. Preceded by the images of the traditional patrons of Antwerp, the giant Antigonous and his wife, group after group typical of all nations and ages, marched through the Grande Place before the Hôtel de Ville, where were gathered the civil and military authorities and the art representatives and guests from all the academies of Europe. Egyptians and Assyrians, Greeks and Romans, were followed by the various renaissances, the crowning feature being Rubens and his School and the Homage to Sir Anthony Van Dyck. Besides this grand display, the opening ceremonies were simple but full of dignity.

Dresden.—The National Fine Arts Exhibition (April 20 to Sept. 17) was very successful. Of its 1,500 entries, 550 were paintings, 350 sculptures, and 600 drawings and engravings.

Madrid.—The third centenary of the birth of Velasquez was celebrated in June by commemorative *fêtes*, in which all the societies of art and science in Spain took part, and in an exhibition of the painter's works. For this purpose all his pictures in the various public galleries, in the churches, and in private collections were assembled in the National Museum. A statue of Velasquez was unveiled in the Prado.

Venice.—The third International Art Exhibition of specimens of contemporary art from all over the world was a pronounced success, and attracted many thousand visitors. It owed its origin to a former mayor of Venice, Signor Selvatico, whose object is to stimulate the Venetians to make their city once more a home of art.

New York: National Academy of Design.—The officers for 1899-1900 are as follow: President, Frederick Dielman; Vice-President, J. G. Brown; Corresponding Secretary, Harry W. Watrous; Recording Secretary, George H. Smillie; Treasurer, Lockwood De Forest; Council, B. West Clinedinst, H. Bolton Jones, J. Carroll Beckwith, C. D. Weldon, C. Y. Turner, and H. Siddons Mowbray. Academicians elected: Herbert Adams, George Inness, Jr., and Douglas Volk; associates, George H. Bogert, Louis Paul Dessar, Leonard Ochtman, Edward H. Potthast, F. K. M. Rehn, and Robert Vonnoh. The Academy has 98 academicians and 58 associates.

The seventy-fourth annual exhibition (April 3 to May 13) contained 344 numbers, of which 329 were pictures. The prizes of the year were awarded as follow: The Thomas B. Clarke prize (\$300), for the best American figure composition, to Edward Potthast for his *Village Carpenter*; the first Julius Hallgarten prize (\$300) to George H. Bogert for his *September Evening*; the second Hallgarten prize (\$200) to Louis Paul Dessar for his *Portrait, Mrs. Ruthrauff*; the third Hallgarten prize (\$100) to Carl J. Blenner for his *The Letter*; and the Norman W. Dodge prize (\$300), for the best picture painted by a woman, to Matilda Browne, for her *The Last Load*. Among the best of the exhibits were Childe Hassam's *The Sea*, Horatio Walker's *Oxen Drinking*, Cecilia Beaux's double portrait of Mr. and Mrs. Anson Phelps Stokes, John F. Weir's portrait of Dean Wayland, of the Yale Law School, Howard Russell Butler's *Wave*, Henry Mosler's *The Coquette*, and George Inness, Jr.'s, *The Last Shadow of the Cross*.

A sentimental interest was attached to this exhibition, as it was the last annual display in the Venetian building at Fourth Avenue and Twenty-third Street, where the Academy has been housed for the past twenty-five years. The next exhibition will be held in the American Fine Arts Building, in Fifty-seventh Street; after that the Academy will occupy temporary quarters, now building on its new site on Morningside Heights,

until the erection of the new National Academy of Design.

New York: National Arts Club.—The organization of this new association, which has its first home at 37 West Thirty-fourth Street, has been perfected as follows: President, George B. Post; Treasurer, Spencer Trask; Secretary and Managing Director, Charles De Kay; chairman of House Committee, Samuel T. Shaw; chairman of Exhibition Committee, Charles R. Lamb; chairman of Library Committee, Richard Watson Gilder. A fire-proof gallery for exhibitions has been constructed, in connection with which are the general reading and assembly rooms, for the use of both women and men members. The second floor is devoted to women alone, and the third floor to the exclusive use of men. The club gave its formal opening in October.

New York: National Sculpture Society.—The Dewey Triumphal Arch, erected on Fifth Avenue at Madison Square as a part of the grand reception given by the city to Admiral George Dewey on Sept. 30, was planned and erected by the society, the members of which gave their services gratuitously to its construction and decoration. The architect of the scheme was Charles R. Lamb. The arch, with a single archway north and south and a transverse smaller archway east and west, was approached on each *façade* through an avenue of Corinthian columns in pairs, each pair fronted by a figure of Victory, the work of Herbert Adams. At the entrance of these avenues the columns were in threes, each trio faced with sculptured groups, those on the north symbolizing respectively the East Indies, by Charles A. Lopez, and the West Indies, by Isidore Konti; those on the south, The Army, by F. W. Ruckstuhl, and The Navy, by George E. Bissell. Each *façade* of the arch was ornamented with four Corinthian columns supporting an entablature, above which was an attic adorned with statues of naval heroes, the whole surmounted by an allegorical group, Naval Victory, by J. Q. A. Ward, representing Victory standing in a floating chariot drawn by Tritons. Between the columns, on each front, were symbolical sculptured groups: To Arms, by Philip Martiny; The Combat, by Karl Bitter; Peace, by Daniel C. French; and The Triumphal Return, by Charles H. Niehaus. The statues on the attic, surmounting each column, were: Commodore Decatur, by George T. Brewster; Commodore MacDonough, by Thomas S. Clarke; Commodore Paul Jones, by E. C. Potter; Commodore Hull, by H. K. Bush-Brown; Commodore Perry, by J. S. Hartley; Lieut. Cushing, by H. A. Lukeman; and Admiral Farragut, by W. O. Partridge. In the spandrels of the arch were symbolic sculptures—on one face The Atlantic and The Pacific, by R. H. Perry, and on the other The North River and The East River, by Isidore Konti. On the east and west faces of the arch were bas-reliefs, The Progress of Civilization, by Johannes Gellert, and Protection of Our Country, by William Couper; and medallions showing the heads of naval heroes: Capt. Lawrence, by Henry Baerer; Commodore Preble, by C. F. Hamann; Admiral Foote and Admiral Worden, by Frederick Moynihan; Commodore Bainbridge, by Ralph Goddard; Admiral Dahlgren, by Caspar Buberl; and Commodore Barry and Admiral Davis, by F. W. Kaldenberg.

The arch and its approaches, constructed of staff on a wooden superstructure, was completed within six weeks. It proved so successful a part of the celebration that a proposition for its perpetuation in marble and bronze has met with almost universal approval.

New York: Society of American Artists.—The twenty-first annual exhibition was held in the Fine Arts Society Building from March 24 to April 29.

The Shaw fund of \$1,500, awarded annually for the purchase of a figure composition in oil by an American artist, was given to Douglas Volk for his *Woodland Maid*. The Webb prize of \$300, for the best landscape in the exhibition painted by an American artist under forty years of age, was awarded to W. L. Lathrop for his *Clouds and Hills*.

The exhibition comprised 354 numbers, including a few miniatures, bronze medallions, and sculptures. Among the noteworthy exhibits were portraits and figure pieces by John W. Alexander, Albert Herter, Kenneth Frazier, Miss Lydia Field Emmet, Miss Louise L. Huestis, Carroll Beckwith, A. H. Thayer, Francis Lathrop, Will H. Low, and Kenyon Cox. The exhibition was, as usual, rich in landscapes, among the best of which were Bolton Jones's *Afternoon by the River*, D. W. Tryon's *Early Spring in New England*, Walter Nettleton's *Breaking up of Winter*—Stockbridge, and several by Birge Harrison. The place of honor was given to Dagnan-Bouveret's great picture, *Christ with his Disciples at Emmaus*, the gift of Mr. Henry C. Frick to the Carnegie Institute of Pittsburgh, and loaned by the institute to the Society of American Artists for the exhibition. This picture, which was briefly noticed last year, is worthy of further mention on account of the curious whim of the artist, who, in imitation of the practice of early Italian and German painters, has included in the group, beside the two disciples, himself, his wife, and his son, all in modern Parisian costume. Dagnan-Bouveret himself is standing—for "no man kneels," he is reported to have said—while his wife and boy are on their knees in devotion. Although this absurd anachronism renders the picture in a measure incongruous to any but a French eye, its broad treatment and masterly execution, especially in the management of the light, make it one of the most noteworthy pictures of modern times.

New York: Society of Landscape Painters.—The first annual exhibition of this new association, held at the American Art Galleries, March 24 to April 5, comprised 184 numbers, of which 61 were water colors. The members of the society are George H. Bogert, Walter Clark, William A. Coffin, Bruce Crane, Charles H. Davis, R. Swain Gifford, Frederick Kost, J. Francis Murphy, Robert C. Minor, Leonard Ochtman, Walter Palmer, and Carleton Wiggins.

New York: Ten American Painters.—This association, made up of disaffected members of the Society of American Artists, held its second annual exhibition (April 4 to 15) at the Durand-Ruel Galleries. Twenty-three pictures were contributed by nine of the members.

New York: Miscellaneous.—The principal art sale of the season was that of the pictures and art objects forming the collection of Thomas B. Clarke, which were disposed of in February at the American Art Galleries. The amount realized by the four nights' sale of paintings (372 works by American artists) was \$234,495, and the total of the sale, including bronzes and other art objects, was \$306,943. Among the best prices obtained for pictures were: George Inness, *Gray Lowery Day*, \$10,150; *Clouded Sun*, \$6,100; *White Mountain Valley*, \$3,100; *Nine o'Clock*, \$3,100; *Winter Evening*, \$3,650; *Wood Gatherers*, \$5,600; *Sunny Autumn Day*, \$4,100; *Twilight*, \$1,600; *September Afternoon*, \$1,500; *New England Valley*, \$2,050; *Harvest Moon*, \$2,700; *Path through*

the Florida Pines, \$1,650; *Sunset in the Old Orchard*, \$1,080; *Afternoon Glow*—Pompton, N. J., \$1,650; *End of the Rain*, \$1,550; *Autumn Silence*, \$1,325; *The Mill Pond*, \$1,400. Homer Martin, *Adirondack Scenery*, \$5,500; *Head Waters of the Hudson*, \$1,500. Winslow Homer, *Coast in Winter*, \$2,625; *The Lookout*—All's Well, \$3,200; *The West Wind*, \$1,625; *Maine Coast*, \$4,400; *The Life Line*, \$4,500; *The Gale*, \$1,625. A. P. Ryder, *Temple of the Mind*, \$2,250. A. H. Wyant, *Mountain and Lake*, \$1,200; *Early Morning*, \$1,800. William M. Chase, *A Coquette*, \$1,500. D. W. Tryon, *The End of Day*, \$2,050; *A Dewy Night*—Moonrise, \$1,000. Charles H. Davis, *The Deepening Shadows*, \$1,100. Charles Melville Dewey, *Edge of the Forest*, \$1,050. Louis Moeller, *Puzzled*, \$1,525. George Fuller, *A Romany Girl*, \$4,100. William L. Picknell, *The Road to Concarneau*, \$1,100.

The Appellate Court Building, on Madison Avenue and Twenty-fifth Street, New York, which was thrown open to public inspection in December, is worthy of special notice as being one of the few public buildings in the United States produced by the co-operation of the arts of architecture, sculpture, and painting. Mr. James Brown Lord, the architect, to whom is due the effective collaboration of the various artists whom he called to his aid, has produced one of the most artistic and impressive structures in the country. The material is of pure white marble, with the substructure and steps of granite. The design is classic, with a portico in the middle of the southern *façade* composed of six Corinthian columns, supporting a pediment, to be filled by a composition by Charles H. Niehaus representing the *Triumph of Law over Anarchy*. Two seated colossal figures, *Force* and *Wisdom*, are to occupy bases on each side of the entrance steps, and allegorical groups—*Justice*, by Daniel C. French, and *Peace*, by Karl Bitter—are to fill the east and west pediments. A series of figures representing eminent jurists of the past, by J. S. Hartley, J. T. Donoghue, Herbert Adams, H. K. Bush-Brown, A. Lukeman, George E. Bissell, Charles A. Lopez, Philip Martiny, E. C. Potter, and William Cowper, are to occupy the upper balustrade and fill the sky line.

The interior, rich with marble, onyx, and carved oak paneling, has been decorated by some of our best mural painters, including H. Siddons Mowbray, Robert Reid, Willard Metcalf, C. Y. Turner, H. O. Walker, Edward Simmons, Edwin H. Blashfield, George W. Maynard, Kenyon Cox, and Joseph W. Lauber. The most important panels are those on the east wall of the courtroom, opposite the dais of the justices. The center one, by Walker, represents *Wisdom*, attended on one side by *Learning*, *Experience*, *Humility*, and *Love*, and on the other by *Faith*, *Patience*, *Doubt*, and *Inspiration*. The right panel, by Blashfield, represents the *Power of the Law*. Law, who draws her sword in behalf of *Appeal*, is attended by black-gowned magistrates and by a Roman magistrate representing *Civil Law*, an Anglo-Saxon, *Common Law*, and a bishop, *Canon Law*. Above, two flying female figures are about to crown Law. The left panel, by Simmons, represents the *Justice of the Law*. Justice occupies the center, with *Peace* recoiling from *Brute Force*, withheld by *Fear*, on the left, and *Plenty* assisting the *Needy*, with *Labor* behind her, on the right.

Of the other decorations, a frieze by Kenyon Cox on the west wall represents the *Reign of Law*, and many small panels between the windows and pilasters, by Lauber, treat numerous allegorical subjects. The main hall is decorated

by beautiful and appropriate friezes and panels by Mowbray, Metcalf, Reid, and Turner; and the library, the robing rooms, and other apartments are furnished in a style harmonious with the general design. Regarded as a whole, the building is one of the most successful productions of American art, and reflects infinite credit on its designer.
